685 for your master!" And thus /305/ they go around the entire vil-
754 lage, meanwhile pulling on the tendon. Then the thief begins to suffocate from fright and confesses. A shout goes up; it happens that the thief dies from it.

687 An oath is taken also in controversial matters. Before the
695 court, in a balagan where the khlaj-nivukh sits, nothing is allowed to be boiled; they eat raw yukola.

A stick (kys') -- about an arshin in length with a human chkhnaj.

If the matter reaches the point of breaking the stick, then they pay more -- double. Both big and little assemble in the balagan of the khlaj-n'ivukh'a (the settlement of Karga, 1896).

881 Women, Childbirth, and Children. A maiden who has reached
30 sexual maturity makes two braids. Women pierce both ears in
178 order to put in earrings (mes'kh); formerly men also pierced their
881 ears. A wife who is a minor can be slept with only after she be-
585 gins to menstruate. During menstruation the woman puts on her
841 oldest clothes and does not sleep with her husband. Women wash
[302] themselves, but not with hot water, for otherwise the tugurmam (the mistress of the fire) takes offense.

171 Among the Kekhal (Orochi) a man who has two wives ac-
837 commodates a guest under one blanket.

843 A pregnant woman must not look at the Amur when it be-
823 gins to break up, in order not to slow up the opening of the river.

844 They give birth in the balagan (midwife -- langyv-mam). In winter the mother spends one and a half days in it, in summer three days.

84 One must not cry out during delivery -- a sin. The husband at this time does not go anywhere. If a child has died during birth, the woman must not travel on the river or sea for a whole year -- there would not be any fish. For a month before childbirth, it is not permissible to bind anything tightly or to drive in stakes; it is not permissible to repair anything for an alien.

[789] During difficult deliveries they open up boxes, tear off patches, and unscrew their rifles. The newborn baby is washed with cold water. The midwife is not paid. Until the umbilicus heals, the

171 among the Goldi, are in use throughout the Gilyak people
751 and are essentially the same as those discussed earlier
301 (Number XIII, p. 207) [see Goldi source 18: Genest--
Analyst]. The Gilyak on Sakhalin Island whose houses
372 Jakobsen entered were likewise highly indignant whenever
462 he left the house with a lighted pipe or when his companions
776 extinguished the fire burning in a hut by pouring water on it.
For in their opinion such things tended to conjure up destruction not only over the inhabitants of the one hut but over the whole tribe. The inhabitants of one house in the village of Varki below Nikolayevsk predicted the same result when Jakobsen was about to light a fire for making the tea, and they forced him to wait till the house-wife saw to this task, since, in their opinion, this was a job only to be performed by her. Plainly this conduct has its basis in the sacred position of fire. [380] Though this no longer leads to a personification of a fire god among the Goldi and the Gilyak, it no doubt existed among them at one time as it still does today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious conceptions of the Goldi; the most important difference seems to me the one that was touched upon earlier (XIV, p. 223), [see Goldi source 18: Genest--Analyst] the fact that the Goldi pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are fed plentifully for an extended time by means of large wooden spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually held late in autumn and in winter and they are affairs of the greatest importance to their celebrators. I will now give the description of the festival that Jakobsen had the opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a festival was to take place on that day. From several other villages, some of which were considerable distances away large numbers of guests had come in already, and the whole place was astir in anticipation of the festival at hand. The opening of the bear festival is in the hands of the village

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotschai; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

302

302 TOILET--shaving and depilation; hairstyles (e.g., cutting, parting, arranging); care of the hair (e.g., washing, brushing); care of the nails (e.g., cutting, filing); body painting; use of cosmetics, ointments and perfumes; age, sex, and status differences in toilet; associated beliefs and practices; etc. See Also:

/257 cont./

143 826 588 that he began to wear men's clothing, got married, and now is the foremost hunter of the vicinity. Normally he lives with his wife, but sometimes copulates with men. He considers the latter more pleasurable and speaks of himself with pleasure: "I have two chances, two joys." All treat him as an urdla n'ivukh. In all I was able to count five such cases among the Gilyak, the number that Bogoraz found among the Chukchee.

881 ● [302] The Gilyak have no special rites at the time of attaining sexual maturity. The only outward sign for a maiden who has attained sexual maturity is that she begins to plait her hair in two braids. The moment of the onset of sexual maturity for a maiden is considered the menstrual period, which ordinarily begins in the thirteenth or fourteenth year.

881 826 This moment is considered the beginning of marriageable age, although the proper term for a woman who has attained sexual maturity is the expression -- "a woman who has seen her body," i.e., whose breasts have grown to the point where she can see them. A similar term exists for men -- "a man who [302] has seen his body," but in this case the word "body" refers to the mustache.

881 867 Some time before the onset of menstruation the mother prepares her daughter for the approaching change in her life and instructs her in all the necessary rites and taboos connected with blood. The Gilyak, both men and women,

881 585 833 fully recognize the significance of menstruation as the mark of sexual maturity and do not have sexual intercourse before its onset. Adult Gilyak frequently marry little girls and from the first day sleep with them under one covering, but do not begin sexual intercourse until the wife informs her husband of the onset of the first menstruation.

/304 cont./

685 754 for your master!" And thus /305/ they go around the entire village, meanwhile pulling on the tendon. Then the thief begins to suffocate from fright and confesses. A shout goes up; it happens that the thief dies from it.

197 The Tymovsk and the Okhotsk Gilyak have one language.

/343/

823 773 A legend about three brothers-cliffs in Aleksandrovsk on Sakhalin. Three Heng brothers went with a bear to look at a cast-up whale (kem), and then all of them turned into stone. Two jags -- mother and daughter -- look after them.

825 761 A rat must not be killed with an ax; a stick is necessary. Nakhvun's wife is dying because her father killed a rat with an ax; his son died for the same reason, and now his daughter is dying.

825 The attitude toward incest among dogs. According to the words of the Gilyak, among dogs a brother and sister do not copulate; exceptions are rare and are attributed to the milk. Dogs are killed for this; otherwise this heavy sin falls on the master; he will be punished with sickness and so forth. Father and daughter among dogs frequently have intercourse, but they are not killed for this.

● 302 Hair may be thrown away in any place.

752 825 [782] A person who has been rescued from death by a bear sacrifices chukh-chugynd -- a dog -- to Pal-n'igyvyn. No one may look at a person wounded by a bear; only an old man or an old woman binds his wounds. His bed is curtained off with a sail.

704 825 [261] In need they sometimes eat a bear that has died, and they treat him like a killed one. When they set off somewhere (hunting) or in general on important business, they always take along their favorite ymgi (son-in-law).

703 In Mil'kvo one Gilyak had two women. Once his daughter with the grandchildren came to visit him. She went to gather berries while the men went out to hunt seals. Then

/409 cont./

As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

G
Gi
SS
302
171

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

G
302

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak

G

artificially lengthen the braid, as the Chinese do, by plaiting
[142] in black silk. Baldness, on the other hand, is subject to ridi-
[826] cule. In order to promote the growth of hair, children are shorn
[856] from time to time, and occasionally, especially in the case of
● [301] boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

and Goldi), and nowhere coincides with the boundary of such fundamentally different peoples as the Gilyak on the one hand and the Amur Tungus or Ainu on the other. Inasmuch as the degree of the dependence of the Amur peoples on the Manchu-Chinese or Japanese is of the greatest importance with regard to their whole existence and lives, however, this border line is also of great ethnographic interest.

G
● 301
171

Like the hair style, there is another aspect of the external appearance which to some extent characterizes individual peoples of the Amur region more than the clothing does -- it is the adornment worn on various parts of the body.

All the natives of the Amur region, and among them the Gilyak, have the use of earrings, or, more properly, ear pendants, in common. They consist either of only a silver or copper wire bent into a ring at the upper end and wound to a spiral shape at the lower end (small earring, Pl. XXIX, Fig. 7), 2 or of a silver wire bent into the shape of a large ring, on the upper and lower parts of which are strung large glass beads or circular disks of a grayish-white or greenish-white stone (jadeite) and pierced in the center (large earring, Pl. XXIX, Fig. 6). The men always wear only one earring in each lobe, the women, however, often two and three large pendants, sometimes several inches long, in each one, the weight of which distends the ear lobes far downward. Among Gilyak children I have occasionally seen, besides the metallic ring, a tuft of fox hair

G

worn at the ear lobe, which may serve as protection against the
Gi
[301] cold as well as adornment. It is noteworthy that, aside from the earrings, the /417/ Gilyak, Olcha, Orok, and, as far as I know, also the Negda wear no other ornament on a head or

Gi

facial part. Among the Samagir on the Gorin, the Goldi, and
301 the Orochi, however, there is a second and similar ornament, which, to be sure, is limited to the female sex (1), among /

1. Only once, quite as an exception, did Maack (Putesh. na Amur", p. 224) see this
2 [See category 116, p. 1009-- Analyst]

ornament on a male individual, a Goldi from Mylki. I did not come across such a case.

whom, however, it is never absent, so that by it one can immediately distinguish the women of these nationalities from
Gi [304] those of the Olcha and Gilyak. This is a nose ring shaped exactly
[515] like the small earring described above, but still smaller, which hangs down from the pierced septum to the upper lip -- a most peculiar, ugly ornament and one which in addition impedes cleanliness, in which all these peoples are so deficient anyway.
Gi [191] Finally, among the Orochi the same situation is found with re-
[184] gard to the kinds of ornaments discussed as with regard to the hair style: the northern Orochi, such as those on Kaiserhafen Hadshi Bay), correspond in this with the Olcha and Gilyak, but the southern ones, or Ta-dse, along the seacoast at least from Olga Bay downward (2) and along the right Ussuri tributaries, corre-

2. Olympiada Wassiljewa, op. cit., p. 67.

spond with the Goldi and Samagir, that is, the former wear only earrings, and the latter, those of the female sex, also nose rings. Moreover, one sees among the Orochi women or girls, and sometimes also among those of the Goldi along the Ussuri and on the Amur near the mouth of the Ussuri, just such a small ring in the
ooo right or the left nostril (3). From what has been said, it is readily

Gi [114] 3. According to Przewalski (op. cit., p. 105) in the right nostril; according to Nadarof (op. cit., p. 78) and Maack (op. cit., p. 179) in the one or the other nostril.

G From what has been said, it is readily
Gi seen that the custom of wearing nose rings, strangely enough, has
SS 301 spread among the peoples of the lower Amur region only as far as
302 the Manchu-Chinese hair style has been accepted by them; where
171 this has not been taken up by them, there are likewise no nose
177 rings in either the nostrils or the nasal septum. I would not know,

G
Gi
SS /417 cont./
302 however, how to explain such a coincidence of the Chinese hair
301 style and the unusual use of nose rings among the natives of the
171 lower Amur region, for, as is well known, the Chinese do not
177 wear such an ornament. Moreover, this coincidence is found only in the lower, not in the upper Amur region. To be sure, the
T Manchu-Chinese hair style has also spread into the latter, and
[302] even far more than in the former, and yet none of the tribes there
[301] wears nose rings, neither the Birar, the Manegir, nor the Orochon.
[171] Thus the custom is limited, on the whole, to only a few of the many Tungus tribes of the Amur region and may perhaps be regarded as only a remnant from an earlier time when it was presumably more widespread.

G A more common customary ornament among all the peoples
301 of the Amur region, in particular for the female sex, are silver
171 or copper finger rings, several of which are sometimes stuck on one finger, and bangles (Gilyak tyisj) made out of the same material or out of bone, /418/ which are worn above the wrist. On
G [531] Plate XXIX, Figs. 8 and 9, a few such bangles of Gilyak workmanship made out of copper with inlaid silver disks and small engravings are shown.

Another piece likewise generally widespread in the Amur region is more interesting -- it is the large and strong ring worn only by men on the thumb of the right hand. Among the Gilyak, who call it aam, it is of the shape and size shown on Plate XLV, 1 Fig. 5 /in the original work; the size of the figure has been reduced for the translation/, made of copper or lead, decorated with various figures that are engraved or consist of inlaid brass and silver and provided in the inner circumference with a silver hoop securely soldered and overlapping on the outside. This
Gi ring, by the way, is not merely adornment, but has a definite
[301] practical purpose. La Pérouse, who saw it among the Orochi
[464] (or Olcha) on de Castries Bay, was of the opinion that it serves them as a prop in skinning and cutting up fish (1). This work,
Gi however, is not done by the men, but by the women.
[113] 1. La Pérouse, Voyage aut. du monde, ed. by Milet-Mureau, Paris, year V (1797), Vol. III, p. 64.

1 [See category 116, p. 1025--Analyst]

/418 cont./
ooo however, is not done by the men, but by the women. As I my-
301 self have seen among the Gilyak and as is reported from other
17 Amur peoples (Olcha, Manegir, Orochon) (2), the thumb ring
411

[113] 2. Maak", Putesh. na Amur", pp. 75, 207. Gerstfel'd", "O pribrezhn. zhit. Amura" (Viestn. Imp. Russk. Geogr. Obshch., Part 20, 1857, Sec. on Res. and Mat., p. 296).

is used to draw the bow, to grasp the string better, and, in case of a strong pull on it, to protect the skin of the finger from
[554] injury as a result of severe abrasion (3). Aside from this practical

[113] 3. According to Anutschin /Anuchin/ (Luk" i striely, Arkheologo-etnograf. ocherk" /Bow and Arrows, an Archeological-ethnographic Essay/, Moscow, 1887, p. 35), this is the bow pull especially characteristic for the peoples of the Mongolian race, and, according to Morse, in his work, "Ancient and modern Methods of Arrow-Release" (Bullet. of the Essex Instit.), the so-called "Mongolian" method of drawing the bow.

purpose, however, the thumb ring is also a special ornament, since it is regarded as a sign of manliness and is associated with skill with the bow and arrow. No halfway adult Gilyak therefore lacks the aam, and it is the same among the other peoples.
[177] Indeed, even where the bow has in large part already been pushed out by firearms, Chinese matchlock guns, or Russian-Yakut rifles, as among the Manegir and Orochon, the thumb ring is still
[579] generally worn (4). Here, then, apart from its use in an occasional

4. Gerstfeldt, loc. cit., and Maack, loc. cit.

301 fist-fight, it is gradually becoming a mere ornament. And this
171

/418 cont./

is even more the case in China, where one sometimes sees it made with beautiful workmanship out of ivory, jasper, agate, etc. on the hands of high officials and mandarins (5). Undoubtedly

5. Davis, La Chine, trans. from the English by Pichard, Paris, 1837, Vol. I, p. 222. According to Neuhof (Die Gesandtschaft der Ost-Indisch.-Gesellsch. in den verein. Niederländern an den Tartar. Cham und nunmehr auch Sinischen Kaiser, Amsterdam, 1666, p. 64), the viceroy of Canton, at the time the Dutch embassy was there (1655), wore a thumb ring made of ivory. Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 303, 317) saw thumb rings of greenish-white jasper on two mandarins, one of whom belonged to the military forces in the city of Shanhai-Kuan on the seacoast close to the Great Wall. Freiherr von Hübner (Ein Spaziergang um die Welt /A Walk around the World/, second edition, Leipzig, 1875, Vol. III, p. 96) remarks that highly placed men in China always wear a large ring of white or green jade on the thumb.

/419/ the explanation for such regard and high esteem for the thumb ring may be found in its original purpose discussed above.

In concluding this section I must still raise the question as to whether and to what extent the custom of coloring, painting or tattooing, certain parts of the body is found among the peoples of the Amur region?

/594 cont./

solely decisive position which the former occupy in the trade with them. Among the Goldi, who live closest to the Sungari Chinese and have constant retail-trade relations with them, a tenth part and perhaps even a hundredth part of the ja or the silver ounce comes into consideration, which makes it necessary for them in giving a price to name also the pertinent unit of value (ja or dicha). For the more distant Olcha and Gilyak, however, who, as we shall see, obtain what they need in Chinese goods in larger quantities in Ssan-ssin on the Sungari, the tenth and the hundredth of the ja are no longer of any practical significance -- for they are concerned only with the whole unit of value and its multiples, and therefore there is no need among them to name it expressly in making appraisals, but rather it suffices to give only the number concerned. If I had made my investigations into this question, instead of from the Gilyak to the Goldi, in the opposite direction, going from the latter to the former, the unit of value upon which their evaluations are based would have been apparent to me without any difficulty, automatically, as it were. Incidentally, the unit of value borrowed from the Chinese, since it is not represented among the latter by any coin, is always only an imaginary quantity for the Amur peoples, and they are able to form only an approximate idea of it in terms of the number or quantity of the corresponding pieces of goods or other articles. As is well known, in China only the thousandth part of a silver ounce is current in the form of coins -- the round brass coins with a square hole in the center (Gilyak tschcha), which are usually strung ten and a thousand on a string. On account of their insignificant value, however, the Gilyak pay no attention to them, and, like the variously shaped brass lamellas, they are used only as decorations for women's skirts or occasionally also as shirt and belt buttons. In my time Russian coins, likewise called tschcha (that is, probably "coin" in general) by the Gilyak, were not accepted either by them or by the other natives of the lower Amur region, both out of complete unfamiliarity with their value and because the Chinese merchants likewise would not accept them (1). Through their association with the Russians,

291 pipe-like pants (gari) made of seal-skin. The upper part of these are not fastened like regular pants but are held to a strap belt by a few thongs. In fall and spring some of them wear these gari made of padded Chinese cotton. Under the gari they wear a pair of regular linen pants which reach to the knees. Instead of wearing stockings, they stuff straw into their torbassa. Straw is a poor heat-conductor, and the same is true of seal-skin. These boots are also water-proof
177 if they are properly sewed. The Gilyak's bodies and arms
291 are covered with a short jacket made simply of dog skin with the fur on the outside. This jacket is sewed like a shirt and has a slit on the left side of the chest, which can be buttoned up. The shirt does not have a collar, the neck and back of the neck are covered by a cap. The color of the jacket differs with the color of the dogs, but the all-black ones are most sought after as gala attire. Sometimes this jacket consists of coarse gray Russian cloth, or only the upper half is of cloth and the lower half of unscraped seal-skin, but this type of jacket is worn more frequently between seasons. The jacket is tied with a belt on which hang various necessary implements, such as the knife, tinder, needle box, etc. Under this outer jacket they wear another, not cut like a shirt, made of blue Chinese cotton, fastened by means of bulbous, Chinese buttons. Under this, many of them wear a coarse linen shirt. Head, neck and back of the neck are covered with a cowl-shaped cap made of dog skin. In very cold weather they also wear fur gloves, with the fur on the inside, and the outside sewed with fish skin; these are fastened with a little band at the wrist.

294 They now sew their clothes with needles and a coarse
439 thread, both of which they buy from the Russians or the Chinese. Formerly they used home-made implements.

291 Women's clothes are very similar to men's. The Gilyak
301 women also wear gari made of skins, which are fastened
531 around the hips with straps. Their shirts, coats and jackets [109] are usually longer than those of the men. The hem of their coats are often sewed with intertwining figures made of sheet brass. They themselves make the figures with the aid of a file. Stylish ladies also wear bracelets which are soldered over an ordinary hearth fire fanned with a bellows. In general the women love to affect a certain neatness of attire. They have aprons for gala occasions, which also have brass ornaments. Their caps, fish-skin boots and torbassa are sometimes decorated with ornaments made of colored cloth, and particularly their gloves are thus decorated. They

291 wear huge pewter ear-rings, five centimeters wide, which
301 are decorated with colored glass beads. Pewter and beads
531 are bought from the Chinese, but they make the ear-rings themselves. Around their necks the women wear beads of colored glass, on these are sometimes hung little wooden amulets representing human figures.

177 Pipes and tobacco pouches are so much a part of the Gilyak
276 personality that I am tempted to give them space here. Their
531 pipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of black horn which has been turned with a lathe; the mouth piece is of jade. The cup-shaped brass bowl of the pipe is no larger than a hazel nut. On their belts they wear a bone spike, ornamented with scrolls, which is used as a pipe cleaner. Their tobacco pouch is tied with strings to a disk of walrus tusk which is also decorated with curlicues, and this is fastened to the upper button of the jacket. As soon as they have finished their smoke, they stuff their pipe and tobacco into the slit in their jacket.

V. Food and Diet

261 If the Gilyak is short on provisions he eats only twice a day. He endures hunger relatively easily, he can hunt or pursue other activities for two days without any kind of food, only on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, he undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak takes but in general they are blessed with a good appetite. From an eye witness I learned that once two Gilyak on a winter journey consumed one pood (about 16 kilograms) of frozen sturgeon in one day [110]

251 Their staple diet consists of fish: sturgeon, various types
262 of carp, whiting, but particularly salmon and mainly kita (salmo longocephalus) and gorbusha (salmo gibbosus). A freshly-caught fish is eaten raw, but the greater part of the salmon catch is dried for the cold season. For this purpose the fish are cut lengthwise and are hung about six feet from the ground; by means of air currents they become a dried non-rotten substance. This is the so-called sukola. The kita provides the bulk of these winter stores, and the fish appears at the end of summer. The fish caught in winter are stored in a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

/409 cont./

As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

G
SS
302
191

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

G
302

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak

G
[142]
[186]
[186]
[301]

artificially lengthen the braid, as the Chinese do, by plaiting in black silk. Baldness, on the other hand, is subject to ridicule. In order to promote the growth of hair, children are shorn from time to time, and occasionally, especially in the case of boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

/410 cont./

302
[171]

1. I later saw something similar among the Daur in the village of Chormoldin: the hair was shaved off the boys and a tuft of hair was left standing only here and there, quite unsymmetrically, either on the crown or on one side, which gave them a very comical appearance. The Chinese presumably also do this.

Adults, however,
[153] never have their head or beard hair cut; indeed, among the
[161] Gilyak there prevails the belief that if an adult among them had his braid cut and his hair shorn, it would bring him sickness and
302 death. After death, however, the braid may be cut off and pre-
765 served by the relatives of the deceased. For instance, the Gilyak Kimrkan in Kalm showed me the braids that he had removed from his first wife and his daughter after their deaths, and which he carefully stored, wrapped in birch bark, in the small hut erected for the manes of the deceased, the so-called rakk,* which

*/HRAF note: According to the list of errata on p. 777 of the foreign text, rakk should be raff. An asterisk on the latter word refers to a footnote which reads "Noted later": see note * on p.1236./

302
515
136

will be discussed later. In caring for their hair, the Gilyak are just as untidy as in their clothing. Hence one often sees them hit their heads with the palms of their hands in order to check the annoying vermin, or scratch their heads, which characteristically is always done with the thumb while the other /411/

[151]

fingers rest on the head. Indeed, the Gilyak even regard the presence of vermin in the head hair as a sign of good health. Thus, during my stay at the Nikolayev post, it happened that a Gilyak boy was taken by a Russian for rearing in his house, but when the father visited the boy after a time and missed the vermin in his hair, he explained that he was worried about

515
825

his health and took him back again. In connection with this, the bad habit of cracking vermin from the head or clothing in the mouth prevails among the Gilyak, as among so many primi-

[123]

tive peoples. My disgust at this, occasionally expressed to them, seemed ridiculous to them, and to my question as to why they did it, since it could be neither for food nor for a delicacy, I was given the answer that they were paying back the little animals for what the latter were doing to them.

/411 cont./

ooo
G
302
191
ooo

animals for what the latter were doing to them.

Exactly the same hair style as the Gilyak have is found among their nearest neighbors, the Negda, Olcha, and their fellow tribesmen -- the Orok on Sakhalin (1). It may be pre-

1. Mamiā Rinsô ("Tôtats-ki ko," in Siebold's Nippon, VII, p. 189) has already noted for the Orok that they do not cut their hair, but let it hang down over the shoulders or wear it wound into a thick plait at the neck.

A
302
199

It may be presumed that formerly the Ainu, too, had the same or a similar, more or less natural hair style, until they fell under the rule of the Japanese, and under pressure from them, as a sign of submission, adopted their present hair style, essentially similar to the one of the Japanese. As is known, the Japanese shave the hair on the forehead and crown, and at the back of the head they do not let it grow as long as do the Chinese nor plait it in a braid, but cut it to a certain length all around and gather it into a lock which, tied with a ribbon, rests on the crown in the direction of the forehead. Now, with the exception of this last point, which for a primitive people would be too elaborate and inconvenient and also require too much attention and care (2),

2. For example, in order not to disarrange their hairdo when sleeping, the Japanese, instead of a pillow, use a small wooden bench that is hollowed out to conform to the shape of the head.

A
175
302
199

the Ainu imitate their rulers. As early as 1622, Father Hieronymus de Angelis reported that the natives of Jesso /Yesso/ shear their hair in front so that there is no hair at the temples, but in the back wear it as long as the Japanese (that is, without a braid hanging down) (3), and Vries added that the women

Goldi, etc. (1). These peoples therefore regard the unshaved and

1. Venault, "Excursion dans les parties intérieures de la Mandchourie, 1850" (Nouv. Annales des voyages, Vol. XXX, 1852[II], pp. 205, 214. Actually it is not difficult to recognize the Olcha villages of Adi, Pulu, and Uchtr in the Tschang-Mao-tse villages mentioned by Venault, "Aki," the first, going downstream, "Pulo," and "Ukuu." It has already been mentioned above (pp. 212 and 388, note 1) that the "Kili-mi" belonging to the Tschang-Mao-tse, who through the murder of de la Brunière gave rise to Venault's voyage, are the Gilyak. Venault also notes that in their physiognomy the Tschang-Mao-tse are closer to the European type than the Tuang-Mao-tse, which is absolutely correct for the Gilyak and Olcha in contrast to the Goldi, Orochi, etc. (See pp. 286 ff. /untranslated/ above.)

unshorn hair as a symbol of freedom, as the Ainu do with regard
G to the braid. This also explains the aversion, heightened to
302 superstition, of the Gilyak, who are especially proud of their
648 freedom from the Manchu-Chinese, against shearing their hair or even cutting the braid plaited with all of it.

Gi
302
191
177
[648]

How much the distribution of the Manchu-Chinese hair style among the Amur peoples depended on the expansion of the effective, not merely nominal rule of the Celestial Empire can be seen from the Orochi. In the southernmost part of their habitation area, where they, designated as Ta-dse, are under considerable pressure from the many Chinese (Mandse) living among them, they wear their hair exactly like the latter, except that, as is also very frequent among the Goldi and Samagir, it is not shaved on the front of the head, for lack of the necessary tools, but only cut quite short (2). Farther north, such as in

T
302
171
177
[131]

southern part of their habitation area, along the eastern slopes of the great Chingan Mountains, around the tributaries of the Nonni, along the Nomin, Ganj, Gujuli, etc., where they live in complete dependence on the Daur and indirectly on the Chinese (4),

4. See p. 94 above.

they also certainly share the hair style of the latter, it gradually disappears going northward, and along the upper Amur and its northern tributaries, where, /416/ in spite of the Treaty of Nerchinsk, they have actually always remained under Russian influence and Russian rule, they have also retained their original and natural hair style, with the hair completely unshorn and either simply hanging down or tied up in a bunch on the crown (1).

648

Thus, the way of wearing the hair among all the indigenous peoples of the Amur region is a sign of their dependence on or independence of the Manchu-Chinese, or, on Sakhalin, the Japanese. The boundary up to which the Chinese, among the Amur peoples, or on Sakhalin the Japanese, hair style extends designates at the same time the boundary of the effective rule of the Manchu-Chinese or Japanese over these peoples. It is a political, not an ethnographic border line: in the western part as well as in the eastern part of the Amur region and Sakhalin it runs across the habitation area of the peoples concerned (Orochon, Orochi, and Ainu), only at certain points separates closely related tribes (for example, the Olcha from the Samagir

A
G
SS
T

/416 cont./

and Goldi), and nowhere coincides with the boundary of such fundamentally different peoples as the Gilyak on the one hand and the Amur Tungus or Ainu on the other. Inasmuch as the degree of the dependence of the Amur peoples on the Manchu-Chinese or Japanese is of the greatest importance with regard to their whole existence and lives, however, this border line is also of great ethnographic interest.

G
301
191

Like the hair style, there is another aspect of the external appearance which to some extent characterizes individual peoples of the Amur region more than the clothing does -- it is the adornment worn on various parts of the body.

All the natives of the Amur region, and among them the Gilyak, have the use of earrings, or, more properly, ear pendants, in common. They consist either of only a silver or copper wire bent into a ring at the upper end and wound to a spiral shape at the lower end (small earring, Pl. XXIX, Fig. 7), or of a silver wire bent into the shape of a large ring, on the upper and lower parts of which are strung large glass beads or circular disks of a grayish-white or greenish-white stone (jadeite) and pierced in the center (large earring, Pl. XXIX, Fig. 6). The men always wear only one earring in each lobe, the women, however, often two and three large pendants, sometimes several inches long, in each one, the weight of which distends the ear lobes far downward. Among Gilyak children I have occasionally seen, besides the metallic ring, a tuft of fox hair worn at the ear lobe, which may serve as protection against the cold as well as adornment. It is noteworthy that, aside from

Gi
[301]

the earrings, the /417/ Gilyak, Olcha, Orok, and, as far as I know, also the Negda wear no other ornament on a head or facial part. Among the Samagir on the Gorin, the Goldi, and

Gi
301

the Orochi, however, there is a second and similar ornament, which, to be sure, is limited to the female sex (1), among

1. Only once, quite as an exception, did Maack (Puteshi. na Amur", p. 224) see this

ornament on a male individual, a Goldi from Mylki. I did not come across such a case.

whom, however, it is never absent, so that by it one can immediately distinguish the women of these nationalities from those of the Olcha and Gilyak. This is a nose ring shaped exactly like the small earring described above, but still smaller, which hangs down from the pierced septum to the upper lip -- a most peculiar, ugly ornament and one which in addition impedes cleanliness, in which all these peoples are so deficient anyway. Finally, among the Orochi the same situation is found with regard to the kinds of ornaments discussed as with regard to the hair style: the northern Orochi, such as those on Kaiserhafen Hadshi Bay), correspond in this with the Olcha and Gilyak, but the southern ones, or Ta-dse, along the seacoast at least from Olga Bay downward (2) and along the right Ussuri tributaries, corre-

2. Olympiada Wassiljewa, op. cit., p. 67.

spond with the Goldi and Samagir, that is, the former wear only earrings, and the latter, those of the female sex, also nose rings. Moreover, one sees among the Orochi women or girls, and sometimes also among those of the Goldi along the Ussuri and on the Amur near the mouth of the Ussuri, just such a small ring in the right or the left nostril (3). From what has been said, it is readily

3. According to Przewalski (op. cit., p. 105) in the right nostril; according to Nadarof (op. cit., p. 78) and Maack (op. cit., p. 179) in the one or the other nostril.

From what has been said, it is readily seen that the custom of wearing nose rings, strangely enough, has spread among the peoples of the lower Amur region only as far as the Manchu-Chinese hair style has been accepted by them; where this has not been taken up by them, there are likewise no nose rings in either the nostrils or the nasal septum. I would not know,

/417 cont./

however, how to explain such a coincidence of the Chinese hair style and the unusual use of nose rings among the natives of the lower Amur region, for, as is well known, the Chinese do not wear such an ornament. Moreover, this coincidence is found only in the lower, not in the upper Amur region. To be sure, the Manchu-Chinese hair style has also spread into the latter, and even far more than in the former, and yet none of the tribes there wears nose rings, neither the Birar, the Manegir, nor the Orochon. Thus the custom is limited, on the whole, to only a few of the many Tungus tribes of the Amur region and may perhaps be regarded as only a remnant from an earlier time when it was presumably more widespread.

A more common customary ornament among all the peoples of the Amur region, in particular for the female sex, are silver or copper finger rings, several of which are sometimes stuck on one finger, and bangles (Gilyak tyisj) made out of the same material or out of bone, /418/ which are worn above the wrist. On Plate XXIX, Figs. 8 and 9, a few such bangles of Gilyak workmanship made out of copper with inlaid silver disks and small engravings are shown.

Another piece likewise generally widespread in the Amur region is more interesting -- it is the large and strong ring worn only by men on the thumb of the right hand. Among the Gilyak, who call it aam, it is of the shape and size shown on Plate XLV, Fig. 5 /in the original work; the size of the figure has been reduced for the translation/, made of copper or lead, decorated with various figures that are engraved or consist of inlaid brass and silver and provided in the inner circumference with a silver hoop securely soldered and overlapping on the outside. This ring, by the way, is not merely adornment, but has a definite practical purpose. La Pérouse, who saw it among the Orochi (or Olcha) on de Castries Bay, was of the opinion that it serves them as a prop in skinning and cutting up fish (1). This work, however, is not done by the men, but by the women.

1. La Pérouse, Voyage aut. du monde, ed. by Milet-Mureau, Paris, year V (1797), Vol. III, p. 64.

[See category 116, p. 1025--Analyst]

/418 cont./

is even more the case in China, where one sometimes sees it made with beautiful workmanship out of ivory, jasper, agate, etc. on the hands of high officials and mandarins (5). Undoubtedly

5. Davis, La Chine, trans. from the English by Pichard, Paris, 1837, Vol. I, p. 222. According to Neuhof (Die Gesandtschaft der Ost-Indisch.-Gesellsch. in den verein. Niederländern an den Tartar. Cham und nunmehr auch Sinischen Kaiser, Amsterdam, 1666, p. 64), the viceroy of Canton, at the time the Dutch embassy was there (1655), wore a thumb ring made of ivory. Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 303, 317) saw thumb rings of greenish-white jasper on two mandarins, one of whom belonged to the military forces in the city of Shanhai-Kuan on the seacoast close to the Great Wall. Freiherr von Hübner (Ein Spaziergang um die Welt /A Walk around the World/, second edition, Leipzig, 1875, Vol. III, p. 96) remarks that highly placed men in China always wear a large ring of white or green jade on the thumb.

/419/ the explanation for such regard and high esteem for the thumb ring may be found in its original purpose discussed above.

In concluding this section I must still raise the question as to whether and to what extent the custom of coloring, painting or tattooing, certain parts of the body is found among the peoples of the Amur region?

/419 cont./

First, as far as the Gilyak are concerned, I believe I can state with certainty that nothing of the kind occurs among them today. At least no trace of such a custom among them was encountered by me, despite frequent contact with them for several years. This is noteworthy inasmuch as this custom is found among their immediate neighbors on Sakhalin, the Ainu, and more or less among all the other Paleo-Asiatic peoples, even though it may be gradually disappearing. In the Ainu area, the coloring or tattooing of certain parts of the body is practiced chiefly on Jesso /Yesso/. In the Japanese descriptions of this island, the Jeso-ki of Kannemon (1652) and Arai Tsikugo-no-Kami (1720), it is said that the Ainu women color their lips with the juice of the kudsi-gusa (or mouth-plant) and produce various flower- and cloud-like figures all around the mouth, as well as on the forehead, face, hands and feet, by means of needle pricks and rubbing in a black substance (1). These tattooings are applied

1. "Descriptions de la terre Jesso, traduites du Japonais par Titsingh /Descriptions of the Land of Yesso, translated from the Japanese by Titsingh/" (Annales des Voyages, Vol. XXIV, 1814, pp. 155, 196). Cf. also Klaproth, San kokf tsou ran to sets, ou Apercu génér. des trois royaumes /General Survey of the Three Kingdoms/, translated from the original Japanese and Chinese, Paris, 1832, p. 231.

to the girls in childhood by their mothers. They are also more or less discussed by the European or North American travelers who visited Jesso (2). To be sure, the same custom prevails

2. For instance, by Vries (Siebold, Aardr. en volkenkund. toelicht. /Geographical and Ethnographical Explanations/, p. 100) and later by Broughton (A Voyage of discov. to the North Pacific Ocean, pp. 99, 105),

Gilyak in winter clothing.

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

Footwear, robes and overcoats were made of specially prepared skins of carp, Siberian salmon and pike, as well as seal and elk skin, dog-fur, etc.

Before the Revolution, neither men nor women cut their hair; they wore it braided—the men, in a single braid, the women, in two braids.

Social Relations and Religion

Problems of the ancient social order of the Nivkhi are particularly interesting in connection with the study of the origins of the family and marriage. Thanks to the well-known works of the Russian ethnographer L. Ya. Shternberg, we have a detailed descritpion of the clan organization of the Nivkhi (or Gilyaks, as they were called in the past) at the end of the last century. Shternberg conducted ethnographic studies of the Nivkhi for a number of years, and collected materials which attracted the attention of F. Engels. Engels wrote about Shternberg's work in a special article, "A Recently Discovered Instance of Group Marriage" (first published in Die Neue Zeit, 1892, and later, as an appendix to "The Origin of the Family, Private Property, and the State").

The Nivkhi were divided into exogamous clans (kk'khal), of which there were several dozen. Most of their names were taken from rivers, such as: Mybing, i.e., "those who live on the My River," Chombing—"those who live on the Chom River," and so on. Already in Shternberg's time, the Nivkhi clans no longer represented territorial and economic entities. A Nivkhi village was inhabited by members of various clans. However, the Nivkhi clan preserved many forms of social ties among clan kinsmen, expressed chiefly in family and marriage norms, and in religious rituals and customs.

The Nivkhi clan was patriarchal, with but a few relics of the more ancient matriarchal order. These relics included the special relationship with the mother's brother, who took part in receiving ransom for the murder of his sister's son, and also the custom of sending gifts and a share of every catch to sons- or brothers-in-law—which may have been a remnant of matrilocal marriage.

The Nivkhi clan was a group of kinsmen along the male line, bound by strictly observed rules of clan exogamy: mutual duties in payment of blood-money (tkhusind), which replaced the vendetta among the Nivkhi; participation of clan members in the payment of bride-price and burial expenses; and the common clan cult (clan fire, clan organization of the bear festival, the clan storehouse for ritual objects, etc.).

In distinction to the Tunguso-Manchurian peoples of the Amur region, the Nivkhi took their wives, not from the clan to which they gave their women, but from a third clan. Thus, each clan was bound by marriage ties to at least two other clans. For example, the Khyyyegnung clan took its women from the Kegnang, the Kegnang from the Tykfing, and the latter from the Khyyyegnung. This was connected with the Nivkhi rule, which, in distinction to those of their Tunguso-Manchurian neighbors, permitted a man to marry the daughter of his mother's brother, but not the daughter of his father's sister. The clan from which men of a given clan took their wives was the former's akhmal'k (father-in-law); conversely, the clan to which the women of a given clan were given was called ymg'i (son-in-law). Hence, the Nivkhi themselves defined the clan as follows: "We have one (i.e., a common) akhmal'k (father-in-law), one ym'gi (son-in-law), one fire, one bear, one tkhusind (blood-money), and one sin."

9: Hawes--157-158 T-3 (1901) 1903 Gilyak
116, 142, 302

"The Gilyak is short of stature, about 5 feet 3 inches in height, spare of limb, and, though often wiry, scarcely robust. His women-folk scarcely exceed 4 feet 6 inches. His complexion is tawny, gipsy-like, but not yellow, and his hair, which he wears in a pigtail, is raven black. Altogether his features betoken a mixed race. Though he has the brachycephalic (round) head, the broad face, and high cheek-bones of the Mongol, [158] yet the slight brow ridges, big mouth, prominent lips, and flattened nasal bridge of the latter are considerably modified in his case. The majority of Gilyaks possess the hairless faces of the Mongol, and perhaps the exceptions who have bushy beards are descendants of Ainu and Gilyak ancestors."

854 Nursing infants are bathed twice daily, but, on the other
515 hand, larger children are seldom bathed. Adult Gilyak
302 consider bathing a luxury, some never do it and leave it to chance, if they are caught in the rain or fall in the water; some, however, wash occasionally, even with soap which they buy from the Russians. They comb their hair with a wooden (Chinese) comb and at the same time rub it with fat and hunt for lice. They do not by any means comb their hair every day.

854 Children nurse for about two years. Tiny babies are kept in a cradle which stands on the floor, but as soon as they are three to four months old they are placed in a trough-like bed. The little trough is open at one end and somewhat pointed; on the other end it has a hole in the bottom. The [130] child is laid with its back against the bottom, its head against the open end; it is tied down and the whole thing is hung up slantwise. The hole serves as a conduit. When the mother leaves the house for a longer time, she ties this cradle to her back.

868 When the Gilyak lad no longer needs his mother's care,
276 he begins to accompany his father on trips and thus gradually
147 learns what he needs for his life. Many children even smoke but all fathers do not permit this. (1)

> 1. The disciples of a one-sided etiology of disease might cite the Gilyak as living examples of the harmlessness of tobacco:this race is on the average healthier than civilized man, their teeth are white and strong, and yet both sexes smoke from childhood. Nevertheless, this would be a false inference: a single given cause always has a different effect according to the mode of living in general. Thus, for instance, the effect of a strong cigar is very different if one smokes outside in cold weather or sitting in a warm room doing head work. In the latter case it will soon lead to nervous palpitation. Furthermore, the organic constitution with which a person is equipped must be taken into consideration. Civilized man would have to live through the tests which the Gilyak endures at birth in order to be compared with him.

855 The parents are tender and indulgent with their children.
524 The children are kissed by their mothers, licked with saliva,

SS: A Gilyak man and woman] were a filthy-looking pair, clad in dirty, garments, with naked feet and legs, and their long, coarse, uncombed hair, been braided, hung down their backs in queues. That of the man (for ere represented) was arranged much like the 'tail' of a Chinaman, in a with the exception that no part of his head was shaven. The woman wore or what had once been such, since her hair, as well as that of her husband, t mass of tangle, and becoming more so every moment through the wing and digging of several long, unwashed fingers.

have experienced some little difficulty in deciding which was the man and man had it not been for a long-stemmed pipe, with amber mouth-piece and ass bowl, which the former smoked, while his fair partner carried a e, large, freshly-caught fish."

231 like a Pawnee concert. There were big dogs and little dogs, white, black, grey, brown, and yellow dogs, and not one friendly. They did not appear courageous, but I was not altogether certain of their dispositions. Their owners sought to quiet them, but they refused comfort.

These dogs had some peculiarities of those in Kamchatka, but their blood was evidently much debased; they appeared to be a mixture of Kamchadale, greyhound, bull dog, and cur, the latter predominating. They are used for hunting at all seasons, and for towing boats in summer and dragging sledges in winter. I was told that since the Russian settlement of the Amoor the Gilyak dogs have degenerated, in consequence of too much familiarity with Muscovite canines. Nicolayevsk appeared quite cosmopolitan in the matter of dogs, and it was impossible to say what breed was most numerous. One day I saw nineteen in a single group and no two alike.

ABOUT FULL.

609 Near the entrance of the village an old man was repairing his nets, which were stretched along a fence. He did not regard us as we scrutinized his jacket of blue cotton, and he made no response to a question which Borasdine asked. Further along were two women putting fish upon poles for drying, and a third was engaged in skinning a large salmon. The women did not look up from their work, and were not 142 inclined to amiability. They had Mongol features, complex-
• 302 ion, eyes, and hair, the latter thick and black. Some of the

•302 men wear it plaited into queues, and others let it grow pretty much at will. Each woman I saw had it braided in two queues, which hung over her shoulders. In their ears they wore long pendants, and their dresses were generally arranged with taste.

000 When recalled by the steam whistle we left the village and took a short route down a steep bank to the boat. In descending, my feet passed from under me, and I had the pleasure of sliding about ten yards before stopping. Had it not been for a Cossack who happened in my way I should have entered the Amoor after the manner of an otter, and afforded much amusement to the spectators, though comparatively little to myself. The sliding attracted no special attention as it was supposed to be the American custom, and I did not deem it prudent to make an explanation lest the story might bring discredit to my nationality.

301 is even more the case in China, where one sometimes sees it
191 made with beautiful workmanship out of ivory, jasper, agate, etc. on the hands of high officials and mandarins (5). Undoubt

[113] 5. Davis, La Chine, trans. from the English by Pichard, Paris, 1837, Vol. I, p. 222. According to Neuhof (Die Gesandtschaft der Ost-Indisch.-Gesellsch. in den verein. Niederländern an den Tartar. Cham und nunmehr auch Sinischen Kaiser, Amsterdam, 1666, p. 64), the viceroy of Canton, at the time the Dutch embassy was there (1655), wore a thumb ring made of ivory. Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 303, 317) saw thumb rings of greenish-white jasper on two mandarins, one of whom belonged to the military forces in the city of Shanhai-Kuan on the seacoast close to the Great Wall. Freiherr von Hübner (Ein Spaziergang um die Welt /A Walk around the World/, second edition, Leipzig, 1875, Vol. III, p. 96) remarks that highly placed men in China always wear a large ring of white or green jade on the thumb.

/419/ the explanation for such regard and high esteem for the thumb ring may be found in its original purpose discussed above.

302 In concluding this section I must still raise the question
•304 as to whether and to what extent the custom of coloring, paintin or tattooing, certain parts of the body is found among the peoples of the Amur region?

G /419 cont./

302 First, as far as the Gilyak are concerned, I believe I can
304 state with certainty that nothing of the kind occurs among them
171 today. At least no trace of such a custom among them was encountered by me, despite frequent contact with them for several years. This is noteworthy inasmuch as this custom is found among their immediate neighbors on Sakhalin, the Ainu, and more or less among all the other Paleo-Asiatic peoples, even though it may be gradually disappearing. In the Ainu area, the
A 302 coloring or tattooing of certain parts of the body is practiced
304 chiefly on Jesso /Yesso/. In the Japanese descriptions of this
[195] island, the Jeso-ki of Kannemon (1652) and Araï Tsikugo-no-Kami (1720), it is said that the Ainu women color their lips with the juice of the kudsi-gusa (or mouth-plant) and produce various flower- and cloud-like figures all around the mouth, as well as on the forehead, face, hands and feet, by means of needle pricks
A 304 and rubbing in a black substance (1). These tattooings are applied

G
K /421 cont./

304 In the whole series of Paleo-Asiatic peoples from Jesso to
171 Greenland we find only two small tribes who lack the custom of tattooing -- the Italmen on Kamchatka and the Gilyak on the Amur and on Sakhalin. Under these circumstances one might think that the custom of tattooing was formerly indigenous among these two peoples, too, but had disappeared in the course of time. Such an assumption, however, is not permissible. Steller's and Krascheninnikof's reports on the Italmen come from a time when the latter had by no means lost their national characteristics to such an extent that such a prominent and, if it existed among them, ancient custom as tattooing could have already completely disappeared without any remnants or traces and even without having left behind any accounts in the traditions. And, as was pointed out at the very beginning of this work, I became fully acquainted with the Gilyak at a time when they were still in full possession of their individuality. The complete lack of tattooing among the former as well as among the latter must therefore be regarded as part of their individuality in contrast to the other Paleo-Asiatic peoples.

Gi At first glance it might seem that this individuality of the
304 Gilyak in the Amur region was also shared by other peoples, in
171 particular those living adjacent to the Gilyak, for the Olcha, the Orok on Sakhalin, the Negda, and Samagir do not have the custom of tattooing. But the situation is essentially different among them. I think I can say with certainty that tattooing is not at all customary at present among the Olcha, /422/ for I became acquainted with them on several voyages throughout their habitation area. I became acquainted with the Samagir on the Gorin only in Ngagha, the largest of their villages, to be sure, and concerning the Orok on Sakhalin and the Negda, I met only isolated individuals, but other travelers, too, who had more contact with them, did not observe any kind of tattooing among them, for example, neither Middendorff and Schmidt among the Negda nor Poljakof, after a stay of several weeks on the east coast of Sakhalin, among the Orok there. This is very noteworthy

/650 cont./

114 and widows, unmarried people, orphans, and the needy; 3-4,
175 often 6-7 pieces of gold cloth are paid per head, but young and
567 stupid persons, however, who cannot be used for any services,
[435] are exchanged for crude goods." According to him, even the
[439] Ainu from Jesso /Yesso/ and from the island of Risiri come over
Sakhalin in order to buy there human beings in the situations named. He adds: "This is why one finds tattooed women in the
[304] country of the Smerenkur" -- a perfectly correct conclusion, for as has already been pointed out (2), tattooing is by no means

2. See pp. 631 ff. above.

customary among the Gilyak. Rinsô's observation concerning the
[184] slave trade of the Ainu correspond completely with ours above and substantially supplement them, but his latter remark leaves no doubt that not only the Gilyak on the mainland but also those of Sakhalin keep slaves, or at any rate female slaves, among them whom the latter obtain probably exclusively from the Ainu. Be-
175 sides purchase, however, the Santaner, as Rinsô reports, also get
567 their slaves in another, more brutal manner by taking to their country as security the brothers, sisters, and children of those Ai who owe them debts in trading and are unable to settle these debts in the following year when they return. Needless to say, they become slaves there. The Japanese government, which had
[648] absolute domination over southern Sakhalin and its main trade center, Ssiranussi, did not /651/ feel bound to check this scandalous practice, which ceased only after the island passed into Russian possession.

Before I go further in describing the family relations of the
567 Gilyak, I should like to insert some data concerning slavery
171 among other Paleo-Asiatic peoples for comparison. As disgraceful as the Ainu practice of selling fellow tribesmen as slaves to the Gilyak and Olcha is, yet nothing is reported, either by Rinsô or by other travelers, to the effect that they keep persons from their own tribe as slaves. What kept them from it, whether it was their own kindheartedness and weakness or a prohibition of the Japanese acting as absolute rulers, may be left undecided

posture in rowing. Paunches and hunchbacks, etc. are not to be found, and in general bodily abnormalities and deformities are much less often found among these savages than among civilized peoples. Their features are not beautiful, although the Gilyak are by no means the ugliest race of men. Their heads are broad and markedly brachycephalic. Their thick black hair, parted in the middle, falls down their back in a braid. Their eyebrows are thick, black and often bristly toward the root of the nose. Their eyes are small, but not conspicuously so, as is the case with some other races. (1) They are straight and slant somewhat upward and outward. Their color is without exception dark. The cheek bones are moderately prominent, the nose short and usually flat. In women the column of the nose is not pierced as is the case with Goldi women who wear nose rings. They do not have a large mouth, their lips are thick and red. They frequently hold their mouths open, showing two complete rows of strong, white teeth. If one examines their mouths closely one discovers that the incisors are more or less worn down from their pipes. Their beards and moustaches are black, but thin. The ear-lobes of both men and women are pierced for earrings.

1. Thus, in my opinion, the eyes of the Buryats, rather than those of the Gilyak are like slits.

Their complexion is brownish. Their facial expression is serious; friendly faces are less often found among them than among the Goldi. However, the women have a gentler expression, although their type is very similar to that of the men. They wear two braids which are often tied together at the bottom.

Tattooing is not common among the Gilyak. Their bodies, also, are not exceptionally hairy. Their skin, if it does not happen to be covered with eruptions, is very smooth, but usually dirty. Their hair, which they oil copiously, is usually not free of lice. The odor characteristic of the Gilyak is a mixture of smoke and fish, with the former predominating.

As far as muscular strength is concerned, it seems to fall below that of Europeans, but they have more physical endurance; the women, moreover, are relatively strong. One cannot say that the Gilyak excel in speed [107] and agility of bodily movement. Only in rowing and mountain climbing are

586 usually favors them and the first husband must abandon his
claims. In recent years many Gilyak have resorted to a
177 special ruse in order to make sure of their wives. Such
586 chaps who are probably not of the best and who may thus be
797 faced with the prospect of eventually being deserted by their
wives, have themselves baptized by a Russian priest, because they know that, according to the Greek religion, marriage must be permanent, and they would consequently, in case of desertion, be entitled to the ispravnik's protection. However, it is doubtful whether this maneuver will help them much in the long run, for such baptized individuals who later have no intention of keeping their Christianity alive, are soon forgotten in official circles. No one knows who or where they are, the wilderness is vast, and looking for them is more than troublesome.

If the abducted woman had had children by her first marriage, these usually remain with the father. [129]

171 Child training. Toward the end of her pregnancy, a
844 woman is taken out of the house for 10 (1) days and brought to
183
343

1. The duration of this exile is not the same everywhere. From some Gilyak I learned that eight days sufficed; on the island of Sakhalin, however, 12 days were given.

a hut made of birch bark, in which a small fire is burning. This custom which is known to exist among other primitive peoples, for instance among the Ostyaks, is, up to the present, very strictly observed by the Gilyak even in winter during the most severe cold, as a result of which the newly-born child often freezes to death. Conceivably a child which survives such a test must be strong. The mother also proves by this what rigors these people are capable of enduring. During her entire stay in the hut only women are permitted to come to her, often she must be her own mid-wife. No one could tell me the actual meaning of this custom: most probably it cannot be explained on the basis of "impurity" of the woman, but it is related to another superstition of which we shall speak later, and which was originally perhaps some hygienic regulation. That no mystical idea of "impurity" underlies it may be seen from the fact that when the woman
854 returns to her house she undergoes no "purifying" ritual.
515 The bathing of the newly-born is also done in the impro-
302 vised lying-in establishment, and it is given its other baths there.

Gilyak in summe

r clothing.

293 /396 cont./
377 Fig. 4) that is very peculiar with regard to the material as well
415 as the form and arrangement. It is made out of the skin of a
[53] sturgeon that is softened beforehand for the purpose and later
[239] hardening like wood: on the Amur out of the skin of the tukki-
tscho of the Gilyak (Acipenser Schrenckii Brandt), on Sakhalin
out of that of an allegedly similar kind occurring in the
northern part of the Sea of Japan and called okras by the Gilyak.
The mlo consists of two quite similar pieces that may be in-
verted over each other and at their upper or lower edge are bent
into a spiral and attached to a leather strap in such a way that,
after pushing away a bone tube running on the latter, the upper
372 piece can be lifted off the lower one. Like the tinder box, the
293 steel, too, often hangs down from the belt on a long chain
(Gilyak kessj-kessj) equipped with various appendages (Pl. XXVIII,
Fig. 1,[2] and Pl. XXIX, Fig. 1).[2] Sometimes there is also found
293 on this a bent, little iron rod pointed at the bottom (Pl. XXVIII,
412 Figs. 1 and 2), which is also carried separately and serves for
all kinds of purposes, at one time for making a hole in a strap,
at another time for loosening a knot or cleaning the pipe, etc.
● [321] This instrument (Gil. kedak) is not infrequently also made of
[53] horn or bone, and as insignificant and unessential as it is in
itself, nevertheless it is usually decorated with all sorts of carved
293 figures (Pl. XXVIII, Fig. 3). Finally, various other odds and
ends usually hang in the belt of the Gilyak as he happens to find
them, for instance, a boar's tusk or tooth, a piece of antelope
horn or deer antler, etc.

291 In winter, the Gilyak women also wear coats of dog fur,
237 which are made like those of the men; nevertheless they are
sometimes seen, though rarely, in coats of more precious furs.
In the winter of 1856, for instance, in Tangi on Sakhalin, I saw
one of the wives of the Gilyak Kombrein wrapped in a coat of
fox skins with the fur turned to the outside, under which two
under-coats of blue and of patterned Chinese material trimmed
with otter and sable furs were visible. On neatly dressed girls,
children of well-to-do parents, one sometimes sees on the dog-fur
coat a narrow fox-fur collar, the so-called mungrusk in Gilyak,

192 bowl-shaped head, which is turned upward. The upper piece, or
G mouthpiece, is of metal (brass) only for a common man; every
[554] well-to-do Gilyak strives to imitate the Chinese and to procure for
● [321] his pipe a stone mouthpiece made of jadeite or perhaps even of
chalcedony, carnelian, or nephrite, such as are made in the
Sungari region (3), especially in Tsitsikar and other places (4).

3. Barabash", "Sungarsk. eksp." (Voen. Sborn., 1874, No. 2, p. 351).

G 276 192 4. The lower metallic piece, with the bowl, is called kott in Gilyak, the mouthpiece ilmf, the wooden middle piece connecting them twamdasir.

A The greatest correspondence prevails among all the peoples of the
276 Amur region in the form of the pipe, since the parts making it
439 up always come from the Sungari region, where they are factory-
made. Only the Ainu on Sakhalin have differently shaped pipes,
because they get them from another source, from the Japanese.
I saw pipes of two forms among them: one with a very small
head, squared off at the top, into which the tip of the little
finger scarcely fitted, and then also one with a larger, bowl-
A shaped head. In addition, however, they /469/ also make their
824 own pipe heads from the wood of the Hydrangea paniculata Sieb.
et Zucc., which are used by the women in particular (1).

A 191 [29] 1. Fr. Schmidt, to whom I owe this information, adds that he saw these pipe heads in use even in Kussunai and Manue, even though the Hydrangea paniculata occurs only in Aniwa Bay and on the west coast of Sakhalin south of Notosama. See his

[113] 2. Ph. Joh. v. Strahlenberg, Das Nord- und Ostliche Theil von Europa und Asia /The Northern and Eastern Parts of Europe and Asia/, Stockholm, 1730, p. 386.

by a later traveler, Gmelin, chiefly no doubt on account of the indeed very strange linking of the Kilani with the Persian province of Gilan and the Awaren /Avar/ to it, that he felt obliged to question the very existence of such a people (3). Gmelin thought

3. See p. 203 above.

that if there were a people there which was especially distinguished by its weapons-making, all of Siberia must be filled with them, and these weapons would long since have been available, if not from the people themselves, at least through the
[53] Chinese (4). Nevertheless, the report which came to Strahlenberg
● [321]

4. J. G. Gmelin, Reise durch Sibirien, Göttingen, 1752, Vol. II, Preface.

attention more than one and a half centuries ago is now confirmed, for both the above-mentioned bows faced with buffalo horn and decorated with silver and the beautiful lances, spears, and knives with inlaid figures in copper, brass, and silver, which have no equal among any of the Siberian peoples, are of Gilyak
326 workmanship. If, however, these beautiful weapons were unknown
411 in Siberia in Gmelin's time, and even today scarcely go beyond
the Amur region, the reason lies, on the one hand, in the small
556 quantity of metal available to the Gilyak, and, on the other hand,
and even more, in the high value which they themselves put on

Gilyak implements: 1, 2 -- iron pipe-cleaner; 3 -- the same made of bone; 4 -- tinder box of sturgeon skin; 5 -- the same made of seal leather; 6 -- tobacco-oil pouch.

/640 cont./

462 would think that for the man, too, there could never be any lack
411 of domestic work. But these objects are by no means made every-
[463] where and by everyone, but rather at only a few places by expert
[439] Gilyak and used for trade (1), so that one need only make a wooden

1. A large portion of them, as was mentioned above (p. 894), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the
462 complete weapon. The situation is similar with respect to bows,
•321 boats, and other implements that are used specifically or chiefly
322 by the men. The domestic activities of the men among the
517 Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and he still has much time left for idleness, smoking, and sleeping.

593 The domestic tasks and accomplishments of the wife, however,
[462] are far from exhausted by what has been presented above, for in addition to all that there are still the maternal duties, the care and tending of the children. The Gilyak, husband as well as wife, find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, not even when he was about to leave on a journey or returned from one.

[855] On the other hand, I have often seen a Gilyak man, not to speak
593 of the women, tenderly caress and kiss small children. Every
842 married Gilyak wants as large a swarm of children as possible, and one who has them prides himself on it. One in Xyi was boasting in front of me about his many children, but to my question as to how many he had, he could only answer: tammlà, tammlà, that is, many, many. Mixed in with this joy, however,
[592] there is also an egoistical, utilitarian viewpoint, for in his growing sons he will soon have helpers in his lucrative hunting, fishing, and trading business, and the daughters promise, /641/ apart from the help that they give in the household, a fine bride price.

XXXIII, Fig. 6), and, to be sure, more often noisily drunk than eaten with a spoon. For the enjoyment of solid food, fish, meat blubber, and the like, rectangular shallow bowls, Gilyak es-ngir

[104] 3. The s is soft in this word and is to be pronounced like the French z.

415 (ibid., Fig. 7), are used. Also used for the same purpose are wooden, circular, rather shallow bowls or plates (Pl. XXXIV, Fig 2 and 3), about a foot in diameter, which among the Gilyak bear the name aam-ngir, ring bowls or thumb-ring bowls, obviously o account of their round form similar to the above-mentioned thum
[439] ring (aam) (4). The Gilyak, however, do not make them them-

[192] 4. Among the Olcha they are called kota.

selves, but obtain them from the Goldi, who occupy themselves
415 with turning them. At the bear festivals they are used in great
531 numbers by the Gilyak, as well as by the Olcha, in particular for
796 eating the above-mentioned kinds of groats, though they are not any means /447/ implements used exclusively in connection with these festivities, as might be concluded from their exotic origin the complete lack of any ornamentation and carving. I myself s the Gilyak use them often enough in their everyday life. In cont to these mass-produced, undecorated bowls turned by the Goldi, all the other above-mentioned vessels made freehandedly by the Gilyak themselves always stand out because of all sorts of decora tions put on them, which, however, remain far behind the artisti carvings which we shall discover on the implements used exclusi
•322 at the bear festivals. For the manufacture of all the vessels pre-
412 sented above, bowls, spoons, etc., for the execution of the carv on them and on other utensils, the Gilyak use, in addition to the

/322 cont./

342 half feet high and five to six feet wide and is interrupted only at
35 the two rear corners of the yurt. These corners (f, f) are usually rounded off, like those in front, and are used for putting away various utensils, chests, and boxes, sleds, and the like. This creates a partition, even though only a very incomplete one, between the two side-benches and the rear bench, which is regarded as the best and most distinguished place in the yurt. Opposite the inner edge of the benches, somewhat above the height of a man, there are crosspoles running between the supporting posts, which serve for hanging up clothing and the like. In the middle of the yurt, between the three plank-beds and only about three feet from each one, is the hearth (g), a platform about four feet wide, twice that in length, and the same height as the benches. It is very simple in nature, in that it consists of only a wooden frame put together with boards, /323/ which is filled with stamped earth. Over the hearth, somewhat above the height of a man, there are several crosspoles, two across the front part and one across the rear, which are borne by the above-mentioned crosspoles put be-
[417] tween the supporting posts. Sticks are fastened to these crosspoles over the hearth and at their lower end terminate in hooks on which the kettles are hung over the fire made in the hearth. In the front part of the hearth three stones (h) are set upright in a triangle and firmly embedded in the earth, on which stands the large kettle used for cooking the soup for the dogs. In large yurts there are sometimes two such large kettles, also serving for human use, incidentally, as was the case, for example, in the large yurt at Tyk, in which I stayed repeatedly and for several days, and where I sketched the plan presented here. The fire is made in the rear part of the hearth, that is, somewhat more in the center between the three plank-beds, serving for heat and for
[415] illuminating the yurt at night. In front of the hearth stands one or
[312] more large receptable, usually tubs (i) made of birch bark, with drinking water, and along the front wall (k), right and left of the entrance, or in one of the front corners (l, l) of the yurt, a supply of dry firewood is always piled up. Finally, at the top, exactly above the fireplace, there is the smoke vent in the form of a longish rectangle that is placed either with its lengthwise

/445 cont./

263 439 few Gilyak are familiar with it (4). On the other hand, they are

4. Mamia Rinsô (Siebold, Nippon, VII, p. 193) says that the Gilyak (Smerenkur) on Sakhalin found the Japanese sugar that he gave them to try very tasty, but did not ask for more of it.

123 On the other hand, they are
263 very avid for Russian sugar; at the time of my stay there, next to tobacco, it was the main object of their frequent and very importunate begging, during which, as a rule, they pushed the children forward and, to arouse sympathy, pretended that they had an eye disease, maintaining that it could be cured only with sugar.
439 Not infrequently they also bought some in Nikolayevsk in order to
252 add it to their dishes, especially to the aforementioned flour-cakes
263 and to those prepared with cranberries or bilberries and the like. They even declared that they would not hesitate to do this to the dishes prepared for the bear festival, if it were available in sufficient quantity, which shows their entirely different attitude toward sugar and salt.

128 To conclude our statements on the food of the Gilyak, there
415 follows here a brief discussion of their most important implements and utensils used for holding the foodstuffs, as well as for the preparation and consumption of the dishes. First, only the ordinary objects of this kind used in daily life will be mentioned, while the special utensils used in connection with the bear festivals will be
312 discussed later at the proper place. As was already stated above,
415 close to the entrance of the yurt there is a bucket made of birch
[824] bark and filled with water, on which hangs a couple of bowls for dipping and drinking. The water for this and for the other house-
[482] hold needs is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke /Pl. XXXIII, Figs. 1 and 2, Gilyak dshamda and kormulk, respectively). /446/ Similarly
415 consideration has been given above to the large iron kettle (Gilyak
179 ormotsch(?)-wunj) which in the winter house is embedded in each of

[See category 116, p. 1013--Analyst]

161 Nikolayevsk.
621 Of the two sexes, there are fewer women, as far as may be judged on the basis of several examples. Thus, among 90 accurately counted Gilyak (1) there were 50 men and 40

1. This count was taken of the population in the houses in which a halt is made along the winter road to Sakhalin, namely, in the villages from Vasin Mys to Chëmi.

women. It has been proved that the same is true among other primitive tribes of Russia. As far as age distribution is concerned, there are not a great many children, but also
163 not very few. Large families of children which frequently occur among the Russian settlers here, are not to be found among the Gilyak. Nevertheless, the birth rate is not so small that one might see in it a cause for a decrease of this tribe. Among 240 persons of both sexes from various villages, I found, for example one-third of them were children of 0-10 years, which just about equals the condition existing in Western Europe.
161 Although nothing has been done in the way of gathering
177 regular statistics on the Gilyak tribe, there is nevertheless no doubt that the tribe has diminished since the Russian occupation of the country. Some villages are now only half as large as they were. We find a repetition here of the same sad phenomenon which we also observe in other countries where civilization and a natural state are contiguous. The more direct causes of this decrease I shall consider below. [RCH: see category 116, p.249]

II. The Country of the Gilyak

133 The lower Amur valley and Sakhalin are mountainous
312 countries. The mountain ranges of the mainland belong to the so-called Tatar range, Sikhote-Alin, which covers the region between the lower Amur section, the Ussuri, and the sea. The Amur whose lower third flows northeastward becomes even more gigantic here than farther up-stream. It is one and one-half versts wide; the depth varies, but even in low water large steamers can travel up and down without difficulty. At Nikolayevsk (60 versts from the ocean) sea-going vessels lie at anchor that do not draw over 12-14 feet [101] but even the largest could enter if it were not for a short, shallow stretch (sand bar). In stormy weather the Amur has such high waves that the river steamers must seek shelter along the shore, and people get sea-sick, just as

133 they do on the ocean. The current in the middle of the stream
312 is torrential. In general the water here is pure and does not have an admixture of particles. (1) It is very soft. (2)

1. The middle section of the lower Amur, on the other hand, at the mouth of the Sungari, contains many earthy ingredients which only gradually sink to the bottom.

2. According to my analyses (Reports of the Commitee of the Medical Society of Eastern Siberia for 1879), the water taken from mid-stream, opposite Nikolayevsk, contains only 0.050 to 0.053 soluble matter per liter of which 0.033 is inorganic. Its hardness is only two degrees according to the French scale.

133 The Amur takes up a great many rivers and brooks from
361 both sides; in many places it forms wide branches and low islands. The general character of the land is that of a majestic wilderness. The mountains along the shore appear partly as bare rocks, partly as green hills; farther inland they are terraced or form chains, and the peaks are generally not more than 1000 to 1500 feet high. The whole region is covered with vast dark green forests. Only here and there the stillness and loneliness of the wilderness is enlivened by the sights and sounds of human or animal life. On high, isolated spots along the shore there are Russian villages surrounded by grain fields and kitchen gardens. Lower down, at the foot of a mountain, insignificant-looking Gilyak villages nestle, surrounded by swarms of barking dogs. Occasionally a noisy steamer hurries by, or a Russian bark
136 or Gilyak row boat glide by. Here and there a motionless heron is seen on the shore, or an eagle floats high up, a fish splashes in the water, or the snow-white body of a dolphin emerges only to disappear again instantly. In general, however, the large animal kingdom is not so frequently revealed to the traveler as he might have expected and as is the case in other regions, - for instance, along the Sungacha, a tributary of the Ussuri.
136 The forests are permeated with the refreshing odor of fir
137 and larch; occasionally the pungent odor of ledum palustre is wafted toward one. The stillness of the forest is broken by

/638 cont./

586 material reasons, which are always decisive to a great extent among the Gilyak, each of the two parties avoids taking the initiative in the dissolution of the marriage.

462 For the most part similar utilitarian considerations lie at the root of the peaceful life shared by the husband and wife and the good treatment which the latter receives from the former. /639/ The Gilyak is much too practical and too intent on the preservation and increase of his possessions not to realize the great usefulness of his wife and to appreciate the tremendous amount of work she achieves through her industriousness, skill, patience, and experience. In the division of labor between husband and wife for their common household, the greater share by far falls to her. In 462 22 general, the man only has to attend to providing the most important means of subsistence. Hunting, catching sturgeon and hausen, killing the seal and dolphin, and trade, and, in particular, the many trips and voyages required for it, [251] make up the field of action that is exclusively his. To be sure, he also does other fishing and, at the time of the mass migrations of the various species of salmon, even does this in a very energetic fashion, but in this the women are of great help to him, and the tiresome work of cleaning the tremendous amount of fish brought ashore, of cutting them up and hanging them on the racks to dry in the sun, falls entirely on them. They also collect, in part with the help of the children, all the winter supplies of vegetable foods inso as they are part of the native flora, the various edible berries, 462 roots, herbs, moss, and the like. In addition, the wife has to tend to the entire household and everything pertaining to it. The single thing that the man does for it directly is to • [313] cut the needed firewood in the nearby forest, split it, and bring it to the front of the house. To carry it into the house as needed, however, is again left to the women, just as they are obliged to fetch the water needed for drinking and cooking -- a task which in winter and in bad weather involves much toil and effort in the villages that lie high above the river. These are, as a rule, also the first tasks of the day,

314

42 posture in rowing. Paunches and hunchbacks, etc. are not
46 to be found, and in general bodily abnormalities and de-
32 formities are much less often found among these savages than among civilized peoples. Their features are not beautiful, although the Gilyak are by no means the ugliest race of men. Their heads are broad and markedly brachycephalic. Their thick black hair, parted in the middle, falls down their back in a braid. Their eyebrows are thick, black and often bristly toward the root of the nose. Their eyes are small, but not conspicuously so, as is the case with some other races. (1) They are straight and slant somewhat up-

1. Thus, in my opinion, the eyes of the Buryats, rather than those of the Gilyak are like slits.

ward and outward. Their color is without exception dark. The cheek bones are moderately prominent, the nose short and usually flat. In women the column of the nose is not pierced as is the case with Goldi women who wear nose rings. They do not have a large mouth, their lips are thick and red. They frequently hold their mouths open, showing two complete rows of strong, white teeth. If one examines their mouths closely one discovers that the incisors are more or less worn down from their pipes. Their beards and moustaches are black, but thin. The ear-lobes of both men and women are pierced for earrings.

2 Their complexion is brownish. Their facial expression is
2 serious; friendly faces are less often found among them than among the Goldi. However, the women have a gentler expression, although their type is very similar to that of the men. They wear two braids which are often tied together at the bottom.

1 Tattooing is not common among the Gilyak. Their bodies,
4 also, are not exceptionally hairy. Their skin, if it does not happen to be covered with eruptions, is very smooth, but usually dirty. Their hair, which they oil copiously, is usually not free of lice. The odor characteristic of the Gilyak is a mixture of smoke and fish, with the former predominating.

6 As far as muscular strength is concerned, it seems to fall
- below that of Europeans, but they have more physical endurance; the women, moreover, are relatively strong. One cannot say that the Gilyak excel in speed [107] and agility of bodily movement. Only in rowing and mountain climbing are

312

312 WATER SUPPLY--sources of water (e.g., springs, wells, rainwater catchment); waters with special properties (e.g., mineral water); waterworks (e.g., dams, reservoirs, settling basins); transportation of water (e.g., containers, pipes, aqueducts, canals); irrigation and drainage systems; construction, maintenance, and regulation of water supply systems; etc. See also:

purga (snow-storm) blows up everything is so completely buried that only those trees can be seen which, at the beginning of winter when the post roads are being laid, are pounded into the ice at regular intervals. Then everything is buried under an enormously thick covering of snow which lies immovable for half a year. During this time the forests are accessible to man only with the help of snow-shoes and dog sleds. Through the stillness of this white solitude the unlovely but energetic voice of the raven is heard; or the stillness is broken by the rapid ringing of a Russian post bell or by the "takh", "takh" which is the Gilyak's signal to his dogs. The raging purgas which last for several days are followed by weeks of cloudless skies when during the day everything lies in a dazzling white glow, and at night the icy heavens are resplendent with bright stars.

The sea coast of the Gilyak country is very picturesque, but hardly charming. From the foam of the breakers up to the peaks of the mountains everything is covered with dark forests, and even the picture of the summer landscape is often clouded with rain and fog which are almost continuous throughout the warmer season. (1) And during the other half

1. The cold arctic current travels past this coast and condenses with the moisture-laden southeast winds.

of the year everything is rigid with snow and ice, so that in winter one can travel with dogs from the mainland to Sakhalin.

This is the general picture of the native land of the Gilyak. There remains for us to add a few details, insofar as these have been ascertained.

With respect to geology, it may be said that argillite seems to occur more extensively, but many igneous minerals also appear. Thus the shores of the De Kastri bay consist of trachyte and basalt. Limestone occurs only seldom, which accounts for the softness of the water. The mountains are rich in metals -at least in various localities gold, iron, and lead were found, and it is well known that on the island of Sakhalin there are large coal beds.

The flora is varied and abundant. The conifers are represented by the fir and the larch, but the pine is absent. Of deciduous trees [104] there are oaks, maple, alder, birch, aspen, elm, among others. There are many berries, especially cranberries, raspberries, and rubus chamae morus.

313

313 LUMBERING--kinds of timber exploited; gathering of firewood; logging op
tions (e.g., felling, trimming, hauling); techniques and apparatus used; s
mills and pulp mills; economic importance of lumbering; organization of
labor and production; forestry science, practices, and policy; etc. See al

Then she pressed tubers of dry shrub into the opening for the eyes and nose of the sivuch and put the head into the kettle.

When the heads were cooked, Xitkun, his son and other hunters started to eat. They were served meat on flat wooden dishes. At the same time they were given a small bottle with salt and a tiny cup containing finely cut cheremsha. While one may eat cooked meat with salt, one must not cook meat or fish with salt. In former times the Gilyaks had no salt. They learned the use of salt from the Chinese. In 1926 I was told in the village Chayvo that the ancient Gilyaks used a solution of ashes instead of salt. I was told the same thing in 1931, in the village Kul. According to my informants the ancient Gilyaks burned boughs and stems of trees thrown up by the sea. They dissolved the ashes of those trees, saturated with the salts contained in the sea, in water taken from a well or river. When the ashes settled at the bottom there remained, as the Gilyaks of Chayvo put it, "water as clear as alcohol." It is this water which they used instead of salt. I brought from the village Kul to the Muzeĭ Antropologii i Etnografii a wooden plate of the ancient Gilyaks, black with age. This plate, which was sold to me by old man Tujun, was specially made for seal meat. In the sides of this "plate" were carved two tiny cups which as Tujun informed me, would be filled with salt water for dipping pieces of meat in it.

On the following day, after the meat was taken off the heads, the Gilyaks prepared them for throwing in the sea. The heads are dumped in the sea by women and not by men-hunters. As we shall see, it is also the women who bring pay to the fire. Xitkun prepared tiny white, thin shavings of qosk-pāks 'rowan.' These shavings are called iugrusps. He handed the shavings to his wife Hemany. The old woman stuck the shavings in the nasal openings in the heads of the two sivuchs and smeared them with cowberry juice. Then she tied the lower jaws to the heads of the sivuchs using stalks of burdock-pas. In a row with the skulls lay jugular vertebrae (mar't) and bone splinters from the broken skulls. The heads were placed on a board. The other wife of Xitkun took the board with the heads and the mug containing the eyes and went towards the sea. I followed her. Standing at [95] the very edge of the water she threw the heads of the sivuch into the sea as far away from the shore as possible. next she threw the contents of the mug into the sea as far as possible and then she threw into the sea the skull

would think that for the man, too, there could never be any lack of domestic work. But these objects are by no means made everywhere and by everyone, but rather at only a few places by expert Gilyak and used for trade (1), so that one need only make a wooden

1. A large portion of them, as was mentioned above (p. 896), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the complete weapon. The situation is similar with respect to bows, which also they buy in the material and use specifically or chiefly by the men. The domestic activities of the men among the Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and to still less time left for smoking, and sleeping.

The domestic tasks and accomplishments of the wife, however, are far from exhausted by what has been mentioned above; for in addition to all that there is still the maternal duties, the care and tending of the children. The Gilyak husband as well as wife find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, but even when he can about to leave on a journey or returned from one, on the other hand, I have often seen a Gilyak man, not to speak of the women, tenderly caress and kiss small children. Every married Gilyak wants as large a swarm of children as possible, and one who has this pride himself on it. One (X Xyi) was boasting in front of me about his many children, but to my question as to how many he had, he could answer: ламгин, ламгин, ламгин, that is, many, many. Mixed in with this joy, however, there is also an egotistical, militarian viewpoint, for in his growing sons he will soon have helpers in the maintenance hunting, fishing, and trading business, and the daughters promise /641/ apart from the bride price they will be a welcome help in the

/704 cont./

described above, for the latter was done after the hind legs of the animal had already been fettered in the cage, but here the bear could make full and free use of all four extremities and its teeth. While the procession halted outside the house, all the ropes and straps required for carrying out the feast were held in readiness. Setting at the moment when the mighty animal stood fully erect, one of the Gilyak threw himself from the front around its neck and embraced it as firmly as he could. At the same moment a second one mounted the animal. Simultaneously several others seized the animal from the rear, pulled its hind legs from under it by means of ropes, and laid it down on the ground. The bear fell on its front paws, but here, too, someone was ready to press them against the ground with a pole and to fetter them. This through quick and concerted action they have the animal so completely disarmed and helpless that in instant, and now the auxiliary ropes needed on its neck-band could be put on in peace and safety. As soon as this was done, all the Gilyak jumped off the bear, all the knots and nooses fastened around its snout and paws with special skill were loosened with one jerk, and the bear again stood there as its claws entirely free and unfettered, except for the neck and body band, roaring madly, whereupon the young boys carried on the sticks, the women in their arms, it was led back into the house and regaled there with finely crushed ice and cowberries /Brickeberen/, whereupon, after a short pause, the same procedure was again repeated several times, that is, the small bear was taken immediately from Jolin's house to another one, but the large bear only after having been led in and out four times, or sometimes only twice.

Immediately after the bears had been removed, the male youth of the village began to carry large and small sticks of alder and mountain ash into the house and to deposit them at the place where the bears had stood, until there was a large pile of them. Everyone who had a knife, except for the women and girls, began to cut the sticks at one end; or, more properly, to whittle them. that is, to make the pointed end of the stick into a kind of

1. The j here is to be pronounced soft, like the French ج.

/704 cont./

Many of them were whittled with the knife on only one side, but most of them on two opposite sides, and some all around; indeed, from some of them very fine and gracefully curled wood-shavings (the repeatedly mentioned so-called catch of the Gilyak) hung down from the upper end of the stick to the lower one. This symbol, which among the Gilyak accompanies all religious performances based on the fear of the influence of evil spirits, such as the giving of offerings to the river (1) conjuring away storms (2), etc.,

2. See pp. 802-804 above.

3. See p. 1088 above.

may not. of course, be absent from the bear festival. This we already see it exhibited over the roof of the house in which a bear festival is to be celebrated and at the same time in the part of the bear cult is to be enacted. We were to /705/ encounter it in more copious masses as the bear festival progressed. For the moment, however, the whole heap of whittled sticks was again carried out. in order to be used on the following day. While the men, young and old, were busying themselves in this way, there appeared a fresh supply of ennep, into which this time they also mixed pulverized fir needles (from Picea ajanensis, Fisch., Gilyak name) as an activity which lasted until evening.

Meanwhile the leading of the bears in and out of the other house, in which the bears were not without disturbance, the Gilyak can never have enough of this entertainment, and they take as timely an interest in all the individual incidents that occur in connection with it as is shown among other peoples at. say, concerts, festive games, or dances with the merry music. which in the bear feast is the Gilyak's only music. Everyone has an opportunity as the head of the one or the other row of bear-leaders, and, as I could by presence intensity, and pressure of mind; the closer he allows the infuriated animal to approach him, the greater the danger to which he exposes himself, the louder is his share of the applause and the greater his fame and distinction among the people. Every detail is followed attentively and afterward

/714 cont./

Toad made out of birch bark.

the gra; beards, as a high post of honor; the women and girls, the boys and youths are excluded, and it therefore proceeds very slowly. Siberian, and, so to speak, solemnly. The place in the kettle in the fireplace was surrounded with a thick wreath of wood shavings, and a similar half-wreath was spread in front of the vent hole. This the kettle was filled with water for it to clinch up water for cooking bear meat, and the fire under the kettle was kindled with shavings and the hatchet, with the latter also used for incense from time to time. Simultaneously a large wooden trough was hung on straps directly under the bears' noses so that it hung about three feet above the floor. The trough was richly decorated with all sorts of arabesques and figures and in particular on one side showed a bear carved in relief and on the other side a toad likewise executed in relief.

The work of the old men proceeded so slowly that it was not until toward evening that they began to cut up the meat of the large bear. Each leg was first placed upon the chopping block, and, as the bears, as though to ask him for their permission to prepare it; and was it cut up and put in the kettle. The cooked piece were fished out of the kettle with an iron hook and transferred to the trough

/716 cont./

begging in front of the bears so that they taste them first. Besides the elders, only a dog remained in the house, and, to be sure, to it appears, only to lick clean the implements used in the cooking and the transfer to the trough.

Early in the morning on the following day (January 28) the old men started their work of cutting up and cooking the meat, which was interrupted only by the usual feeding of the dogs in the house and a rare beforehand with specially decorated animals dragging behind them only the tail of a fox or dog, as was mentioned above. Next, a number of articles were brought in from the storehouse, /717/ All of which were hung or otherwise attached to the bear rack in colorful confusion: pieces of fur and the skin of paws of previously killed bears, the chains on which they were led while alive, dried bear-paws wrapped in birch bark, knives which at the point of attachment of the blade have a bonite of hair from the bear's pelvic region around them, the so-called ninda-dokako of the Gilyak, with which it is clinch to cut anything other than bear meat and so on (see Plate II /To 1351/, Fig. 3), and a number of nicely carved spoons and peculiarly shaped bowls. The latter were put to use immediately, being filled with the broth obtained from the bear meat, which was cooked directly in it with the help of the spoons. This service, used by the Gilyak only when performing bears, is very interesting and deserves detailed discussion.

The bowls called nichrey-ngar or nichrey-ngash, i.e., bear-spoon bowls, by the Gilyak after the bear spoons nichrey, are always carved out of a single, rather thick, good-size piece of wood, which about in the middle or near the one or the other end has either a rather deep or only a shallow oval hollow (Plate I /p. 1250/, Figs. 1 and 2). The former are specifically intended for eating the bear-meat broth, the latter (the same Plate, Fig. 2) for the bear meat or fat. What makes these bowls especially interesting, however, is that sometimes the one, sometimes the other end of the piece of wood, and sometimes both the front and the handle end, are provided with various carvings referring to the bears and the bear festival. The latter are also found in profusion on the handles and sometimes

/718 cont./

even on the lower end of the spoon which are used by the Gilyak at the bear-festival feasts. I succeeded in bringing back to our museum quite a number of bear-festival bowls and spoons which had belonged to the distinguished Gilyak, Stogin in Kuik, and came into my hands only through a lucky accident. At the time of my visit the Gilyak refused any offer, however high, for a similar used in connection with bear feast, with the assertion that such a transaction would be too greatly sinch. If one examines these carvings more closely, one discovers that they attempt to depict the bear in all the various situations and positions in which it is put during the bear festival. on Plate I /p.1250/, Fig. 1, for instance, it is drawn with the neck and body band, on Plate I, Fig. 3, and Plate III /p 1252/, Figs. 3 and 5, attention is called to the revolving ring on the upper side of its body band. Plate III, Fig. 6, shows it eating from the bear spoon; Plate II /p 1251/, Fig. 6, shows how, led on a chain, it defends itself against its attackers, and the same figure, as well as Fig. 1 in Plate III, shows the bear's head in the tilting and later looking down from the rack in the house. The most interesting, however, is the spoon illustrated on Plate II, Fig. 6, not only because it can be regarded as a masterpiece of Gilyak wood-carving, but also because in a case shown about all the situations of the bear at the festival held in connection with it and, in addition, by linking the bear's head looking down from the rack in the house with the toad depicted in the bowl of the spoon, it shows the bear's close spiritual relation of the whale bear festival. These bowls and spoons are always made only during the bear festival, and here in /718/ Tebach two Gilyak set on the floor in front of the bears busily occupied with the carving of such implements.

In the afternoon of the same day new quantities of bear meat were brought from the storage chambers and placed on the floor covered with fir branches in front of the bears. A barbecue, the kettle was filled with water, and the cooking now proceeded more energetically -- but always without any salt, the use of which is strictly forbidden, only in the prepared bear meat broth, and sometimes both the front and the handle end, are provided with various carvings referring to the bears and the bear festival. The latter are also found in profusion on the handles and sometimes

/718 cont./

stagnon lying in front of the bears, and a little to one side, in an unsuitable place, so to speak, where they could not be seen by the bears, quite a number of bear-festival bowls and spoons which had belonged to the distinguished Gilyak, Stogin in Kuik, came into my hands only through a lucky accident. At the time of my visit the Gilyak refused any offer, however high, for a similar used in connection with bear feast, with the assertion that such a transaction would be too greatly sinch. interpretation for this symbolic act in connection with what has been said above other than the following. With the cutting up of the meat, the cooking of the broth, and the eating of the bear meat and broth, but also for all other food during the bear festival,

/754 cont./

826 753 sick and dies, if he does not use the proper means to free himself of the mipitsch. The only means that can help him, however, 755 is a shaman. He conjures up a ldgn (a good god), who removes 756 the mipitsch from the sick person. At the same time a mipitsch 757 carved by the shaman himself or by someone else at the order of (780) the shaman is hung around the patient's neck and must be worn by the sick person from then on to protect himself in the future. A sick man wears a single mipitsch, a woman a double one. The mipitsch are always carved out of wood, especially the vagmipitsch. It is only on the snout-band of the dead bear (see pp. 822 1156, 1162) that a single mipitsch of birch bark may be found. 746 It is made by the women, but the wooden ones are always 824 made by the men, since wood carving of all kinds is an occupation for only the men, while the women are skilled at cutting arabesques and figures out of cloth and therefore also out of birch bark.

753 The ideas of the Gilyak concerning the lizard (mkjingai) are 755 similar to those concerning the toad and snake, except that much 825 less power is attributed to it. It allegedly crawls into the head of the sleeping person and is removed in a way similar to the above by a shaman and by putting an iron amulet-ring (halb) (1)

1. See Appendix 6 /p. 1196 /.

around the head. This ring bears the representation of a lizard on either side, in the region of the temples; in front, closer to the forehead, there is a human figure on either side, supposedly indicating a man on one side, a woman on the other. Finally, at the very front, on the forehead, the laiz bears a frog shape. This is striking, since the frog (dhal) is not regarded as unlucky, is not magi. (Bm. II, pp. 44-46.)

756 30. Gilyak. Amazing, miraculous acts which the Gilyak 554 shaman performs are chiefly the means by which he wins admiration and esteem among his countrymen. The more these acts deviate from the natural course of things, the greater is the reputation of the sorcerer. Such is enjoyed, for example, by the Gilyak

Playing a wooden percussion instrument.

The wooden religious sculpture was akin to that of the Orochi, Ulchi 534 and Nanay. The figurines of bears on dippers and spoons used in the 324 bear festival were finely made and realistic in style. The bear dippers 1071 were often remarkable in their craftmanship. Some of them were carved 746 with pictographs, relating the history of the hunt or rearing of a given bear. The carvings on the dipper handles were also symbolic; they indicated by a variety of symbols whether the bear was killed in a hunt or reared in captivity, whether it was killed in the summer, and so forth.

The musical culture of the Nivkhi was very poor. They played a 534 primitive one-string instrument (t'ygytyg) and a lip jew's-harp (khangai). 1046 During the bear festivals they used, instead of musical instruments, an 871 ordinary log, which the women struck with sticks. 1042

Education was entirely lacking among the Nivkhi before the Revolution. The Nivkhi-Nanay school was opened in the 1890's by the missionary, Protopopov, who was assisted by the Nivkhi.

Protopopov also established the first school, which was opened in the city of Mariinsk; two two others were opened in 1899. By 1905 they were closed for lack of funds. Only a few individual Nivkhi attended Russian schools.

Contemporary Life of the Nivkhi

175 In 1918, soon after the establishment of the Soviet government in the 648 Far East, this area, and especially the Amur Basin and Sakhalin, became the scene of civil war and intervention. Guerrilla units were organized to fight the White Guards and interventionists. The bitter fighting lasted

/350 cont./

197 themselves give a reason other than the scarcity of iron for this. 325 As recently as a generation ago a steel was a valuable thing, /351/ 871 and sometimes an entire clan possessed a single communal steel. 1042 Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in 197 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is 741 the ready products of nature -- fish, fowl, berries, roots; he 18 is as yet incapable of helping nature along and accelerating her 472 creation of foodstuffs. He does not plant or sow, or raise domes- 255 tic animals for meat. This is the fundamental feature of a 18 "savage" state. Moreover, Gilyak traditions of times when 323 water was boiled in troughs by means of hot stones and their 194 memories of wooden dishes coated with clay, and the absence 172 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savagery." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

/447 cont./

302 yi-dhakko already mentioned, several knives of special shape. 412 Thus, to hollow out wood, a knife with a fluted, bent blade of various sizes, the unjir-wen of the Gilyak (Pl. XXXII, Fig. 4), 2 is used; for fine carving, the kydr-dhakko, a knife with a very narrow and pointed blade (ibid., Fig. 3), etc. Finally, among 412 the table utensils of the Gilyak the chopsticks (Gilyak tschakhr) (1)

[192] 1. Presumably borrowed from the Manchurian tschakcha. Among the Olcha: alako.

copied from the Chinese must be mentioned, a specimen of which, from the village of Wasej, is shown on Plate XXXIII, Fig. 6. These owe their origin among the Gilyak more to the imitative instinct, which readily makes itself felt in particular with regard to anything Chinese, than to a real need, because they are practically never found in use among them.

As one sees from the above, all the household and table 445 equipment made by the Gilyak themselves is exclusively of wood 323 or birch bark. Earthenware is not found among them at all; they 322 neither make any themselves nor is there used among them, in spite of their contacts with the Chinese and Japanese, the porcelain made by these peoples, for at most a single piece of it, usually one or several of the small porcelain bowls used by the Chinese for drinking brandy, is kept here and there by a well-to-do Gilyak as an article of value or as an oddity. The fact that pottery, even 323 in its beginnings, is completely foreign to the Gilyak, despite 114 their being surrounded by people skilled in other things, for example, in woodworking and, as we shall see later, at the smith's trade, certainly merits full consideration, and I am therefore permitting myself a few remarks about it. In order first to put their fate itself still further beyond doubt, I must expressly emphasize that despite my long and various stays among them I never saw a piece of pottery of any kind in their households nor did I even hear of any from others. Hence, some entirely different statements in Mamia Rinš's report on his travels on Sakhalin (Krafto) and in the Amur 197 region were all the more striking to me. He found that the earthenware and porcelain of the Gilyak (Smerenkur) on Sakhalin was

/447 cont./

323 similar in shape to that of the Olcha and the Japanese (2). /448/ 114 114 648 [113] 2. Mamia Rinš, "Tôsats kiko" (Siebold, Nippon, VII, p. 194).

322 One might suppose that the traveler was concerned with, not 114 originally Gilyak, but only with imported Chinese and Japanese 114 pottery which he saw among the Gilyak, but this would still not 114 remove the contradiction with my above statements, because Mamia Rinso goes on to say that there were especially many porcelain factories along the Amur (Manšô) near Kidzi (1). This,

1. Op. cit., p. 172.

however, no longer refers to the Gilyak, whose territory does not begin until somewhat below Kidzi, but even among the Olcha, to whom it must refer, and still farther upstream among the Goldi, at least as far as the Usuri, I never saw such factories or any 323 their products. And Maack had the same experience, except that 114 in the Goldi village of Sulbi he saw some earthenware pots among the household utensils of the natives (2). This village, however,

[113] 2. Maak", Puteši. na Amur" /A Journey to the Amur/, p. 143.

323 is in the vicinity of the Sungari, where, as we shall presently see, 114 totally different conditions prevail in this respect. If, therefore, one is to believe Mamia Rinš's report, and, according to my experience, they fully merit it, one is forced to assume that the Olcha, and presumably also the lower Goldi, at the beginning of this century were making pottery and porcelain and sold the products even among the Gilyak as far as Sakhalin, and that the latter were likewise familiar with this industry -- an industry which had been completely lost fifty years later when I explored 323 the Amur region. How this happened will be illustrated as 114 much as possible in one of the following chapters in the discussion 648

/448 cont./

323 of the trade relations of the Amur peoples, and especially of the 114 Gilyak, with the neighboring civilized peoples. For the moment, 648 it will suffice to make the general remark that it most probably was brought by violent seizure and devastation plundered by the Manchu-Chinese government itself for political reasons and to which Mamia Rinso's voyage may even have given rise. Through the devastating blow that the government, feared by the natives, executed, among other things, against the pottery and porcelain manufacturing of the Olcha on the Amur, they were forced back, like their neighbors upstream and downstream, the lower Goldi and Gilyak, to their traditional woodworking industry and were so strongly and lastingly prejudiced against all pottery and porcelain that from then on even articles of this sort made in China or Japan could not find approval and acceptance among them. This destruction of the pottery manufacturing in the lower Amur region, 415 on the other hand, may have prompted the Goldi to take up the 114 mass production of wooden implements, to turn those large bowls 114 322 and plates which are still generally used by the Gilyak and Olcha under the designations aam-ngir and kota, respectively.

Whereas the pottery and porcelain industry was destroyed 323 along the lower Amur by the Manchu, it made rapid and unimpeded 114 progress in southern Manchuria and along the Sungari and its tribu- 648 taries. /449/ According to the notes of the Chinese U-tsien in 1722, the Manchu at that time did not have any earthenware, but only wooden vessels, bowls, and plates (1). With the increasing

[115] 1. Vasil'ev", "Zapiski o Ningutse /Notes on Ninguta/" (Zap. Imp. russk. Geogr. Obšch., Vol. XII, 1857, p. 96).

colonization of the country by the Chinese, however, many pottery and porcelain factories also arose there. Near Sur-mu-tsching in Liao-tong Williamson (2) saw many such factories and various

/449 cont./

323 utensils produced there, some of them of very good qua- 171 were shipped far away, and, according to Barabash (3),

[113] 3. Barabash", "Sungar. ekspedicia 1872 g. /The Sungari Expedition of 1872/" (Voenn. Sborn., 1874, No. 2, p. 351).

one or several of them in every Sungari town. The pot- Maack saw in Sulbi on the Amur probably also came fr Sungari. The fact that it does not go farther down the ever, to the lower Goldi, Olcha, and Gilyak, in spite 323 annual trade voyages to the Sungari, attests all too clea 17 aversion that they entertain against such utensils.

If, from the statements by Mamia Rinš given ab 323 must draw the conclusion that the Gilyak and Olcha, th 17 do not use pottery in their households today, nevertheless they must have been familiar with it in the past, for they 415 it themselves, it may also be gathered from them that 114 means an art practiced since ancient times, but rather 114 learned it through the Chinese and Japanese in relatio 114 He found the pieces seen by him on Sakhalin, as was sa 114 to those of the Chinese and Japanese, and it is highly p 114 the main porcelain factories near Kidzi which he ment 114 under Chinese influence and with Chinese co-operation 114 it was recent and foreign, this art could so easily again 114 altogether among the Gilyak and Olcha amidst the subs 114 favorable conditions, without leaving any trace other t 114 aversion against its products. My view that the mainl 114 was originally foreign to the Gilyak and was temporarily 114 by them from the Chinese only in recent times is also 114 by the fact that this art, as among the Gilyak, it missi 114 was missing up to a short time ago, among all the other 114 Asiatic peoples, with one single exception. Mamia Rin

among the earthenware vessels made by the Eskimo which he saw on the Yukon (Kwichpak), a few of which are illustrated in his book on Alaska, one was obviously modeled after a Russian model. This may have been the case, for since the Russians settled in this country some Russian dishes and troughs were soon unfindable in reached the natives there. Nevertheless, the making of pottery by the Aleutian Eskimo is so way came from the Russians. The latter found it there already, and Dawydof, like Sagaskin, represents the acquaintance with copper kettles and other implements, which the Eskimo owed to the Russians, and considerable late among them the relatively general distribution of pottery vessels of their own manufacture, was which Dall, too, agrees. Finally, also arguing for the great antiquity of the art of pottery among the Eskimo, Nordenskjöld (7) says that the simple and primitive fashion in which it is practiced. the vessels are shaped freehandedly, and therefore are not quite circular or symmetrical (1), and then are smoothed and decorated by means

1. As can be seen from the illustrations in Dawydof's travel account (pp. 214 and 215).

of peculiar and likewise very simple instruments (2). Without

2. These implements are illustrated by Dawydof (op.cit., P. 298).

/451 cont./ 4. (cont.) beads either straight, wavy, and zigzag lines, and, in general, the ornamentation

essentially wholly similar to pieces of this type found in other regions under similar conditions, here, too, belonged to an early period in the history of the Gilyaks, and, in particular, to a relationship with the present. Nevertheless I must add here that the articles found along the Petchi River (see /453/ note 3 on p. 490) were not to many Gilyak (?) to find out from them

1. As is expressly pointed out in the above-mentioned periodical (Vremeshnoe Pomor'e)

whether they will had similar tools, or why tradition referring to them — they were completely unfamiliar to them, however. Lopatin continued the idea and Czech in Tarakha above the stone tools and potsherds found there. The latter, to be sure, declared that dating the ware the Aino had gone into hiding in the earth after the arrival of the Gilyak in the Amur region, but the Nivx themselves were totally unfamiliar with the stone tools. On the other hand, the old men of Tymovsk knew of a legend which another than jects in a people called Tsisei who formerly inhabited these regions but later moved to the Amur. The remains of the ancient Tsisei now lived degenerate on the Gulf of Petlance, near Cape Tatarovo, and of other places on Sakhalin are also ascribed to them. Lopatin found this legend throughout part of southern Sakhalin through which he traveled (5).

5. Since the alleged name of the people from whom, according to the legend, the stone tools and old potsheres are supposed to come actually only means Tungusic, it can be seen from the above-mentioned statement by Mamin Sibirsk concerning the pottery of Tymovsk (7 Tymovsk, 1 E-5, Esc.then.pan)

/200 cont./ Manchu reached them also and installed elected tsiseis. There was such a seasons, for example, in Tangis. It was from the Manchu that the Gilyak learned to obtain all those objects which they could not produce themselves.

Gilyak (?) Iron was known to them, however, in the earliest times as the most sacred method of obtaining fire — a method used in ancient times by the ancestors. All the other hollowwage are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but the most consequence these borrowings have inevitably brought the Gilyak with culture... But let us return to that on which their civilization stopped.

The Gilyak, in their primitive state, the basic food of the Gilyak is the ready products of nature — fish, fowl, berries, roots; he is the only one that knows how to catch fish and to obtain and accelerating his creation of foodstuffs. He does not plant or sow, or raise domestic animals, or hunt game. This is the fundamental feature of a "savage" state. Moreover, Gilyak traditions of time when the Gilyak was ignorant of hoeing and sowing

/568 cont./
with the latter probably extend back into earlier times than those with the former, in that, as the latter do not show the Golds (in the other groups (i.e., before they came to the south region of the Amur.

1. See p. 214 above /unrevised/.

they already had a homeland on Sakhalin, where they were directly in contact with the Ainu and thus also indirectly with the Japanese -- this circumstance points to the latter as the source of the Gilyak's knowledge of iron and other metals, and as their teachers, even though only indirectly, in the minh's art. And a series of facts corroborate this in this view.

If the use and the working of iron had come to the Gilyak from the Chinese, that is to say, down the Sungari and Amur through the intermediation of the Manchu and Goldi, one would expect in the opposite direction, going upstream from the Gilyak, an increase in skill in the forging of iron. Actually, however, in the direction mentioned there is not only no increase, but, on the contrary, a decrease in the fineness and neatness of the metalwork. For the Chiba, to be sure, the Gilyak actually into skilled ironsmiths, and especially armorers, than their teachers, the Gilyak, but far behind the Golds and the Chiba in this (b).

2. The Manchu opinion also pen his Yutenb. ia Amur", pp. 175 and 207).

though they are extraordinarily skilled at many other things, such as boat-building, sewing, embroidery, and plaiting. In this connection, they do something different from the Gilyak in forging in that they use only one bellows, and also accumulate iron are not insignificantly /569/ different, for instance, an anvil shaped quite differently, and the like (1). Finally, it is not in

1. See Maack, op. cit., p. 207 and Plate II, Figs. 11, 12, 13, and 24.

be overlooked that the Goldi designation for these things have nothing in common with the Gilyak one. All this seems to suggest that the Goldi obtained their smith's art from a party, that they owe their knowledge of iron and its treatment to the Japanese. Exactly the same manner of forging iron as among the Gilyak is also found among the Ainu on Sakhalin. Mamia Rinsh devotes a special section to this subject in the description of his journey through Krafto (Sakhalin) and a part of the lower Amur region (b). In his time (1808) iron-forging was

2. Siebold, Nippon, VII, p. 187.

practiced only very little by the Ainu on Sakhalin, indeed, only here and there by a few old people, because the iron was then imported from Japan, which naturally were of much better workmanship, and already had been generally disseminated among them. Prior to this, however, they devoted themselves to manufacturing what they needed in iron weapons and utensils themselves, and, to be sure, out of pieces which they obtained by trading with the Japanese in Sakmarai. Mamia Rinsh describes their procedure in forging the iron, which again corroborates what we can described above for the Gilyak; he mentions the two bellows made out of sealskin or fish skins and lying on the ground side by side, the bellows tubes covered or weighted down with earth up to the common opening, the simultaneous participation of two men in the work, etc. Subsequently (b), in speaking of the

3. Ibid., p. 194.

Sternenkur (Gilyak) of Sakhalin, he expressly states that they have the same method of forging iron as the Ainu. To be sure, despite the fact that he further notes that the Ainu make the

/569 cont./
cutting edges of their weapons in Japanese fashion and that in general their method of forging is "approximately the same as in Japan," still Mamia Rinsh does not draw the obvious conclusion that the Ainu have to thank the Japanese for their knowledge of iron and other metals and the working of them, and, indeed, he maintains instead that they did not learn their manner of forging iron from any other people, but rather seem to have invented it themselves. This should not surprise us, however, because the careful traveler gives in his short and sober report only what was seen and experienced by him and may even have been of categorization and conclusion. It therefore even more establishes beyond doubt that the spread of iron and the art of working it took place from Japan to the Ainu of Sakhalin and from Sakhalin and Japan to the Gilyak in a very ancient period, a period which is too far back for any accounts or traditions concerning that event to have been preserved among the Ainu at Rinsh's time.

/570/ Finally, the fact, too, that the Gilyak iron utensils and weapons, bowls, spears, and the like are more like those part of the same form as those of the Ainu and that the figures engraved on them are more like those of the Ainu than those of Japan are often reminiscent of Japanese pattern -- as was noted above (1)

1. See p. 597.

with reference to the decorations on their clothing and on various wooden and bone implements -- this fact stands in agreement, to a least not in contradiction, with the Japanese origin of the familiarity of the Gilyak with iron and the working of it. There is only one thing that might appear strange at first glance, namely, the fact that the greatest skill of the Gilyak in forging iron is not found on Sakhalin, but on the Amur and therefore in that section of their habitation area which is the farthest from Japan and, on the other hand, is most open to Manchu-Chinese influence. This can be explained, however, on the basis of political conditions. According to Mamia Rinsh's testimony,

/570 cont./ According to Mamia Rinsh's testimony, the Ainu on Sakhalin (Krafto) lost their skill at forging iron more and more and finally practically gave it up entirely as a result, in part, of the Japanese prohibition against forging. We must add that this step backward by the Ainu certainly had another, deeper reason, which the Japanese traveler probably would not or could not mention -- the oppressive bondage in which they found themselves in relation to the Japanese, connected with merciless exploitation by the latter, under which they were bound to sink more and more into poverty, misery, and indolence. The Gilyak of Sakhalin, on the other hand, were in a more favorable situation because of the greater distance of their sites from the Japanese. Thanks to these circumstances and, at the same time, their greater energy and strong character, they were able to remain independent of them. Indeed, fear of the Japanese and the sad fate which had befallen their neighbors, the Ainu, may have had a salutary effect upon them in regard to the more northward on Sakhalin and, finally, even to emigrate, or, in consideration of a more distant past, perhaps accounted also, said, to migrate back in large part to the opposite mainland (2).

2. Concerning this emigration or migration back by the Gilyak from Sakhalin to the mainland, see pp. 214 and 247 above /unrevised/.

At any rate, the political independence which they were able to maintain on Sakhalin with regard to the Japanese and in the Amur region with regard to the Manchu-Chinese was a powerful lever for the preservation and increase of their well-being, as well as for the further development of their material skills, among them the art of metal forging, and all the more to the more abundantly the springs of their subsistence flowed, as was especially the case along the large and fish-rich Amur River.

Like the Ainu and Gilyak, the third people on Sakhalin, the Oroch, also owed their knowledge of iron and the working of it to the Japanese, though they did not obtain it directly from

/572 cont./
their eyes, of course, were accustomed with the sea of great waves, so that they could not see the other bays, inlets, and the like which they themselves (the Ainu) prized so highly and paid for so dearly to trade with them, and, indeed, much (the) so the case can be seen from Stellar's information that the Kurile Ainu gladly gave 20 sea beavers for an old Japanese saber and thought that they had made a very good trade, but were much taken aback only on festive days or during festive processions and made "the strangest figure during the welcoming" with them.

For the moment it must remain undecided whether the above-mentioned iron needles, which came from Japan to the Kamchadals, were brought by Japanese sailors, or from the latter to their neighbors, the Koryak and the Chukches, before iron needles were then brought by the Russians. At any rate, three Paleo-Asiatic peoples, the Ainu, the Gilyak, and the Kamchadal, received iron from Japan, and this was a central occurrence of the geographical history of Asia, in consideration of the vast number of the peoples, for just to the north of Nippon, the principal island of Japan, is the Asiatic continent, the region of the Ainu (1).

1. The view advanced chiefly by Ph. Siebold that the Ainu formerly also inhabited the north of Nippon (see above, p. 150) has recently been attacked by Braun ("Die Bevölker der japanischen Inselwelt. /"Ie Inhabitants of the Japanese Island-Realm)" in the Jahrescber. der Frankfurter Verein fir Geogr. u. Statist., Years 48 and 49, 1885-1886, 1886-1887, Berlin, Part, pp. 5 ff).

which, in turn, on the one hand, leads to the half-Gilyak Sakhalin, and, on the other hand, via the chain of the Kuriles, to Kamchatka. In speaking of the former (on Sakhalin) at the time when these peoples lived farther in the interior

/572 cont./
of the continent (2), as may be presumed for various reasons,

2. See p. 247 above /unrevised/.

they still had no knowledge of iron and obtained this only after they had become peripheral peoples, that is, after they had been pushed to the sea-shore, and had taken up fishing and hunting on the islands and peninsulas lying in front of it and had thus arrived in the vicinity of Japan (3).

3. The question as to the origin and development of the Gilyak, which, of course, outside the scope of this work.

If we now return to the Gilyak after this digression, this is the place, in concluding the above discussion of their weapons and of hunting on land and on the water, to mention a few other pieces of their armament. First to be mentioned here are two long very valuable and very estimated 2.5 meters long, which happened that the owner of such a shield has pawned it to a Russian merchant, but as soon as he got some money, he bought back his property.

K. Marriage and the Bearing of Children

Not much can be reported concerning this, and, indeed, summarized, and it is even rarer to find married men with more than one or two wives, for the reason a certain amount of means is needed, there are too few women. The beginning of a [126] marriage requires the payment of a ransom (kalym). This dare not consist of money, but of certain necessary items-weapons, dog sleds, etc. An average kalym amounts to 200-300 rubles. There are no special marriage ceremonies, but the wedding celebrations are much alike to be given by the bridegroom last a rather long time,-a week or more. Besides millet, fish and tea, a great deal of alcohol is consumed.

A various, although not altogether unique custom are marriages between four and five year old children. As soon as the parents reach an agreement, a boy and girl, the one known and wed. The father of the boy pays the kalym and takes the girl home, in order to bring her up with her "husband"; sometimes, however, she remains a few more

especially well-worked pieces and which causes them neither to use such pieces nor to sell them, but rather /567/ to store them away carefully as capital, so to speak, and to bequeath them, or at most use them to buy a wife, whereby they change owners, to be sure, but still remain in the realm of the Gilyak. Moreover, in view of the inadequacy of their tools, much time may be spent on the manufacture of each individual piece of this kind, and, as is always and everywhere the case, not everybody may have a great skill. At the time of my stay in the Amur region, the village of Chylk (1), located on the Amur directly above

1. On the ethnographic map of the Amur region appended to this volume, the location of this village is indicated, but its name is not entered.

Patt, was regarded as the place where the most beautiful spears, lances, and knives were manufactured, and the specimens illustrated on Plate XXXI /see p.1011/, Fig. 2, and Plate XLVI /see p.1026/, Figs. 4 and 5, which belonged to the wealthy Gilyak Judin in Tebach and his sons and which I acquired from them for a high price in exchange for various wares were said to have been made there. Unfortunately, I passed this unattractive settlement consisting of only two houses at a time when I as yet knew nothing about its industrial importance for the Gilyak. In the summer of 1855, the Russian settlement of Michailofskoje was founded directly beside it, indeed, almost at the same spot (2), which presumably later prompted the Gilyak to abandon

2. This appears on the map of the Amur region which is appended to the first volume of this work.

their home there.

114 325 326 192

On the other hand, I did have the opportunity of watching the Gilyak forge iron in the village of Tyk on Sakhalin. The smithy was set up in the very rear of the earth yurt, opposite the entrance. For this purpose several boards from the sleeping benches had been removed there, so that the earthen floor underneath was exposed. Here lay two longish bellows (Gilyak chigr) made out of sealskin, whose long tubes converged toward the ends into one common tube. In front of its mouth was set up a semicircular block made of hard, dry clay (Gilyak chugn), which on its lower side was provided with a cutout, the size of which corresponded exactly to the mouth of the bellows tube, and immediately in front of it was the fire, into which were thrust the iron pieces to be forged. In order to keep the bellows tube immovably in place, the two arms were weighted down by several longish and narrow boxes such as are used among the Gilyak, placed on top of one another. A youth worked the two bellows, alternately lifting the one and lowering the other, and another, adult Gilyak, with a pair of tongs (Gilyak watsch) (3), took the

[104] 3. The w is pronounced here like the English w.

iron pieces to be forged out of the fire in order to hammer them on a nearby small, triangular, iron anvil (Gilyak mik). These tongs are of varying sizes depending on the size of the iron pieces to be wrought. Made in my presence were a blade for an ordi-
[293] nary knife used for cutting wood, and the like, a so-called yi-dshakko (4), and a second, finer piece, a so-called kessj-kessj,

4. See p. 590 above and Plate XXXI /see p. 1011/, Fig. 4.

that is, one of those chains, sometimes rather complicated /568/ which, equipped with various small pendants, an iron pipe-cleaner, a steel for making fire, and the like, are worn at the belt by the

/568 cont./

325 326 [531] [435]

For this type of work among the Gilyak, in addition to iron (Gilyak wytsch), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass (Gilyak tussj), and silver (Gilyak totta) (2). The more of the

[192] 2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make orna-
[439] ments, such as rings, ear pendants, clasps, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to use for their purposes (3).

[436] 3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

[174] The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is an art practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg
325 stands in agreement with this. Undoubtedly, however, they have
197 borrowed this art from one of the two civilized peoples of East
174 Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relatic

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to 30 meters long. The lykh was lowered into the water; the hunter hid himself nearby in his boat or on the shore. When he caught sight of his quarry, the hunter carefully directed the lykh at it and quickly drove it into the animal.

324 As compared with its role among other Amur peoples, hunting played a 362 smaller part among the Nivkhi. The hunting season began in autumn, after 22 the end of the fish-runs. At this time bears come down to rivers to treat [184] themselves to the delicacy of fish, and the Nivkhi awaited them with bows or guns. Sometimes they set crossbows for them. In winter, they hunted bears with spears. The bear season was followed by the sable-hunting season. Sable and certain other fur animals (otter, lynx and marten) played an important part in the Nivkhi economy. The Amur Nivkhi went out every autumn in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This was due to the abundance of sable on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees which served the sables as crossings.

324 The main weapon in hunting was the gun, which in the early 20th century [177] replaced the compound Nivkhi bow with its horn covering. However, the bow [178] was preserved in the bear festival and in children's games. Squirrel and foxes were hunted with dogs. Crossbows were set for both small and large animals.

241 Agriculture already began to appear among the Nivkhi in the middle of the 19th century, when they first learned to plant potatoes. Individual Nivkhi had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in some of the villages, who reforged Japanese, Chinese, and later Russian metal articles for their own needs; they made knives, straight and curved, adapted to wood-carving; arrowheads, tips for harpoons, spears, and so forth. The smiths used double bellows, an anvil and hammer. Pieces of massive chains preserved from the past speak of the high skill of the old smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The 887 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these 462 occupations, including tackle and means of transportation, the preparation and transportation of firewood, and blacksmithery. The women processed the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and ornamented clothing, made birchbark utensils, gathered plant products, did the housework and took care of the dogs.

By the time the Far East was Sovietized, commodity relations were quite 177 strongly developed among the continental Nivkhi. The old forms of collective 433 production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in 22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola 262 took the place of bread. Meat was eaten rarely. Food was prepared with

462 takes trips on various business matters, and so forth; he also takes care of fishing. The woman spins, makes nets and clothing, cooks, takes care of the children and the dogs.

286 Weaving is entirely unknown to the Gilyak, artificial ma-
326 terials, such as twine and needles are bought; the latter,
463 moreover, they formerly fashioned in a very primitive manner. In general it can be said that every Gilyak man and woman knows how to do all the work necessary for their existence, although not in the same degree. For instance, with respect to metal work: everyone knows how to make a knife, not everyone can make a hatchet, and only a few, finally, concern themselves with the making of a jew's harp (to be described below) and the more intricate weapons, as for example lances with silver decorations.

372 This is the place for us to say something of fire-making. The Gilyak customarily wears a pouch on his belt, containing flint, steel and tinder. The birch fungus is used as tinder, flint is found in abundance on the banks of the Amur. If they should lack fire tools they make fire, just as other primitive peoples do, by friction. A dry stick, on both ends of which is tied a bit of fungus, is put into a groove on a block of wood; one person holds the stick upright, another winds a string around it, takes the ends of the string in his hands and makes a sawing motion back and forth. Usually fire is produced after a half hour.

IX. Weapons

411 The Gilyak customarily carries no other weapon except his knife which is seldom used for defense. The knife consists of a pointed blade and a wooden handle. The blade and half the handle are carried in a leather sheath which is worn on the belt. To the actual weapons belong lances, bows and arrows and at present also the gun which many of them have obtained.

The bow is made of wood but has an underlayer of whale bone which is glued to the wood with fish glue. They like best to use ash wood (frax. mandshurica). On the inner, i. e., the whale bone side not far from the ends there are two [125] small grooved strips for the bow string. The unstretched bow is bent so that the whale bone faces outward, but in use it is on the inside, otherwise it might be damaged. The string consists of intertwined sinews of rope. It requires some effort to stretch the bow, and the shot is powerful. The arrow has three small feathers at one end, the other end is somewhat thicker and has an iron point which is barbed, but

2. (cont.)
Finnish Languages/, Helsingfors, 1875, p. 105). Gradually, however, it became common among them for all the dwellings of same, of whatever kind they might be, in contrast to the log or beam houses of the Russian peasants (Russ.: izba) or to other European houses, and one also often finds it used in this wider sense in the travel accounts referring to Siberia. Accordingly, the Russians in the Amur region as a rule call the Gilyak winter-house a yurt, and this term is used in the same sense in this work.

342 house or Chinese winter-yurt. The earth yurt, toryf of the Gilyak, is built exactly on the pattern of a tent: in actuality it is nothing more than a more or less spacious, immovable tent half sunk into the ground and roofed over with beams. If there is to be such a large yurt of this kind, a hole about 20-22 feet square and about 3-4 feet deep is dug in the ground; its walls are smoothed or, at least the upper part, covered with thin beams. Around it there is erected a pyramidal /322/ roof slanting upward evenly on all sides, which consists of thin beams placed close to one another and resting on four crossbeams, which, in turn, are supported by four supporting posts (a) inside the yurt. /Illustration appears here./ Only at the peak of the roof is an opening left to serve as a smoke vent. In order to make the roof airtight, it is covered on the outside with dry grass and soil. In the autumn when snow falls on it, the whole yurt from the outside merely looks like a snow-covered hill slightly blackened at the top by the rising smoke. The entrance (b) is found on the side of the yurt which is away from the prevailing winds or is most protected from the wind. It does not lead directly into the yurt, however, but rather into a quite long, low, gradually descending passageway (c), likewise roofed over with thin beams or tree branches and dry grass, in which, at both sides, either a few household utensils are kept or the place for the dogs is

1. This plate is to serve at the same time to illustrate the house decorations customary during the bear festival and some of the entertainment going on in front of it, which will be discussed later. ⁂

[335] The walls consist of thin, horizontal beams, which are not joined at their ends, but are pointed and fitted into the lateral grooves of a few thicker, upright beams. On the transverse walls, which rise higher, and especially in the middle of them, these vertical beams are of a considerable thickness. The gaps between the beams are plugged with moss and daubed with mud on the outside. The large, rather flat roof, which in winter has to carry a considerable burden of snow, requires very complicated timberwork for its construction and support. /Illustration appears here./ It has a regular roof framework made up of longitudinal beams and crossbeams. The ridge is supported, in addition to the central, upright beams of the two transverse walls (see Pl. XI), also by two thick, towering posts in the interior of the house (a) on the accompanying plan). Sometimes, instead of one post, two standing not far apart rise in each place. Similar, but much smaller and thinner posts (b) sometimes rise up here and there at the sides and, together with the two nearest vertical beams of the transverse wall, serve as supports for the middle part of the roof, and in the lower part it is supported by the longitudinal walls of the yurt. Longitudinal beams and crossbeams in turn run here and there between the towering posts in the interior, and similarly to the upper edges of the longitudinal walls -- a framework that /327/ serves to connect the walls to one another and thus to steady the walls and keep them upright. In addition, the lower part of it, up to a little above the height of a man, is used for the storage of various articles and for hanging up clothing, and so forth. On our Plate XI one sees the ends of the aforementioned longitudinal beams at the transverse wall, as well as at the ridge and the side edges of the roof, project out quite far, whereby the side beams of the latter intersect each other far out at the gable

326
[411]

At various places in the foregoing, mention has been made of the iron utensils and iron weapons of the Gilyak, in the course of which we have come across, especially among the latter, specimens of very artistic workmanship. This is therefore the place to inquire into the origin and eventually into the manner of the manufacture of these objects. The circumstance that the Gilyak do not use any iron in the exterior or interior construction of their houses, and likewise in the making of boats, sleds, etc. always use only wooden pegs instead of iron nails to join the individual pieces together, does not lead one to expect them to be masters in the craft of forging, and at first glance suggests the conjecture that the numerous and in part neat and artistically worked iron utensils and weapons found among them are of foreign origin. Nevertheless, this is by no means the case. Even in the earliest reports they are described as skilled armorers. During his captivity in Siberia at the beginning of the previous

/17 cont./

194 Thus, it is indisputable that the Gilyak are relatively late arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time cannot be considered very ancient, that, strange as it seems, the Gilyak arrived in their present territory from more northerly areas closer to the Arctic Circle. Indeed, some of the peculiarities of Gilyak life seem to be clear survivals from a period of residence in
174 a colder climate. The most typical proof of this kind is a remnant
171 connected with their winter abode -- the dugout. The Gilyak dug-
342 out is built in the manner of the Kamchadal. But while there is no door in the Kamchadal yurt, because of the severity of the arctic winter, and its function is performed by the smoke opening, among the Gilyak, due to the lesser severity of the winter, the dugout has a passageway from which a low, sliding door leads into the yurt.

342 There are also times when the smoke opening in the Gilyak
196 yurt once again performs the function of a door as among the
178 Kamchadal. This is during the days of the bear festival, when the furthest echoes from the most remote antiquity come to life from the mist of millenniums, when a ritual which has not changed for tens of centuries is observed with reverential strictness. Then there returns the memory of the smoke opening, which at one time served as the only entrance into the yurt; through this opening a Gilyak with the skin and the meat of the bear killed during the festival descends down a pole which is specially set up for this occasion. At the end of the festival all the accessories of the ritual, as well as the bones of the bear, are carried out of the yurt through the same smoke opening. The violation of this ritual is regarded as the greatest sin. Those Gilyak who have adopted the Manchu
[199] yurt, where there is no smoke opening, are forced to open their windows of fish skin during the days of the festival, in spite of the February frost, so that in this extraordinary /18/ way they can take the sacred relics in and out and thus, albeit approximately, perform the ancient ritual. That the fact cited by us is actually a
[192] remnant of their way of life is clearly proved by the fact that the very concepts for "enter" and "exit" from the yurt are expressed in Gilyak by words whose literal meaning is "dive in" and "dive out"

342 /18 cont./
198 (kuzind and jugynd), which is fully consistent with the manner of
178 entering and leaving through the smoke opening.
192

I shall not at this point speak of any other aspect of the
171 arctic way of life. I shall mention only the remarkable fact that
174 riding on dogs (we encounter it among the Yukagir, the Chukchee,
492 the Eskimo, the Aleut, the Koryak, and the Kamchadal) is undoubtedly a characteristic peculiarity of the purely arctic way of life adopted by the natives of the Amur region, the Ainu, the Goldi, and the Orochi, from the Gilyak. The Gilyak term "tu" -- dog sled -- became the property of both the Ainu and the Tungus tribes. The priority, as it were, of the Gilyak in this respect is clearly revealed in everything. The Ainu and the Tungus tribes (the Goldi and the Orochi) have adopted from the Gilyak not only the term and the principle of conveyance on dogs, but also the details of building the sled, the ways of sitting on the sled (astride, with the feet on ski along the sides of the sled), the harness of the dogs, and driving them. It is remarkable that among the reindeer Chukchee, among whom dog-raising is preserved only in legends, the Gilyak way of sitting on the sled (astride) has been preserved to the present. The same way of sitting was habitual among the Kamchadal as well.

In connection with this hypothesis, it is interesting to compare a very widespread legend.

173 Among the numerous legends that I have collected about
174 the origin of the Gilyak clans, I have frequently encountered a
133 legend about how this or that clan came to Sakhalin on the so-
[614] called "hovykh." By "hovykh" the Gilyak mean everything that is carried on the current of a river or sea, for the most part clods of earth or tundra turf broken off from the bank, and also floes of ice which are carried on a sea current. One such hovykh is still pointed out on the eastern shore of Sakhalin in Nyyvo Bay, where it formed a minuscule island opposite the settlement of Takrvo.
[614] It is alleged that a part of the clan now living in the settlement of Tangi on the western shore appeared on this hovykh. There is nothing impossible about conveyance on a hovykh. It not infrequently happens that during the spring hunt for seals a sudden

/27 cont./ In
22 spring, with the seals and the first fish that travel in masses upstream to spawn, the koryushka, herring, the Gilyak is again revived, and in the course of the summer months in the expectation of the autumn catch he again begins to make visits and dolce far niente.

574 In speaking of guests I cannot fail to mention a peculiar
252 festive dish and the favorite food item to which Gilyak guests are treated -- the so-called mos'. It is prepared from a sticky broth of fish skins, seal fat, berries, rice, sometimes with the addition of small pieces of yukola. All this is mixed together and cooled. Sometimes, to add color and flavor, a solution of white clay is added to the mixture. Without any fastidiousness, the boiled fish skins are squeezed out into a trough by the dirty hands of the Gilyak women, and for more flavor the small pieces of yukola are first ground with the teeth and spat out with the saliva into the dish...

342 The exterior living conditions of the Gilyak are very simple.
354 Only in some places closest to the Amur have the Gilyak adopted
352 the Manchu type of winter dwellings, which, by the way, are also
[197] very primitive. In form they are large sheds /28/ built with poles and spars, in which large pipes made of stone or wood and smeared with clay, and connected at the openings with the stove, are laid on the floor along each wall. Laid out over the pipes are plank beds, which are always heated by the warmth of the pipes. The smoke of the stove goes out through an underground passage into a high, vertical pipe which rises straight up from the surface of the ground. The role of this pipe, which resembles those on our factories, is played by a hollow tree. In the middle of a yurt there is a high rectangular scaffold on which the packs of dogs are let out when they are to be fed. A more primitive yurt is a dugout, which is half in the ground and covered with poles and spars smeared with clay or covered with earth. The entrance from the passageway is through a low door along several steps. The hearth is in the middle of the yurt and is surrounded by passages between the plank
[132] beds; over the hearth is the smoke opening. In winter, even in the yurts of the first type, it is sometimes so cold that the mercury in the thermometer freezes, and with the least wind the yurt becomes
352 full of smoke. One sleeps on the plank beds with the head toward
516 the hearth and on skins or quilted bedding; under the head there are

/28 cont./
352 roller-like pillows stuffed with hair or feathers. The favorite posi-
[516] tion of the Gilyak is either to sit in Turkish fashion or to lie
[492] sprawled out on his plank bed. In the depths of the plank bed are placed boxes with valuables, Chinese silks, robes, expensive spears, furs, and other things that play a role on the solemn occasions of one's life: when a beloved person who has died is sent off on the long road to the settlement of the dead; when a daughter is provided with a dowry and sent off to her husband's house; when it is necessary to pay ransom in affairs of vengeance, or to pay the bride money for a bride bought for a son or brother, and on similar occasions.

342 The summer dwelling is a hut placed directly on the ground, or a pile structure made of spars and poles.

411 The weapons of the Gilyak consist of a bow, already beginning, by the way, to go out of use, a spear with a long tip and frequently adorned with skillfully made silver inlays, and of late a gun, with which he has already become familiar. In addition one can mention crossbows of various types and a harpoon for hunting sea animals, which is attached to a very long, sectional shaft, several meters in length.

492 As the means of transportation, sleds serve in winter, boats
[501] in summer. The Gilyak dog-sled is in its way beyond perfecting. Being about two meters in length and about 30 centimeters in height and width, put together from slender birch bars with /29/ a light binding in the seat, they are so light that a person can lift them with one hand without any difficulty, and at the same time they are so sturdy that they can carry a weight of a quarter of a ton; in elasticity and sturdiness only the ancient Kamchadal dog-sled can compare with them.

Overturned, runners up, they have the shape of a flattened segment which touches the ground with the smallest part of its surface. Because of the small area of friction, they are very light when in motion, are easily carried over difficult places, and on a smooth road, and especially on ice, they glide like the
492 best English skates. The manner of steering them is very original.
493 Because of their very small width, they are very unstable and lose their balance at the least unevenness. Therefore, the

/30 cont./
221 purchase fish, while in many places (for example, on the Ty the inhabitants set out in whole settlements to travel several h dred kilometers to the seashore for the spring seal-hunting, o to return half a year later for the fall run of fish in their nativ
574 places. The Gilyak likes to travel, however, even without
517 serious reasons for it. To make visits, receive guests, arrang
[484] celebrations, and live gregariously are the greatest pleasures
[157] the Gilyak. Gloomy and stern while alone, he is transformed society and becomes playful, gay, and garrulous.

342 In the north, in winter, between 30 and 40 people live
159 the big yurts of the Manchu type. It is here that sociablenes which is inherent anyway in the conditions of the social frame
128 work of the Gilyak, is cultivated. Now, however, we must l the external aspect of the life of the Gilyak and pass to its in ternal structure, with whose unique peculiarities I intend mai to acquaint my readers.

III.

601 Kinship System. Marriage Norms and Their Influence
171 on the Family-Clan Structure.
174

Of all the peculiarities of the Gilyak way of life nothin characteristically distinguishes them from the surrounding nat alities as their classificatory system of kinship and the rules t regulate their sexual relations and marriage. In this respect Gilyak stand equally far from their southern neighbors, the A and from the Tungus tribes that surround them. The Ainu are only nationality of the Priamur krai who have preserved featu
[611] maternality /materniteta/. The Gilyak family and clan are
[614] patriarchal institutions. As for the Tungus tribes, although t
[595] classificatory system of kinship and certain characteristics of marriage analogous to those discovered by me in 1891 among Gilyak were discovered by me among them, a careful compa of this institution among the Tungus tribes and among the Gil leads to the conclusion that they /31/ belong to quite differe

252 their mouths and chew it. Each person spits out what he has
264 chewed into an individual small basket made of birch bark.
415 The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

343 Gilyak villages lie along the river banks in low places
361 which, however, are usually not reached by flood waters.
417 The houses stand in a row, usually three in number, seldom 12 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

> 1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened!

333 Their house (2) somewhat resembles a common farm house,
342
354

> 2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes weighted with stones, to offer resistance to the wind. Sanctifying the house. On the eve of sanctification, on the day of the sanctification, on the setting of the sun, a reliable man must make his way there and be attentive for a cracking sound or streaks of light.

If a cracking sound is heard during the sunset, or purple streaks of light are noticed, this is a bad sign. If the cracking is at dawn or the streaks of light are bright light -- this is a good sign. The bad sign means that not a real "master," but a devil -- kins has settled in the house. Then the shaman must be called, and he makes a chihinyr chihinx, a grass figure, and drives out the demon. A real "master" is fed two times -- in autumn (cleaning) (I) and another time when one wishes. They

1. Evidently speaking of the cleaning of the hearth by feeding the "master" of the fire.

feed all the posts, the door posts, the threshold, the matrix, the stone under the threshold near the door, where the old man or the old woman lives, guarding the house against the entering of the evil spirit.

/318/ Driving out the evil spirit takes place in the following fashion: a grass figure -- chihinxi, on three legs, is placed in the middle of the yurt. A man holds it by a string tied to his hand; in his other hand he holds a club. A shaman shamanizes with a tambourine. The evil spirit must hide. The shaman enumerates the walls, boxes, and various things in the yurt from which his kejihn must drive out the evil spirit, and he does not mention only one corner -- it is there that the evil spirit is hiding.

The shaman then says: "gu, gu (i.e., 'good'), in such and such a corner there is no evil spirit." And all answer: "Z-z-gu, z-z-gu," such and such a corner does not have any spirit." Finally the shaman says: "The kings has hidden in such and such a corner. Ntasu (apparently the spirit -- assistant of the shaman), go and get him, and the rest make a battue!" "There, he went out, he went out as a dog..." (speaking to the kehhn, i.e., to the spirit).

/318 cont./
"Make a battue, drive him toward this grass figure. Ah! He has turned into a mouse." The chorus: "He is going there. He turned into a human form... he turned into a bird. He got into the pots!"

Finally, there is no other place, and he has to get into the chihinxi -- the grass figure, whether he wants to or not. When he has entered it, the hand of the person holding the thread appears to shake. The shaman shouts: "Pik hisu!" And that one hits. They light a candle, throw light on it, and inspect the grass figure: it again does not have its head toward the threshold. The shaman searches for him again. He finds him. Again the same thing. Finally, the chihinxi has its head toward the threshold, which means that the evil spirit has gone out. The shaman leaves his hanxi to keep watch overnight. In the evening of the following day the shaman calls the rest "master." He has one answer that he was late. The real "master" is generally hidden under the earth, the shaman looks for him and addresses to him the request: "Here they have built an isba, be the matter, they will feed you. watch over it, protect it!" Finally the master has appeared in the middle of the floor and stuck out his head. "Come out," says the shaman, "do not be shy, say what you want, we will prepare everything!" The master answers: "Kill the dog, rub the corner with its blood, boil its meat so that the dog steam fills the house. Boil kosterka. Boil mlyk marcha (a fish with two fins at the tail), boil the white lin'ka, the puchka, the head of the Siberian salmon, treat each post to the steam, do that, make a fumigating smoke with marsh tea, drive in a piece of pig iron several pieces by the threshold and in other places of the floor, then the floor will be iron. Strengthen it thus."

/234 cont./
One may not sleep with a woman when nooses and traps are being set, i.e., during the narkhund, and also during a bear festival and when a child was born.

III.

The Building of a House and Rites and Ideas Connected with the House

A flint and some sweetbrier are placed under the post. The sweetbrier guards against the milk, while the flint is there so that there will be no hole in the wood, and then the milk (evil spirit) cannot come through. The hanxi is made.

When a new yurt is finished, a festival is held. They make an iinu chihinxi (chihinx) efn (I) ehhlung: Ady-Tymti in the shape of a human face on each of four posts (narki khsr) of the house, and,for the sturdiest of the house, inau are tied to the cross rafters (narki). Then they kill a dog, tie it to the narki khsr closest to the door, and rub the chihinxi with the blood of its heart. The meat of the dog is boiled. Mos' is made, and the chihinxinau, the kelgelnan'ch, or (in Arkyro) the lymyznman, and the mich are fed. These fetid fats are then placed in the hearth and tied up with two saranka -- bound with puchka (ehhr); for some reason these bindings are called "heart." After this, mos' wrapped in inau is put in three places under the ground. At night when everybody has gone to bed, it is necessary to burn the fire and say a prayer.

In the fire nearest the exit is the tugur-mam, and beyond the fire the old man tugur-yehhh. The tugur, the master of the fire, is fed with all sorts of viands; they throw them into the fire and say: "Ungur inji, urlantaf muqit" (i.e., "eat well, be a good house"). Next they feed each /335/ corner, repeating: "Urlan tugur muqitalu urlaf parkif, hinlan taf muqif ta cho'ihsiff" -- "In a good fire, do everything well, be a house that brings luck in the hunt, do not get broken!" (it is understood that the old woman

/335 cont./
of the fire, the tugurmam, lives there). Then they feed the four inau. Furthermore, a hole is dug at the left front corner of the hearth, and they put sacrifices there, saying, "Ungur ch'ef, nehhlung kun k-khoiaf khavyr hunivagqin" -- "after eating well, make your children live without sickness," and after these words the hole is filled up. Finally, they feed the ka'lung anikh -- "the hatch looking into a behind." At night, when everybody has gone to bed, it is necessary to burn a fir and say a prayer.

When the hearth is renewed in the winter quarters, small inau are set with sacrifices. In the evening they place three fats, tie them up with saranka and puchka, and then, when everyone has gone to sleep, they throw sacrifices up through the pipe: one is thrown by the woman, another by the man. Before the beginning of the festival, the hearth is cleaned, covered with fresh earth, and lighted with the blood.

The spirits living in the house. Tav yzin -- the master of the house - four chihinxi, two male, two female, all pile hejmar -- old men. Tavyzing tugur, -- This yzing was a tribesman in the past. His soul lives in the yurt in the tugur (flint box).

When the yurt breaks, the tugur must not be touched.

If one breaks the tugur (box), he pays a fine.

Lymyr'a-mam -- mistress of the threshold. She is in fish skin, hanchebacked, gray, lulls crying children. When the ceremony of stamping the threshold is held, when a woman leaves or arrives, she lies in the corner at the entrance, near the caps which are placed on both sides of the threshold.

IV.

Women, Childbirth, and Children

Means for love. There is medicine to make another person fall in love with one. The brain of a cuckoo is mixed into tobacco (then a man soon dies),or a cuckoo feather is sewed in a dress. The girl then goes around like a mad person.

/350 cont./
in boots or sleds, according to the time of the year. The attack was ordinarily made at night. In expectation of it, the whole adult male population, armed, /359/ gathered in one yurt. The women and children remained alone in other yurts, since, by the international law of the Gilyak, the women, children, and also the property of the foe was inviolate in time of war. In each yurt there was a secret exit in case of an unexpected attack. At the first alarm of war they went out by the secret passage and organized an ambuscade somewhere beyond the yurts. The struggle continued for the night in one variant, longer according to others, but there is no doubt that there was a customary period of time for slaughter. Some Gilyak have indicated the period of time, the foe departed, while those attacked began to count the dead. If a smaller number had fallen on their side than on the side of the assailants, the affair had no sequel; otherwise they were obliged to reply to the attack with a war. The attacking side, in any case, had to consider itself satisfied. For the eventuality of meeting at sea an enemy boat which might be of wood and birch bark with metal kettles. They forge iron and artfully work with carpenters' and cabinetmakers' tools. They build yurts in the Manchu style and make stoves and tremendous chimneys of stone. They master Japanese sabers and they preserve very expensive swords decorated with silver inlays. They wear robes and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the south-east tribes they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

Of all the borrowings made by the Gilyak, the use of iron is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to reforge iron, but they do not know how to make use of it. Recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail. Though the Gilyak

/358 cont./

/362 cont./
Thus it is that kinship and social bonds attach the Gilyak to his clan. Without some particular need the Gilyak will not abandon the settlement of his clan, the tombs of his clan. No matter where the Gilyak may grow rich, he finally returns to his homeland. The writer has seen Gilyak who had become completely Russified, who had grown up in service among the Russians, but who, having married, settled down and returned to the settlement of their clan. And this is so easily done. The Gilyak does not find it absolutely necessary to construct a yurt, since in any village there will always be two to three square arshins on the plank bed for the family of a clansman. He does not even need a boat and a net; he will always find owners of these things, with whom he will go fishing on a basis of equal rights. The inevitable affiliation of every Gilyak to the great clan union has placed an indelible stamp on his entire spiritual make-up, on his character, customs, and intellectual development. The habit of judging all jointly, this necessity of entering into the interests of his clansmen, this mutual responsibility in matters of vengeance, these communal festivals and sacrifices, this fraternal bond of numerous fathers, brothers, and children, and finally the necessity and practice of living in large yurts together with dozens of one's fellows -- a necessity that compels the Gilyak to live continually in the eyes of others -- all this must have developed a social, communal, loquacious, serious character, non-like in matters of friendship.

Enter one of the large winter yurts, which are so frequent in the north, enter one of these authilis on a winter's evening, and you will be pleasantly surprised. The huge yurt is lighted up only by the flame of the stoves; in the far corners it is completely dark, but you will hear the sedate conversation of the old men, the loud talk of the middle-aged, merry laughter, the jokes and music of the youth. Here boredom has no place...

/366 cont./
the god gives meat to man, and the bones are returned as the creative element for future fish and seals. For the same reason the Gilyak carefully buries the eyes in the sand of the shore, and any underwater fish is placed in the interior of a seal. To the Gilyak a sacrifice is not a ritual or a routine matter, but serious business on which his welfare depends. In addition to the solemn sacrifices offered at the opening of the seal season, the Gilyak with special ceremony gives presents to his god at the beginning of the sable season. He offers this sacrifice all by himself in the taiga, at the side of the same small balagan which serves as a night shelter the whole time he watches over his snares and traps. Besides his usual gifts, he necessarily sacrifices a dog for this occasion. After striking the sacrificial animal in the heart, he gives its blood to the god, but eats the meat at a solemn feast with his kinsmen. He usually gives his client gifts to his god, although just a little at a time, believing that a hundred fish mean as little to a god as a handful of rice or saranka means to a Gilyak. Offerings made during a journey can be touching. I remember that once during a journey to northern Sakhalin we came to the crest of a mountain ridge unexpectedly, and suddenly there unfolded the magical panorama of the mountains. The "head of the earth" towered majestically before us. My Gilyak companions were deeply moved. One of them took from his pocket a little sack with saranka, tobacco, tweet roots, and so forth, and, moving off about 30 steps to the right, he squatted down, buried a handful of each in the snow, and repeated his prayer for a long time. When he got up, he moved a few steps to the left and did the same thing. Then, his face suffused with emotion, he returned to us and distributed the remains of his sacrifice. He had prayed that we be granted a happy journey. Later, he was able to boast that his prayers had been heard... There is a tremendous difference between the religious feeling of a Gilyak and the religious feeling of not only a Christian, Jew, or Moslem, but even of a Buddhist. "Contrition," the utility of the sacrifice, the idea of a God, in our meaning, all seem to be incomprehensible things to a Gilyak. For him, in religion everything is simple /367/ and clear; there are no doubts and no suffering. He does not wage any religious conflicts

/377 cont./
permission, the emigrant builds a yurt, fishes, kills seals, hunts
361 fowl, etc.; only the streams are prohibited to him for the setting
of nets for sable.

342 /378/ Only in exceptional cases does the Gilyak live
alone with his family in the yurt. Customarily he lives with his
brothers and classmen, sometimes with his father-in-law, more
rarely with members of other clans. The winter yurts of northern
Sakhalin are frequently enormous, holding as many as 50 people,
frequently all classmen. The economic advantage of such communal dwellings consists in the fact that heating, which consumes
a great deal of wood among the Gilyak by reason of the unsatisfactory construction of the houses, is not so costly for each individual taken separately. Moreover, these dwellings guarantee security from abduction for the women. The summer yurts are built
smaller and ordinarily house from one to three families. The winter
yurts are built through the joint efforts of several brothers or
classmen, the summer ones -- frequently by one person. But all
those who live in the yurt, temporary or permanent inhabitants
classmen or members of other clans who had no part in building
it, all live in the yurt without any compensation to the builders,
and it is doubtful whether the latter enjoy any special privileges
in obtaining firewood. If the yurt becomes congested, there
will always be found a pair of persons who on their own initiative
will undertake the construction of a new yurt, into which the
builders themselves move and gladly welcome co-dwellers. Thus,
the dwelling of the Gilyak is, it is true, the common property of
several families who participated in its construction, but at the
same time it is an object of gratuitous utilization by classmen
(074) and, in general, by anyone who desires it. This is a vestige of
the time when the dwelling was built by the joint efforts of the
clan and was an object of collective property.

342 The views of the Gilyak concerning movable property
are perfectly clear and strictly defined. The ordinary articles of
movable property among them are boats, nets, kettles, arms,
dogs, sleds, supplies of dried fish, etc. It often happens that a
boat, a net, or dogs are the common property of two or three

/386 cont./ To make some money,
166 115 individuals, i.e., one-sixth of the adult population, make
423 a living by sledding, sealing, etc. The settlements richest in seals and
(Z04) dolphins are Tamlyvo, Viskvo, Pontr, and Tangi; this last is
(Z05) also richer in sables than the others. Potatoes are raised by the
(Z06) Gilyak of Khoe and Tangi. In the settlements of Tyki, the
(Z07) Gilyak have made a request concerning the settlement among
(Z08) them of at least one Russian with whose help they could raise
(Z09) vegetables. The settlement of Tyd should be mentioned for several other reasons. In the first place, starting from this point
(Z10) the Gilyak are ceasing to hunt sables because of the overwhelming
(Z11) competition from the Tungus who have killed off the sables in the
vicinity of the settlement and now pursue them on their reindeer.

Before the appearance of the Tungus, the Gilyak were very
342 successful hunters of wild deer and sables. In the second place, be-
(Z12) ginning at this settlement one notices a progressive improvement
(Z13) in the construction of the winter yurts. In Tyki the dugout rises
(Z14) above the ground, it has windows made of fish skin, and
(Z15) on one yurt even of glass; in the middle of the yurt, instead
of a smoking hearth, one finds a chimney-like stove with a pipe.
Farther north, beginning with the settlement of Tengi, one encounters
enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The
horizontal channels which lead out from the stove and stretch
along the wall under the plank beds serve mainly to heat these
latter; the smoke goes through a subterranean passage into a
vertical pipe which is made of a hollow tree trunk especially
(Z16) adapted for this purpose. A similar system of heating is used by
(Z17) the Amur Gilyak and in the *fanza* /house/ of the Manchu, from
(Z18) whom, it may have been borrowed.

As to the character of the region, the maritime sections
133 of the western coast are mostly tundra-like, with sparse vegeta-
(Z19) tion; road runs partly along the sea, partly through the
(Z20) taiga, and occasionally over the mountain ridges. Near the
settlement of Pontr the coast becomes more elevated, and, beginning at the summer settlement of Mut'vo, it strikingly

Photo. 68. Sakhalin Gilyak. Group of children.

/300 cont./
361 1. (cont.)
Amur was covered with ice. In the spring of
1855, I found the Gilyak in the village of
Sasaoch, the first above Nikolayevsk, already
in their summer dwellings located beside the
winter houses on May 16 (28); in the villages
farther upstream, however, up to Tadi, they
had not yet moved into them at that time.

361 Sometimes the Gilyak living together in one village
342 in winter separate to go to different places for the summer, only
114 to come together again in the fall. If the winter and summer
houses are located beside one another, as, for instance, in Wair
(or Weir, as the Russians call it), the summer houses are larger
and more populous than it actually is. More than half of all
the houses are then the summer houses, much smaller in com-
parison with them, large winter-houses, and some of the
larger storehouses, /321/ similar to the former in construction,
could easily be taken for living quarters. This explains the
excessively great number of houses that I gave in some instances
for individual villages (1). On the other hand, if the

1. Krusenstern (Reise um die Welt /Journey
around the World/, St. Petersburg, 1811,
Vol. II, p. 162) counted 27 houses in one
Gilyak (according to him, "natarischen")
village, which was located on the northern
end of Sakhalin between the capes Elizabeth
and Maria. For another village, on Baddaka
Bay, he gives 16 to 18 houses, but the de-
scription of it clearly permits one to recog-
nize summer and winter dwellings the latter
of which, moreover, stood empty (op. cit.,
pp. 178, 182, 183). Orlof, on the occasion
of his first trip to the Gilyak on the Sea of
Okhotsk (in July, 1849), gave the number of
houses in the village of Kuli as 46 (cf.
Tikhmenev*, Ист. Опис. обоз. Рос.-

/301 cont./
192 1. (cont.)
361 Amurik. Komp. /Historical Survey of the Forma-
342 tions of the Russian-American Company/, Part II,
(113) St. Petersburg, 1863, p. 64), many of which were
certainly only storehouses.

summer and winter houses lie apart as two separate villages, the
number of individual villages appears larger to the uninitiated
traveler and in another way he again gets the impression of a
larger population for the region than it actually has. Later on I
shall return to the number of houses in the individual villages of
the Gilyak, after we have first come to know in greater detail the
construction and nature of their summer and winter dwellings.

342 It is certainly for reasons that make it necessary for the
136 Gilyak to build separate dwellings for winter and for summer. In
winter it is important to be protected against the exceedingly
severe cold; they accompanied by violent storms and snowfalls;
in summer, on the other hand, to counteract the excessive
humidity which is caused by the maritime location and the con-
stant overflow of houses that is by no means rare. The summer rooms
that are as tight as possible and enclosed by windproof walls,
while the latter, on the contrary, can be achieved only by more
open dwellings with a constant circulation of air. To contribute
both adequately in one structure seems to be beyond the strength
and means of a primitive people. Let us now see how the Gilyak
have solved this problem.

342 The winter houses of the Gilyak are of two types: a simpler one,
peculiar and primitive -- the *earth* yurt, and a more complicated
one copied from the Chinese design, which deserves the name of
house rather than yurt (2), and which I shall call simply winter

2. The Russians originally designated the tent-
like dwellings of the Siberian natives with this
word (Russ.: yurta) of Finnish-Tataric origin (cf.
Ahlqvist, Die Culturwörter der westfinnischen
Sprachen /The Cultivated Words of the West

/321 cont./
2. (cont.)
Finnish Languages/, Helsingfors, 1875, p. 106).
Gradually, however, it became common among
them for all the dwellings of same, of whatever
kind they might be, in contrast to the log or beam
houses of the Russian peasants (Russ.: izba) or to
other European houses, and one also often finds
it used in this wider sense in the official accounts
referring to Siberia. Accordingly, the Russians
in the Amur region as a rule call the Gilyak
winter-house a yurt, and this term is used in the
same sense in this work.

342 house or Chinese winter-yurt. The earth yurt, *tarvf* of the Gilyak,
is built exactly on the pattern of a tent: in actuality it is noth-
ing more than a more or less spacious, immovable tent half
sunk into the ground and roofed over with beams. If there is to
be such a large yurt of this kind, a hole about 20-22 feet square
and about 3-4 feet deep is dug in the ground; its walls are
smoothed off, at least the upper part, and roofed with beams.
342 Around it there is erected a pyramidal /322/ roof slanting upward
(336) evenly on all sides, which consists of thin beams placed close to
one another and resting on four vertical posts, in turn, it is
supported by four supporting posts (a) inside the yurt. /Illustration
(B54) appears here./ Only at the peak of the roof is an opening left to
serve as a smoke vent. In order to make the roof airtight, it is
covered on the outside with dry grass and soil. In the autumn
when snow falls on it, the whole yurt from the outside merely
looks like a snow-covered hill slightly blackened at the top by
the rising smoke. The entrance (b) is found on the side of the
yurt which is away from the prevailing winds or is most protected
from the wind. It does not lead directly into the yurt, however,
but rather into a quite long, low, gradually descending passage-
way (c). Likewise roofed over with thin beams or tree
branches and dry grass, in which, at both sides, either
a few household utensils are kept or the place for the dogs is

/322 cont./
342 Plan of a Gilyak Earth Yurt (*tarvf*).
(113)

Key:
a - Supporting posts. b - Entrance. c - Low passage. d - Door. e - Hearth. f - Rear corners, without plank beds. g - Hearth. h - Stone triangle for the large kettle. i - Water container. j - Front wall. k - Front corners of the yurt.

floats. At the end of this passageway one reaches the door
(d), which is either vertically hinged, or is turned up, or is
formed by a board placed horizontally, which can be pushed
aside (Pl. X) (i). Directly behind it, or below it, a few steps

1. On this plate, showing the interior of a
Gilyak earth-yurt, the door, through which
one can pass only in a extremely stooped
position, is too high.

lead down to the floor of the hut, which consists of stamped earth.
342 In the yurt, along both sides and in the rear, between the sup-
35 porting posts and the earth wall, runs a sitting and
sleeping bench or plank bed (e), which is about one and a
half feet Category 116, P.990 -- Analyst)

/322 cont./
342 half feet high and five to six feet wide and is interrupted only at
35 the two rear corners of the yurt. These corners (f, f) are usually
rounded off, like those in front, and are used for putting away
various utensils, clothing, and sleds, and the like. This
creates a partition, even though only a very incomplete one, be-
tween the two side-benches and the rear bench, which is regarded
as the best and most distinguished place in the yurt. Opposite the
inner edge of the benches, somewhat above the height of a man,
there are cross-poles running between the supporting posts, which
serve for hanging up clothing and the like. In the middle of the
yurt, between the three plank-beds and only about three feet
from each one, is the hearth (g), a platform about four feet wide,
twice that in length, and three inches high, made of clay, or
very simple in nature, in that it consists of only a wooden frame
put together with boards, /323/ which is filled with stamped
earth. Over the hearth, another stone platform is laid, the inside vent is so
very high above the hearth; the passage-way leading to the do
has disappeared or shrunk to a few sheltering projections -- in
short, the yurt has become a tent made of thin wooden beams.
(Z21) Such was the small yurt of Tafiz-wo in the Tymy Valley on
(Z22) Sakhalin where I spent the night of February 18 (March 1), 1856
and found the mercury in the thermometer freezes the next morn-
ing. I am unable to say whether this was only a temporary stru
ture, or, any rate, it was occupied by a Gilyak family with chil
dren, and their summer yurt stood not far off. This winter yurt
Tafiz-wo was distinguished only by its stronger material and
larger dimensions from the emergency tent that the Gilyak usu
erect when during their winter journeys they are taken by surp
by a violent snowstorm. On my /324/ winter journey in 1855
(Z23) was forced to spend the night of Feb. 6/18 in the forest on
high nashore somewhat south of Cape Wangi (I) on the west

/323 cont./
342 and crosswise diameters corresponding to the hearth or crosswi
35 to it.

The smaller earth-yurts of the Gilyak are quite similar in
nature, except that in them all the dimensions are more or less
considerably smaller. In some cases, for instance, the hole
dug in the ground for building the yurt is so shallow that there
is nothing to be seen of any wall behind the plank beds, but
rather the timber of the roof begins immediately. In order to
gain space in such small yurts, the two rear corners are also
equipped with plank beds, so that, with the exception of the
front wall and the two front corners, one continuous sitting or
sleeping bench extends all around. If the dimensions of the yu
are reduced even more, it finally becomes quite shallow, and
hearth and plank beds, framed by narrow, upright boards, ar
rise above the ground, the latter only as much as the thickness
of the layer of boards serving as a bed. In the smaller yurts, ther
very high above the hearth; the passage-way leading to the do

The Building of a House, Its Plan, and Rites Connected with the House

342 [087] Before laying down the first row of logs, they try sprinkling flour: if in the morning there is an imprint of a human foot, this is good; if of a human hand or of a beast, this is bad, and then they change the place. If there are no imprints of any kind, this is also good.

342 354 Explanation of the plan of a house (see drawing). 1. Shy -- door. 2. Tol-erkh pusk fakh -- window facing the hearth of the "master" of the sea. 3. Kem-fakh -- second window to the left of the door. 4. Ponakh-fakh -- window over the middle plank-bed. 5. Pal-erkh ponakh-fakh -- window facing the master of the mountain. 6. Kyly nakh fakh (mat'k:as' n'ekh fakh) -- window alongside the long plank-bed. 7. Mat' k:as' akhr fakh -- window near a small post. 8. Pal-erkh pusk fakh -- window on the side 342 of the mountain. 9. Kangyl -- the place for tying dogs. 10. Tly k:as' -- large post. 11. Kil erkh mat' k:as' -- small post. 12. Tol erkh mat' k:as' -- post on the side of the sea. 13. Mat k:as' -- small post. 14. Hytyfi mat k:as' -- middle small post. 15. Pi'la digr-irku k:as' -- large elongated post under the matka. 16. Pal erkh' mat k:as' -- small post on the side of the mountain. 17. Kylynã mat' k:as' -- long and slender little post. 18. Shyvos n'ich fakh -- small stone near the threshold. 19. Pi'la k:as' nir fakh -- small stone at the threshold on the level of the floor. 20. Pi'la digr -- elongated matka. 21. Pal erkh tuur -- hearth of [354] the master of the mountain. 22. Tol erkh tuur -- hearth of the [335] master of the sea. 23. Tyjf -- cross log, foundation of the house. 24. Kylzhutã -- the middle of the plank bed where they put a person who has been wounded by a bear. 25. Uig dz:onkh -- tabooed [778] corner for the bear's head and so forth. 26. Ke dz:onkh -- upper corner. 27. A dz:onkh -- lower corner. 28. Pal erkh pusk dz:onkh -- corner on the side of the mountain for tabooed things. [776] 29. The floor is divided into two halves: a) pal erkh kyl, and b) tol erkh kyl. On each half is placed only that which has to do with the appropriate spirit, with tol or pal'.

/315 cont./

342 782 Sacrifices (sacrificed dishes -- chmãus) are placed on the appropriate half; if there is not enough space, then on the appropriate nau (tol or pal'). /316/ /Sketch of the house-plan appears here./

342 [776] /317/ Tyvyz -- "master" of the house; he lives either under the post (10) or under a stone (19). Sometimes he is an old man, sometimes an old woman or a young woman.

The master of the house and his family occupy the tol' erkh pusk; if the family is large then also the kemfakh (3) and ponakh (4). The bear's head is placed in the middle (25).

[356] [782] In autumn, during cleaning, everything is abundantly fed: the walls, the floor, the supports under the plank beds, the edges of the plank beds, and so forth.

Rites upon the completion of a house. When a new house is completed, they place two sticks, one in the front and the other in the back (of the house), and on a thread stretched between them are hung images of the sun (keng) and the moon (long chakh). They are not renewed later.

342 782 When the house is completed, sacrifices are made: They prepare mos' 1) alys -- berries, 2) rak: -- a porridge of rice or wheat, and feed the four corners (chonkh), four posts (mon'-nakh) and the two posts in the middle -- the front one, amkhas', and the rear one, kemkhas', in which the master lives; they also feed the crossbeam -- tyjf (edz:). Here the old man says: "Urla dyf muja' nolagu kýnynguch: humguja', ta sikhydz kh:olaf ta humguja'" -- be a good house (sit firmly). Make it felicitous for my children, and so that there be no kind of sickness." In autumn the [356] house is cleaned, plastered with clay, and they sacrifice -- tyv arnydz:.

342 778 776 Tyv yz' bakh -- a stone before the threshold or beyond the threshold, or a piece of pig iron; under it sits the "master," who guards against the entry of the milk'.

342 782 776 Lym yz' -- threshold. Beyond the threshold, under the ground, they place different foods (chyudz:) -- for the earth -- the master and the tol fynydz:.

Plan of the House of the Amur Gilyak

Section 3: "Ethnographie, auf Grund des von Dr. Karl von Scherzer gesammelt. Materials bearb. von Friedrich Müller /Ethnography, on the Basis of Material Collected by Dr. Karl von Scherzer and worked up by F. Müller/," Vienna, 1868, p. 158. In the last-named work the heating by pipes is called "Russian type," though this is by no means a national Russian arrangement.

by means of which an evenness of temperature is attained in the house to an extent inconceivable in the primitive dwellings of the Amur peoples.

352
354
516
171
513
[179]

Finally, the fact that the heated sleeping benches are used by the Gilyak and all the other Amur peoples in exactly the same way as by the Chinese also /353/ argues in favor of the Chinese origin of them. According to U-tschen, the Chinese always lie crosswise on the kang (1), with their feet

1. Cf. Wassilijef's translation of U-tschen's writing, op. cit., p. 98.

toward the wall (2), and the same is also observed by the Gilyak

2. Pallas, op. cit. In the Amur region, too, I have never seen Chinese sleep otherwise on the kang.

and the other Amur peoples with superstitious strictness, whereas in the earth yurts, one sleeps in the opposite position, with the head toward the wall. In a Gilyak winter-house on the Amur, when I once placed my head against the wall, as in the earth yurt, in order to have a support for my pillow, it aroused general indignation among the Gilyak, and the cry "uïtsch, uïtsch," which means the same as "misfortune" or "unlucky, forbidden," rang out on all sides. The reason why the Chinese always assume this position on the kang is said to be that the part of the sleeping bench that joins the wall is especially warm because of the pipe

[123]
[184]
[177]

G /353 cont./
352 running under it and therefore is better suited for the feet th
354 for the head. There is another justification for this custom
513 the winter houses of the Amur peoples. If one lies with his
516 head against the wall, he exposes himself so that the rats,
171 which are exceedingly abundant in these houses and which
[136] ways run along the walls, would be constantly running over
G face. This alone, however, would not make the Gilyak ref
[184] to allow even a stranger to assume this position on their 'kan
[199] if superstition did not demand strict observance of the tradi-
tional custom, and afraid of any violation of it, no matter
G whom, as misfortune for all the inhabitants of the house.
342 Due to the lack of historical data, it cannot be deter-
171 mined when the Chinese winter-yurt reached the Gilyak on
Amur and, gradually spreading downstream, supplanting the
earth yurt, reached the Amur-Liman, the coast of the Sea o
G Okhotsk, and the Liman coast of Sakhalin. In the reports o
[175] Pojarkof and Nagiba, who spent the winter among the Gilya
at the mouth of the Amur and along the Sea of Okhotsk in 1
45 and 1652 (3), there are, unfortunately, no hints which w

3. See pp. 216, 219 ff. above.

K permit conclusions about the nature of the Gilyak houses at
342 time. In the case of another Paleo-Asiatic people, the Kam
177 chadal, we see the original earth-yurt completely disappea
175 before an imported, foreign type of house construction with
the short space of about 50 years. At the time of Krascheni
and Steller (in the forties of the previous century), all the
Kamchadal still lived in earth yurts of the type described al
Even in 1779, when Clerke, the successor of Cook on the la
third voyage, visited Kamchatka, at least the south of the
peninsula, between Peter-and-Paul's Harbor and Bolscherez

/324 cont./

(417) origin, or, on the mainland, Chinese, with a rather long, straight
(417) beard, and a thick blade almost equally broad to the end, as is
(418) shown on Plate XXX[illegible] in the hand of a Goldi boy. At that time
(419) the Gilyak lived entirely on human food, with a short, somewhat
(420) sloping handle and a little more than a pit's few feet deep in the
(421) snow, lined the bottom and the walls with fir branches, spread
(422) a cover of fish skins over it on the north side, over sticks stuck
(423) obliquely in the snow, and in the center built a small fire, over
(424) which hung the kettle. The wind increased during the night, and
(425) in the morning the storm was so severe that further travel was
(426) inconceivable. The Gilyak immediately set to work to make a
(427) camp better protected from the storm and snow. First they dug
(428) a circular cavity in the snow, stuck sticks around it, coming
(429) together conically at the top, and spread several fish-skin
(430) covers over them in such a way that only an opening at the top
(431) was left for a smoke vent; a tip of the cover that could
(432) be folded back served as a door. Then the walls of the pit and the
(433) ground around it were covered with fir branches, and over that were
(434) spread the bear skins used for a bed, which the Gilyak always take
(435) with them on their winter journeys. Next came the setting up of a
(436) hearth in the little dwelling. The important thing was to create
(437) the base for the fire, because otherwise, made directly over
(438) the snow, it would soon degrade into a pit and could no longer
(439) warm those sitting around it. For this purpose several very flat
(440) pieces of wood were placed as exactly and as close to one another
(441) as possible, framed on all four sides by other, thicker and set on
(442) edge, and these latter were fastened in position by wooden pegs.
(443) In this manner a rectangular cavity was obtained for the
(444) hearth. At the bottom of it the Gilyak now spread pieces of larch-
(445) tree bark, then brought lumps of frozen sand from the high em-
(446) bankment along the seacoast, cut them up with their axes, which
(447) they always carry with them on such journeys in order to procure
(448) the necessary firewood for the nightly campfire, and with this
(449) filled the cavity made for the hearth up to the rim. In passing I
(450) must mention that the axes commonly used for housebuilding
(451) and the like by the Gilyak and their neighbors at the time of my
(452) stay among them were either, on Sakhalin, of Japanese shape and

/324 cont./

(453) Tyrmy Gilyak and one from the village
(454) of Tyk, who were traveling along the same route, camped next
(455) to me. With a moderate northerly wind, there was a very heavy
(456) snowfall. The Gilyak dug out a pit a few feet deep in the
(457) snow, lined the bottom and the walls with fir branches, spread
(458) a cover of fish skins over it on the north side, over sticks stuck
(459) obliquely in the snow, and in the center built a small fire, over
(460) which hung the kettle. The wind increased during the night, and
(461) in the morning the storm was so severe that further travel was
(462) inconceivable. The Gilyak immediately set to work to make a
(463) camp better protected from the storm and snow. First they dug
(464) a circular cavity in the snow, stuck sticks around it, coming
(465) together conically at the top, and spread several fish-skin
(466) covers over them in such a way that only an opening at the top
(467) was left for a smoke vent; a tip of the cover that could
(468) be folded back served as a door. Then the walls of the pit and the
(469) ground around it were covered with fir branches, and over that were
(470) spread the bear skins used for a bed, which the Gilyak always take
(471) with them on their winter journeys. Next came the setting up of a
(472) hearth in the little dwelling. The important thing was to create
(473) the base for the fire, because otherwise, made directly over
(474) the snow, it would soon degrade into a pit and could no longer
(475) warm those sitting around it. For this purpose several very flat
(476) pieces of wood were placed as exactly and as close to one another
(477) as possible, framed on all four sides by other, thicker and set on
(478) edge, and these latter were fastened in position by wooden pegs.
(479) In this manner a rectangular cavity was obtained for the
(480) hearth. At the bottom of it the Gilyak now spread pieces of larch-
(481) tree bark, then brought lumps of frozen sand from the high em-
(482) bankment along the seacoast, cut them up with their axes, which
(483) they always carry with them on such journeys in order to procure
(484) the necessary firewood for the nightly campfire, and with this
(485) filled the cavity made for the hearth up to the rim. In passing I
(486) must mention that the axes commonly used for housebuilding
(487) and the like by the Gilyak and their neighbors at the time of my
(488) stay among them were either, on Sakhalin, of Japanese shape and

/325 cont./

(489) in front of the door, but in no way eliminated, and if the door
(490) remains open, such a strong draft is produced between it and the
(491) smoke vent, that even in the middle of the day, when the latter
(492) is deprived of all its warmth in no time and comes close to having
(493) the temperature of the air outside. And yet this experiment must
(494) often be repeated several times a day precisely during very cold
(495) and stormy weather, because then it frequently happens that a
(496) man of cold air sinks down through the smoke vent, or an eddy
(497) of wind gets into it, forces back the smoke, and temporarily
(498) blocks it from getting out. In the shortest time the small room
(499) is then filled with suffocating smoke affecting the eyes, throat,
(500) and lungs, and there is nothing left to do but quickly open the
(501) door, clearing the air again. This is why all the beams in
(502) the yurt are blackened by smoke and covered with a more or less
(503) thick layer of soot near the smoke vent. The temperature in
(504) the earth yurt is even more perceptible at night, for after the fire,
(505) beside which one has fallen asleep, goes out, the yurt is soon
(506) filled with cold air coming down through the smoke vent. It is be-
(507) sure, it is said that this can be closed, but I have never seen it
(508) done, though I spent many a night among the Gilyak. And to be
(509) sure, the air inside is all the worse the smaller the yurt is and the
(510) lower the smoke vent is over the hearth and the sleeping benches.
(511) At night in the small tent-yurt of Tafiz-wo, where one could
(512) reach the smoke vent with the hand and where so big and lasting
(513) fire was therefore possible, /286/ we soon had the temperature
(514) of the outside air, which, in addition, set in accompanied by a
(515) noticeable difference between the temperature in the yurt, and so
(516) preferred in a night's rest in the open air with a steadily burning
(517) fire, even if it should be very cold, as long as there is no snow-
(518) storm!

342 (519) The winter yurt built after the Chinese pattern tschadyf of
342 (520) the Gilyak, is completely different in character. It always has
(521) the appearance of a house provided with walls and a roof. It is
(522) an approximately square structure, though, as a rule, somewhat
(523) longer than it is wide, about 6-7 fathoms long and about 5-6
(524) fathoms wide, with low walls and a large roof sloping down finally
(525) toward the two longitudinal sides (see Pl. XI) (1). The walls

/326 cont./

342 (526) of the walls, horizontal beams, which are not joined at their
(527) ends, but are pointed and fitted into the lateral grooves of a few
(528) thicker, upright beams. On the transverse walls, which rise
(529) higher, and especially in the middle of them, these vertical
(530) beams are of a considerable thickness. The gaps between the
(531) vertical and horizontal beams are chinked with moss and caulked
(532) with clay. The rafters, rather flat roof, which in winter has to carry
342 (533) a considerable burden of snow, requires very complicated timber-
(534) work for its construction and support. The construction appears here
(535) It has a regular roof framework made up of longitudinal beams
(536) and crossbeams. The ridge is supported, in addition to the cen-
(537) tral, upright post of the two transverse walls (see Pl. XI), also
(538) by two thick, towering posts in the interior of the house (a) on
(539) the accompanying plan). Sometimes, instead of one post, two
(540) are used, and the latter is placed in the middle. Similar, but much
(541) smaller and thinner posts (b) sometimes rise up here and there
(542) at the sides and, together with the two nearest vertical beams of
(543) the transverse wall, serve as supports for the middle part of the
(544) roof, and in the lower part it is supported by the longitudinal
(545) walls of the yurt. Longitudinal beams and crossbeams in turn
(546) rest here and there between the towering posts in the middle and
(547) similarly to the upper edges of the longitudinal walls -- a framework
(548) that /327/ serves to connect the walls to one another and thus to
342 (549) steady the walls and keep them from plain. In addition, the lower
342 (550) part of it, up to a little above the height of a man, is used for
(551) the storage of various articles and for hanging up clothing, and so
(552) forth. On our Plate XI one sees the ends of the aforementioned
(553) longitudinal beams at the transverse wall, as well as at the ridge
(554) and the side edges of the roof, project out quite far, whereby the
(555) ends of the latter intersect each other far out at the gable
(556) ¾ [See Category 116, p. 491 - Analysis]

/327 cont./

342 (557) and with the ridge. The remaining finer latticework of the
342 (558) roof is made up of thin poles and sticks put crosswise and then
(559) covered with mats (c) or the large reeds, which, finally with
(560) a layer of dry grass or Calamogromis straw, etc., which is
(561) pressed down and held in place by a series of poles placed para-
(562) llel to the ridge of the roof. The entrance is found in one corner
(563) of the house, and, to be sure, if one stands in front of one of
(564) its long sides, always to the right, in the transverse wall or in
(565) the longitudinal wall, with an ordinary door (d), which consists
(566) of several boards held together by a few cross-strips, and also
(567) always with a high threshold by means of which the influx of
(568) cold air into the house is, at least, somewhat lessened. In the single
(569) pipe serving the two hearths and at the same time as outlet
(570) for the smoke there is one of the most frequently used open sa-
(571) far away into an identically-shaped, vertical, high chimney (e,
342 (572) Gilyak: kin) usually higher than the house. The benches are
(573) covered with mats usually put up by the Gilyak themselves out
(574) of a kind of reed, with only the edge of the bench left uncovered,
(575) and not infrequently the walls, too, are covered with such mats in
(576) place. In the center of the house, between the two posts sup-
(577) porting the ridge, there is a large, heavy table (f), about two
(578) fathoms long and half as wide, on which the dogs are fed, and
(579) which, I shall therefore simply call the dogs' table (Russian: [illegible]).
(580) The top of it, which, along its longitudinal edges usually projects
(581) out in crudely carved, pyramidal, cone or hook-shaped continua-
(582) tion, rests upon four posts, and only rarely stands on four posts
(583) and, if necessary, when more space is needed in the house, dur-
(584) ing the bear festival, for instance, can be lifted off of them.
(585) Above the two ends of the dogs' table there hangs down from
(586) the central longitudinal beam of the house, and a long pole
(587) can be stuck between them, to which the dogs are tied during
(588) the feeding. Our Plate XII shows the feeding of the dogs,
(589) to be discussed later, also gives some insight into the nature of
(590) the interior of a Gilyak winter-house; I must mention, however,
(591) that the dogs' table as it is there shown is little too small and, on the
(592) other hand, the space between it and the plank bed is too wide.
(593) Subsequent pictures which are to illustrate the bear festival and
(594) the mourning ceremonies among the Gilyak give more accurate
¾ [See Category 116, p. 492 - Analysis]

/327 cont./

342 (595) reduced as much as possible. The house is provided with windows
342 (596) (g) on all four or at least three sides, and, to be sure, the two
(597) longitudinal walls and the one transverse wall on the side of the dogs
(598) and under certain circumstances even food for human beings are
(599) prepared. Directly adjacent to the benches and the sitting and
(600) lying-down benches of plank bed with their high edges, which are in
(601) very little and are somewhat low, about one and a half feet high
(602) and one fathom deep, and run all around the walls. Their chief
(603) characteristic is that they are warmed from below by means of
(604) wooden pipes (i) lined with clay, which come out from both
(605) hearths, run under the benches, and join in the corner of the
(606) house diagonally across from the entrance, and in this single
(607) pipe serving the two hearths and at the same time as outlet
(608) for the smoke there is one of the most frequently used open sa-
(609) far away into an identically-shaped, vertical, high chimney (e,
342 (610) Gilyak: kin) usually higher than the house. The benches are
(611) covered with mats usually put up by the Gilyak themselves out
(612) of a kind of reed, with only the edge of the bench left uncovered,
(613) and not infrequently the walls, too, are covered with such mats in
(614) place. In the center of the house, between the two posts sup-
(615) porting the ridge, there is a large, heavy table (f), about two
(616) fathoms long and half as wide, on which the dogs are fed, and
(617) which, I shall therefore simply call the dogs' table (Russian: [illegible]).
(618) The top of it, which, along its longitudinal edges usually projects
(619) out in crudely carved, pyramidal, cone or hook-shaped continua-
(620) tion, rests upon four posts, and only rarely stands on four posts
(621) and, if necessary, when more space is needed in the house, dur-
(622) ing the bear festival, for instance, can be lifted off of them.
(623) Above the two ends of the dogs' table there hangs down from
(624) the central longitudinal beam of the house, and a long pole
(625) can be stuck between them, to which the dogs are tied during
(626) the feeding. Our Plate XII shows the feeding of the dogs,
(627) to be discussed later, also gives some insight into the nature of
(628) the interior of a Gilyak winter-house; I must mention, however,
(629) that the dogs' table as it is there shown is little too small and, on the
(630) other hand, the space between it and the plank bed is too wide.
(631) Subsequent pictures which are to illustrate the bear festival and
(632) the mourning ceremonies among the Gilyak give more accurate
¾ [See Category 116, p. 492 - Analysis]

/328 cont./

(633) proportions in this respect and at the same time show other pe-
(634) culiarity discussed details in the construction and interior arrange-
(635) ment of a Gilyak winter-house. In contrast to the summer-house
(636) I make mention that along the walls (h), immediately to the right
(637) and left of the entrance, there are sometimes shelves or cupboards
(638) for storing household utensils, and, to be sure, there are also
(639) one or more large receptacles which contain the water needed for
(640) drinking and cooking the food. An open cabinet with various
(641) cooking and eating implements similarly hangs on the wall behind
(642) the hearth. Finally, it should be noted that in the front transverse
(643) wall of the house, close to the roof, there is a round hole which
(644) can be closed with a similarly-shaped, round board and serves for
(645) ventilating the house when it is filled with smoke and steam during
(646) the preparation of the fish broth for the dogs or with smoke
(647) of the bear's fat, in the middle of the house, and when the window in
(648) the rear longitudinal wall is absent, so that the number of windows
(649) in them is reduced to three. Nevertheless, even these, because
(650) of their considerable size, light the interior of the house sufficient-
(651) ly. The windows are sometimes square, three to four feet in size,
(652) sometimes somewhat wider than high, or vice versa. They have no
(653) glass panes, but instead only a number of little sticks or sticks
(654) distant from one another, and fish skin take the place of glass
(655) between them. In particular there are skins from Salmo
(656) [illegible]ghalian Gilyak: [illegible]-tscho, or, on Sakhalin, [illegible]-tscho (7).

(192) 2. Known by the Russian throughout Siberia
under the name [illegible]

the most common kind of salmon in the Amur River, made at
this and transparent as possible by scraping and pounding, and
then sewed together in such a way that the seams form many
longitudinal lines and a few transverse lines running in a zigzag.
The windows do not open, but are only lifted out with the whole
frame. The floor inside the house consists of stamped clayey
earth. To the right and left of the entrance are the two benches
(Gilyak: [illegible]) made of clay. They are fed through square

/329 cont./

(657) same time in order to let out excessive steam or smoke. The
(658) [illegible] and along the walls of the house are placed the sleeping
(659) benches, the plank beds, on the contrary, are often quite warm.
(516) The Gilyak, to be sure, suffer little from them, since they usually
(517) sleep on the plank bed with their feet stretched out toward the
(518) fire and are convinced of how very hot and therefore uncomfortable
(519) these can become, when in January, 1896, I attended the bear
(520) festival in Tebach for several days. In order to feed the numer-
(521) ous guests, a strong fire was maintained uninterruptedly in both
(522) hearths, and, as a consequence, the temperature of the plank
(523) beds rose so much that some nearby stories on hand in my leather
(524) suitcase which I kept next to me melted completely. The heat
(525) during the bear festival, however, is an exceptional case and great
(526) things that they greatly promote the increase of many kinds of
(527) vermin. Under them, in inaccessible hidden spots, along the
(528) pipes, etc., countless rats (Mus decumanus) make their home and
(529) ravage at night in search of food. Often, when everybody had
(530) gone to bed and I was still writing in my journals, I would see
(531) rats come out from their hiding places and go about the house
(532) not far from me. They do not disdain even to crawl up the un-
(533) [illegible] beam of the house; when I once, in order to escape other
(534) vermin, had a hammock put up between two posts, the great rats
(535) the rats would gnaw through the leather straps and the mat would
(536) fall down. But the vermin against which I sought such protection
(537) are more annoying: the water bugs (Blattidae) and bedbugs
(538) which find refuge in the crevices of the coarse straw-mats. In
(539) summer, if one enters an empty Gilyak winter-house, he is
(540) literally covered with them in an instant. I even discovered that
(541) it is advise to set up a tent in the vicinity of such a house, or the
(542) surrounding smooth and firm ground. Undoubtedly /326/ the
(543) vermin that makes why the Gilyak leave their winter-houses
(544) spring comes and move into differently constructed dwellings
(545) in the hot months of vermin, and in particular of fleas, as well
(546) as the impossibility of staying on the heated plank bed in summer

1. The question now arises as to which one of the two types of winter houses described above prevails among the Gilyak in the various parts of their territory. At the time of my stay in the Amur region (1854-1856) the earth yurt was almost exclusively confined to Sakhalin, but there it far predominated over the Chinese winter-yurts. The area east of the island and the Tymy Valley had only the earth yurt. (In the west coast of Sakhalin,

2. Specifically they were the Gilyak Jalkun and Pryngan from the village of Dobongi, and Tamkin from the village of Ngaur-wo on the Limun.

A FEW YEARS LATER (1863) Dybovski through a section of this coast and made a list of all the villages there, as well as the number and nature of their yurts (4). In comparing my data with his, though they

essentially agree, they nevertheless show some differences which are almost entirely of little value and lead one to conclude that there has been a decrease in the population in this part of Sakhalin during this interval of time. For instance, the number of villages in my list, especially the small ones with only one earth yurt, is larger than in Glebov's, in which the names are scrap, but combined with other designations as referring to one and the same, no smaller settlement. Likewise, for the larger villages, my list shows significantly greater a larger number of yurts than Glebov's. This depopulation which took place after my time is fully explained by the decimation of the native population by epidemic which ravaged precisely this part of the Amur region in the winter of 1857/58. As has been noted, many a yurt died out completely, and in Sakhalin generally almost since in 1856 and 1858 I was at this place no less than four times

along the Limun and the Sea of Okhotsk up to the northern tip of the island, there were villages containing sometimes of earth yurts, sometimes of Chinese yurts, and at times both types of winter dwellings occurred beside each other. I myself have not been in this part of Sakhalin, but have collected detailed information on the villages in it, as well as on the number and character of their yurts, from, among others, Gilyak residing there, who visited me at the Nikolayevsk post in the company of Tschebarbach-Gilyak friends of mine (3). A few years later

Nikolaevsk. Accordingly, at that time, to begin with, three villages, each consisting of a single earth yurt, still lay to the north of Pogbobi. In Dabong, consisting of four yurts, one stood earth yurt and one Chinese yurt, beginning with Tulbij (1).

1. In Gleben it is called Jordört-tigr-wo.

there is a series of villages which consist only of houses of the latter type. This, as has been said, is the most populous part of Sakhalin, with the largest villages, among them Tymi-mula-wo, in my large sketch-map is referred to in pedantry population, and, according to the Gilyak, numbering over 12 houses (2). The last of these

2. Gleben found only nine. The great number of houses and inhabitants of this village is indicated by its name, for tamla, tamlamch, or tamlamch means "numerous" in Gilyak.

tschebrs' villages on Sakhalin, lying in an uninterrupted row, in Pontyr-wo in Tymi-wo on the Sea of Okhotsk. Glebs did not go northward beyond that village and gives only earth yurts for the remaining part of the west coast of Sakhalin up to the northern tip of the island. According to my information, however, the Chinese winter-yurt also predominates there, for after a small interval village, Mainb-wo (in Gleben, Maiyb), there follows Pilja-wo with one earth yurt and one Chinese yurt, which was formerly probably larger, and then there are two more, tschabiyf villages, Tumi-wo and Ngyw-wo (in Gleben, Ngyb), the latter of which is made up of four yurts (and does not lie far from the northern tip of the island (the Mif-yurt, as the Gilyak designated it to me). According to its location on the small bay which Krusenstern called Nadezhda Bay, Ngyw-wo must be the same village that this navigator visited in 1805. From his quite detailed

2) Schrenck—669 E-5 (1854-1856) 1881-1895 RXI Gilyak RX2.

description one learns that the Gilyak ("Tatarem") at the time — it was August 15/27 — lived in their summer yurts. Somewhat farther, Ngyw-wo, larger, by other, apparently larger houses, provided with fireplaces and chimneys, which, however, stood empty at the time (3) — evidently the above-described winter

3. Krusenstern, Reise um die Welt, Vol. II, pp. 178, 185.

houses of the Gilyak. Here, therefore, is other proof of the presence of tschabiyf villages in this part of Sakhalin, too (4).

4. In order to supplement and verify my above data and at the same time to make it possible to compare them more accurately with Glebov's, I am adding here the whole list of the villages explored by me north of Pogbobi on Sakhalin, with a statement of the number and nature of their yurts. To be sure, we did not always hear the name of the village exactly the same, but it is not difficult to recognize them. I am also adding in parentheses the number of yurts given by Glebs, for from this one can judge the extent of the depopulation caused by the smallpox epidemic of 1857-1858, especially for the part of the coast extending south of Pontyr-wo, where Glebs himself visited most of the points and counted their yurts. The following villages lie north of Pogbobi:

Ngamuyf	-	earth yurt	
Wanj - - -	-	1 (4)	"
Ngynb - - -	-	1 (4)	"
Tschebrs - -	-	1 (1)	Chinese yurt

/331/ Among the Gilyak of the mainland the Chinese winter-yurt predominates to a much greater extent than the earth yurt on Sakhalin. Indeed, in my time there was only one earth yurt left, which presumably has since disappeared. It was the small earth yurt of Pjtnach, directly on the Limun just north of the mouth of the Amur. I visited it in March, 1856. It was located at some distance from the Chinese winter-yurt of the same place and was constructed exactly like the smaller earth-yurts on Sakhalin. It could be maintained with some ease that it was almost accordingly simple and primitive construction in imitation of a tent, in the fact that with only slight modifications it is also found among all the other Palaeo-Asiatic peoples.

there are certainly no longer any earth yurts. Along the bays of Tugur and Ulban, where Sakhalin approaches most closely the Gilyak, they live in the winter, as I gather from his handwritten notes (1), in exactly the same type of houses as on the

1. In his travel report, too (see Beitr. zur Kenntn. des Russ. Reichs, Vol. XX, Part 2, p. 619), he mentions the "functional pipes carrying heat under the sleeping benches in the houses" of the Gilyak there.

Limun and Amur. It therefore cannot be assumed that matters are different in the area between Kuli and Ulban Bay, the only search for which so far has yielded no ethnographic accounts. The Gilyak, too, though I often asked them about it, knew of no earth yurt on the mainland to report to me other than the above-mentioned one of Pjtnach.

In brief, therefore, among the Gilyak on the mainland, as far as their distribution extends, the Chinese yurt at present represents the only form of winter dwelling: on the island of Sakhalin, however, it occurs only on the west coast opposite the mainland, along the Limun, and on the Sea of Okhotsk, interspersed with earth yurts, while in all the other Gilyak parts of the island, only the latter form is found. Form this distribution of two types of winter dwellings one may conclude that the earth yurt is the original dwelling particular to the Gilyakh, which was formerly also used generally on the mainland, but later was driven out, little by little and finally entirely on the mainland and in large part on the coast of Sakhalin adjacent to it, by a foreign form that came down the Amur, and Ajtkh has been preserved only among the Gilyak of Sakhalin. Perhaps, I am bringing in favor of this view that the earth yurt is in fact the original winter dwelling of the Gilyak, that it is the only one that is constructed accordingly simple and primitive construction in imitation of a tent, in the fact that with only slight modifications it is also found among all the other Palaeo-Asiatic peoples.

1. Ventsmirnof, op. cit., p. 201.

After this digression, which acquainted us with the earth yurt in its various modifications in the original winter dwelling of all the Palaeo-Asiatic peoples as far as Greenland and the extreme northern part of America, let us again return to our point of departure, the Amur region and the Gilyak. While the earth yurt, the tanf, is the original, national winter-dwelling of the Gilyak, the tschabiyf, erected on level ground and equipped with pipe heating, must be designated as a later form of winter dwelling brought to them from the outside. Into contact with other peoples, chiefly through Chinese influence. I have therefore called it above simply the Chinese winter-yurt. Glebs (2),

2. "Reisebericht von der Insel Sachalin" (Beiträge zur Kenntn. des Russischen Reichs, Vol. XXV, 1867, pp. 133 ff.).

Schmidt (3), Mitnl (4), and others call it the "Manchurian

yurt," but, if this is not merely another one of those frequent confusions of the Chinese in the Amur region with the Manchu, as was discussed above (3), as I believe it to be, then it can be

3. See, p. 144, and note 2, in this work.

argued that the Manchu borrowed their way of constructing their winter houses from the Chinese. That is reached the Gilyak from the south, down the Amur, in Bowsi, as was mentioned above, by the distribution of the earth yurt and the Chinese winter-yurt in their area, in particular by the fact that on Sakhalin the latter are found only along the west coast of the island facing the Chinese mainland. Moreover, the type of construction of the winter house can be followed continuously from the south to the north of the Amur region lying upstream from the Gilyak, up to the Chinese along the Unori and Sungari. There is a prevalent everywhere among the Manchu, Chinese and Dwar (2). For example, the Chinese

1. The latter will be dealt with separately below.

Korea (3), etc. In larger and more neatly built houses, they

Nevertheless, this type of house construction, with a system of pipes carrying the heat underneath, under the sleeping benches, and opening into a chimney standing outside the house, is by no means of Chinese provenance, but rather is a product of undoubtedly Chinese origin, introduced by the Chinese from the motherland to Manchuria as well as to their other colonies. For the same type of house construction is found everywhere in North China (6) and in other countries which, like Manchuria, are

4. Though there is hardly a work about China in which there is not also mention of the kang as a characteristic peculiarity of the Chinese dwelling, I want to mention here a few, in part only incidental, in part more discussion or descriptions of it: for example, in Du Halde (Description de l'empire de la Chine et de la Tartarie, Paris, 1735, Vol. II, p. 87), Van Braam (Gesandtschaftsreise in Ambassade de la Comp. des Indes orientales nach Peking, Leipzig, 1798, Vol. II, p. 364), Grenée (Reise durch Sibirien, Berlin, 1858, Vol. II, p. 44b), by Moreau de St. Méry, Paris, year VI (1798), Vol. I, p. 340, Davis (La Chine, traduit de l'anglais, Paris, 1844, Vol. I, p. 120), Fortune (Reise durch China, transl. from Eng. by Fischer, Paris, 1857, Vol. I, p. 301), Huc (L'Empire Chinois, Paris, 1854, Vol. II, p. 380), Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 187-190 and 251 among others), Poussielgue (Voyage du Prince de Joinville dans l'Asie Ch. et de Mme. de Bourboulon, Paris, 1866, p. 24), and Grand-Jean (Souvenirs d'un Voyage dans l'Asie orientale, Paris, 1869, Vol. II, p. 384), among others.

5. Von Wellemitof-Urbaf (Voyage of the Austrian Frigate "Novara" around the World under the Command of Commodore B. von Wellemitof-Urbaf, Anthropol. Part,

cially in the cities, there are, of course, all kinds of architectural and decorative elements borrowed from the Chinese, but as in the rest of the construction, for example, the number of kang varies according to the number of people in the family.

/353 cont./

shortly thereafter, however, in 1790, Saatyschof reported /354/ from his journey through the country that there were no longer any earth yurts anywhere and that instead of them Russian-style houses (log houses, plaited huts) had been built everywhere, only the summer dwellings of the Kamchadal, which are like-wise peculiar, had been retained (1). On the basis of a remark by

1. Sarychev*, Putesh. po Sieverovost. chasti Sibiri, Pt. I, p. 179.

Mamia Rinof on his voyage in 1809 from Deren down the Amur, one might think at first glance that the same thing had happened among the Gilyak on the Amur, too. Coming from the territory of the S'ksma (Olcha), when he entered the territory of the Smienouhar (Gilyak) at Horo (Chipere), he noticed that from there on people, clothing, implements, and way of life changed and became exactly the same as on Krafto (Sakhalin) (2). One might

2. Siebold (Nippon, VII, p. 177). Cf. also p. 248 above.

think, therefore, that at that time the Gilyak on the Amur were still living in earth yurts as on Sakhalin. But this is impossible, for, as mentioned above (p. 466), four years earlier Krusenstern had found the earth dwelling prevalent among the Gilyak on the northern tip of Sakhalin, that is, at the farthermost point, as far as these dwellings are found even today. If, in addition, one considers the fact that Mamia Rinof was traveling in summer, there can be no doubt but that his above remark referred to the summer dwellings, which in fact, as we shall see in a moment, are quite different among the Gilyak on the Amur and on Sakhalin than among their neighbors, the Olcha, and the other Tungusic Amur-peoples. Conditions in Kamchatka and in the lower Amur region were too different to have produced an equally rapid disappearance of national peculiarities in both places. In the former, the Russians, after conquering the region, settled

/354 cont./

permanently among the natives, who were greatly decimated by the previous bloody battles, building their houses in their own way (as already mentioned, peaceful relations with the Kamchadal, even mixing with them more and more. It is therefore not surprising that their style of building soon became the commonly use house throughout the region. Matters were different in the lower Amur region among the Chinese and Manchu: a conquest and colonization of this region by the peoples named have never taken place. As we discussed above in detail (3),

3. See pp. 119, 142-144 above.

it instead was and is visited only from time to time by individual Manchu officials and Chinese merchants who, in a few places, during the year have their own houses, always take up residence in the houses of the natives, and this only among the Tungusic Amur-peoples, for the Gilyak have even denied the Chinese trader entry into their region. Hence, it undoubtedly must have taken a long time before the Chinese winter-yurt replaced the Gilyak from the Chinese on the Sungari, spreading along the Ussuri and the Amur from people to people, and the trading expeditions which the Goldi, Olcha, and Gilyak from ancient times to now have conducted annually to the Chinese along the Sungari and on which they have had repeated opportunities to become familiar with and to appreciate the type of construction of the Chinese house, must certainly have contributed most of all to its adoption and further spread among the Amur peoples.

/355/ In April and May, when spring comes, the Gilyak find it necessary to abandon their winter dwellings and to move into their summer dwellings. First the inhabitants of the earth yurts move out of their houses, because they are made wet and uninhabitable by the water running in both from the top and the sides as a consequence of the melting snow and the thawing of the ground. The Chinese winter-yurts, set on level ground, are more serviceable, even in spring and summer, though even in them water sometimes comes through or over

/355 cont./

the low threshold and soaks the floor when the snow melts quickly or when there are heavy rains. Even these dwellings, however, become uninhabitable in summer because of the warm sleeping benches, which inevitably are heated each time food is cooked, and because of the above-mentioned vermin, and, finally, the crowding of fish carried on in this season of the year requires the move into the summer dwellings, which are more favorably and conveniently located for it.

The summer dwelling of the Gilyak is of the same type everywhere, on the continent as well as on Sakhalin, and bears the same designation in both places *kŷ-f*. The most striking exterior feature is that it rests on piles which rise four to five feet above the ground. Only at isolated points on the east coast of Sakhalin, south of the Amur, especially in Tangi, Choji, Arkai, and Dui, did I see summer houses set on level ground, but otherwise of exactly the same type, outside and in, as those resting on piles (1). The aim that the Gilyak have in

1. The large village on Nadezhda Bay at the northernmost tip of Sakhalin (map, see p. 467 above), which was visited by Krusenstern, had summer houses resting on piles. See his Reise um die Welt, Vol. II, p. 182.

mind with this construction on piles is a twofold one: first, to protect their dwellings against inundations, since the Amur, as a result of prolonged rainfall, often rises considerably and floods the lower stretches of its basin, and then also to make the houses airier and drier by setting them not directly upon the damp ground but somewhat above it, with a constant flow of air under them and penetrating even into the house through the crevices in the floor, this is all the more necessary since part of the fish supply is stored in them. Both may also be necessary for the Gilyak living on the Amur itself, for there, too, depending on the locality, a sudden rise of the waters as a result of stormy winds must be reckoned with, and

/356 cont./

one might call a narrow balcony (1). On the accompanying plan of a Gilyak summer-house it is the space a bounded with a dotted line toward the front. The entrance to it (b) is precisely in the middle of the front side of the house, or, as in the illustration on Plate XIII, somewhat to the side. Through this, however, one

a = Sill or narrow balcony along the front side of the yurt. b, c = Doors. d = Anteroom for the storage of implements and supplies. e = Actual living quarters. f = Sleeping benches. g = Hearth. h = Stone triangle for the big kettle. i = Corners for odds and ends.

Plan of a Gilyak Summer-Yurt (Ailyŷ).

first enters a good-sized front space (d), which is used for the storage of various implements, as well as for storing supplies of fish and the like, and only behind it is the living room proper (e) found (2). This is exactly like the interior of the earth yurts,

1. Krusenstern (op. cit.) calls it a gallery.

2. Krusenstern found this room locked and though that it was the room for this women, which fitted in with his general conception of a Mohammedan Gilyak population consisting of "Tatars," which, however, does not at all correspond with reality.

/357/ This is exactly like the interior of the earth yurts, in that low and wide plank-beds or sleeping benches (f) run along the sides of the room, on both sides and the entrance, leaving a passage door (g), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as the front side of the house, or, as in the illustration on Plate XIII, somewhat to the side. Through this, however, one

/357 cont./

yurt, between the piles, for protection against the rain, and the dogs, too, find a suitable shelter under the same protective roof.

The above description also applies, apart from the specific reference to the pile-construction, to the summer dwellings of the Gilyak on the Amur and in addition to those on Sakhalin and, as has already been mentioned, of very similar nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is on level ground, the flat sill, space a, projecting along its front side is likewise on the ground. As long as it is still winter, this space is used for the erection of a shelter before the entrance to the yurt, even though only a crude one. For this purpose, on both sides and in front, where the domed line is on the plan a-f-a, poles are set up vertically and, with the exception of a passage, are bound together with plaited switches, and the spaces between them /358/ are filled with grass and brushwood, so that a shelter is produced. This is assigned to the dogs for their abode, where, posted at both sides of the entrance to the house, they make good sentinels for it.

Since the main occupation of the Gilyak during the summer is fishing and preparing the supplies of fish for the winter, one always sees beside the summer dwellings several contrivances for this purpose. Thus, more or less numerous, upon racks for vertically placed boards which can easily be removed in any number desired, as had been done in the case of the yurt at Sibi at the time it was set up, usually, another dwelling, usually one, to be sure, but a very important one in its consequences for the Gilyak, must be mentioned in connection with the construction of their dwellings. In order to make them inaccessible to the great number of rats in the winter yurts, a vital necessity because of the fish supplies assembled in them, a piece of birch bark is placed over the upper end of each of the pole-supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing up the poles to get into the yurt. The sled are hung under the

/358/ merely an approximately square hole which is just big enough so that a person can go through it in a stooped position, and whose cover is a board that fits it exactly, before which a crosspiece of wood is advanced instead of a bolt (1). The interior of the store-

1. An illustration of the front side of such a storehouse, among other things, will be found below on a plate showing a funeral procession of the Gilyak.

house is usually divided by a partition into two sections, which are connected by a door, so that in it, as the accompanying plan indicates, there are eleven separate, large and small, or smaller wall surfaces, along which the supplies of fish are stacked.

/359/ Like the earth yurt, all the pile buildings mentioned above, the summer yurt, the storehouse, etc., are original, peculiarly Gilyak structures which the neighbors of the Gilyak, the Tungusic Amur-peoples, lack, but which recur among many other Paleo-Asiatic tribes. For example, according to Krasheninnikof's and Steller's descriptions and an illustration given by the latter, the summer dwellings of the Kamchadal are pyramidal huts built on top of pillars, and the pile hutsgen by the Russians (1). The Eskimos of the American Northwest along

1. Krasheninnikow*, "Opis. semli Kamchatki" (Poln. sobr. uchen. pusch. po Rossii, Vol. II, St. Petersburg, 1818, p. 87). Steller, Beschreib. von dem Lande Kamtschatka, Frankfort and Leipzig, 1774, p. 318. Steller also gives the dampness of the air and the ground as the compelling reason for the construction of such "dry dwellings" on Kamchatka. This explains why these peculiar dwellings can be found also in other parts of the earth yurts, as mentioned above, had already been forced out by Russian-type dwellings.

/359 cont./ the Eskimos of the American Northwest also the Kwikpak, Norton Sound, and the Arctic Ocean erect their storehouses on high piles above the ground in order to safeguard the supplies of fish, dried meat, and the like against the dampening the summer both against the humidity and against attacks by mice, foxes, wolves, and especially the dogs, which are always hungry during the summer (2).

2. Zagoskin*, Pechehlioch. opis' chasti russk. vlad. v' Rossiskoi Amerikie, Moscow, 1847, Pt. I, p. 56. Dall, Alaska and its resources, Boston, 1870, p. 27. Jacobsen, Reise an der Nordwestküste Amerikas, Leipzig, 1884, p. 173. Seemann, Reise um die Welt, Vol. II, Hannover, 1858, p. 62. In Dall (op. cit.), p. 13 and 40 there is a description of such "dovecote-like" buildings, as Seemann aptly calls them. The designation comes from the Russian (Sagoskin, op. cit.), which Dall also uses for the summer and winter dwellings of the Eskimo (op. cit., p. 20, 40), and according to Steller (op. cit., p. 318, for him), through the correspondence of the word "pasapar," by which, however, the Kamchadal refer to a last made out of long grass for an overnight stay.

Thus, the Gilyak, where they have kept their original Gilyak and construction, and many another Paleo-Asiatic people can to a certain extent be called cave-dwellers or troglodytes in winter and pile-dwellers in summer. In this respect they stand at a point which on Europe, according to far distant, prehistoric period. From this point of view, too, the pile huts of Paleo-Asiatic peoples, which I have proposed for those remnants of an ancient population formerly more widespread on Asiatic soil, is in a certain sense justified.

/359 cont./

Before I leave the Gilyak, I must come back to the question touched on above about an approximate determination of their total number according to the number of their winter dwellings. Such an estimate can only be undertaken on the basis of the winter dwelling, not the summer one, if only because the number of the former is far easier to ascertain. Although summer population is that of the latter. If the large winter houses with their separate chimney-cowls, with smoke nonetheless pouring out, more readily strike the eye of the traveler at any time, this is especially the case in winter, since on the journey then from village to village or dog-drawn /360/ sled brings him directly in front of one of the winter houses, whereas the summer houses off to one side and sometimes at a considerable distance from them, without a road to them, and so, for overlooked, or even confused with the storehouses, which are of very similar construction. Moreover, the statements of the Gilyak themselves, when asked about the number of houses in that or that place, always refer only to the winter dwellings, for it is in these solid, spacious winter dwellings, erected with a great expenditure of labor and energy, that the life of the Gilyak is concentrated during the greater part of the year, from about the middle of October to the middle of May, that is, seven months. Everyone of them has a hospitable reception there on his winter travels and journeys, shelter and food for himself and his dogs, the best festivals are celebrated there amid a confluence from near and far, etc.; yet, the warm dwellings are the true permanent dwellings of the Gilyak, whereas in summer the fishing and the gathering of all kinds of provisions puts the whole population in a more or less fluctuating movement and scattered over a broad area, and in addition the mild season makes a house less necessary. For this reason, incidentally, winter is also the most suitable time of the year for ethnographic investigations among the Gilyak. The number of winter dwellings in the individual Gilyak villages is of interest for still another reason, for it gives an immediate criterion for their size and importance and indicates that principal and central points of Gilyak life note.

/360 cont./

in general and in the individual areas. Such principal and central points are of special importance for the ethnographer, because here the national character of a people as a rule appears more sharply and precisely stamped and the peculiar usage and customs remain preserved longer against foreign influences, whereas in smaller villages it more readily happens that, as a result or support in isolation, the mixed marriages of the few residents with members of a neighboring tribe, etc., many a national characteristic is obliterated. Indeed, in the course of time many a foreign idea or custom finds entry, for which I shall have more than one opportunity to cite examples in the following.

Unfortunately, I am not in a position to give the number of winter dwellings in the whole Gilyak area. In those parts through which I traveled, such as along the Amur River and the Limun on the mainland, on Sakhalin along the west coast from Pogibshi to Dué and in the interior along the entire Tymve River to somewhat north of its mouth, I have been able to ascertain it owing to my own count, and in other adjacent parts such as on the west coast of Sakhalin north of Pogibshi and south of Dué, by means of many inquiries among the Gilyak. For the east coast of Sakhalin a few statements by Glehn are available (1); these on the parts of the Gilyak territory along

dwellings of the successive peoples in this direction. One need only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

In these housing conditions of the indigenous Amur peoples it is evident that there is a feature fundamentally different between the anciently sedentary, Paleo-Asiatic Gilyak and the Tungusic peoples surrounding them, who wandered in later, indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way of life and subsistence of the peoples mentioned. The Gilyak are

G

[262]

predominantly fishermen and, along the seacoast, also seal hunters; correspondingly, they are almost exclusively ichthyophagous, as is their only domestic animal, the dog. Now, in order to support themselves and their many dogs, required both for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

Gilyak do not use any iron in the exterior or interior constr of their houses, and likewise in the making of boats, sleds, always use only wooden pegs instead of iron nails to join th individual pieces together, does not lead one to expect the be masters in the craft of forging, and at first glance sugge conjecture that the numerous and in part neat and artistical worked iron utensils and weapons found among them are of

G
[175]
000

foreign origin. Nevertheless, this is by no means the case. in the earliest reports they are described as skilled armorers During his captivity in Siberia at the beginning of the previ

/597 cont./

435 The value of the kettle embedded in the hearth and
439 the portable kettle is reckoned in part, on the basis of size, but in part and chiefly on the basis of their origin, because the Manchurian (Chinese) kettles are far inferior in quality to those of Japanese: the former easily crack over the fire if they contain no water, but the latter will not. Accordingly, it costs for:

A large Manchurian hearth-kettle (tsch) (ormoz-wunj)	4 ja
/598/	
A smaller Manchurian hearth-kettle	3 "
" Manchurian portable kettle (matsch-wunj) with handles, depending on the size	3-7 "
A small Japanese kettle (Gilyak kughi-wunj, i.e., Ainu kettle)	7-8 "
A large kettle of the same kind	20 "
" " Japanese kettle with three handles . . .	30 "

435 The evaluation used among the Gilyak for
342 their houses is very peculiar, inasmuch as it
343 costs for:

A winter yurt (tschadryf) with two hearths only . .	4 ja
" summer yurt (käryf) only	2-4 "
A storehouse(njö), on the other hand, depending on the number of compartments	10 " and more.

435 A number of conclusions concerning the trade of the Gilyak,
439 as well as telling numerical evidence of certain of their customs and beliefs, can be drawn from this table, some of which have already been discussed in the previous sections and some will be discussed in the following. For the moment it will suffice to draw attention only to the following points:

1) Furs, the most important barter item of the Gilyak in their trade with the Chinese, have a relatively low price, which

/599 cont./

G 435 342 343 7) At first glance the evaluation of their various kinds of housing on the part of the Gilyak as given in the table seems very irrational, for one can scarcely believe that a structure as large and relatively complicated as their winter dwelling, built on the Chinese pattern and provided with two hearths, four wide sleeping benches heated by pipelines, and large windows, is worth only about half as much as a /600/ storehouse lacking all of these accessories. Nevertheless I must stand by the above figures, repeatedly confirmed for me by the Gilyak and hope to be able to give an adequate explanation for them in the following while discussing the social relations of the Gilyak and their socio-communistic attitude coming to light in the construction and utilization of their houses, as well as in other things, as I learned from them themselves.

G G1 435 8) Finally, if I compare the table of prices of the Gilyak with that drawn up by Maximowicz (1) in a similar way among the

1. In his handwritten notes put at my disposal.

Goldi, I find an almost complete correspondence in most things, obviously because the prices prevailing among the Sungari Chinese are decisive for both. Nevertheless, some differences, which are characteristic of region and people, can be recognized in them. Among the Goldi, for example, all fur seems to have a higher price than among the Gilyak (a good sable, for example, is valued by them at 4-5 ja, a red fox at 3 ja, a black one even at 30-60 ja), undoubtedly because the animals involved are less frequent in their territory than in the abundantly forested north, and perhaps also because the Gilyak accumulate a greater quantity of them through their industrious trade as middlemen, with the neighboring peoples. In this connection, too, among the Goldi attention is paid to the smaller animals, such as squirrels, ermine, Mustela sibirica, and the like (ten specimens of the former, for example, cost

Interior of an old winter dwelling.

/636 cont./

585 As soon as the bride price is paid, the marriage is regarded as concluded, and the man may take his wife and lead her to his home. This is often done without further ado. Wealthier [556] people, however, usually arrange a feast to celebrate the wedding of their daughter or sister, at which, aside from relatives, villagers and friends also /637/ take part. Similarly, a supply of various foods, fish, mossj, berries, millet, etc., are given to the departing married couple, so that the young wife, having reached the home of her husband, is also able to give a feast for the relatives, there, as well as members of the household and village.

591 592 As a rule the young couple moves to the place where the husband has his home, that is, where his parents or brothers live, and take up residence with one or the other of them, according to circumstances, since the Gilyak dwellings, as has been described above, are of the type that can accommodate several families. The house, however, is by no means always inhabited only by relatives, but often also by other villagers who perhaps helped in building it or have some other connection with its owner. The members of the household remain together until, through the increase in the families, the space becomes too crowded and some of them have the means to build another house for themselves either in the same village or elsewhere. Besides 592 the central room used by all the members of the household, with • 342 the hearth in the earth yurt or the dog table in the winter house 35 built in Chinese fashion, each family has its particular share of the sleeping benches running all around and each individual has his designated place on them. But these individual sections are never separated from one another in any way by screens, curtains, or the like, and the whole interior of the house always gives the impression of a room used by everyone in common.

577 171 As little as such living together by all the members of the household in one room can be conducive to morality, generally speaking, I must nevertheless give the Gilyak a good rating in this respect. In fact, I do not hesitate to call them a morally austere people, in contrast to their neighbors, the Goldi, Orochi, 577 Ainu, and even more the other Paleo-Asiatic peoples. There is

/667 cont./

735 421 different, however, when it is a matter of goods which Nature furnishes mankind only sparingly and which must be wrested from her, so to speak, with toil and effort, as, for example, sable and other precious animal pelts as well as everything which is obtained by trade by means of the latter from the Chinese, Japanese, and Russians. It would never occur to a Gilyak, be he rich or poor, to consider them likewise as common property and, accordingly, to sacrifice them in cases of need to the common good or to demand that this be done. In addition, these goods, in contrast to the first ones, and not exempting the cereals, tobacco, and the simplest Chinese or Russian clothing materials, are merely luxury goods without which he can still very probably maintain life if need be. Thus, the extremely [182] active instinct of the Gilyak for trade and acquisition and their endeavor to preserve /668/ and add to their property form an effective counterweight against the communism and prevent the lazy, and therefore poor, from living at the expense of the industrious and wealthy, even though without denying him, in case of need, what is absolutely required to sustain life.

• 342 421 423 The Gilyak also take account of the communistic principle in the matter of shelter or the dwelling, which, in a region with long and severe winters like their homeland, is of no less importance than food and clothing for the maintenance of life. How and to what extent this is done can be seen from the following. It has already been mentioned above that the Gilyak, in an apparently quite irrational fashion, do not evaluate a structure as large and, in some respects, complicated as their winter-house, built according to the Chinese pattern, half as high as a simple, always much smaller storehouse (1). This can be explained by

1. See pp. 937-943 above.

the fact that the former, in spite of its size, yields a considerably smaller direct income than the latter, and this, in turn, rests on the fact that the dwelling is in part of communistic origin and

/668 cont./

and thus in its utilization is to a certain extent subject to the communistic principle, which is not at all the case with regard to the storehouse. On account of its size and complicated construction, the former cannot be built by a single person, as can the latter; putting it up requires the joint labor of many persons, whom the person undertaking the enterprise, if he cannot find them among his relatives, engages from the circle of his fellow-villagers or neighbors for a small payment. Though later on it belongs to the person or persons who undertook the construction and were able to persuade the others to help, it is never forgotten that it owes its origin to joint labor and, accordingly, it is always regarded to some extent as common property: shelter and protection in it may not be denied to any villager or other fellow-tribesman, and it would be absolutely contrary to the views and the practice of a Gilyak house-owner if he tried to collect a high rent from a person permanently domiciled with him, and, to be sure, in any form other than through the obligation for assistance for the household. Hence the direct profit from a winter house, and similarly from a summer house, is very little.

The situation is different with regard to a storehouse, which is built by the owner himself. It belongs to him exclusively, and the richer Gilyak only have an interest in one insofar as they have provisions and other things and have no shelter for them. It is arranged in practice so that only a single wall, and, if this is not enough, a second and a third can be rented for storage, until the means to construct an entire storehouse are obtained (1).

1. Cf. the arrangement of a storehouse (p. 529) with its 11 wall pieces (f-q) and two spaces (c and d) in the middle.

Since more can be asked from a well-to-do Gilyak, a section of a wall, even reckoned at only one ja, will yield about 10 ja in direct income.

/731 cont./

which were strung in a row by means of the Foramina vertebralia on the branches of the brush, and beside them hung Goldi birch-bark bowls and baskets, such as are found also on the grave sites, of deceased human beings and which apparently were offered as a sacrifice to the manes of the slain bear.

It is not to be assumed that the Gilyak of Sakhalin differ essentially from their fellow-tribesmen on the mainland in their basic ideas about the bear and the festival dedicated to it, especially since we must think of how the Gilyak spread, that, having come to Sakhalin from the mouth of the Amur, they found a home there for a long period, and only then, oppressed by the Ainu, migrated back to the mainland for the greater part (1). In individ-

1. See pp. 214 /untranslated/, 247 /untranslated/, 889, and 892 of this work.

ual phases of the festival, on the other hand, there are very considerable differences between them, determined chiefly by the different method of construction and the spaciousness of the dwellings of the continental and the Sakhalin Gilyak.

As plain as the exterior of an earth-yurt of the latter is -- a low, conical, snow-covered mound somewhat blackened at the top by the smoke streaming out -- its external decoration for the bear festival is just as shabby. As a rule, only one or two young fir trees, stripped of their lower branches, are stuck in the snow at the entrance to the yurt, with a few ringlet-shaped, curled wooden-shavings (zach) hanging down from their crowns and from the branches of neighboring shrubs. Only when a bear has been eaten in the same dwelling a few weeks or a month previously or even in the course of the year is its skin used for the exterior decorating of the yurt, being spread over a long and sturdy branch stuck obliquely into the snow and sometimes supported by a small railing, and in front of it is put a bundle of wooden curls (zach) (2).

2. See the woodcut, p. 1180.

I saw this, for example, in Tyk, Duĭ, Jwlk, Pud-wo, and elsewhere along the /732/ west coast and in the Tymy Valley of Sakhalin. If

/732 cont./

Bearskin hung up near the yurt.

the head and leg pieces of the skin have already been cut off to be used as bowls at the bear-festival feasts, they are sewed back on the rump section on such an occasion, in order to make the skin look whole.

The narrow, low, and dark passageway leading into the earth yurt and the small entrance often closed only with a board that can be pushed in a horizontal direction instead of a door make it impossible to lead the bear in and out here, and in the interior of the yurt, taken up almost entirely by the hearth and the three sleeping-benches, there is no room for temporarily displaying even one bear, much less two or three (1). Thus this principal pleasure of the Amur

1. See the plan and the arrangement of a Gilyak earth-yurt, p. 452 of this work.

Gilyak during a bear festival must be renounced by their fellow-tribesmen on Sakhalin, in so far as there are only earth yurts there. The opportunity for this was first offered to the Gilyak when the earth yurts (toryf), originally customary among them even on the mainland, were replaced by houses built in the Chinese fashion (tschadryf) which in my day had already taken place throughout on the mainland except for one earth yurt in Pättach, and to a large extent along the Liman coast of Sakhalin (2). At first, the conservative spirit which

116, 182, 342

"The possession of two houses for the different seasons is also found to be an advantage from the point of view of their occupations. In winter it is convenient to be in the forest to pursue the hunting of the bear, fox, etc., while in the summer fishing points to the river bank or sea-coast as the most handy. In shape the summer hut resembles a rudely constructed Swiss châlet. Some were built on piles, but these were few, and this was apparently a doomed fashion."

animates all primitive peoples may have resisted any change in the traditional custom, but gradually there must have been greater utilization of the advantages which the new housing offered to them by its position on level ground and its greater spaciousness also for the celebration of the bear festival and this could not have taken long for a people with such practical talents as the Gilyak. If one sees the Amur Gilyak lead their bears, temporarily displayed in the houses, out through the door and immediately back in again many times, apparently without any purpose whatsoever, and stroll around with them in this fashion from house to house throughout the entire village, it gives the impression as though, with their traditional memory, so to speak, of the limitation that was formerly imposed on them in this respect and within which their fellow-tribesmen on Sakhalin still find themselves today they revel in the enjoyment offered to them by their present /733/ dwellings, which are more suitable for the bear festival. As a matter of fact, this custom seems to be only the manifestation of joy and satisfaction gradually becoming customary among the continental Gilyak over the change in the construction of their dwellings which has taken place in the course of time.

Another difference in the bear-festival practices determined by the different construction of the dwellings among the continental Gilyak and the Sakhalin Gilyak pertains to the transfer of the bear's head from the läsng into the yurt. Among the former this is done, not through the door, but always through one of the windows of the house. The earth yurt, however, has no windows and gets daylight only through the smoke vent, which, aside from the door, is generally the only opening in it leading to the outside. I therefore suspect that among the Sakhalin Gilyak, too, this transfer taken place, not through the door, but through the smoke vent, which would scarcely be possible in the Gilyak houses built in the Chinese fashion, and therefore the continental Gilyak are obliged to use the window opening instead of the smoke vent, which is also much easier. I think that confirmation of this conjecture of mine with regard to the Sakhalin Gilyak is to be found in the fact that over a yurt in which a bear has been eaten the skin of the animal consumed, immediately after the meal is finished, is spread over a pole jutting

/733 cont./

796 out obliquely from the smoke vent and with a bundle of curled
342 wood-shavings hanging from its tip, such as I saw in the village
184 of Tyk. Here, the toad carved out of birch bark probably also remains on the smoke vent, while the bear's head and skin is lowered through the smoke vent directly onto the platform of the hearth.

796 In the meantime, in the interior of the yurt there, the rack
184 for the bear's head, made, just as on the mainland, out of unpeeled alder poles and richly decorated with fir branches, has been readied. It stands close to the rear end of the hearth platform in the passageway between it and the rear bench, or bench of honor, thus, in a place which corresponds exactly to the one which it occupies in the Gilyak houses built in Chinese fashion.

796 Since the hearth platform in a large earth yurt is quite spacious,
184 two separate fires can be kindled on it, corresponding to the two
354 hearths in the tschadryf, over which the kettles used to cook the
252 bear meat as well as for preparing the other dishes hang from the yurt beams. The fire closer to the bear rack is the kotr -- or
[824] tschchyf (1) -- tur, the bear fire, in which fresh branches of fir

[192] 1. As the bear is usually called on Sakhalin.

trees, and especially of the cedar shrubs so common in northern Sakhalin, are burned during the preparation of the bear meat and also at other times during the bear festival on account of the popular fragrance.

796 The wooden curls (zach), being regarded as a symbol of
798 holiness, purity, and inviolability, are an essential ornament in the
353 interior of the earth yurt. They always hang down in a long bundle
184 from the center of each of the four crossbeams supporting the conical roof, and at the time of the bear festival there number is increased by four new ones, which /734/ are put in the four corners of the yurt.
[171] In the Gilyak houses, on the mainland one usually sees only two of them, and not always even these, suspended from the two supporting posts of the house, but their number seems to increase as one approaches the Ainu, among whom they are used under the name inau.

resettled. In southern Sakhalin, individual families live in the village of Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-gan—big dog). The agglutinating features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives have many similarities with verbs. The Nivkhi numerals are interesting: in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasiliy Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to as "Gilyak peasants." According to these reports, they lived in large villages in wooden winter houses, flanked by barns, racks for hanging fish and log structures for bears. The Nivkhi wore clothing of fishskins and animal pelts; they kept many dogs, engaged in fishing, and their diet consisted mainly of fish. They traded with the Chinese, Ainu and Tungus.

342

Mud hut.

342 175 the entrance to the hut was no longer from the roof, but through a long low corridor.

From about the period of the Ming dynasty, the Nivkhi dugouts began to give way to Manchu fanzas of the frame type, which spread over the entire Nanay territory and were taken over by the Nivkhi. The structure and lay-
[171] out of the winter dwelling were similar to those of the Ul'chi. In summer-time, the Nivkhi usually lived in summer dwellings built on piles some 1.5 m high. They usually consisted of two parts: the rear part, which served as living quarters and was lighted by an opening in the roof, and the front part, which served as a warehouse. The summer house was usually sur-
[171] rounded by racks for jerking fish and storehouses on piles for storing various products. The general appearance of the Nivkhi summer dwelling was similar to the Ul'chi summer storehouse.

291 The old summer dress of the Nivkhi men was similar in many features to that of the Nanays. It consisted of trousers (varsh), a robe, reaching to the knees and closing from left to right, footwear of sealskin, and a conical birchbark hat (kh'ifkh'akk). The trousers and robe were made of blue or gray cotton cloth. The women's summer robe of fishskin or fabric was longer, and was decorated along the edge with copper disks. In winter, an outer garment of dark fur, with the fur outside, was worn above the robe. During sled trips, the men wore a kilt of sealskin above the fur garment, to save it from wear (sealskin was not used for dressing the dead). The head
[531] was protected by earmuffs and a fur hat. Men's and women's clothing differed only in that the latter had more embroidery and appliqués, and was made of a greater variety of materials (silk, cloth, lynx-fur on the hat).
[439] Formerly, the Nivkhi obtained material for their clothes from Chinese and Russian merchants. Footwear, robes and overcoats were made of

Feeding a bear.

the sea. Both the Nivkhi dwelling and every river had its yz', who took care of man. The sky was thought to be inhabited by "sky people." The sky people—the sun and moon—had no close relations with man, but the Nivkhi were always in close relations with the yz'. "Receiving" from them fish, sea animals, etc., the Nivkhi had to "give" them in return—to sacrifice to them. The cult connected with the "masters" of nature was of pronounced clan character.

The "mountain man," the "sea man" and the bear, in the Nivkhi thinking, were common to the clan. And the bear festival (chkhyf-lekherno—"bear game") was a clan festival. The clan which celebrated the festival assumed the expense and work of arranging it. This festival was connected with the cult of the dead, since it was usually held in memory of a dead clan kinsman. A bear cub was caught in the taiga or bought and placed in a special frame building. The cub was reared by members of the given clan. On specific days it was taken out and led on a chain through the encampment. The bear was reared for several years. Before the festival, all the clan members gave the bear's master products and money. The master's family prepared food for the holiday (usually held in February), built a platform—a shooting ground with one or several pairs of trees—poles hung with ritual shavings (inau) and covered with carving. The bear was tied between them. The honorary duty of killing the bear was given the narkha—people of the clan in the relationship of "son-in-law" to the clan holding the festival. The festivities sometimes lasted several days and consisted of a complex ceremony of killing the bear with a bow and arrow, ritual feasting on the bear meat, the sacrifice of dogs, and so on. The bearskin with the head was lowered into the yurt through the smoke vent on a high pole. In the intervals between eating, there were dog races, shooting matches with bow and arrow, fencing with sticks, and dancing. After the festival the head and bones of the bear, the ritual utensils et cetera were put away in the special clan storehouse. Wherever a Nivkhi lived, he retained his contact with his clan storehouse, where he always brought the skulls of the bears he killed.

The burial rites of the Nivkhi differed sharply from those of the Tunguso-Manchurians of the Amur regions. The Nivkhi characteristically

175 648

1918, soon after the establishment of the Soviet government in the Cast, this area, and especially the Amur Basin and Sakhalin, be- the scene of civil war and intervention. Guerrilla units were organized nt the White Guards and interventionists. The bitter fighting lasted l years.

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

[241] [433]

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

[231]

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

177 648 474 361

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

177 648 474 36 [342]

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs.

177 648 474 342 353

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

177 291 [294] [292]

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi.

843 These buildings were the receptacles of dried fish for the winter use of dogs and their owners. The elevation of the floor serves to protect the contents from dogs and wild animals. I was told that no locks were used and that theft was
.85 a crime unknown.

342 The dwellings were generally divided into two apartments; one a sort of ante room and receptacle of house-keeping
415 goods, and the other the place of residence. Pots, kettles,
777 knives, and wooden pans were the principal articles of household use I discovered. At the storehouses there were several fish-baskets of birch or willow twigs. A Gilyak gentleman does not permit fire carried into or out of his house, not even in a pipe. This is not owing to his fear of conflagrations, but to a superstition that such an occurrence may bring him ill luck in hunting or fishing.

251 It was in the season of curing fish, and the stench that greeted my nostrils was by no means delightful. Visits to dwellings or magazines would have been much easier had I possessed a sponge saturated with cologne water. Fish were in various stages of preparation, some just hung upon poles, while others were nearly ready for the magazine. The manner of preparation is much the same as in Kamchatka, save that the largest fish are skinned before being cut into strips. The poorest qualities go to the dogs, and the best are reserved for bipeds.

226 Though the natives do the most of the fishing on the Amoor, they do not have a monopoly of it, as some of the Russians indulge in the sport. One old fellow that I saw had a boat so full of salmon that there was no room for more. Now and then a fish went overboard, causing an expression on the boatman's face as if he were suffering from a dose of astonishment and toothache drops in equal proportions.

.31 There were dogs everywhere, some lying around loose, and others tied to posts under the storehouses. Some walked about and manifested an unpleasant desire to taste the calves

342
291

NIGHT SCENE—GROUP OF PEASANTS.

heads. Their cover consists of skins, sometimes also of a coarse military cloth.

The houses of the Sakhalin-Gilyak are differently arranged. They have neither stoves, nor chimneys, nor windows. The floor is somewhat below the surface of the ground; in the middle of it is a box-like open hearth made of pressed clay, and above this is an opening in the roof. In windy weather the houses are usually full of smoke.

A Gilyak house is lived in only during the cold and colder parts of the year; in summer, however, those who do not go off on longer excursions move into the airy storage hut. This consists of boards, and stands on poles in order to protect it from rats. [115] On their expeditions the Gilyak often make themselves huts of birch bark, and they carry along with them wide and long pieces of bark. It is scraped, and softened in hot steam. They also make baskets, small dishes, etc. of this.

A Gilyak house seldom serves but one family; usually several of them live together, sometimes as many as eight or nine.

VII. Transportation Methods, Boats and Dog Sleds.

There are two kinds of boats. The regular one is usually made of fir or cedar wood. It is rather narrow, but very long, about six to seven meters and has no keel. The steering end is rounded, the opposite end, pointed. Lengthwise it consists of three planks, one of which is the floor, the others, the two sides. The floor board projects out at the prow, the two side boards are shorter than it and are joined by two small cross-boards; the projecting floor board softens the impact in landing and serves to tie up the vessel. The boards are joined with wooden pins, the cracks stuffed with moss which on the inside is covered with thin wooden strips and fastened down. There is no rudder; instead they use a short steering oar which is used alternately on the right and left sides. The ordinary oars are shovel-shaped; the wider end is cut in the shape of a lyre. There is a small bar fastened to the edge of the boat for each oar, against which it is braced. The rowers sit on low, narrow cross boards. Sometimes a mast is raised and a sail is set. The latter consists of fish skin or sail cloth. These boats go very rapidly but easily overturn.

The Omorchka is a small narrow canoe made of birch bark; inside, the frame is supported by a double row of lashing of the same material, which runs criss-cross. Usually only one person sits in this canoe and rows with a double oar, both right and left.

161 It is as impossible to estimate with any certainty the number
of Gilyak, as it is the number of Goldi. Rittich estimates
their number to be about 3000. On the Amur Jakobsen found
quite a large number of villages; on Sakhalin Island, on the
other hand, there were far fewer villages.
439 Like their neighbors, the Gilyak are fishermen and hunters;
433 only now and then do they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and
flour for the inhabitants of Sakhalin. In accordance with their
primary occupations they spend their summers on the river
banks while in winter they move into the mountains and roam
through the woods. I am unable to say with certainty whether
they have summer and winter dwellings like the Goldi, but I
think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-
brick ovens and the benches, warmed by the pipes, along the
342 walls are also to be found in these houses. On the other hand,
361 the traveller found in September 1884 above Nikolayevsk a
whole number of Gilyak villages that were at a considerable
distance from the river bank, while the summer settlements
of the Goldi by their nature as fishing villages used to be
situated right by the river. One might conclude from this,
perhaps, that these Gilyak villages were not simply fishing
villages for the summer, but served as dwellings for the
whole year; unless one wanted to assume that the Gilyak were
forced to withdraw from the immediate neighborhood of the
river in summer because of the partically marshy and there-
fore unhealthy river bank. In Sakhalin, moreover, there was
not a trace of the larger houses of the Gilyak such as those
mentioned above; rather, the huts were only small and half
under-ground, so that they had a certain similarity to the
511 dwellings of the Eskimos in Labrador and in Alaska. They
515 offer a very unenviable abode for the European traveller,
for with their confined space one can hardly avoid close con-
tact with the inhabitants and the dangers connected with that,
in short, being tormented by a multitude of vermin. In addition
the atmosphere created by the crowd of people present, by
the presence of the dogs, by the manifold provisions hung up
for drying or smoking, and by the smoke which can only
511 escape with difficulty, is hardly bearable. The large houses
136 on the main land are in better condition, but they, too, have

The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

Gilyak villages lie along the river banks in low places which, however, are usually not reached by flood waters. The houses stand in a row, usually three in number, seldom 2 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened!

Their house (2) somewhat resembles a common farm house,

2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes weighted with stones, to offer resistance to the wind. The few

354 hinges. There is no ceiling; instead, there are a few cross bars on which lie or from which hang various implements, among other things a kettle which reaches to the front opening of the hearth. The hearth or the stove, if you like, consists of pressed clay; the larger houses have two of them. The smoke passes into a horizontal pipe made of stones and covered with clay, which goes around the room under the sleeping boards, leads out through the side wall and ends in a high wooden chimney that stands separately. The Goldi and Manchurians have the same arrangement. The smoke pipe is seldom cleaned, and yet fire does not often occur. The thin walls of the Gilyak house do not hold the heat, the stove is low and small, and thus the warming of the benches from below is a very practical arrangement. Even so, it is often very cold in the houses, especially when it is below freezing and there is a wind. A large kettle for water is put into the upper opening of the stove and besides that, as we have said, a smaller kettle or cooking pot is suspended from a chain and rests just in front of the front opening of the stove, right next to the floor. The logs are usually so long that [114] they do not fit properly and burn outside the opening of the stove, which frequently causes the room to be filled with clouds of smoke.

231 The furniture is very simple. Not far from the door is the
352 hearth or, if there are two, they are put on either side of the entrance. Around the walls run the benches, or, rather, one continuous bench. It is low and so wide that a tall man can lie diagonally across it. It is covered with woven mats made of arundo. In the middle of the room is the long and low dog table. The dogs are called in before they are fed and tied on the table; they are let down one by one, fed, and chased out again. Besides, there are hanging cradles, a primitively decorated cabinet, a box, etc. On the benches stand a few stools in case a higher seat is needed for some work. On the cross beams below the roof hang all kinds of skins, fish, cloths, etc.; above these, diagonally, lie oars, lances, bows, and the like. There are no idols to be seen; these are usually kept in the storage houses and are brought out only on special
354 occasions. In the evening the room is lighted in the most primi-
373 tive fashion: a cloth and a small bowl of fish oil is the lamp, or, if there happens to be no oil, a pine chip is lighted.

513 In summer their bed consists of mats, in winter of bear skins or other skins. For pillows they use long, cylindrical cloth sacks stuffed with hay, one of which serves for several

urial hut erected at a grave site,

/358 cont. /For the storing of the supplies prepared in summer, there are special storehouses, which, however, since consumption takes place in winter, are always located beside the winter dwellings, and the supplies are carried to them as they accumulate.

The storehouses of the Gilyak (njö, in the Tro and Tymy dialect njo) /illustration appears here/ appear at first glance to be very similar to the summer dwellings in that, like them, they rest on piles (on which the above-mentioned pieces of birch bark may not be absent) (2) and have the same kind of walls and roofs, indeed,

2. Pallas (Reise durch versch. Prov. des Russ. Reiches, Vol. III, p. 482) mentions that the Cheremis along the Kama and Wjatka, like most of the Kasan Tatars, put their sheaves of stored grain in round, pointed heaps above four piles connected by beams and covered

merely an approximately square hole which is just big enough so that a person can go through it in a stooped position, and whose cover is a board that fits it exactly, before which a crosspiece of wood is advanced instead of a bolt (3). The interior of the store-

3. An illustration of the front side of such a storehouse, among other things, will be found below on a plate showing a funeral procession of the Gilyak.

house is usually divided by a partition into two sections, which are connected by a door, so that in it, as the accompanying plan indicates, there are eleven separate, larger or smaller wall surfaces, along which the supplies of fish are stacked.

G 342 343 171 /359/ Like the earth yurt, all the pile buildings mentioned above, the summer yurt, the storehouse, etc., are original, peculiarly Gilyak structures which the neighbors of the Gilyak, the Tungusic Amur-peoples, lack, but which recur among many other Paleo-Asiatic tribes. For example, according to K 175 [342] Krascheninnikof's and Steller's descriptions and an illustration given by the latter, the summer dwellings of the Kamchadal are pyramidal huts built on high piles, which are called balagan 000 by the Russians (1). The Eskimo of the American Northwest along

K [113]

1. Krasheninnikov", "Opis. zemli Kamchatki" (Poln. sobr. uchen. putesh. po Rossii, Vol. II, St. Petersburg, 1819, p. 37). Steller, Beschreib. von dem Lande Kamtschatka, K [132] Frankfort and Leipzig, 1774, p. 215. Steller also gives the dampness of the air and the ground as the compelling reason for the construction of such "airy dwellings" on K [198] Kamchatka. This explains why these peculiar [199] dwellings continued to be retained after the earth yurts, as mentioned above, had already been forced out by Russian-type dwellings.

2: Schrenck--531 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2 Eskimo ND2

G 343 171 E 343 /359 cont. /The Eskimo of the American Northwest along the Kwichpak, Norton Sound, and the Arctic Ocean erect their storehouses on high piles above the ground in order to safeguard the supplies of fish, skins, furs, and the like stored in them during the summer both against the humidity and against attacks by mice, foxes, wolves, and especially the dogs, which are always hungry during the summer (2).

2. Zagoskin", Peshekhodn. opis' chasti russk. vlad. v" Amerikie, St. Petersburg, 1847, Pt. I, p. 56. Dall, Alaska and its resources, Boston, 1870, p. 27. Jacobsen, Reise an der Nordwestküste Amerikas, Leipzig, 1884, p. 173. Seemann, Reise um die Welt, Vol. II, Hannover, 1858, p. 62. In Dall (op. cit., pp. 13 and 65) there are also illustrations of such "dovecote-like" buildings, as Seemann aptly calls them. E [192] The designation barabora for them (Sagoskin, op. cit.), which Dall also uses for the summer and winter dwellings of the Eskimo (op. cit., pp. 39, 65), arose according to Steller (op. cit., p. 218; for him, "barabara"), through the corruption on the part of the Russian Cossacks in Kamchatka of the word "pasapar," by which, however, the Kamchadal refer to a hut made out of long grass for an overnight stay.

G 342 174 Thus, the Gilyak, where they have kept their original dwellings and constructions, and many another Paleo-Asiatic people can to a certain extent be called cave-dwellers or troglodytes in winter and pilework-dwellers in summer. In this respect they stand at a point which on European soil belongs to a far distant, prehistoric period. From this point of view, too, the designation of Paleo-Asiatic peoples, which I have proposed for these remnants of an ancient population formerly more widespread on Asiatic soil, is in a certain sense justified.

2: Schrenck--937 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/597 cont. /

435 439 The value of the kettle embedded in the hearth and the portable kettle is reckoned in part, on the basis of size, but in part and chiefly on the basis of their origin, because the Manchurian (Chinese) kettles are far inferior in quality to those of Japanese: the former easily crack over the fire if they contain no water, but the latter will not. Accordingly, it costs for:

A large Manchurian hearth-kettle (tsch) (ormoz-wunj)	4 ja
/598/	
A smaller Manchurian hearth-kettle	3 "
" Manchurian portable kettle (matsch-wunj) with handles, depending on the size	3-7 "
A small Japanese kettle (Gilyak kughi-wunj, i.e., Ainu kettle)	7-8 "
A large kettle of the same kind	20 "
" " Japanese kettle with three handles . . .	30 "

435 342 343 The evaluation used among the Gilyak for their houses is very peculiar, inasmuch as it costs for:

A winter yurt (tschadryf) with two hearths only . .	4 ja
" summer yurt (käryf) only	2-4 "
A storehouse (njö), on the other hand, depending on the number of compartments	10 " and more.

435 439 A number of conclusions concerning the trade of the Gilyak, as well as telling numerical evidence of certain of their customs and beliefs, can be drawn from this table, some of which have already been discussed in the previous sections and some will be discussed in the following. For the moment it will suffice to draw attention only to the following points:

1) Furs, the most important barter item of the Gilyak in their trade with the Chinese, have a relatively low price, which

2: Schrenck--940 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2 Goldi RX3

/599 cont. /

G 435 342 343 7) At first glance the evaluation of their various kinds of housing on the part of the Gilyak as given in the table seems very irrational, for one can scarcely believe that a structure as large and relatively complicated as their winter dwelling, built on the Chinese pattern and provided with two hearths, four wide sleeping benches heated by pipelines, and large windows, is worth only about half as much as a /600/ storehouse lacking all of these accessories. Nevertheless I must stand by the above figures, repeatedly confirmed for me by the Gilyak and hope to be able to give an adequate explanation for them in the following while discussing the social relations of the Gilyak and their socio-communistic attitude coming to light in the construction and utilization of their houses, as well as in other things, as I learned from them themselves.

G 435 8) Finally, if I compare the table of prices of the Gilyak with that drawn up by Maximowicz (1) in a similar way among th

1. In his handwritten notes put at my disposal.

Goldi, I find an almost complete correspondence in most things, obviously because the prices prevailing among the Sungari Chinese are decisive for both. Nevertheless, some differences, which are characteristic of region and people, can be recognized in them. Among the Goldi, for example, all fur seems to have a higher price than among the Gilyak (a good sable, for example, is valued by them at 4-5 ja, a red fox at 3 ja, a black one even at 30-60 ja), undoubtedly because the animals involved are less frequent in their territory than in the abundantly forested north, and perhaps also because the Gilyak accumulate a greater quantity of them through their industrious trade, as middlemen, with the neighboring peoples. In this connection, too, among the Goldi attention is paid to the smaller animals, such as squirrels, ermine, Mustela sibirica, and the like (ten specimens of the former, for example, cost

/641 cont./

593 842 the help that they give in the household, a fine bride price. A
[595] sterile wife, then, is commonly exposed to the risk that the hus-
[586] band will cast her out or take a second wife, who, if blessed with children, would soon push her completely into the background. Needless to say, the wife shares the husband's desire and scorns no means that might serve to fulfill it, and the prevailing superstitiotion gives her many such means. For instance, I saw many a
[825] [789] woman wear the tooth of a bitch around the neck in the belief that this would make her fertile. Presumably other amulets specially carved for the purpose are worn by the women, though I am unable to name a particular object of this sort.

844 After all this, it is all the more surprising that there exists among the Gilyak an inhuman, cruel custom in connection with the birth of a child, the custom, that is, that a woman may never give birth in the house, but must always leave it, regardless of the weather and of the time of day or year. I did not want to
844 114 believe this, but I myself witnessed it. When I visited the village of Kulk on April 24 (May 6), 1855, and entered one of the houses, I saw a woman going out extremely heavily and laboriously and sinking down nearby on a prepared bed of straw, where she was immediately seized with labor pains. The husband stood in front of the door, calmly looked on for a while, and then went back into the house, whereupon I, too, left. A few hours later I heard from a Gilyak of the same village that the birth had been successful, but the child died soon afterward. The mother was still alive.
[132] The mean temperature on this day was 2.8° R. in nearby Nikolayevsk. At 7 o'clock in the morning the thermometer registered only 1.1°, at 2 o'clock in the afternoon it rose to 6.3°, and dropped again to 2° at 9 o'clock in the evening. The river had not yet thrown off its cover of decaying ice, and, with the sky slightly cloudy, for the most part, a moderate east wind was blowing from the Liman (1).

1. Cf. Vol. IV., p. 30, of this work.

844 During the colder seasons, in the late fall and winter, delivery
● 343 does not take place in the open, but rather in a birch-bark tent

/641 cont./

844 erected for this purpose near the house, where a small fire can
● [343] also be kept going. Nevertheless, with the low winter tempera-
[132] tures and the severe snowstorms in the Gilyak country, this is still
[165] a harsh demand for mother and child, and I do not doubt but that the high mortality among Gilyak children and the generally small population of the Gilyak are caused in large part by this bad custom. I am unable to say what conceptions gave rise to it. It is not likely, however, that it is based upon the superstition
[846] that there is something inherently unclean about the woman during delivery, for, as Dr. Seeland (2) and Deniker (3) note, she is

[113] 2. "Die Ghiliaken, eine ethnographische Skizze /The Gilyak, an Ethnographic Sketch/," (Russische Revue, edited by Carl Röttger, Vol. XXI, St. Petersburg, 1882.

[113] 3. Cf. Dr. H. Ploss, das Weib in der Natur- und Völkerkunde /Woman in Natural Science and Ethnology/, 3rd ed., edited and published by Dr. Max Bartels, Leipzig, 1891, Vol. II, p. 43.

subjected to no special purification after it, but, on the contrary, after about 8-12 days may return to the house without further ado.
114 The first-named thinks rather that this /642/ custom may be
844 linked with the Gilyak belief that misfortune will befall a house
768 in which a death has occurred and therefore it has to be torn
[763] down; for this reason they also have dying persons carried out of the house and left to lie there until they are dead (1). It is

1. Dr. Seeland, op. cit., p. 223.

possible that they have such a notion, but it still has to be substantiated that they actually tear down or at least abandon a house in which someone has died, which still seems very doubtful, particularly with respect to the large and complex Chinese

/668 cont./

342 and thus in its utilization is to a certain extent subject to the
421 communistic principle, which is not at all the case with regard
423 to the storehouse. On account of its size and complicated construction, the former cannot be built by a single person, as can
[476] the latter; putting it up requires the joint labor of many persons, whom the person undertaking the enterprise, if he cannot find them among his relatives, engages from the circle of his fellow-villagers or neighbors for a small payment. Though later on
[574] it belongs to the person or persons who undertook the construction
[427] and were able to persuade the others to help, it is never forgotten that it owes its origin to joint labor and, accordingly, it is always regarded to some extent as common property: shelter and protection in it may not be denied to any villager or other fellow-tribesman, and it would be absolutely contrary to the views and the practice of a Gilyak house-owner if he tried to collect a high rent from a person permanently domiciled with him, and, to be sure, in any form other than through the obligation for assistance for the household. Hence the direct profit from a winter house, and similarly from a summer house, is very little.

● 343 The situation is different with regard to a storehouse, which
423 is built by the owner himself. It belongs to him exclusively, and the richer Gilyak only have an interest in one insofar as they have provisions and other things and have no shelter for them. It is
[427] arranged in practice so that only a single wall, and, if this is not enough, a second and a third can be rented for storage, until the means to construct an entire storehouse are obtained (1).

1. Cf. the arrangement of a storehouse (p. 529) with its 11 wall pieces (f-q) and two spaces (c and d) in the middle.

Since more can be asked from a well-to-do Gilyak, a section of a wall, even reckoned at only one ja, will yield about 10 ja in direct income.

10 resettled. In southern Sakhalin, individual families live in the village of
[361] Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

197 The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

[194] In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-gan—big dog). The agglutinating
[193] features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives
802 have many similarities with verbs. The Nivkhi numerals are interesting: in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

197 As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants.
174 There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

175 The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasiliy Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to
[361] as "Gilyak peasants." According to these reports, they lived in large vil-
[342] lages in wooden winter houses, flanked by barns, racks for hanging fish and
[343] log structures for bears. The Nivkhi wore clothing of fishskins and animal
● [241] pelts; they kept many dogs, engaged in fishing, and their diet consisted
[731] mainly of fish. They traded with the Chinese, Ainu and Tungus.
[822]
[429]

252 their mouths and chew it. Each person spits out what he has
264 chewed into an individual small basket made of birch bark.
415 The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

● 343 Gilyak villages lie along the river banks in low places
361 which, however, are usually not reached by flood waters.
417 The houses stand in a row, usually three in number, seldom 12 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

> 1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened!

333 Their house (2) somewhat resembles a common farm house,
342
354

> 2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes weighted with stones, to offer resistance to the wind. The few

578 out somewhere in the taiga for a whole year, the consensus
586 usually favors them and the first husband must abandon his claims. In recent years many Gilyak have resorted to a
177 special ruse in order to make sure of their wives. Such
586 chaps who are probably not of the best and who may thus be
797 faced with the prospect of eventually being deserted by their wives, have themselves baptized by a Russian priest, because they know that, according to the Greek religion, marriage must be permanent, and they would consequently, in case of desertion, be entitled to the ispravnik's protection. However, it is doubtful whether this maneuver will help them much in the long run, for such baptized individuals who later have no intention of keeping their Christianity alive, are soon forgotten in official circles. No one knows who or where they are, the wilderness is vast, and looking for them is more than troublesome.

If the abducted woman had had children by her first marriage, these usually remain with the father. [129]

171 Child training. Toward the end of her pregnancy, a
844 woman is taken out of the house for 10 (1) days and brought to
183
● 343

> 1. The duration of this exile is not the same everywhere. From some Gilyak I learned that eight days sufficed; on the island of Sakhalin, however, 12 days were given.

a hut made of birch bark, in which a small fire is burning. This custom which is known to exist among other primitive peoples, for instance among the Ostyaks, is, up to the present, very strictly observed by the Gilyak even in winter during the most severe cold, as a result of which the newly-born child often freezes to death. Conceivably a child which survives such a test must be strong. The mother also proves by this what rigors these people are capable of enduring. During her entire stay in the hut only women are permitted to come to her, often she must be her own mid-wife. No one could tell me the actual meaning of this custom: most probably it cannot be explained on the basis of "impurity" of the woman, but it is related to another superstition of which we shall speak later, and which was originally perhaps some hygienic regulation. That no mystical idea of "impurity" underlies it may be seen from the fact that when the woman
854 returns to her house she undergoes no "purifying" ritual.
515 The bathing of the newly-born is also done in the impro-
302 vised lying-in establishment, and it is given its other baths there.

844 Pregnancy, Childbirth and Miscarriage among the
753 Inhabitants of Sakhalin Island (Gilyak and Ainu).
● 343 by Bronislaw Pilsudski

I. The Gilyak

The house of birth.

Among the Gilyak the act of birth is considered unclean and therefore is never allowed to take place in the yurt, their home. That is why not only in summer, but even in winter during the worst periods of frost and snowstorms, the woman in labor is led to a hut built especially for her near the home. The choice of the place makes it clear that the Gilyak feel no respect for the act of birth, for the hut mentioned above is built in the bushes which serve as a privy for the
562 women. The location of these bushes is always
841 definitely fixed, and no man would ever walk in that
753 direction. The boys are strictly forbidden to run or to look around there, and they are warned that they will contract a disease called taremynd if they step into a trace of women's blood. The disease begins with a paralysis of the hands and feet, the afflicted person loses the ability to move, loses weight and finally dies, for the disease is incurable.

844 As soon as the labor pains start the woman is
183 brought into the lan-raf or the "house of birth". This "house of birth" is erected hurriedly at the very last moment. Built of wooden boards roughly put together and covered with old bark from fir trees, it looks more like a dog house than like the room destined to welcome a new inhabitant of the world longingly expected by his parents. In the eyes of the Gilyak there is no conflict between the affection and love of the parents for the newly born child and the severe, if not cruel welcome, it is given. The child will go through a hard, more than Spartan education, and its life will be full of worries and hardships in a neither opulent nor gentle nature. This is why no Gilyak even comes to think that the first entrance into the world might be easier and more wholesome for the little guest if it took place in the presence of other people under other and better circumstances.

161 lages with about two thousand inhabitants. The villages are
361 on both banks from the mouth of the river to Mariensk, and out of the reach of all inundations. Distance lends enchantment to the view of their houses, which will not bear close inspection.

592 Some of the houses might contain a half dozen families of
361 ordinary size, and were well adapted to the climate. While
342 we took wood at a Gilyak village I embraced the opportunity

A GILYAK VILLAGE.

to visit the aboriginals. The village contained a dozen dwellings and several fish-houses. The buildings were of logs or poles, split in halves or used whole, and were roofed with poles covered with a thatch of long grass to exclude rain and cold. Some of the dwelling houses had the solid earth for floors, while others had floorings of hewn planks.

● 343 The store houses were elevated on posts like those of an American 'corn barn,' and were wider and lower than the dwellings. Each storehouse had a platform in front where canoes, fishing nets, and other portable property were stowed.

22: Knox T-2 (1866) 1870 Gilyak

These buildings were the receptacles of dried fish for the winter use of dogs and their owners. The elevation of the floor serves to protect the contents from dogs and wild animals. I was told that no locks were used and that theft was a crime unknown.

The dwellings were generally divided into two apartments; one a sort of ante room and receptacle of house-keeping goods, and the other the place of residence. Pots, kettles, knives, and wooden pans were the principal articles of household use I discovered. At the storehouses there were several fish-baskets of birch or willow twigs. A Gilyak gentleman does not permit fire carried into or out of his house, not even in a pipe. This is not owing to his fear of conflagrations, but to a superstition that such an occurrence may bring him ill luck in hunting or fishing.

It was in the season of curing fish, and the stench that greeted my nostrils was by no means delightful. Visits to dwellings or magazines would have been much easier had I possessed a sponge saturated with cologne water. Fish were in various stages of preparation, some just hung upon poles, while others were nearly ready for the magazine. The manner of preparation is much the same as in Kamchatka, save that the largest fish are skinned before being cut into strips. The poorest qualities go to the dogs, and the best are reserved for bipeds.

Though the natives do the most of the fishing on the Amoor, they do not have a monopoly of it, as some of the Russians indulge in the sport. One old fellow that I saw had a boat so full of salmon that there was no room for more. Now and then a fish went overboard, causing an expression on the boatman's face as if he were suffering from a dose of astonishment and toothache drops in equal proportions.

There were dogs everywhere, some lying around loose, and others tied to posts under the storehouses. Some walked about and manifested an unpleasant desire to taste the calves of my legs. All barked, growled, and whined in a chorus

778 782 224 225 to shout: "Yrk-lu? -- Is it enough?" -- "Yrkrá! -- It is enough!" Everyone approaches by houses and feeds it, and each says his own: "Send the dolphin! Send the little fish!" After this everybody must return together at the same time, for otherwise it would be a heavy sin if they were to meet each other.

778 688 The customary takhej of a hunter is the individual uig. Anybody who touches it gives a dog. If a member of another clan has insulted a lezing (the place for the bear festival), the vopund kymlydz: assembles, and they judge him; they demand a bear or 782 a luk -- a shaggy dog. Pyl-yz' -- the spirit of the master is fed each month. If they have caught a tasty fish, /314/ they cut themselves a piece and him a piece, and when his pieces have stood for half an hour, they eat them themselves.

796 346 782 When they build a pila uigryf (house in which the bear festival is celebrated), it is imperative to celebrate a bear festival. If there is nowhere to buy a bear, they must kill a luk: -- a shaggy black dog ("it is just like molk," i.e., like a bear). If the house is simple, they kill only dogs, two to four in number, without regard to kind. If a post falls on a lezing, they kill two black dogs. It is not at all necessary that a man be killed by a bear for a pila uigryf. After a bear festival, when the members of other clans are leaving for (their own) homes, the bear bones are tied together with a thong and their dogs are killed at a special chédzig.

It is not permissible for a single clan in a single village to make two lezing, but there can be several uigryf. Any house where a bear festival takes place is an uigryf.

"We came upon an old Gilyak and his wife, who sat slicing and cleaning kita. With a long rakish knife, which is the men's hunting and 'general-purposes' knife (dzhakho), the fish was split open, a nd with a short-bladed and curved edition of the former—the woman's fish and domestic knife (ungu dzhakho)—the kita was cleaned. Two slices were cut from each side, leaving for remainder the head and tail and backbone, with some flesh adhering. All these were then hung up to dry in the sun, this drying-ground being the 'village green,' or 'market-place,' of the Gilyaks. The slices were for human consumption, and woe betide the Gilyaks if August (O.S.) [LSS: The old style calendar is 13 days earlier than the Gregorian calendar.] which is the chief season of fish-drying, prove a rainy month, for then only a small quantity of their staple food will be prepared against the winter, and stores will give out early, and many will die of starvation. Fortunately, sunny weather [174] had this year attended their efforts, and goodly quantities of sun-dried fish were hanging in rows upon rows, to be eventually consigned to those strange-looking coffin erections, consisting of a short log hollowed out and perched on forked stakes. These stakes were, in 'well-regulated establishments,' encircled with pieces of bark, umbrella-shaped, to prevent the ravages of rats and other vermin."

Amoor line is closed up, the telegraph circuit around the globe will be complete.

The telegraph is operated on the Morse system with instruments of Prussian manufacture. Compared to our American instruments the Prussian ones are quite clumsy, though they did not appear so in the hands of the operators. The signal key was at least four times as large as ours, and could endure any amount of rough handling. The other machinery was on a corresponding scale.

A merchant who knew Mr. Borasdine invited us to his house, where he brought a lunch of bread, cheese, butter, and milk for our entertainment. Salted cucumbers were added, and the repast ended with tea. In the principal room there was a Connecticut clock in one corner. and the windows were filled with flowers, among which were the morning glory, aster, and verbena. Several engravings adorned the walls, most of them printed at Berlin. We purchased a loaf of sugar, and were shown a bear-skin seven feet long without ears and tail. The original and first legitimate owner of the skin was killed within a mile of town.

In addition to his commerce and farming, this merchant was superintendent of a school where several Gilyak boys were educated. It was then vacation, and the boys were engaged in catching their winter supply of fish. At the merchant's invitation we visited the school buildings.

The study room was much like a backwoods schoolroom in America, having rude benches and desks, but with everything clean and well made. The copy-books exhibited fair specimens of penmanship. On a desk lay a well worn reading book containing a dozen of Æsop's fables translated into Russian and profusely illustrated. It corresponded to an American 'Second Reader.'

There was a dormitory containing eight beds, and there was a wash-room, a dining-room, and a kitchen, the latter separate from the main building. Close at hand was a forge where the boys learned to work in iron, and a carpenter shop with a full set of tools and a turning lathe. The superinten-

22 In spring, with the seals and the first fish that travel in masses upstream to spawn, the koryushka, herring, the Gilyak is again revived, and in the course of the summer months in the expectation of the autumn catch he again begins to make visits and dolce far niente.

574 252 In speaking of guests I cannot fail to mention a peculiar festive dish and the favorite food item to which Gilyak guests are treated -- the so-called mos'. It is prepared from a sticky broth of fish skins, seal fat, berries, rice, sometimes with the addition of small pieces of yukola. All this is mixed together and cooled. Sometimes, to add color and flavor, a solution of white clay is added to the mixture. Without any fastidiousness, the boiled fish skins are squeezed out into a trough by the dirty hands of the Gilyak women, and for more flavor the small pieces of yukola are first ground with the teeth and spat out with the saliva into the dish...

342 354 352 [197] The exterior living conditions of the Gilyak are very simple. Only in some places closest to the Amur have the Gilyak adopted the Manchu type of winter dwellings, which, by the way, are also very primitive. In form they are large sheds /28/ built with poles and spars, in which large pipes made of stone or wood and smeared with clay, and connected at the openings with the stove, are laid on the floor along each wall. Laid out over the pipes are plank beds, which are always heated by the warmth of the pipes. The smoke of the stove goes out through an underground passage into a high, vertical pipe which rises straight up from the surface of the ground. The role of this pipe, which resembles those on our factories, is played by a hollow tree. In the middle of a yurt there is a high rectangular scaffold on which the packs of dogs are let out when they are to be fed. A more primitive yurt is a dugout, which is half in the ground and covered with poles and spars smeared with clay or covered with earth. The entrance from the passageway is through a low door along several steps. The hearth is in the middle of the yurt and is surrounded by passages between the plank [132] beds; over the hearth is the smoke opening. In winter, even in the yurts of the first type, it is sometimes so cold that the mercury in the thermometer freezes, and with the least wind the yurt becomes 352 516 full of smoke. One sleeps on the plank beds with the head toward the hearth and on skins or quilted bedding; under the head there are

/28 cont./

352 [516] roller-like pillows stuffed with hair or feathers. The favorite posi-
tion of the Gilyak is either to sit in Turkish fashion or to lie
[422] sprawled out on his plank bed. In the depths of the plank bed
are placed boxes with valuables, Chinese silks, robes, expensive
spears, furs, and other things that play a role on the solemn oc-
casions of one's life: when a beloved person who has died is sent
off on the long road to the settlement of the dead; when a
daughter is provided with a dowry and sent off to her husband's
house; when it is necessary to pay ransom in affairs of vengeance,
or to pay the bride money for a bride bought for a son or brother,
and on similar occasions.

342 The summer dwelling is a hut placed directly on the
ground, or a pile structure made of spars and poles.

411 The weapons of the Gilyak consist of a bow, already be-
ginning, by the way, to go out of use, a spear with a long tip
and frequently adorned with skillfully made silver inlays, and of
late a gun, with which he has already become familiar. In
addition one can mention crossbows of various types and a harpoon
for hunting sea animals, which is attached to a very long, sectional
shaft, several meters in length.

493 As the means of transportation, sleds serve in winter, boats
[501] in summer. The Gilyak dog-sled is in its way beyond perfecting.
Being about two meters in length and about 30 centimeters in
height and width, put together from slender birch bars with /29/
a light binding in the seat, they are so light that a person can lift
them with one hand without any difficulty, and at the same time
they are so sturdy that they can carry a weight of a quarter of a
ton; in elasticity and sturdiness only the ancient Kamchadal dog-
sled can compare with them.

Overturned, runners up, they have the shape of a flattened
segment which touches the ground with the smallest part of its
surface. Because of the small area of friction, they are very
light when in motion, are easily carried over difficult places,
and on a smooth road, and especially on ice, they glide like the
492 best English skates. The manner of steering them is very original.
493 Because of their very small width, they are very unstable and
lose their balance at the least unevenness. Therefore, the

/31 cont./

601 periods in the evolution of marriage, and, although they
191 have influenced one another, they basically belong, spea
174 [595] the language of geology, to different formations. It is su
[835] to say that among the Tungus tribes sexual intercourse wi
individuals of ascending generations is allowed, for exam
the wife of the father's younger brother, while among the
this is regarded as incest.

595 At first sight the Gilyak institution of marriage doe
581 seem to be anything special. A Gilyak will generally bu
[583] rarely two or three wives, who come over into his clan a
garded before the world as his personal wives and the mot
[851] his children. The children belong exclusively to the fath
[611] succeed him after his death. When a Gilyak becomes a f
[551] is no longer called by his former name, but is called the
of the born child. The exclusive possession of his wives e
[684] itself in the stern custom of blood vengeance against the
[614] of marital harmony. The clan is based on the principle o
[582] tion, and marriage is exogamous.

764 To be burned is better than to be buried.

766 The one made the first mos' for a drowned man is not burned after death, but buried in the ground.

A drowned person, if he is of another clan, is not burned, but is inclosed in sticks.

If the deceased was murdered, he is not carried into the yurt, but is placed beside it. Near the place of the cremation of the murdered person, they place a "vagn'" -- a tree with the roots /329/ upward. Those who have been killed are carried off the field of battle by both sides to their villages.

764 If a person dies in a balagan, he remains there (until the funeral.

764 349 A raf (a little house with a little door, over the grave) is made in a month, or in two, three, or four months, when there is time. A raf cannot be set up in winter or spring, for the earth is frozen, and in autumn as well. During this time the deceased is absolutely not fed. A raf is prepared by common efforts.

[784] [614] On the day of the preparation of a raf, as on the day of cremation, all forms of work are prohibited for the clan members. It is prohibited to fish, to go hunting, to make a dog sled; it is prohibited to sew, even to "make one's head," i.e., to comb one's hair, but one can sing songs. Members of alien clans are allowed to work if they did not observe the work on the construction of the raf, but the members of the same khala, if they know that a raf is being made, even if they live in a different settlement, are forbidden to work. The master who helps in the building of the raf does not receive any reward; that is a sin.

The walls of a raf are made of boards. The roof is made as on an actual house. In the middle there is a k:khak:, a double board with a stopper which closes an aperture -- kylmyz' (navel). The sharp stoppers go through a round piece of birch bark which is placed over the aperture. In the upper section are stuck a spear, arrows, hooks, and a knife. The k:khak: is wrapped in a piece of drel' of a trapezoidal shape and fastened, tied to the navel; the upper part of the k:khak: remains bare. On top of this, in front, there is an apron of the same shape, which is decorated

/329 cont./

764 with embroidery, with otter fur, and so forth. A hontkh --
349 muslin, mly (a small sack for flint), and a knife with a scabbard are tied to the belt of drel'. Vessels, food, and so forth are set in place. In the corner they place an image of the pyk (cuckoo) on a wooden support, and a wooden cup -- nirng, into which they put rice, is placed in front of it. During the building of a raf, all the belongings are broken, and everything that is broken is placed inside the raf, or, if it does not fit inside, next to it; all kinds of ornamented things may be put in the raf.

764 The raf, the sewing, and so forth are done on the spot.
765 They lay a fire, begin to prepare various dishes, and bring vodka. First they themselves eat, and then they place the food in the raf mu nig:yvyn arind. The pryski is untied in the morning,
[231] brought to the raf, and fed while they are eating. In addition to the boiled food, rice, buda, peas, and tobacco are sprinkled in the raf and around it. On the following day someone must come and eat up the remains of the boiled food.

/330/ After this, the mu n'igyvyn is fed no longer, though they come to look, smoke, and, frequently, to drink vodka. This continues for from two days to two or three months. The
[231] pryski is then returned to its original place. It may not be sacrificed or eaten; one may not make a fur coat of its skin, either for kinsmen or for someone from the kikhal.

766 After the death of a murderer, at his cremation, they set
764 up a takhch (see below, pp.4[illegible]-476), and then they make a raf anyway.

765 The soul and the world beyond the grave, Mlyvo. Every man is
[761] killed by a milk (evil spirit), who carries away his soul. The soul
[766] is afraid and hides with Pal-n'igyvyn or Tol-n'igyvyn, depending on which milk killed the person. The soul will return to Mlyvo in at most three years. If an old man died, he will arrive there old, if young, then young. After death in Mlyvo, the soul goes to another Mlyvo, and the soul of a woman to still a third Mlyvo, and then is born again. The soul of a man is completely similar to that of men.

found. At the end of this passageway one reaches the door (d), which is either vertically hinged, as is customary, or is formed by a board placed horizontally, which can be pushed aside (Pl. X) (1). Directly behind it, or below it, a few steps

1. On this plate, showing the interior of a Gilyak earth-yurt, the door, through which one can pass only in a extremely stooped position, is too high. 1 n

lead down to the floor of the hut, which consists of stamped earth. 2L In the yurt, along both sides and in the rear, between the supporting posts and the earth wall, runs a sitting and sleeping bench or plank bed (e), which is about one and a
5
n [See Category 116, P. 990 -- Analyst)

/322 cont./

342 half feet high and five to six feet wide and is interrupted only at
35 the two rear corners of the yurt. These corners (f, f) are usually rounded off, like those in front, and are used for putting away various utensils, chests, and boxes, sleds, and the like. This creates a partition, even though only a very incomplete one, between the two side-benches and the rear bench, which is regarded as the best and most distinguished place in the yurt. Opposite the inner edge of the benches, somewhat above the height of a man, there are crosspoles running between the supporting posts, which serve for hanging up clothing and the like. In the middle of the yurt, between the three plank-beds and only about three feet from each one, is the hearth (g), a platform about four feet wide, twice that in length, and the same height as the benches. It is very simple in nature, in that it consists of only a wooden frame put together with boards, /323/ which is filled with stamped earth. Over the hearth, somewhat above the height of a man, the are several crosspoles, two across the front part and one across the rear, which are borne by the above-mentioned crosspoles put be-
[417] tween the supporting posts. Sticks are fastened to these crosspoles over the hearth and at their lower end terminate in hooks on which the kettles are hung over the fire made in the hearth. In the front part of the hearth three stones (h) are set upright in a triangle and firmly embedded in the earth, on which stands the large kettle used for cooking the soup for the dogs. In large yurts there are sometimes two such large kettles, also serving for human use, incidentally, as was the case, for example, in the large yurt at Tyk, in which I stayed repeatedly and for several days, and where I sketched the plan presented here. The fire is made in the rear part of the hearth, that is, somewhat more in the center between the three plank-beds, serving for heat and for
[415] illuminating the yurt at night. In front of the hearth stands one or
[312] more large receptable, usually tubs (i) made of birch bark, with drinking water, and along the front wall (k), right and left of the entrance, or in one of the front corners (l, l) of the yurt, a supply of dry firewood is always piled up. Finally, at the top, exactly above the fireplace, there is the smoke vent in the form of a longish rectangle that is placed either with its lengthwise

/323 cont./

342 35 and crosswise diameters corresponding to the hearth or crosswise to it.

The smaller earth-yurts of the Gilyak are quite similar in nature, except that in these all the dimensions are more or less considerably smaller. In some cases, for instance, the hole dug in the ground for building the yurt is so shallow that there is nothing to be seen of any wall behind the plank beds, but rather the timber of the roof begins immediately. In order to gain space in such small yurts, the two rear corners are also equipped with plank beds, so that, with the exception of the front wall and the two front corners, one continuous sitting or sleeping bench extends all around. If the dimensions of the yurt are reduced even more, it finally becomes quite shallow, and hearth and plank beds, framed by narrow, upright boards, just rise above the ground, the latter only as much as the thickness of the layer of branches serving as a bed; the smoke vent is not very high above the hearth; the passage-way leading to the door has disappeared or shrunk to a few sheltering projections -- in short, the yurt has become a tent made of thin wooden beams.

342 [122] Such was the small yurt of Tafiz-wo in the Tymy Valley on Sakhalin where I spent the night of February 18 (March 1), 1856, and found the mercury in the thermometer frozen the next morning. I am unable to say whether this was only a temporary structure, at any rate, it was occupied by a Gilyak family with children, and their summer yurt stood next to it. This winter yurt of Tafiz-wo was distinguished only by its stronger material and its larger dimensions from the emergency tent that the Gilyak usually erect when during their winter journeys they are taken by surprise

[122] by a violent snowstorm. On my /324/ winter journey in 1855 I was forced to spend the night of Feb. 6/18 in the forest on the high seashore somewhat south of Cape Wangi (1) on the west

[192] 1. The Gilyak call this cape "Pilja-Wangi," i.e., Large Wangi, and a smaller, more southerly promontory, where we were, "Matsch-Wangi" -- Little Wangi.

/327 cont./

342 [824] and with the ridge. The remaining finer latticework of the roof is made up of thin poles and sticks put crosswise and then covered with tree bark, in particular fir bark, and finally with a layer of dry grass or Calamogrostis straw, etc., which is pressed down and held in place by a series of poles placed parallel to the ridge of the roof. The entrance is found in one corner of the house, and, to be sure, if one stands in front of one of its long sides, always to the right, in the transverse wall or in the longitudinal wall, with an ordinary door (c), which consists of several boards held together by a few cross-strips, and also always with a high threshold by means of which the influx of cold air over the floor, as well as the penetration of drifting snow and running rainwater into the house, is supposed to be reduced as much as possible.

342 35

Inneres eines Gilyak winter yurt on Sakhalin.

85 As soon as the bride price is paid, the marriage is regarded as concluded, and the man may take his wife and lead her to his home. This is often done without further ado. Wealthier 56 people, however, usually arrange a feast to celebrate the wedding of their daughter or sister, at which, aside from relatives, villagers and friends also /637/ take part. Similarly, a supply of various foods, fish, mossj, berries, millet, etc., are given to the departing married couple, so that the young wife, having reached the home of her husband, is also able to give a feast for the relatives, there, as well as members of the household and village.

91 As a rule the young couple moves to the place where the 92 husband has his home, that is, where his parents or brothers live, and take up residence with one or the other of them, according to circumstances, since the Gilyak dwellings, as has been described above, are of the type that can accommodate several families. The house, however, is by no means always inhabited only by relatives, but often also by other villagers who perhaps helped in building it or have some other connection with its owner. The members of the household remain together until, through the increase in the families, the space becomes too crowded and some of them have the means to build another house for themselves either in the same village or elsewhere. Besides 92 the central room used by all the members of the household, with 42 the hearth in the earth yurt or the dog table in the winter house 35 built in Chinese fashion, each family has its particular share of the sleeping benches running all around and each individual has his designated place on them. But these individual sections are never separated from one another in any way by screens, curtains, or the like, and the whole interior of the house always gives the impression of a room used by everyone in common.

77 As little as such living together by all the members of the 71 household in one room can be conducive to morality, generally speaking, I must nevertheless give the Gilyak a good rating in this respect. In fact, I do not hesitate to call them a morally austere people, in contrast to their neighbors, the Goldi, Orochi,

origin, or, on the mainland, Chinese, with a rather long, straight
(77) handle and a thick blade almost equally broad to the end, as is
shown on Plate XXX[a] in the hand of a Goldi boy. At that time
there were practically no Russian axes, with a short, somewhat
sloping handle and a blade broadening greatly toward the end.
342 Thus, in the shortest time, there arose a lodging which offered
the Gilyak sufficient protection against the weather and in form
and construction reminded one strongly of their earth yurts. Like
the former in the snow, the latter are sunk into the ground to
insure protection against wind and weather. Perhaps /325/ this
was how the idea of erecting earth yurts such as we find among
the Gilyak arose. In any case their complete similarity with these
emergency tents in form, ground plan, and construction speaks
for their quite primitive character.
342 As simple and primitive as the Gilyak earth-yurt is, it never-
351 theless offers many advantages, especially when its dimensions
52 are somewhat larger. The location of part of it in the ground, the
carefully built, tightly closed roof provided with a thick layer of
snow on the outside, and the absence of any window openings give
the cold outer air, with even the strongest wind, no lateral entry
into the inner part of the yurt, provided that the door is closed,
and the fire maintained continually on the hearth warms and venti-
352 lates the small room and makes a sojourn in it cozy. At the same
time the hearth located in the center of the yurt gives it a unified
character: the entire company is gathered around the blazing fire
which is equidistant from all three benches; all face one another,
all receive warmth and light from the same source. This inevitably
leads to greater communicativeness, to a mutual exchange of adven-
(76) tures, views, and experiences, and I have often seen the Gilyak
sitting this way in general conversation around the fire far into the
night and the tobacco pipe passing from hand to hand, often partici-
342 pating in their conversation myself insofar as possible. But aside
354 from these advantages the earth yurt has many drawbacks. The
most unpleasant of these is the frequent, severe, and rapid change of
temperature to which it is exposed. Whenever the door is opened,
a cold stream of air comes into the yurt and blows among the
floor. To be sure, it is lessened by the roofed-over passageway
& [See Category 116, P. 1010--Analyst]

342 /327 cont./ They are fed through square
354 openings (f) on their front side and on top have /328/ a round
(415) hole (g) for the large kettle, in which the fish broth for the dogs
and under certain circumstances even food for human beings are
342 prepared. Directly adjacent to the hearths are the sitting and
354 sleeping benches or plank beds (h, Gilyak: tikky) which bend in
very little and are somewhat low, about one and a half feet high
and one fathom deep, and run all around the walls. Their chief
characteristic is that they are warmed from below by means of
wooden pipes (i) lined with clay, which come out from both
hearths, run under the benches, and join in the corner of the
house diagonally across from the entrance. From here the single
pipe serving the two hearths and at the same time as an outlet
for the smoke runs out of the house underground and opens not
far away into an identically-shaped, vertical, high chimney (k,
Gilyak: kin) usually higher than the house. The benches are
342 covered with mats usually plaited by the Gilyak themselves out
354 of a kind of reed, with only the edge of the bench left uncovered,
(286) and not infrequently the walls, too, are covered with such mats in
places. In the center of the house, between the two posts sup-
342 porting the ridge, there is a large, heavy table (q), about two
354 fathoms long and half as wide, on which the dogs are fed and
(23) which I shall therefore simply call the dogs' table (Gilyak: kyll).
The top of it, which along its longitudinal edges usually projects
out in crudely carved, pyramidal, cone or hook-shaped continua-
tions, rests upon four posts (m) firmly rammed into the ground
and, if necessary, when more space is needed in the house, dur-
ing the bear festival, for instance, can be lifted off of them.
Above the two ends of the dogs' table two cross-sticks hang down
from the central longitudinal beam of the house, and a long pole
can be stuck between them, to which the dogs are tied during
the feeding. Our Plate XII, which shows the feeding of the dogs,
to be discussed later, also gives some insight into the nature of
the interior of a Gilyak winter-house; I must mention, however,
that the dogs' table on it is drawn a little too small and, on the
other hand, the space between it and the plank bed is too wide.
Subsequent pictures which are to illustrate the bear festival and
the mourning ceremonies among the Gilyak give more accurate
& [See Category 116, P. 992 ~ Analyst]

/328 cont./
342 proportions in this respect and at the same time show other pre-
354 viously discussed details in the construction and interior arrange-
(23) ment of a Gilyak winter-house. In concluding this description I
(353) must mention that along the walls (n), immediately to the right
and left of the entrance, there are sometimes shelves or cupboards
for storing household utensils, and here, too, is the place for one
or more large receptacles which contain the water needed for
drinking and cooking the food. An open cabinet with various
cooking and eating implements similarly hangs on the wall behind
342 the hearth. Finally, it should be noted that in the front transverse
354 wall of the house, close to the roof, there is a round hole which
can be closed with a similarly-shaped, straw mat and is used for
ventilating the house when it is filled with smoke and steam dur-
ing the preparation of the fish broth for the dogs or with smoke
when there is insufficient draft in the pipes. Incidentally I almost
always saw it open, and closed only at night. Since, because of
(574) this smoke hole, the /329/ plank bed along the front transverse
(437) wall is very drafty, it is regarded as the worst place in the house
and usually faces the straw mats, whereas the bench along the
front longitudinal wall and, after that, the one along the rear
transverse wall are regarded as the best, and here, to honor a
guest, a small rug acquired by trade from the Chinese is some-
times also spread out over the straw mat, which is never lacking
342 [illegible] As advantageous as the Chinese winter-yurt of the Gilyak is
(190) over their earth yurt, insofar as it is much more spacious, lighter,
354 and, in general, due to the place under the plank beds, also
warmer and not subject to such sudden changes of temperature,
nevertheless it, too, has many disadvantages, and in part some
that the earth yurt does not have, or at least not to the same
degree. The thin outer walls and large windows do not offer
sufficient resistance to the heavy fronts and violent snowstorms.
There is often a strong draft, and in many places fine powdered
snow comes in, or there is a deposit of ice. The draft is even
stronger along the floor, especially since the door opens directly
to the outside and not into a protected space in front, as in the
earth yurts. In addition, it must occasionally be kept open for

/329 cont./
342 some time in order to let out excessive steam or smoke. The
(352) draft and cold along the floor are all the more noticeable here
since the plank beds, on the contrary, are often quite warm.
(516) The Gilyak, to be sure, suffer little from them, since they usually
342 sit on the plank beds with their legs crossed under them. I be-
(78) came convinced of how very hot and therefore uncomfortable
138 these can become, when in January, 1856, I attended the bear
(114) festivals in Tebach for several days. In order to feed the numer-
ous guests, a strong fire was maintained uninterruptedly in both
hearths, and, as a consequence, the temperature of the plank
beds rose so much that some stearin candles on hand in my leather
suitcase which I kept next to me melted completely. The heat-
able sleeping benches, incidentally also have the great disadvan-
tage that they greatly promote the increase of many kinds of
vermin. Under them, in inaccessible, hidden spots, along the
pipes, etc., countless rats (Mus decumanus) make their nests and
emerge at night in search of food. Often, when everybody had
gone to bed and I was still writing in my journals, I would see
them come out from their hiding places and go about their business
not far from me. They do not disdain even to crawl up the in-
terior beams of the house; when I once, in order to escape other
vermin, had a hammock put up there, the Gilyak warned me that
the rats would gnaw through the leather straps and the mat would
fall down. But the vermin against which I sought such protection
is even more annoying: the warm benches are alive with fleas,
which find refuge in the crevices of the coarse straw-mats. In
summer, if one enters an empty Gilyak winter-house, he is
literally covered with them in an instant. I even discovered that
it is unwise to set up a tent in the vicinity of such a house, on the
surrounding smooth and firm ground. Undoubtedly /330/ the
principal reason why the Gilyak leave their winter houses when
spring comes and move into differently constructed dwellings
lies in this swarm of vermin, and in particular of fleas, as well
as the impossibility of staying on the heated plank beds in summer.

/351 cont./
030 winter houses from the Chinese. That it reached the Gilyak
342 from the south, along the Amur, is shown, as was mentioned
141 above, by the distribution of the earth yurts and the Chinese
(194) winter-yurts in their area, in particular by the fact that on
Sakhalin the latter are found only along the west coast of the
island facing the mouth of the Amur. Actually, this type of
construction of the winter house can be followed continuously
among all the peoples of the lower Amur region living up-
stream from Gilyak, as far as the Chinese along the Usuri
and Sungari. There it is prevalent everywhere among the
342 Manchu, Chinese and Daur (6). For example, the Chinese
354

191

6. The latter will be dealt with separately below.

U-tschen, in the description of his birthplace, Ninguta, written by him in 1722, mentions that the houses there have three kang, i.e., sitting and sleeping benches or plank beds running along the walls and heated by pipes running under them (7).

7. According to U-tschen, the kang, about six feet wide and two fathoms, five to six feet long, were put along the north, west, and south walls of the houses; along the east wall, separated by a partition from the rest of the room, was the women's room, which had two kang, along the north and along the south wall. The kang are covered with reed or straw mats, over which a red felt carpet is frequently spread. Cf. U-tschen's writing in the translation by Klaproth: "Zapiski o Manchzhurii" (Zap. Rusk. Geogr. Obshch., Bk. XII, 1857, p. 98).

use along the Sungari, Nonni, Churcha or Mutuan-ho, etc. (3).

3. In the middle of the house, where among the Gilyak the dogs' table stands, there is an elevation made of clay or bricks with a cavity the size of an ordinary tub. Wood and charcoal are kept burning in it, so that it is always full of hot ashes; kettles with hot water stand there for replenishing the tea cups, brandy and beer are warmed there in tin containers, etc. Williamson, op. cit.

/352 cont./
342 Nevertheless, this type of house construction, with a system of
354 pipes going out from the hearth, running under the sleeping
17 benches, and opening into a chimney standing outside the house,
354 is by no means of an indigenous Manchurian origin, but rather
of undoubtedly Chinese origin, introduced by the Chinese from
the motherland to Manchuria as well as to their other colonies.
For the same type of house construction is found everywhere in
North China (4) and in other countries which, like Manchuria, ar
113

4. Though there is hardly a work about China in which there is not also mention of the kang as a characteristic peculiarity of the Chinese dwelling, I want to mention here a few, in part older, in part more detailed discussions or descriptions of it: for example, in Du Halde (Descript. géogr., hist., chronol., polit. et litér. de l'Empire de la Chine et de la Tart. Chinoise, Paris, 1735, Vol. II, p. 87), Van Braam (Voyage de l'Ambassade de la Comp. des Indes orientales Hollandaises vers l'Empereur de la Chine en 1794 et 1795, publ. by Moreau de St. Mery, Paris, year VI (1798), Vol. I, p. 346), Davis (La Chine ou descript. géngr., des moeurs et des coutumes etc. de l'empire Chinois, transl. from Eng. by Pichard, Paris, 1837, Vol. I, p. 331), Huc (L'Empire Chinois, Paris, 1854, Vol. II, p. 380), Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 192-194 and 251 among others), Poussielgue (Voyage en Chine et en Mongolie de M. et de Mme. de Bourboulon, Paris, 1866, p. 24), and Girard (France et Chine, vie publ. et privée des Chinois, Paris, 1869, Vol. II, p. 384), among others.

Section 3: "Ethnographie, auf Grund des von Dr. Karl von Scherzer gesammelt. Materials bearb. von Friedrich Müller /Ethnography, on the Basis of Material Collected by Dr. Karl von Scherzer and worked up by F. Müller/," Vienna, 1868, p. 158. In the last-named work the heating by pipes is called "Russian type," though this is by no means a national Russian arrangement.

by means of which an evenness of temperature is attained in the house to an extent inconceivable in the primitive dwellings of the Amur peoples.

Finally, the fact that the heated sleeping benches are

352 364 517 17 [126] 513 [199]

used by the Gilyak and all the other Amur peoples in exactly the same way as by the Chinese also /353/ argues in favor of the Chinese origin of them. According to U-tschen, the Chinese always lie crosswise on the kang (1), with their feet

1. Cf. Wassiljef's translation of U-tschen's writing, op. cit., p. 98.

toward the wall (2), and the same is also observed by the Gilyak

2. Pallas, op. cit. In the Amur region, too, I have never seen Chinese sleep otherwise on the kang.

and the other Amur peoples with superstitious strictness, whereas in the earth yurts, one sleeps in the opposite position, with the

[123] 184 [197]

head toward the wall. In a Gilyak winter-house on the Amur, when I once placed my head against the wall, as in the earth yurt, in order to have a support for my pillow, it aroused general indignation among the Gilyak, and the cry "uftsch, uftsch," which means the same as "misfortune" or "unlucky, forbidden," rang out on all sides. The reason why the Chinese always assume this position on the kang is said to be that the part of the sleeping bench that joins the wall is arouse warth because of the pipe

/353 cont./

G 352 364 517 513 516 17 [126] 184 [199]

running under it and therefore is better suited for the feet than for the head. There is another justification for this custom in the winter houses of the Amur peoples. If one lies with his head against the wall, he exposes himself so that the rats, which are exceedingly abundant in these houses and which always run along the walls, would be constantly running over the face. This alone, however, would not make the Gilyak refuse to allow even a stranger to approach this position on their kang, if superstition did not demand strict observance of the traditional custom, and afraid of any violation of it, no matter by

G 342 17

whom, as misfortune for all the inhabitants of the house.

Due to the lack of historical data, it cannot be determined when the Chinese winter-yurt reached the Gilyak on the Amur and, gradually spreading downstream, supplanting the

G [195]

earth yurt, reached the Amur-Liman, the coast of the Sea of Okhotsk, and the Liman coast of Sakhalin. In the reports of Pojarkof and Nagiba, who spent the winter among the Gilyak at the mouth of the Amur and along the Sea of Okhotsk in 1644-45 and 1652 (3), there are, unfortunately, no hints which would

3. See pp. 216, 219 ff. above.

K 342 197 195

permit conclusions about the nature of the Gilyak houses at that time. In the case of another Paleo-Asiatic people, the Kamchadal, we see the original earth-yurt completely disappear before an imported, foreign type of house construction within the short space of about 50 years. At the time of Krasheninnikof and Steller (in the forties of the previous century), all the Kamchadal still lived in earth yurts of the type described above. Even in 1779, when Clerke, the successor of Cook on the latter's third voyage, visited Kamchatka, at least the south of the

342 825

peninsula, between Peter-and-Paul's Harbor and Bolscherezk (4).

K [113]

4. Tagebuch einer Entdeckungsreise nach der Südsee in den Jahren 1776-1780 unter Anführ. der Capitäne Cook, Clerke, Gore und King, transl. by J.R.Forster, Berlin, 1781, p. 333.

342 /354/ 352 364 354

This is exactly like the interior of the earth yurts, in that low and wide plank-beds or sleeping benches (f) run along three of its walls, on both sides and in the rear, opposite the entrance door (e), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as a smoke vent and actually consists of two holes put in the two halves of the roof and joining at the ridge pole.

[117] [353]

Under this, several longitudinal and transverse poles are put over the hearth and a wooden hook is hung on them to hold the kettle over the fire. Some similar longitudinal and transverse poles run over the sleeping benches and are used for hanging up clothing.

In the corners between the side benches and the front wall, to the right and left of the door, there are shelves with all sorts of utensils, a large container with drinking water, a small supply

342 354

of firewood for the hearth, and the like. Since the room as a whole is not high and the roof is rather flat, the large smoke vent is not very high above one's head, which, together with the many crevices in the walls and the floor, actually makes the house very airy. If, in addition, the doors to the front space and from there to the outside are open, a strong draft is created. Therefore, as a rule, the summer dwelling is completely free of smoke and also quite free of gnats, which is very important. The front space (d) can also be specially ventilated, if the supplies stored there require it, for its walls in part consist only of vertically placed boards which can easily be removed in any number desired, as had been done in the case of the yurt at Mäo at the time it was drawn. Finally, another feature, a simple one, to

342 825

be sure, but a very important one in its consequences for the Gilyak, must be mentioned in connection with the construction of their summer dwellings. In order to make them inaccessible

[251]

to the great number of rats in the winter yurts, a vital necessity because of the fish supplies assembled in them, a piece of birch bark is placed over the upper end of each of the piles supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing

342

up the piles to get into the yurt. The sleds are hung under the

/479 cont./

23 [136]

The diet of the Gilyak dogs, like that of their masters, consists almost exclusively of fish. Their principal food is provided in particular by the same fish appearing on the coasts and in the rivers in shoals at certain seasons on which the existence of the Gilyak also principally rests, that is, the various species of salmon, especially lyghi-tscho and tengi-tcho (Salmo lagocephalus and Salmo proteus), and in winter along the seacoast the kanji fish (Gadus wachnja), which, however, on account of its smallness, stands far behind the former. The part of these fish especially and exclusively intended for the dogs is the above-mentioned (2),

so-called chark in Gilyak, the pieces consisting of the head and backbone with a little flesh attached to it (3). Only if there is no

3. The Russians in the Amur region and throughout Siberia very aptly call it kosti, that is, bones, which in fact is all it is.

more of it available is the nikola intended for the people used as dog food. Next to this, seal and whitewhale meat, and along the seacoast not infrequently the meat and blubber of stranded whales, serves the same purpose. With the exception of the latter, which, as was mentioned above, may not be brought into the yurt, according to Gilyak superstition, /480/ food is never given to the dogs in the raw state, as the Russian do, but rather cooked to a soup. Also, the feeding does not take place outside, but always in

[462] 352

the yurt. Like all housework, it falls upon the women. In the tuchadrif, the table found in the center or in a corner (Gilyak

[512]

kylli) (1) is used by the women, in the toryf, the platform of the

1. See pp. 458, 462, 546 above.

[462] [512]

hearth. When the soup, made out of the above-mentioned materials in one of the large hearth-kettles, is ready, which is always one of the first of the daily chores of the women, a couple of

/642 cont./

553 852

Immediately, or at least very soon after its birth, the child is given a name, usually toward evening of the same day or in the morning of the following day, depending on whether it was born in the daytime or during the night. This takes place without any ceremony: the father simply names the name desired by him or the mother, or /643/ a Gilyak who happens to be present may propose a name, and the father approves it and adopts it for his child. It must be expressly stressed that no shamanistic arts are practiced either in connection with the birth or the name-giving.

[852] [656]

In most cases the birth of a child is not the occasion for a special celebration. Well-to-do people, however, occasionally express their joy over the family increase by a feasts which they share with a few villagers and friends.

When the child has grown a bit, it is placed in a cradle

854 [192] [352]

(Gilyak tuchjakli). This has a very peculiar nature: it consists of a canoe-shaped or fluted, hollowed-out piece of wood of such a length and width that the upper body of the child, up to its head, can be fitted into it comfortably. While its upper end, usually painted, remains open, the lower end is closed with a crossboard which is provided with several grooves emptying into a central hole. The child, wrapped in blankets except for its naked buttock is set on this board so that the upper body rests in the hollow, whereupon a couple of straps are drawn from one edge of it to the other to prevent the child from falling out. A small basket half filled with moss or fine wood-shavings is fastened below the opening in the little seat-board, and then the cradle is hung on a crossbeam of the house, above the sleeping bench (cf. Pl.XII /see p. 992/). But in order to prevent the latter from being soiled by excrement that might seep through the basket, a longish board (Gilyak mu, Pl. XXXIV, Fig. 9 /see p. 1014/), provided with raised rims and several grooves lengthwise and crosswise, is put on it below the cradle. The long straps by which the cradle is suspended are so skillfully drawn and lashed that the latter can be put in a higher or lower, vertical, oblique, or horizontal position as desired. To quiet or to amuse the child, a bundle of various small objects (wood or metal) is hung on the back of the cradle an

Gilyak household equipment: 1 -- wooden trough for serving food; 2 -- large wooden bowl; 3 -- the same from below; 4 -- portable tables; 5, 6 -- wooden ladle and scoop; 7 -- ordinary eating spoon; 8 -- board for cutting up tobacco; 9 -- board to put under a child's cradle.

/326 cont./

342 1. This plate is to serve at the same time to illustrate the house decorations customary during the bear festival and some of the entertainment going on in front of it, which will be discussed later.

[335] The walls consist of thin, horizontal beams, which are not joined at their ends, but are pointed and fitted into the lateral grooves of a few thicker, upright beams. On the transverse walls, which rise higher, and especially in the middle of them, these vertical beams are of a considerable thickness. The gaps between the beams are plugged with moss and daubed with mud on the out-
342 side. The large, rather flat roof, which in winter has to carry
335 a considerable burden of snow, requires very complicated timber-work for its construction and support. /Illustration appears here./ It has a regular roof framework made up of longitudinal beams and crossbeams. The ridge is supported, in addition to the central, upright beams of the two transverse walls (see Pl. XI), also by two thick, towering posts in the interior of the house (a) on the accompanying plan). Sometimes, instead of one post, two standing not far apart rise in each place. Similar, but much smaller and thinner posts (b) sometimes rise up here and there at the sides and, together with the two nearest vertical beams of the transverse wall, serve as supports for the middle part of the roof, and in the lower part it is supported by the longitudinal walls of the yurt. Longitudinal beams and crossbeams in turn run here and there between the towering posts in the interior, and similarly to the upper edges of the longitudinal walls -- a framework
342 that /327/ serves to connect the walls to one another and thus to
[353] steady the walls and keep them upright. In addition, the lower part of it, up to a little above the height of a man, is used for the storage of various articles and for hanging up clothing, and so forth. On our Plate XI one sees the ends of the aforementioned longitudinal beams at the transverse wall, as well as at the ridge and the side edges of the roof, project out quite far, whereby the side beams of the latter intersect each other far out at the gable [See Category 116, p. 991 -- Analyst]

/328 cont./

342 proportions in this respect and at the same time show other pre-
352 viously discussed details in the construction and interior arrange-
[231] ment of a Gilyak winter-house. In concluding this description I
[353] must mention that along the walls (n), immediately to the right and left of the entrance, there are sometimes shelves or cupboards for storing household utensils, and here, too, is the place for one or more large receptacles which contain the water needed for drinking and cooking the food. An open cabinet with various cooking and eating implements similarly hangs on the wall behind
342 the hearth. Finally, it should be noted that in the front transverse
354 wall of the house, close to the roof, there is a round hole which can be closed with a similarly-shaped, straw mat and is used for ventilating the house when it is filled with smoke and steam during the preparation of the fish broth for the dogs or with smoke when there is insufficient draft in the pipes. Incidentally I almost always saw it open, and closed only at night. Since, because of
[504] this smoke hole, the /329/ plank bed along the front transverse
[439] wall is very drafty, it is regarded as the worst place in the house and usually lacks the straw mats, whereas the bench along the front longitudinal wall and, after that, the one along the rear transverse wall are regarded as the best, and here, to honor a guest, a small rug acquired by trade from the Chinese is sometimes also spread out over the straw mat, which is never lacking.

342 As advantageous as the Chinese winter-yurt of the Gilyak is
[197] over their earth yurt, insofar as it is much more spacious, lighter,
[354] and in general, due to the pipe lines under the plank beds, also warmer and not subject to such sudden changes of temperature, nevertheless it, too, has many disadvantages, and in part some that the earth yurt does not have, or at least not to the same degree. The thin outer walls and large windows do not offer sufficient resistance to the heavy frosts and violent snowstorms. There is often a strong draft, and in many places fine powdered snow comes in, or there is a deposit of ice. The draft is even stronger along the floor, especially since the door opens directly to the outside and not into a protected space in front, as in the earth yurts. In addition, it must occasionally be kept open for

/356 cont./

342 one might call a narrow balcony (1). On the accompanying plan

1. Krusenstern (op. cit.) calls it a gallery.

of a Gilyak summer-house it is the space a bounded with a dotted line toward the front. The entrance to it (b) is precisely in the middle of the front side of the house, or, as in the illustration on
[353] Plate XIII, somewhat to the side. Through this, however, one

a -- Sill or narrow balcony along the front side of the yurt. b, c -- Doors. d -- Anteroom for the storage of implements and supplies. e -- Actual living room. f -- Sleeping benches. g -- Hearth. h -- Stone triangle for the big kettle. i -- Corners for odds and ends.

Plan of a Gilyak Summer-Yurt (käryf).

first enters a good-sized front space (d), which is used for the storage of various implements, as well as for storing supplies of fish and the like, and only behind it is the living room proper (e) found (2). This is exactly like the interior of the earth yurts,

[114] 2. Krusenstern found this room locked and though that it was the room for the women, which fitted in with his general conception of a northern Sakhalin population consisting of "Tatars," which, however, does not at all correspond with reality.

342 /357/ This is exactly like the interior of the earth yurts,
[357] in that low and wide plank-beds or sleeping benches (f) run along
[354] three of its walls, on both sides and in the rear, opposite the entrance door (c), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as a smoke vent and actually consists of two holes put in the two halves of the roof and joining at the ridge pole.

[417] Under this, several longitudinal and transverse poles are put over the hearth and a wooden hook is hung on them to hold the kettle
[353] over the fire. Some similar longitudinal and transverse poles run over the sleeping benches and are used for hanging up clothing. In the corners between the side benches and the front wall, to the right and left of the door, there are shelves with all sorts of utensils, a large container with drinking water, a small supply
342 of firewood for the hearth, and the like. Since the room as a
354 whole is not high and the roof is rather flat, the large smoke vent is not very high above one's head, which, together with the many crevices in the walls and the floor, actually makes the house very airy. If, in addition, the doors to the front space and from there to the outside are open, a strong draft is created. Therefore, as a rule, the summer dwelling is completely free of smoke and also quite free of gnats, which is very important. The front space (d) can also be specially ventilated, if the supplies stored there require it, for its walls in part consist only of vertically placed boards which can easily be removed in any number desired, as had been done in the case of the yurt at Mäo at the
342 time it was drawn. Finally, another feature, a simple one, to
825 be sure, but a very important one in its consequences for the Gilyak, must be mentioned in connection with the construction
[251] of their summer dwellings. In order to make them inaccessible to the great number of rats in the winter yurts, a vital necessity because of the fish supplies assembled in them, a piece of birch bark is placed over the upper end of each of the piles supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing
342 up the piles to get into the yurt. The sleds are hung under the

/733 cont./

*796 out obliquely from the smoke vent and with a bundle of curled
342 wood-shavings hanging from its tip, such as I saw in the village
184 of Tyk. Here, the toad carved out of birch bark probably also remains on the smoke vent, while the bear's head and skin is lowered through the smoke vent directly onto the platform of the hearth.

*796 In the meantime, in the interior of the yurt there, the rack
184 for the bear's head, made, just as on the mainland, out of unpeeled alder poles and richly decorated with fir branches, has been readied. It stands close to the rear end of the hearth platform in the passageway between it and the rear bench, or bench of honor, thus, in a place which corresponds exactly to the one which it occupies in the Gilyak houses built in Chinese fashion.

*796 Since the hearth platform in a large earth yurt is quite spacious,
184 two separate fires can be kindled on it, corresponding to the two
354 hearths in the tschadryf, over which the kettles used to cook the
252 bear meat as well as for preparing the other dishes hang from the yurt beams. The fire closer to the bear rack is the kotr -- or
[824] tschchyf (1) -- tur, the bear fire, in which fresh branches of fir

[192] 1. As the bear is usually called on Sakhalin.

trees, and especially of the cedar shrubs so common in northern Sakhalin, are burned during the preparation of the bear meat and a at other times during the bear festival on account of the popular fragrance.

*796 The wooden curls (zach), being regarded as a symbol of
178 holiness, purity, and inviolability, are an essential ornament in the
*353 interior of the earth yurt. They always hang down in a long bundle
184 from the center of each of the four crossbeams supporting the conic roof, and at the time of the bear festival there number is increased by four new ones, which /734/ are put in the four corners of the yu In the Gilyak houses, on the mainland one usually sees only two of
[171] them, and not always even these, suspended from the two supportin posts of the house, but their number seems to increase as one approaches the Ainu, among whom they are used under the name inau

/743 cont./

778 down to the forehead in front, but over the entire wooden piece in
532 back and seem to represent hair. Below the face the hair is fas-
tened to the wooden piece by similar little bands of bark. Plate
LIII /p.1253/, Fig. 2, shows such an idol. Several such idols
stood in a little house made out of boards and covered with loose
grass, which is shown on Plate LIII /p.1253/, Fig. 3. These idols
were named for me by the Allof Gilyak as tubyn. The Gilyak
Surgin, however, did not know this name and used the expression
tyf-ÿžigy, i.e., house god. This was the first time that I heard
the word ÿžigy used in connection with the idols of the Gilyak, and
I believe that this was done only in order to make me understand.
I was likewise unable to find out whether by tyf, that is, house,
the yurt of the Gilyak or the little idol-house was meant. Since
the latter bears the name kánigs. I must relate it to the yurt of the
Gilyak, and it therefore seems that these idols mainly play the part
of lares or guardians of the house. (Bm. I, pp. 58, 59.)

778 5. Gilyak. In the Gilyak village of Patt (on the right bank
184 of the Amur) I saw three idols standing outside a storage chamber,
532 human figures hewn out of blocks of wood, very similar to those
171 of the Olcha, though not with the particular expression which
seems to be characteristic of all the idols of the latter. When I
inquired, the Gilyak informed me that they revere these kägn
like gods. In Patt, they said, they are also kept in the yurts, but
not among other Gilyak. I then had the idols in the yurt showed to
me: three large, wooden human-figures with old, smoky zach
around their necks, as is also the custom among the Olcha, stood
there on the beams of the yurt above the rear sleeping-bench. --
778 In the village of Kuik, too, I saw idols in the yurts, standing in the
532 same place as in Patt. This is a very dark spot in the yurt, con-
184 cealed from sight, and anyone who does not know that the Gilyak
(353) keep their idols there will not easily find them. Many a yurt may
therefore have contained idols, while seeming to me not to have
any. But many a one actually does not have any, as I discovered
in Wait. -- It seems to me that /744/ the farther downstream one
goes on the Amur the less esteemed or at least less obviously
revered the idols are. (I W. R. II, pp. 119, 137, note 5.)

(241) **In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of**
(243) **potatoes and cabbage per hectare. In the course of only 3 years, from 1949**
(251) **to 1951, the cultivated area increased by 30%.**

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

177 **An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly**
448 **scattered over large distances. Before the Revolution, Nivkhi villages often**
477 **consisted of no more than 3-5 households, But even in the larger villages,**
361 **the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.**

177 The most widespread of the new dwellings is the warm Russian log
64 house. Near the houses of the collective members are various barns, sheds,
474 etc. Every collective-farm village has a number of public buildings; a
school, a reading room, a club, an administrative building, and buildings
36 devoted to economic uses (a collective-farm garage, a smithy, a vegetable
storehouse, cattle-yards, etc.). Almost every collective-farm village has a
(342) bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

177 The internal furnishings of the Nivkhi home have also changed, and are
64 today similar to those of Russian homes. Some collective-farm villages
64 have electricity and radio. In the Nivkhi homes, especially on the conti-
471 nent, one often sees plastered and whitewashed walls, or walls covered
with wallpaper, and a variety of bought furniture, as well as curtains and
34 flowers in the windows. The Nivkhi are very fond of pictures, and adorn the
(353) walls of their homes with illustrations, placards and photographs.

177 Today, the Nivkhi wear bought clothing of the Russian type. They
also use underwear, which was entirely unknown in the past. In winter, the
29 continental Nivkhi wear city-type coats, felt boots, high overshoes, and
fur caps (edges of silver seal skins. The Sakhalin Nivkhi prefer clothing made
of reindeer or seal skins. They obtain the reindeer skins from Orok
collective-farm members. The fur clothing and headdress remain of the
(234) traditional cut and materials. Many Nivkhi women make their own clothing
of factory-made fabrics, bought in stores opened in collective-farm villages.
Here and there, one encounters the ancient national costume. On holidays,
(242) the young people love to wear robes made of fabric and richly ornamented.
Such robes are made even today. Clothing of fishskin is almost discontinued,
as are the old conical birchbark hats.

177 Substantial changes have taken place in the Nivkhi diet. There is greater
26 use of vegetables, bread, butter, tea, sugar and other purchased products.
The incidence of illness, and particularly of tuberculosis, which had been
759 widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions.
(243) Already during the early years of the Soviet regime, hospitals and medical
and maternity centers were opened for the Nivkhi, but wide educational
work was needed to accustom the Nivkhi to use these institutions for medical
aid. Soviet medicine rapidly won the confidence of the Nivkhi.

In
22 spring, with the seals and the first fish that travel in masses up-
stream to spawn, the koryushka, herring. the Gilyak is again re-
vived. and in the course of the summer months in the expectation
of the autumn catch he again begins to make visits and dolce far
niente.

In speaking of guests I cannot fail to mention a peculiar
574 festive dish and the favorite food item to which Gilyak guests are
252 treated -- the so-called mos'. It is prepared from a sticky broth
of fish skins, seal fat, berries, rice, sometimes with the addition
of small pieces of yukola. All this is mixed together and cooled.
Sometimes, to add color and flavor, a solution of white clay is
added to the mixture. Without any fastidiousness, the boiled fish
skins are squeezed out into a trough by the dirty hands of the Gilyak
women, and for more flavor the small pieces of yukola are first
ground with the teeth and spat out with the saliva into the dish...

The exterior living conditions of the Gilyak are very simple.
342 Only in some places closest to the Amur have the Gilyak adopted
(354) the Manchu type of winter dwellings. which, by the way, are also
352 very primitive. In form they are large sheds /28/ built with poles
(197) and spars. in which large pipes made of stone or wood and smeared
with clay, and connected at the openings with the stove, are laid
on the floor along each wall. Laid out over the pipes are plank
beds. which are always heated by the warmth of the pipes. The
smoke of the stove goes out through an underground passage into a
high vertical pipe which rises straight up from the surface of the
ground. The role of this pipe, which resembles those on our factor-
ies, is played by a hollow tree. In the middle of a yurt there is a high
rectangular scaffold on which the packs of dogs are let out when
they are to be fed. A more primitive yurt is a dugout, which is
half in the ground and covered with poles and spars smeared with
clay or covered with earth. The entrance from the passageway is
through a low door along several steps. The hearth is in the
middle of the yurt and is surrounded by passages between the plank
(192) beds; over the hearth is the smoke opening. In winter, even in the
yurts of the first type, it is sometimes so cold that the mercury in
the thermometer freezes. and with the least wind the yurt becomes
352 full of smoke. One sleeps on the plank beds with the head toward
516 the hearth and on skins or quilted bedding; under the head there are

/313 cont./

796 morning it is necessary to take back the ski and so forth quietly
787 and stealthily. These things are placed so that the Tly-n'ivukh
descend the tree, and by these objects they find out the nature
of the Tly-n'ivukh and "if he has a good heart," if he will give a
"risk" /fart/ or not. "After all, five of us go, one caught some-
thing while another goes on and on pursuing but gets nothing.
What is the reason for this?"

731 During a tahh -- smallpox epidemic -- in Tyr all the
787 Gilyak assemble, make a sacrifice -- bow, present rice, roots,
165 and berries. First the 120-year-old man Żyvavun from the vil-
lage of Dyl'myu sacrifices. They pray before the tree chêdzigr.
This old man remembers four big takh.

796 Pal likes a tree with different peculiarities, and on solemn
787 occasions such objects are selected. A sacrifice is always made
to one's clan Pal-yz' (the master of the mountains), but they are
not made to Pila-yz' (the great master). He is most frequently
seen on a knoll. One must not shout to him. There is a con-
versation going on on the other side -- that is Pal-yz'. Pal --
mountain master -- likes a black dog; Tol -- sea master -- a
white one. Each large house has two fires, Pal-tuur and Tol-tuur.
(372) If a person has one stove, it is only Tol-tuur, and if he must boil
(354) bear meat, he goes to a clansman of that khala who has two
stoves.

Tol-takhej -- a takhej of larch; a hammer, chong-chtäs',
787 is hung on it. Near it is a halynyr (bench /labaz/)on which are
787 placed the carcasses of dolphins, kaluga, and reindeer. And here
225 they invariably boil the dolphins, here the bones are left to lie,
except the skulls and heads, which are carried away to kikhork
n'angof, i.e., a place where they put skulls. During the fynyndz:
only two dishes are placed on the halynyr -- mos' and muvi
(kissel/ a jelly-like dish/). It is also from here, in the presence
of the entire khala, that they throw a little of everything into the
Amur, but say nothing -- otherwise another misfortune will
occur. -- Then on the takhej they hang tobacco, agia (akhydz') --
a bunch, yukola -- pys' and announce that everyone should come
out and feed it. This is the main office of Tol. People are sent

The Building of a House, Its Plan, and Rites Connected with the House

342 Before laying down the first row of logs, they try sprinkling
(287) flour: if in the morning there is an imprint of a human foot, this
is good; if of a human hand or of a beast, this is bad, and then
they change the place. If there are no imprints of any kind, this
is also good.

342 Explanation of the plan of a house (see drawing). 1. Shy -
354 door. 2. Tol-erkh pusk fakh -- window facing the hearth of the
"master" of the sea. 3. Kem-fakh -- second window to the left
of the door. 4. Ponakh-fakh -- window over the middle plank-
bed. 5. Pal-erkh ponakh-fakh -- window facing the master of
the mountain. 6. Kyly nakh fakh (mat'kas' n'ekh fakh) -- windo
alongside the long plank-bed. 7. Mat' kas' akhr fakh -- window
near a small post. 8. Pal-erkh pusk fakh -- window on the side
342 of the mountain. 9. Kangyl -- the place for tying dogs. 10. Tly
kas' -- large post. 11. Kil-erkh mat' kas' -- small post. 12. T
erkh mat' kas' -- post on the side of the sea. 13. Mat kas' -
small post. 14. Hytyfi mat kas' -- middle small post. 15. Pi'la
digr-irku kas' -- large elongated post under the matka. 16. Pal
erkh' mat kas' -- small post on the side of the mountain. 17.
Kylynä mat' kas' -- long and slender little post. 18. Shyvos
n'ich fakh -- small stone near the threshold. 19. Pi'la kas' nir
fakh -- small stone at the threshold on the level of the floor.
20. Pi'la digr -- elongated matka. 21. Pal erkh tuur -- hearth of
(354) the master of the mountain. 22. Tol erkh tuur -- hearth of the
(355) master of the sea. 23. Tyjf -- cross log, foundation of the house
24. Kylzhutä -- the middle of the plank bed where they put a pe
son who has been wounded by a bear. 25. Uig dz:onkh -- taboo
(178) corner for the bear's head and so forth. 26. Ke dz:onkh -- upper
corner. 27. A dz:onkh -- lower corner. 28. Pal erkh pusk
dz:onkh -- corner on the side of the mountain for tabooed things.
29. The floor is divided into two halves: a) pal erkh kyl, and b)
(176) tol erkh kyl. On each half is placed only that which has to do wi
the appropriate spirit, with tol or pal'.

Plan of the Ho

windows have fish skin stretched over them instead of glass panes. The simple, low door has leather straps instead of hinges. There is no ceiling; instead, there are a few cross bars on which lie or from which hang various implements, among other things a kettle which reaches to the front opening of the hearth. The hearth or the stove, if you like, consists of pressed clay; the larger houses have two of them. The smoke passes into a horizontal pipe made of stones and covered with clay, which goes around the room under the sleeping boards, leads out through the side wall and ends in a high wooden chimney that stands separately. The Goldi and Manchurians have the same arrangement. The smoke pipe is seldom cleaned, and yet fire does not often occur. The thin walls of the Gilyak house do not hold the heat, the stove is low and small, and thus the warming of the benches from below is a very practical arrangement. Even so, it is often very cold in the houses, especially when it is below freezing and there is a wind. A large kettle for water is put into the upper opening of the stove and besides that, as we have said, a smaller kettle or cooking pot is suspended from a chain and rests just in front of the front opening of the stove, right next to the floor. The logs are usually so long that [114] they do not fit properly and burn outside the opening of the stove, which frequently causes the room to be filled with clouds of smoke.

The furniture is very simple. Not far from the door is the hearth or, if there are two, they are put on either side of the entrance. Around the walls run the benches, or, rather, one continuous bench. It is low and so wide that a tall man can lie diagonally across it. It is covered with woven mats made of arundo. In the middle of the room is the long and low dog table. The dogs are called in before they are fed and tied on the table; they are let down one by one, fed, and chased out again. Besides, there are hanging cradles, a primitively decorated cabinet, a box, etc. On the benches stand a few stools in case a higher seat is needed for some work. On the cross beams below the roof hang all kinds of skins, fish, cloths, etc.; above these, diagonally, lie oars, lances, bows, and the like. There are no idols to be seen; these are usually kept in the storage houses and are brought out only on special occasions. In the evening the room is lighted in the most primitive fashion: a cloth and a small bowl of fish oil is the lamp, or, if there happens to be no oil, a pine chip is lighted.

In summer their bed consists of mats, in winter of bear skins or other skins. For pillows they use long, cylindrical cloth sacks stuffed with hay, one of which serves for several

of Gilyak, as it is the number of Goldi. Rittich estimates their number to be about 3000. On the Amur Jakobsen found quite a large number of villages; on Sakhalin Island, on the other hand, there were far fewer villages.

139 Like their neighbors, the Gilyak are fishermen and hunters;
133 only now and then do they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and flour for the inhabitants of Sakhalin. In accordance with their primary occupations they spend their summers on the river banks while in winter they move into the mountains and roam through the woods. I am unable to say with certainty whether they have summer and winter dwellings like the Goldi, but I think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
71 winter houses of the Goldi. The typical, enormous clay-brick ovens and the benches, warmed by the pipes, along the
342 walls are also to be found in these houses. On the other hand,
361 the traveller found in September 1884 above Nikolayevsk a whole number of Gilyak villages that were at a considerable distance from the river bank, while the summer settlements of the Goldi by their nature as fishing villages used to be situated right by the river. One might conclude from this, perhaps, that these Gilyak villages were not simply fishing villages for the summer, but served as dwellings for the whole year; unless one wanted to assume that the Gilyak were forced to withdraw from the immediate neighborhood of the river in summer because of the partically marshy and therefore unhealthy river bank. In Sakhalin, moreover, there was not a trace of the larger houses of the Gilyak such as those mentioned above; rather, the huts were only small and half under-ground, so that they had a certain similarity to the
511 dwellings of the Eskimos in Labrador and in Alaska. They
515 offer a very unenviable abode for the European traveller, for with their confined space one can hardly avoid close contact with the inhabitants and the dangers connected with that, in short, being tormented by a multitude of vermin. In addition the atmosphere created by the crowd of people present, by the presence of the dogs, by the manifold provisions hung up for drying or smoking, and by the smoke which can only
511 escape with difficulty, is hardly bearable. The large houses
36 on the main land are in better condition, but they, too, have

/365 (cont.)

This it is that kinship and social bonds attach the Gilyak to his clan. Without some particular need the Gilyak will not abandon the settlement of his classmen, the tombs of his clan. In matter where the Gilyak may grow rich, he first returns to his homeland. The writer has seen Gilyak who had become completely Russified, who had grown up in service among the Russians, but who, having married, settled down and returned to the settlement of their clan. And this is so easily done. The Gilyak does not find in absolutely nothing to constitute a yurt, since in any yurt of his clan there will always be two to three square arshun on the plank bed for the family of a clansman. He does not even need a bed and a lamp; he will always find owners of these things, with whom he will go fishing on a basis of equal rights. The invaluable utilization of every thing in the great clan union has placed an indelible stamp on his entire spiritual make-up, on his character, on his intellectual development. The custom of judging all jointly, this necessity of entering into the interests of his clansmen, this mutual responsibility in matters of vengeance, the settlement of disputes and sacrifices, this fraternal bond of numerous fathers, brothers, and children, and finally the necessity of constantly living in large yurts together with dozens of one's fellows -- a necessity that compels the Gilyak to live continually in the eyes of others -- all this must have developed a social, communal, hospitable, serious character, sensitive in matters of honor.

Most one of the large winter yurts, which are so frequent in the north, enter one of these anthills on a winter's evening, and you will be pleasantly surprised. The huge yurt is lighted up only by the flame of the stove, which has formed in it a completely dark, but you will hear the notable conversation of the old men, the loud talk of the middle-aged men, the laughter, the jokes and music of the youth. Here boredom has no place.

2. (cont.).

Finnish Language(, Helsingfors, 1875, p. 160). Gradually, however, it became common among them for all the dwellings of some, of whatever kind they might be, in contrast to the log or beam houses of the Russian peasants (Russ. izba) or to other European houses, and one also often finds it used in this wider sense in the travel accounts relating to Siberia. Accordingly, the Russians in the Amur region as a rule call the Gilyak winter-house a yurt, and this term is used in the translation of this work.

house or Chinese winter yurt. The earth yurt, tavif of the Gilyak, is built exactly on the pattern of a tent: in actuality it is nothing more than a more or less spacious, immovable tent built into the ground. Instead of a tent cloth, a roof of bark is used. It is be such a large yurt of this kind, a hole about 20-22 feet square and about 3-4 feet deep is dug, and the walls are smoothed or, at least the upper part, covered with tin beams. Around it is erected a pentahedral /292/ roof starting upwards on all sides. Instead of a tent, it would seem better to use a horizontal roses plus which lead out from the stove and stretch along the wall under the plank bed were easily to hold house latter, the smoke gas through a subterranean passage and a high vertical pipe which is made of a hollow tree trunk especially adapted for this purpose. A similar system of heating is used by the Amur Gilyak and in the fanza /houses/ of the Manchu, from whom it may have been borrowed.

As to the character of the region, the maritime sections of the western coast are mostly rocky tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the forests, and occasionally over the mountain ridges. Near the settlement of Pronsk the coast becomes more elevated, and, beginning at the summer settlement of Mus'vo, it strikingly

/324 (cont.)

coast of Sakhalin. Four Tymy Gilyak and one from the village of Tyk, who were returning along the same route, camped near us. With a moderate northerly wind, there was a very heavy snowfall. The Gilyak shoveled out a pit a few feet deep in the snow, lined the bottom and its walls with fir branches, spread a cover of fish skins over it on the north side, over sticks stuck obliquely in the snow, and in the center built a small fire, over which hung the kettle. The wind increased during the night, and in the morning the storm was so severe that further travel was inconceivable. The Gilyak immediately set to work to make a camp better protected from the storm and snow. First they dug a circular cavity in the snow, then, using sticks and cords, they tied together conically at a midpoint, and spread several fish-skin covers over them in such a way that only an opening at the top was left for the smoke to escape. The edge of the cover should be folded back served as a door. Then the walls of the pit and the conical tent were covered with fish skins, and there it is so much a large yurt of this kind, a hole about 20-22 feet square and about 3-4 feet deep is dug, and the walls are smoothed or, at least the upper part, covered with tin beams. Around it is erected a pentahedral /292/ roof starting upwards on all sides. Instead of a tent, it would seem better to use a horizontal roses plus which lead out from the stove and stretch along the wall under the plank bed were easily to hold house latter, the smoke gas through a subterranean passage and a high vertical pipe which is made of a hollow tree trunk especially adapted for this purpose. /327 (cont.)

/292/ roof such as possible. The house is provided with windows (3) on all four or at least three sides, and, to be sure, the two longitudinal walls and the one transverse wall have each four, the front transverse wall one. Even in the most spacious Gilyak houses I never saw more than these seven windows (1). very often,

(1) I did encounter this among other Amur peoples, but I shall speak about that later.

however, the window in the Tebach house standing in the foreground on Plate XI, and not employed in the other transverse wall and the longitudinal wall but only on one side, is unique. Usually it is then always placed unsymmetrically closer to one or the other corner of the yurt, and, in the latter case, the remaining wall is covered with a more or less thick layer of soot near the top. The change of temperature in the earth yurt is even more perceptible in the Amur Gilyak, for the latter, besides which one has fallen asleep, goes out, the yurt is soon filled with cold air coming down from the smoke vent, and, if there is no one in the house, the smoke vent is closed, but I have never seen it done, though I spent many a night among the Gilyak. And to be sure this should be done, for the smoke vent is very large, and the lower the smoke vent is over the hearth and the sleeping benches. At night in the usual fire place and in the hearth, the smoke reaches the smoke vent with the heat and where no big and lasting fire was therefore possible, /292/ we soon had the temperature of the outside air, which, in Sakhalin, in December, is not a noticeable draft. Under these circumstances how greatly to be pitied are the natives, who, in the open air with a notably burning fire, even if it should be very cold, as long as there is no snow-storm!

The winter yurt built after the Chinese pattern tchadyr of the Gilyak, is completely different in character. It always has the appearance of a house rather than a yurt, since it is built on an approximately square structure, though, as a rule, somewhat longer than it is wide, about 6-7 fathoms long and about 5-6 fathoms wide, with the time of my stay among them were either, on Sakhalin, of Japanese shape and

/327 (cont.)

/292/ roof such as possible. The house is provided with windows (3) on all four or at least three sides, and, to be sure, the two longitudinal walls and the one transverse wall have each four, the front transverse wall one. Even in the most spacious Gilyak houses I never saw more than these seven windows (1). very often,

(1) I did encounter this among other Amur peoples, but I shall speak about that later.

however, the window in the Tebach house standing in the foreground on Plate XI, and not employed in the other transverse wall and the longitudinal wall but only on one side, is unique. Usually it is then always placed unsymmetrically closer to one or the other corner of the yurt, and, in the latter case, the remaining wall is covered with a more or less thick layer of soot near the top. The change of temperature in the earth yurt is even more perceptible in the Amur Gilyak, for the latter, besides which one has fallen asleep, goes out, the yurt is soon filled with cold air coming down from the smoke vent, and, if there is no one in the house, the smoke vent is closed, but I have never seen it done, though I spent many a night among the Gilyak. And to be sure this should be done, for the smoke vent is very large, and the lower the smoke vent is over the hearth and the sleeping benches. At night in the usual fire place and in the hearth, the smoke reaches the smoke vent with the heat and where no big and lasting fire was therefore possible, /292/ we soon had the temperature of the outside air, which, in Sakhalin, in December, is not a noticeable draft. Under these circumstances how greatly to be pitied are the natives, who, in the open air with a notably burning fire, even if it should be very cold, as long as there is no snow-storm!

The winter yurt built after the Chinese pattern tchadyr of the Gilyak, is completely different in character. It always has the appearance of a house rather than a yurt, since it is built on an approximately square structure, though, as a rule, somewhat longer than it is wide, about 6-7 fathoms long and about 5-6 fathoms wide, with the time of my stay among them were either, on Sakhalin, of Japanese shape and

/328 (cont.)

proportion in this respect and at the large time they offer precisely detailed details in the construction and interior arrangement of the Gilyak dwelling. In concluding this description I must mention that along the walls (3), immediately to the right of the entrance, there are sometimes shelves or supports for storing household utensils, and here, too, in the place for one or more large receptacles which serve for storing the food. An open cabinet with various cooking and eating implements similarly hangs on the wall behind the stove, and, finally, it should be mentioned that in the interior of the house, close to the roof, there is a round hole which serves as a chimney for the smoke, and, in the place for the stove, a hole for letting the house when it is filled with smoke and steam during the preparation of the fish broth for the dogs or with smoke and steam in the winter, when the door, which generally (2) always saw it open, and closed only at night. Since, because of the smoke, the /292/ roof of the yurt, which, as a rule, consists of a kind of roof, with only the edge of the bench left uncovered, stood out infrequently the walls of the house, which are covered with bark or the /292/ roof, the place of the house, between the two pair supporting the ridge, there is a large, heavy table (3), about two fathoms long and about one fathom in the form of a bench, temporarily placed in the middle of the house, and, finally, there is also a large table (4) for the dogs, which, in contrast to the other dwellings one may conclude that the earth yurt is the original dwelling peculiar to the Gilyak, which was formerly also used generally on the mainland, but later was driven out, later by tinge and finally entirely on the mainland and in large part on the coast of Sakhalin adjacent to it, by a foreign form that came down the Amur, and /292/ has been preserved only among the more remote insular Gilyak. Finally, arguing in favor of this view that the earth yurt is in fact the original winter dwelling of the Gilyak, apart from above-mentioned exceedingly simple and primitive construction and arrangement, is the fact that with only slight modifications it is also found among all the other Paleo-Asiatic peoples.

/328 (cont.)

there are certainly no longer any earth yurts. Along the bays of Tugur and Ulbi, which, according to information given me by the Gilyak, they live in the winter, as I gather from his hand-written notes (1), in exactly the same type of houses as on the

(1) In his travel report, too (see Beitr. zur Kenntn. des Russ. Reichs, St. Petersb., 1857, Bd. XXIX, p. 58) he mentions the "fractional pipes carrying heat under the sleeping benches in the houses" of the Gilyak

Limas and Amur. It therefore cannot be assumed that matters are different in the area between Kuli and Ulbas Bay, the only stretch for which we do not have eyewitness accounts. The Gilyak, too, have adopted the Chinese tchadyr. They, knew of no earth yurt on the mainland to report to the other than the above-mentioned Russian peasants.

In brief, therefore, among the Gilyak on the mainland, as far as their distribution extends, the earth yurt is the original winter dwelling of the Gilyak, and, finally, on the island of Sakhalin, however, it occurs only on the west coast opposite the mainland, being that there it is found in the form of a bench, temporarily, and, finally, also in all the other Gilyak parts of the island, only the latter, however, in a modified form. In contrast to the other Gilyak dwellings one may conclude that the earth yurt is the original dwelling peculiar to the Gilyak, which was formerly also used generally on the mainland, but later was driven out, later by tinge and finally entirely on the mainland and in large part on the coast of Sakhalin adjacent to it, by a foreign form that came down the Amur, and /292/ has been preserved only among the more remote insular Gilyak. Finally, arguing in favor of this view that the earth yurt is in fact the original winter dwelling of the Gilyak, apart from above-mentioned exceedingly simple and primitive construction and arrangement, is the fact that with only slight modifications it is also found among all the other Paleo-Asiatic peoples.

in more ancient times (1).

1. Wenkämindof, op. cit., p. 201.

After this digression, which acquainted us with the earth yurt in its various modifications as the original winter dwelling of all the Paleo-Asiatic peoples as far as Greenland and the extreme northern part of America, let us again return to our point of departure, the Amur region and the Gilyak. While the earth yurt, the kapi, is the original, national winter-dwelling of the Gilyak, the tukahrf, erected on level ground and equipped with pipe heating, must be designated as a later form of winter dwelling brought to them from the outside, from contact with other peoples, chiefly through Chinese influence. I have therefore called it above simply the Chinese winter-yurt. Glehn (2),

2. "Reisebericht von der Insel Sachalin" (Beiträge zur Kenntn. des Russischen Reichs, Vol. XXV, 1867, pp. 233 ff.),

Schmidt (3), Mitul (4), and others call it the "Manchurian

yurt," but, if this is not merely another one of those frequent confusions of the Chinese in the Amur region with the Manchu, as was discussed above (3), as I believe it to be, then it can be

5. See, p. 144, and note 2, in this work.

argued that the Manchu borrowed this way of constructing their winter houses from the Chinese.

/351 cont./
winter houses from the Chinese. That it reached the Gilyak from the south, down the Amur, is shown, in the manner mentioned above, by the distribution of the earth yurts and the Chinese winter-yurts in their areas, in particular by the fact that on Sakhalin the latter are found only along the west coast of the island facing the mouth of the Amur. Actually, this type of construction of the winter house can be followed continuously among all the peoples of the lower Amur region living upstream from the Gilyak, up to the Chinese along the Usuri and Sungari. There it is prevalent everywhere among the Manchu, Chinese and Dsai (6). For example, the Chinese

6. The latter will be dealt with separately below.

U-tschen, in the description of his birthplace, Ninguta, written by him in 1722, mentions that the houses there have three kang, i.e., sitting and sleeping benches or plank beds running along the walls and heated by pipes running under them (7).

7. According to U-tschen, the kang, about six feet wide and two fathoms, five to six feet long, were put along the north, west, and south walls of the houses, along the east wall, separated by a partition from the rest of the room, was the women's room, which had two kang, along the north and along the south wall. The kang are covered with reed or straw mats, over which a red felt carpet is frequently spread. U-tschen's writing in the translation by Wassiljef; "Zapiski o Ningutse" (Zap. Imp. Russk. Geogr. Obsch., Bk. XII, 1857, p. 98).

/352 cont./
Nevertheless, this type of house construction, with a system of pipes going out from the hearth, running under the sleeping benches, and opening into a chimney standing outside the house, is by no means of an indigenous Manchurian origin, but rather of undoubtedly Chinese origin, introduced by the Chinese from the mainland to Manchuria as well as to their other colonies. For the same type of house construction is found everywhere in North China (4) and in other countries which, like Manchuria, are

4. Though there is hardly a work about China in which there is not also mention of the kang as a characteristic peculiarity of the Chinese dwelling, I want to mention here a few, in part older, in part more detailed discussions or descriptions of it; for example, de Du Halde (Description géogr., hist., chronol., polit. et ligue. de l'Empire de la Chine et de la Tart. Chinoise, Paris, 1735, Vol. II, p. 87), Van Braam (Voyage de l'Ambassade de la Comp. des Indes orientales Hollandaises vers l'Empereur de la Chine en 1794 et 1795, publ. by Moreau de St. Méry, Paris, year VIII, 1798), Vol. I, p. 346), Davis (La Chine ou descript. géogr. des mœurs et des coutumes etc., de l'empire Chinois, transl. from Eng. by Pichard, Paris, 1837, Vol. I, p. 301), Hue (L'Empire Chinois, Paris, 1854, Vol. II, p. 300), Fleming (Travels on horseback in Mantchu Tartary, London, 1865, pp. 192-194 and 251 among others), Poussielgue (Voyage en Chine et en Mongolie de M. et de Mme. de Bourboulon, Paris, 1866, p. 54), and Girard (France et Chine, sur poih. et priste des Chinois, Paris, 1869, Vol. II, p. 384), among others.

/352 cont./
more or less under Chinese domination, in Mongolia (5),

5. Gmelin (Reise durch Sibirien von dem J. 1733-1743, Göttingen, 1751, Vol. I, p. 449), Pallas (Reise durch verschi. Provinzen des Russ. Reichs, Vol. III, St. Petersburg, 1776, p. 116), and others gave detailed descriptions of the kang and the rest of the construction of the Chinese houses in Maimatschin opposite Kiachta. In the latter, Van Braam, Voyage dans la Tart., le Thibet et la Chine, Paris, 1850, Vol. I, p. 19, there is one from Mongolia near the Chinese border.

Korea (6), etc. In larger and more neatly built houses, sign-

Section 3: "Ethnographie, auf Grund von Dr. Karl von Scherzer gesammelt. Materialien bearb. von Friedrich Müller /Ethnography, on the Basis of Material Collected by Dr. Karl von Scherzer and worked up by F. Müller/," Vienna, 1858, p. 138. In the last-named work the heating by pipes is called "Russian type," though this is by no means a national Russian arrangement.

by means of which an evenness of temperature is attained in the house to an extent inconceivable in the primitive dwellings of the Amur people.

Finally, the fact that the heated sleeping benches are used by the Gilyak and all the other Amur peoples in exactly the same way as by the Chinese also /353/ argues in favor of the Chinese origin of them. According to U-tschen, the Chinese always lie crosswise on the kang (1), with their feet

1. Cf. Wassiljef's translation of U-tschen's writing, op. cit., p. 98:

toward the wall (2), and the same is also observed by the Gilyak

2. Pallas, op. cit. In the Amur region, too, I have never seen Chinese sleep otherwise on the kang.

and the other Amur peoples with superstitious strictness, whereas in the earth yurts, one sleep in the opposite position, with the head toward the wall. In a Gilyak winter-house on the Amur, when I once placed my head against the wall, as in the earth yurt, in order to have a support for my pillow, it aroused general indignation among the Gilyak, and the cry "uhsch, uhsch," which means the same as "misfortune" or "unlucky, forbidden," rang out on all sides. The reason why the Chinese always assume this position on the kang is said to be that the part of the sleeping bench that joins the wall is especially warm because of the pipe

/353 cont./
running under it and therefore is better suited for the feet than for the head. There is another justification for this custom in the winter houses of the Amur peoples. If one lies with his head against the wall, he exposes himself so that the rays, which are exceedingly abundant in these houses and which always run along the walls, would be constantly running over the face. This alone, however, would not make the Gilyak refuse his allow even a stranger to assume their position on their kang. If superstition did not demand strict observance of the traditional custom, and afraid of any violation of it, no matter by whom, as misfortune for all the inhabitants of the house.

Now, as the lack of historical data, it cannot be determined when the Chinese winter-yurt reached the Gilyak on the Amur and, gradually spreading downstream, supplanting the earth yurt, reached the Amur-liman, the coast of the Sea of Okhotsk, and the Liman coast of Sakhalin. In the reports of Poyarkof and Nagibin, who spent the winter among the Gilyak at the mouth of the Amur and along the Sea of Okhotsk in 1644-45 and 1646 (2), there are, unfortunately, no hints which would

2. See pp. 216, 219 ff. above.

permit conclusions about the nature of the Gilyak houses at that time. In the case of another Paleo-Asiatic people, the Kamchadals, we see the original earth-yurt completely disappear before a imported, foreign type of house construction within the short space of about 50 years. At the time of Krashenninikof and Steller (in the forties of the previous century), all the Kamchadali still lived in earth yurts of the type described above. Even in 1779, when Clerke, the successor of Cook on the latter's third voyage, visited Kamtschatka, at least the south of the peninsula, between Petar-and-Paul's Harbor and Bolschereck (4),

4. Tagebuch einer Entdeckungsreise nach der Südsee in den Jahren 1776-1780 unter Anführ. der Capitäne Cook, Clerke, Gore und King, transl. by J.R.Forster, Berlin, 1781, p. 333.

/357/ This is exactly like the interior of the earth yurts, in that low and wide plank-bed or sleeping benches (1) run along the walls, on both sides and in the rear, opposite the entrance door (2), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as a smoke vent and actually consists of two holes put in the two halves of the roof and joining at the ridge pole. Under this, several longitudinal and transverse poles are put over the hearth and a wooden block is hung on them to hold the kettle over the fire. Some similar longitudinal and transverse poles run over the sleeping benches and are used for hanging up clothing. In the contact between the side benches and the front wall, to the right and left of the door, there are shelves with all sorts of utensils, a large container with drinking water, a small supply of firewood for the hearth, and the like. Since the room as a whole is not high and the roof is rather flat, the large smoke vent is not very high above one's head, which, together with the many crevices in the walls and the floor, actually makes the house very airy. If, in addition, the doors to the front space and from there to the outside are open, a strong draft is created. Therefore, as a rule, the summer dwelling is completely free of smoke and also quite free of gnats, which is very important. The front space (g) can also be specially ventilated, if the supplies stored there require it, for in walls in part consist only of vertically placed boards which can easily be removed in any number desired, as has been done in the case of the yurt at hand at the time it was drawn. Finally, another feature, a simple one, to be sure, but a very important one in its consequences for the Gilyak, must be mentioned in connection with the construction of their summer dwellings. In order to make them inaccessible to the great number of rats in the winter yurts, a vital necessity because of the fish supplies associated, the hunting dogs are put over the upper end of each of the piles supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing up the piles to get into the yurt. The sleds are hung under the

/352 cont./
Thus the procession sways along, sometimes forward, sometimes backward, but always closer and closer to the house, right around the local oaken of cage of the bear being tugged back and forth in which the other two animals jump, and around the wild, intermittent shouts of jubilation of the bear leaders as well as the bystanders. The few oil-lamps do not sufficiently illuminate the large space of the yurt with its dark sooty beams so that all those who are busy with the bear can clearly see its movements, and yet this is absolutely essential for the prompt intervention of one or the other man in them. Hence a number of boys leap onto the sleeping benches and there illuminate the turbulent proceedings, following the procession back and forth with improvised torches, which consist of strips of birch-bark and sometimes flare up brightly and then again spread only dark smoke. Truly a strange picture (see Plate XLVII /p.1247/).

The bear's feet were then /357/ led out of the house in the same manner as the small bear. The first one was decidedly the good-natured and attractable of all, which the Gilyak ascribed to the fact that it had broken a leg while being caught and consequently was still limping. It was remarkable how differently the three bears expressed their rage and defended themselves: whereas the small bear and the large one straightened themselves up and tried to claw the man goading them, the third bear behaved quite differently: it did not try to get up at all, but attempted to ward off the thrusts of the stick by holding its paw in front of its face and reaching out for the legs of the one goading it, as it would lie down on its back and defend itself with its paws. It was also the only one of the three which in its fury, tried to scratch up the stamped-earth floor of the yurt, which, however, the Gilyak stopped it from doing each time.

The purpose of the procession with the bears was to lead them through all the houses in the village, of which there were seven in Tebarki; the procession with the three bears turned into each of them, and everywhere they were arranged in the same order, the large bear in the middle, the two others at the sides, and treated with many foot-stamps as a sign that they are held in esteem and are welcome guests in each house.

/708 cont./

*796 house alone. Hence it is quite understandable that during the
292 entire bear festival, but especially during the night preceding the
principal feast, the Gilyak women are fully occupied with the
preparation of the dishes required for it, which, as has been mentioned (2), is sometimes very complicated. /709/ They are al-
[354]

2. See p. 676 above.

ways prepared on the hearth which is located on the transverse wall
of the house in a line with the bears arranged in the center area
*796 and is thus exposed to their gaze in particular. I shall therefore
[824] call it the bear hearth. In it, and in it alone, quite large quan-
tities of fresh fir branches (from the Picea ajanensis, Gilyak twisky)
are burned by the women from time to time, not only during this
last night, but throughout, for the entire duration of the bear festi-
val, which may be one of the arrangements of homage which are given
to the bears or one of the offerings which are presented to them.
Thus a bear festival is proclaimed by the prevailing fragrance of
burned pine-needles in the houses and to some extent even outside.
*796 On January 13 at about 6 o'clock in the morning, the
23 leading of the bears finally ceased. After they had made their
last rounds through the village, the animals were led to the place
of execution prepared for them, the so-called kadhra of the Gilyak,
and arranged carefully bound there between the stakes standing in a row in the middle of it. The order of the bears was again
the same so that the small bear was closest to the building, in the
back of the kadhra, the lässgn, the large one in the middle, and
*796 the medium-sized one next to the entrance. Then everybody
went into Judin's house, where in the meantime the women had
set out the foods prepared for the feast, in wooden troughs, round
wooden bowls, and square bowls of birch bark, on the floor in the
central area of the house, where the bears had previously stood
The guests invited to the feast took their places on the bench
[804] along the transverse wall opposite the bear hearth, which on such
an occasion is regarded as the bench of honor, though as a rule,
it is probably less warm and often less light than longitudinal bench

/733 cont./

*796 out obliquely from the smoke vent and with a bundle of curled
342 wood-shavings hanging from its tip, such as I saw in the village
184 of Tyk. Here, the road carved out of birch bark probably also remains on the smoke vent, while the bear's head and skin is
lowered through the smoke vent directly onto the platform of
the hearth.

*796 In the meantime, in the interior of the yurt there, the rack
184 for the bear's head, made, just as on the mainland, out of unpeeled alder poles and richly decorated with fir branches, has
been readied. It stands close to the rear end of the hearth platform in the passageway between it and the rear bench, or bench
of honor, thus, in a place which corresponds exactly to the one
occupied in the Gilyak houses built in Chinese fashion.
*796 Since the hearth platform in a large earth yurt is quite spacious,
184 two separate fires can be kindled on it, corresponding to the two
354 hearths in the tschadryf, over which the kettles used to cook the
252 bear meat as well as for preparing the other dishes hang from the
yurt beams. The fire closer to the bear rack is the kotr -- or
[824] tschchyf (1) -- tur, the bear fire, in which fresh branches of fir
[192] are burned.

1. As the bear is usually called on Sakhalin.

trees, and especially of the cedar shrubs so common in northern
Sakhalin, are burned during the preparation of the bear meat and also
at other times during the bear festival on account of the popular
fragrance.

The wooden curls (zacht), being regarded as a symbol of
*796 holiness, purity, and inviolability, are an essential ornament in the
708 interior of the earth yurt. They always hang down in a long bundle
353 from the center of each of the four crossbeams supporting the conical
184 roof, and at the time of the bear festival there number is increased
by four new ones, which /734/ are put in the four corners of the yurt.
[177] In the Gilyak houses, on the mainland one usually sees only two of
them, and not always even these, suspended from the two supporting
posts of the house, but their number seems to increase as one approaches the Ainu, among whom they are used under the name inau.

439 with the Chinese. After the appearance of the Russians in the Amur region,
*796 the Nivkhi began to use small quantities of bread, sugar and salt.
[823] The immemorial, and until recently the only, domestic animal of the
231 Nivkhi was the dog. It served as a draught animal and provided for fur
clothing and meat for food; it was widely used as a medium of exchange
[55] and played an important part in religious ideas and rituals. The number
[420] of dogs in a household was an index of wealth. As a rule, every household
kept six to eight dogs, which demanded considerable care. They were fed chiefly
fish and seal-fat; feed had to be stocked for the whole winter, when dogs
were used most in drought animals.

The old sled of the Nivkhi, which was still found in use by Shrenk in
the middle of the last century, was so narrow that it could be carried outside
[177] by a single person. Resting his feet on small skis, sometimes he raised himself and ran in
this position on skis. The runners of this sled were curved both in the back
and in front. The dogs were harnessed to the runners by fixed loops
492 either side, rather than in pairs. The harness was a simple collar, so that
the dog pulled with the neck.

Until quite recently, dog races were still a part of the bear festival; in
*796 these, the Nivkhi used the old sled and the old type of harness. The harness
184 and the sled which appeared among the Nivkhi at the beginning of the 20th
354 century were considerably different from the old type. They were of the
[824] so-called Eastern Siberian type; the sled was of greater capacity and
[192] equipped with a vertical shaft-bow and paired harness; not in collars but in
yokes, which the dogs pulled with the chest.

The development of the carting trade brought with it a new type of sled.
179 Its greater size and stability permitted the transportation of up to 200 kg
182 of goods. It was usually drawn by 9 to 11 dogs. The best trained and most
183 valuable dog was the leader. The driver—kayur—usually called out his
directions to this dog. The dogs were stopped with a shouted order and
brake pole. Dogs were sometimes also harnessed to a boat on a longer
tow strap.

The horse as a draught animal appeared among the Nivkhi relatively
184 recently.

In addition to dog transportation, winter travel on land was done by
281 skin-share skis without fur lining, or by bulls lined with seal fur. The former
were used for short trips; the latter, for distant expeditions during the fur-
hunting season. The Nivkhi skis were distinguished by the wooden strips
nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed
50 boats made of poplar. These dugouts were so light that they were carried
[824] by hand across barriers (shallows and isthmuses). They were propelled
with oars or poles (usually employed for upstream travel). For long-
[171] distance travel, the Nivkhi had a large boat similar to that of the Ul'chi,
Nanays and Orochi. It was made of three wide outer boards, of which
[824] the bottom was a bent board in front, projecting like a spade. It was
rowed with 2 to 4 pairs of oars, by lifting alternately the right and the
left oars.

361 The Nivkhi villages were usually situated near the mouths of spawning-rivers, and seldom exceeded 20 dwellings. Until recently, the dwell-
342 ings of kinsmen were set side by side. Some 40 to 50 years ago, the
175 Sakhalin Nivkhi still widely used the dugout house. It was made by dig-
ging a pit some 1.25 meters deep, over which a wooden framework was
built of thin logs, and covered on the outside with earth. The smoke vent
[824] served as a window as well; the hearth was built in the center, and
[192] plank beds were set around the walls. At the end of the 19th century,

252 their mouths and chew it. Each person spits out what he has
354 chewed into an individual small basket made of birch bark.
415 The contents of all the little baskets are then gathered and
put into a pot; to this are added fresh, unsalted fish, berries,
cedar nuts, flour and seal blubber, and the whole is then
cooked. The soup is not eaten with spoons but drunk out of
wooden mugs; from these they also eat their porridge. They
eat with their fingers; instead of plates and bowls for dry
food they use small wooden boards with legs. Both sexes eat
together; they sit crossleged on benches on which also the
bowls and little trays stand.

VI. Dwellings

343 Gilyak villages lie along the river banks in low places
366 which, however, are always free from floods by flood water.
417 The houses stand in a row, usually three in number, seldom
12 or more. The front of the village is usually more or less
hidden by the high scaffolding, on which the fish are dried.
The only out-buildings are small storage houses. Neither
stalls nor places to house their idols, neither kitchen
gardens nor cultivated fields are to be seen around such a
village. (1) The scaffolds consist of high perpendicular poles

1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the
dogs are usually assembled. Some Gilyak villages have
separate bear houses, a small square made of beams where
a bear is kept and fattened!
333 Their house (2) somewhat resembles a common farm house,
342
354

2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has
no glass at the windows, and no smoke vent in the roof. It
consists of only one room. The walls are made of thin fir
beams. The cracks are stuffed with moss and smeared over
with clay. The floor consists of pressed clay, the roof of
birch bark or coarse dried grass (calamagrostis purpurea)
on which earth is sprinkled; the roof is also sometimes
weighted with stones, to offer resistance to the wind. The few

161 It is as impossible to estimate with any certainty the number
of Gilyak, as it is the number of Goldi. Rittich estimates
their number to be about 3000. On the Amur Jakobsen found
quite a large number of villages on Sakhalin Island, on the
other hand, there were far fewer villages.
439 I like their neighbors, the Gilyak are fishermen and hunters;
431 only now and then they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and
flour for the inhabitants of Sakhalin. In accordance with their
primary occupations they spend their summers on the river
banks while in winter they move into the mountains and roam
through the woods. I saw them in the winter with certainty whether
they have summer and winter dwellings like the Goldi, but I
think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-
brick ovens and the benches, warmed by the pipes, along the
342 walls are also to be found in these houses. On the other hand,
361 the traveller found in September 1884 above Nikolayevsk a
whole number of Gilyak villages that were at a considerable
distance from the river bank, while the summer settlements
of the Goldi by their nature as fishing villages used to be
situated right by the river. One might conclude from this,
perhaps, that these Gilyak villages were not simply fishing
villages for the summer, but served as dwellings for the
whole year; unless one wanted to assume that [164] they do not fit
in groups of people. The Gilyak in the last few years
frequently causes the room to be filled with clouds of smoke.
231 The furniture is very simple. Not far from the door is the
352 hearth or, if there are two, they are put on either side of the
entrance. Around the walls run the benches, or, rather, one
511 continuous bench. It is low and so wide that a tall man can lie
515 diagonally across it. It is covered with woven mats made of
arundo. In the middle of the room is the long and low dog
table. The dogs are called in before they are fed and tied on
the table; they are let down one by one, fed, and chased out
again. Besides, there are hanging cradles, a primitively
decorated cabinet, a box, etc. On the benches stand a few
stools in case a higher seat is needed for some work. On the
cross beams below the roof hang all kinds of skins, fish,
clothing, etc., above these, diagonally, lie oars, lances, bows,
and the like. There are no idols to be seen; these are usually
kept in the storage houses and are brought out only on special
354 occasions. In the evening the room is lighted in the most primi-
373 tive fashion: a cloth and a small bowl of fish oil is the lamp,
or, if there happens to be no oil, a pine chip is lighted.
513 In summer their bed consists of mats, in winter of bear
skins or other skins. For pillows they use long, cylindrical
cloth sacks stuffed with hay, one of which serves for several

20: Bush--103 T-2 (1865) 1871 Gilyak
116, 251, 354

"Many of their houses are heated by a fire in the centre of the room, the bunks for sleeping ranged around the sides, and a square hole in the roof for the smoke to escape through, while others have the fire in a kind of oven in one corner, the smoke and heat being conducted entirely around the room, under the bunks, before escaping from the chimney. This is in order to heat their beds during the winter. Suspended to the rafters overhead they frequently have hundreds of salmon curing in the dense smoke. This is called 'ukale' by the Russians, and, when carefully prepared--'and you know the woman as made 'em,' as Sam Weller said of veal pies--are quite palatable."

342 782 Sacrifices (sacrificed dishes -- chmfun) are placed on the appropriate half; if there is not enough space, then on the appropriate nau (tol or par). /316/ Sketch of the house-plan appears here./

342 [700] /317/ Tyvyz -- "master" of the house; he lives either under the post (10) or under a stone (19). Sometimes he is an old man, sometimes an old woman or a young woman.

The master of the house and his family occupy the tol' erkh nuik; if the family is large then also the kemfaih (9) and ponakhfaih (4). The bear's head is placed in the middle (23).

• [356] 782 In autumn, during cleaning, everything is abundantly fed: the walls, the floor, the supports under the plank beds, the edges of the plank beds, and so forth.

Rites upon the completion of a house. When a new house is completed, they place two sticks, one in the front and the other in the back (of the house), and on a thread stretched between them are hung images of the sun (keng) and the moon (long chakh). They are not renewed later.

342 782 When the house is completed, sacrifices are made: They prepare mos' 1) alya -- berries, 2) rak; -- a porridge of rice or wheat, and feed the four corners (chonkh), four posts (mon'-nakh), and the two posts in the middle -- the front one, amkhas', and the rear one, kemkhas', in which the master lives; they also feed the crossbeam -- tyif (edzz). Here the old man says: "Uria dyf' muiz' nolagu kynynguch: humguja', ta sikhydz khoiaf ta fum guiz'" -- be a good house (sit firmly). Make it felicitous for my children, and so that there be no kind of sickness." In autumn the 356 house is cleaned, plastered with clay, and they sacrifice -- tyv arnydzz.

342 778 776 Tyv yz' bakh -- a stone before the threshold or beyond the threshold, or a piece of pig iron; under it sits the "master," who guards against the entry of the milk'.

Lym yz' -- threshold. Beyond the threshold, under the 342 782 776 ground, they place different foods (chyudzz) -- for the earth -- the master and the tol (vyydzz.

/646 cont./

595 presence of several women around one man in the same room and in a common household if, in the long run, scarcely con-
595 ceivable. Therefore very rich Gilyak who are impelled by
567 vanity to display their wealth and indulge in the luxury of
[556] polygamy, frequently seize upon another means to lighten the work for their wives and, without disturbing the peace, to be able to favor one or another of them. This means is to keep slaves, usually of the female, but sometimes of the male sex, for the purpose of performing the heaviest work in the house.

595 These, however, are by no means to be thought of as lone Gilyak
567 men or women who attach themselves to a family and, in ex-
357 change for free food and lodging, assume the obligation to per-
• form the heavy work in the house, such as fetching water, felling and splitting firewood, etc. There are such domestic persons, who are hired, so to speak, among the Gilyak, but the situation that they are in is entered into by them voluntarily, it can be dissolved at will, and it in no way deprives them of the esteem of their countrymen, nor does it injure their social position with equal rights among them.

567 The situation is entirely different, however, with regard to the slaves. The Gilyak have a special term for them: kryghryu, or, with a statement of the sex, kryghryu-umgu -- female slave, and kr.-uzgu -- slave of the male sex. It is to be stressed, first of all, that they are never and under no circumstances Gilyak, but are always individuals bought from the neighboring tribes, Ainu or Goldi. The Ainu (Kughi) supply the most slaves, and especially female slaves, to the Gilyak, the Goldi supply them in smaller numbers, and, to be sure, the "Jant" as well as the "Tycholdok," that is, the lower as well as the upper Goldi. The Gilyak were unable to name for me any other tribes furnishing them with slaves. Thus, significantly enough, the shameful sale of girls and boys of their own tribe into slavery is practiced only by the two peoples of the Amur region who are the immediate neighbors of the two civilized peoples of East Asia, the Japanese and Chinese, and who are the most dominated and oppressed by them. It is certainly no mere accident that the

/649 cont./

114 176 595 case personal motives on the part of the Japanese traveler came into play and gave rise to the vague wording of the report, which can be interpreted in various ways. Forced to wait among the

114 176 592 595 Smerenkur (Gilyak) at Cape Noteito for an opportune moment to carry out his planned trip to Tōtats (on the opposite mainland), which had been unsuccessful the year before, /650/ and without any provision, Mamia Rinso found himself, in order to stay alive, forced to do all kinds of work, such as cutting wood and the like, in the house where he had taken refuge. For a time,

• [359] then, he entered the ranks of person obligated to perform do-
[560] mestic service in exchange for food and lodging and had to accommodate himself, like the "rest" and the "other" men in a similar position, including the slaves, to act according to the orders of the woman in charge of the house and to being treated "like a servant" by her. This does not mean either polyandry nor a dominant position of the woman over her husband. Pride and vanity, and perhaps also fear of his government, probably prevented the traveler from fully and openly confessing in his report the undignified and humiliating position and treatment which had befallen him among the Smerenkur, and prompted him to describe the situation in a more favorable light as the alleged

[515] custom of the people. He also depicts the women of the "Smerenkur in an ideal light, saying that "their face and skin are extremely delicate and beautiful due to daily washing," whereas actually the Gilyak women of Sakhalin look still dirtier than those on the mainland as a consequence of staying in the cramped, dark, and sooty earth huts.

114 176 595 567 435 Even though Mamia Rinsō avoids speaking of slaves in referring to his subservient position among the Smerenkur, he is well aware of the existence of such among them. For he says (1)

1. Op. cit., pp. 186 and 187.

of the inhabitants of southern Krafto (Ainu) that in their trade with the Santaner, that is, Gilyak, Olcha, and Goldi, they "even frequently sell human beings, and, to be sure, widowers

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi.

361

361 SETTLEMENT PATTERNS--location and distribution of settlements; types and descriptions of settlements and the incidence of each (e.g., rary camp, set'led hamlet or village, town, city, urban metropolis); permanence or impermanence; settlement plan; urban ecology (e.g., dential, business, and industrial areas); satellite areas (e.g., suburb terns of urban growth; zoning; city planning; etc. See also:

Land use . . . . . .
Community organization . . . . . .

/109 cont./

And this is just what is striking in the Gilyak system of life. Despite all the complexity of the social fabric, embracing all aspects of life, all those external-formal signs of organization which the European involuntarily seeks everywhere are either completely absent or assume forms which are too fluctuating.

/110/ Let us begin with territory. It is completely natural that the members of one clan should prefer to live together in immediate unity and community with each other. There are actually some settlements, such as Tangi, Nyanivo, Viskivo, and others, where the whole population belongs to one clan. In the large winter yurts of such settlements one can sometimes count 20 or 30 clansmen and not a single alien. Even where several clans live in one settlement, as in Kol', the yurts of each clan are arranged in a row, as if in accord with a strictly observed tradition. Each clan has its own clan streams for hunting, divided among the different families, among whom they pass by inheritance from father to son, although the right to property is limited by actual use, upon the suspension of which the stream becomes res nullius and can be utilized by anyone, even an alien.

Nevertheless, despite the natural tendency of clansmen to remain near each other, the principle of territoriality does not in fact exist. In the great majority of Gilyak villages the composition of the population is mixed. In the above-mentioned settlement of Kol' I counted representatives of eight clans, in smaller villages, from two to three clans, and but very few villages in which there were absolutely no members of other clans. There are clans whose branches are to be met in the most different and remote points of Gilyak territory. This dispersion, of course, is a fact that seems to be at variance with the principles of clan, but it is inevitable under the given economic and social conditions. A settlement located in a particularly favorable place from the fisherman's point of view will naturally attract newcomers from other clans, and, conversely, if the clan has grown so large

/110 cont./

in its original site that the indigenous village can no longer feed everybody, emigrants by degrees depart from it to other places, selecting the nearest possible sites in order that the ties between the clansmen will not be severed. Immigration to very distant points involves an actual division of the "fire" and branching out of the clan. A no less important cause of the mixture of population is the custom, in some instances, of sons-in-law /zyat'ya/ moving to the clans of their fathers-in-law, about which we shall speak in detail in its place. Territory is in any case an indefinite sign of the clan.

The Gilyak do not even possess a consciousness of the right to property, not only with respect to themselves, but also with respect to /111/ strangers. When wandering Tungus appeared on Sakhalin 50 years ago and began to hunt in the primordial territories of the Gilyak, it did not occur to anyone to protest against this, although the Tungus came in small groups and could hardly have withstood the numerous aborigines with force.

Clan names are just as indefinite a sign. In the mass of primitive, so-called "totemistic" tribes, the clan name is one of the very sharpest external signs of the unity of a clan. A totemistic name is a real object of nature, animal or plant, which is represented on the body, clothing, buildings, etc.

Among the Gilyak there is nothing of this sort. In some clans there are totemistic legends. Thus, for example, a clan living in the settlement of Tangakh considers itself kindred with the bear on the grounds that a woman of that clan had given birth to a monstrosity with features resembling those of a bear. Similar legends exist in other clans. Nevertheless, not only typical totemistic, but even ordinary clan names in the proper sense are absent. There are only territorial names. If a Gilyak wants to name the people of such and such a clan, he says "the dwellers of such and such a settlement," which sometimes corresponds with the actual place of habitation of the clan, but most frequently only indicates the village which was once the primordial abode of one or another clan.

*835 /179 cont./ By way of an exception, I observed several cases
878 where jealous men moved to an isolated place immediately
182 after the wedding, in order to avoid the competition of their
166 brothers. Thus, the settlement of Sakh-Kotan, the southern-
●[361] most Gilyak settlement on the western shore, was founded by such a jealous man; when I visited it in 1897, I found there only its founder with his numerous descendants, and my Gilyak companions made not a few jokes about him, but he was invulnerable -- his wife was of an age when women are well
*835 beyond suspicion. But such cases are exceptional, and all the
578 more exceptional are cases of sharp clashes between brothers
834 on account of jealousy. In order to avoid them, only an observance of tact is demanded. Such cases are possible when an individual wife and a bachelor tuvn go beyond the bounds of decency and tact: when a woman begins to run after her sweetheart publicly, disappears from the home, and completely disregards her obligations to her individual husband. In such cases it is sometimes necessary for the sweetheart to move out of the house of his brother or even out of his village,
[166] and the woman sometimes gets a scolding. I met such exiles a couple of times in northern Sakhalin. Usually, however, the
*835 relations between tuvn are quite peaceful. If the older brother
578 gets a little angry, it is in silence and without any consequences. Any active reaction is considered a sin. It is considered a great sin to challenge one's brother to a duel out of jealousy. I personally never happened even to hear of such cases. I happened to find out about one such case from B. Pilsudski, but this was a completely /180/ exceptional instance. A certain Lokhmatka, a young Gilyak also very well known to me personally, a very poor lad, but one who enjoyed unusual success with the Gilyak women, allowed himself to live too openly with the wife of one of his tuvn. According to the
[626] Gilyak custom, as I have already said, publicity in such cases
[554] is not allowed. It is allowed in exceptional cases, when the
[556] hero is an outstanding and rich man, esteemed by all. Lokhmatka, however, was a thriftless Gilyak, everlastingly in debt to everybody, lightheaded, and undistinguished by any

/286 cont./
117 went to the Amgun and left a sharpened stick (chjakh-varadz:,
103 Gilyak gesams'a, geskha narni); the second party did not /287/
173 notice and traveled to Chkharbakh (Turkhung), while the third party did not like the fast current of the Amgun and it settled in Gok.

After the Chinese, Tyr was inhabited by the Kojma-fing
[173] /see Koyma above/. This was at the time when "the pike lived on land and the snake in the water; the pike used to bite, and war was declared on it with a net, arrows, and so forth. Then the god decided that the pike should live in the water and the snake under the stones." After this the Kojma-fing left for Koyr

117 Settlement of De, one kilometer from Tyr. 1) Khal
103 Ajumka. 2) Khal Samakhajl. 3) Khal N'askhajl.
●361 Settlement of Khok (one and a half kilometers from Tyr). 1) Kalm-fing -- Gilyak. 2) The Udan clan (Khan'gan -- forty y of age) -- Negda; moved from the Amgun, and it had come to the Amgun from Udyli.

Settlement of Kal'ma at seven and a half kilometers from
[162] Tyr. Three Chinese; one of them married to a Gilyak woman One Kugi from Kosunaya has already lived here 20 years; he is not married, "no money to buy a wife."

117 A khal living here is a mixture of the Chokchagil and the
582 Ainu khal'a of Dmitriya in Tyr. They make chédzigr (see belo and select their wives from the Olcha and the Gilyak; there are women from the Amgun as well. At the present time they may take women from the Chokchagil. They can take two sisters. They may not exchange women between clans. Here they may take widows as well. The daughter is given to the wife of the brother in order to be sold, but he cannot demand this. At the bear festival anyone can shoot at the bear (1910).

117 Settlement of Dal'dzha. -- A Negidal clan. Originally
103 the Ry-Negda lived in Dal'dzha, 30 kilometers from here. They
173 all died (only one girl remained). They lived at a winter en-
[539] campment. Once upon a time, in summer, a tiger appeared before the entrance. They attempted to get out of the yurt, bu could not. Finally they got out by stepping over the tiger. The

II.

A Legend about Pilavo (1)

1. Recorded in the settlement of Takhta in 1910. Pilavo is four settlements; two on Sakhalin, one Khez'-Pilavo and Tky, the Goldi settlement near Khabarovsk. The inhabitants there still burn their dead, and there is a bear festival. The terrain is identical in all four villages.

On the north of Sakhalin a father had many children. During the sharing they quarreled over a stone with a hole, or, which, on a silver chain, is put on the breast of a bride. One brother said: "You have divided everything, now give the stone to me." He put it on the neck of his daughter, and through the night it was not possible to take it off. The others said: "Daughters are not of our clan, they leave to marry, how can one leave them such an expensive article?" The eldest brother: "We consider only sons, daughters are not ours. You can make as many children as you wish, but you cannot find such stones." After this the eldest brother always wanted to kill the little girl, while the younger brother guarded. The younger brother became angry and ran away from the south of Pilavo to the north. There, was a famine. During the most severe famine they killed a seal, they killed a small seal. They boiled it, they divided it up into pieces, they ate it, and the bones remained. The children began to chew, to fight. One of the brothers came up and began to beat the son of another brother on the "mug" with the same bone: "You, dog, take it, gorge!" and he was beating the youth. The youth began to cry. His father was not at home. The mother stepped in for her son, and the mother got it. In a little while the father arrived. The mother complained to her husband, and a fight took place.

/384 cont./

128 (121) resulting(1)ly, we consider it appropriate to cite some of the numerical data obtained by us on these questions during the detailed 1891 census. In doing so, it seems more convenient to deal separately with: (a) the western coast, between the Aleksandrovsk post and cape Marik (the northernmost extremity of the western coast); and (b) the eastern coast and the basin of the Tym' River between Cape De La Kroyer and Cape Levenshtera (the northern extremity of the eastern coast).

(a) The western coast. There are 25 Gilyak winter settlements between the Aleksandrovsk post and Cape Marii. They are located in the following order: Arkyryo, Yamy, Mangiuay, Tangi, Khoe (Khoi), Viakhtu, Tyki, Vaaz, Nyvde (1), Noksy,

/387 cont./

114 / 103 settlements the settlement of Mos'bvo on the banks of the Tym' River, seven verst from the settlement of Rykovskoye. In continuation with this settlement of Mos'bvo, the author makes the following comment: "It is inhabited only in autumn and winter. In spring and summer the inhabitants pass on to the western coast, mainly to the village of Arkyro, where in the early spring they hunt seals and during the summer catch fish which are not to be found in the Tym' at this time of the year. At the beginning of August, before the Siberian salmon run, the population returns to their winter dwellings." Editors of the journal, Ernogr. Obozr."

large cape of rock mentioned, which among the Gilyak bears the
131 name Harpach (7). At any rate, on the east coast of Sakhalin

[103] 7. Following Lopatin, Schmidt gives the Gilyak name of Cape Delisle de la Croyère as "Harpa." There is no doubt about the ending sounding like, not "pa," but "pach," since the latter is often repeated in Gilyak place names and means "rock" or "stone." I suspect, however, that the first syllable, too, is not rendered quite correctly, and that the cape is not called "Harpa," but "Tschaharpach," that is, "wood-" or "forest-rock" -- a name which occurs also at the mouth of the Amur.

the southern border of the Gilyak territory thus lies close to Cape Delisle de la Croyère, that is, /15/ about 51° north latitude, or

Reichs, ed. by Baer and Helmersen, Vol. XXV, p. 148).

G 131 361 103 115 119 103 361 The Negda
live permanently along lakes Orel and /16/ Tschlja /Chlya/, as well as along the river branch connecting them, although there is also a Gilyak village, Tschlja, on the latter. This information, which I obtained from a trustworthy Gilyak (Judin in Tebach) devoted to me (1), was confirmed by later travelers,

[103] 1. According to Judin's information, among the Gilyak Lake Orel is called Kend-tu ("tu" means "lake"), Lake Tschlja And-tu. On the former lie the villages of Pfypri-wo and Kuldsh, on the latter Tschomok and Tschlja, and, on the branch of the river which connects the two lakes, the village of Kesf (the "s" is weak) -- all Negda villages, with the exception of Tschlja.

Schenurin (2), Schmidt (3). Middendorff, by the way, calls

G 113 2. Schenurin found Negda or Nigidal yurts on the east as well as on the west side of Lake Orel. See his journal, which has been published in the article, "O novom" puti iz" Nikolaevsk. posta, chto na r. Amurie, v" Udskii Ostrog" /On a New Route from the Nikolayev Post on the Amur River to Udskii

G 131 113 /16 cont./ 2. (cont.)
Ostrog/," in Zap. Sib. Otd. Imp. Russk. Geogr. Obshch., Bk. III. 1857, Miscellany, p. 11.

G 103 3. "Histor. Ber.," etc., op. cit., p. 148. Schmidt mentions only the Negda village Nemorchon on the river branch that connects the two lakes, Orel and Tschlja (op. cit., p. 142). This name is probably Negda, at any rate not Gilyak.

Lake Orel "Negda Lake" on a map in part based upon Chinese information and still unpublished ("Erster Versuch einer hydrographischen Karte des Stanovoi-Gebirges und seiner Ausläufer, zwischen dem 45. und 62. Grade nördl. Br. /First Attempt at a Hydrographic Map of the Stanovoi Mountain Range and Its Spurs, between 45° and 62° North Latitude/."

G 101 G 101 103 361 In the territory of the Gilyak, their Amur neighbors, the Olcha, have penetrated more deeply than the Negda. To begin there, too, as mentioned above, with the village of Chjare, there lie far to the north of it, on the right bank of the river and surrounded by purely Gilyak villages, two villages, Tschylwi and Tyt, which are inhabited only by Olcha, the former with six, the latter with two winter yurts. And still farther to the north, on the same bank, there is the place Kaberazbach, consisting of only one winter yurt besides accessories, in which at the time of my journey an Olcha, who had married a Gilyak wife, governed as head of the household. On the other hand, deep within Olcha territory
G 361 one comes across isolated permanent Gilyak sites. For example, of the six winter yurts that make up the village of Aure located only slightly north of Kidsi, I found that three had been occupied by Gilyak for many years. Everywhere these scattered members of an alien people have clung as much as possible to their respective mother tongues and native customs.

G 101 /16 cont./
It is different from the Amur on the Liman and along the coast of the northern part of the Sea of Japan, in that there on the mainland, between the Gilyak and Orochi areas, there is a considerable stretch of uninhabited territory, which -- for reasons that we shall touch on later -- keeps the two peoples strictly
G 131 A 101 separated. On Sakhalin, however, with regard to the Ainu and Orok, there is repeated, and in part to an even greater degree, what we have seen on the Amur and on the Sea of Okhotsk. On
A 101 the west coast of the island some permanent Ainu families have
A 101 162 mixed with the Gilyak even before they reach their southern
G 361 boundary. For example, it was said, as the Gilyak in Arkai told me, that of the villages south of Duf, Adogi was still purely
103 Gilyak, Sthdus contained two Gilyak and one Ainu yurt, Chograni again was inhabited only by Gilyak, and, finally, Pilja-wo was
A 103 361 inhabited half by Gilyak and half by Ainu (4). The latter /17/

4. Coming from the north, Schmidt, too, met the first Ainu in Kthêm, which, moreover, at that time consisted of only two miserable yurts. He likewise calls Chograni an Ainu settlement ("Histor. Ber.," etc., op. cit., pp. 65, 66). Again, however, I cannot agree with the version of the names for the above-mentioned places, "Krasui," "Chokkoran," and "Pil-wo," on Schebunin's map.

G 361 A 113 place bears among the Ainu the designation "Poro-kotan," with the same meaning as its Gilyak name, "Pilja-wo," that is, "big village" (1). Beyond this place the coast is uninhabited for

1. Rudanofskij, too (Vostochnoe Pomor'e /Eastern Seaboard/, 1866, p. 96), calls Poro-kotan or (Gilyak) "Pile-wo" the first Gilyak village as one approaches from the

A G 103 361 113 /17 cont./ 1. (cont.)
south. He counted ten yurts. The Gilyak named only three to me, which makes the designation of the place appear somewhat uncalled for. According to Schmidt, however (op. cit., p. 67), it is said to have actually been a large village in former times, but in his time there were still only three poor yurts. Mizui's statement (Ocherk" ostr. Sakhalina v" sel'skhozyaistv. otnosh. /Sketch of Sakhalin Island from the Point of View of Agriculture/, St. Petersburg, 1873, p. 129) that there are no longer any Ainu north of Pilja-wo (Poro-
A 114 kotan) is therefore not quite correct, according to the above.

G 361 a long stretch and is only temporarily visited by the Gilyak for their livelihood. Schmidt, for instance, on the river Arokonai, between the capes Tribis and Tunai, met a Gilyak who had been seal-hunting near Otta-endu (2). Occasionally it also

G 361 439 2. Schmidt, "Histor. Ber.," op. cit., p. 71.

happens that Gilyak on trading trips to Stiranusi, at the southern point of Sakhalin, are obliged to stay somewhere for the winter, and in this case they may easily be taken for permanent in-
G 101 G 101 103 361 habitants of the place. The border conditions on the east coast of Sakhalin are more complicated than on the west coast, in that three peoples, Gilyak, Ainu, and Orok, come together there (3). To be sure, the area of the first, as we saw above, ends

3. See my travel report in the Bull. de la cl. physico-mathém. de l' Acad. Imp. des sc., de St. Pétersb., Vol. XV, p. 171; Mél. phys. et chim. tirés du Bull., Vol. III, p. 11.

G 101 361 /17 cont./
on the coast with the village of Tschamr-wo and in the interior at the headwaters of the Tymy, but nevertheless in the Gulf of Patience, near where a coastal lake empties in the sea, one still comes across a Gilyak yurt, Ssiska, whose inhabitants Schmidt came to know (4). On the same lake there is an Orok settlement,

4. "Histor. Ber.," etc., op. cit., p. 113.

A G 101 361 Tschogbo, to the north a second one, Taran-kotan, and still farther to the north on Lake Taraika, alongside several Orok
114 113 settlements, the large Ainu village of Taraika (5). Thus, the

5. Schmidt, op. cit., pp. 89, 113, 116. Bickmore ("The Aïnos or hairy men of Jesso, Saghalien and the Kurile Islands," Amer. Journ. of Science, May, 1868, p. 13) thinks that there are Ainu also at the northern point of Sakhalin, between Capes Elisabeth and Maria and even sees in this proof that the Ainu were the original inhabitants of the island, while the Gilyak and the Orok (for him, "Orotschi" /Orochi/) were later immigrants. But this information stands quite alone and is evidently only based upon an erroneous interpretation of Russian reports concerning the number of Ainu villages on Sakhalin, since he thought that the villages noted on the "Okhotsk coast" must be erroneously placed there instead of being sought on Sakhalin's east coast. Why the great number of these villages (22) did not seem to him obstructive for such an interpretation is incomprehensible, especially since in the same report (Rudanofskij) the total number of the Ainu villages on the densely populated west coast of Sakhalin is given as 35.

Amur

/287 cont./

they saw in their dreams that during the daytime when no one was present the tiger slept with the little girl. Six times he slept, six times "a boy was born." Then they argued and separated in different directions, Four generations have lived here. The Tyr branch adopted the Kugi. The Goldi also have their clan (1896).

Settlement of Kuk, ten and a half kilometers from Kal'ma. Chilba-khal (Goldi) -- speak Gilyak and bury their dead in the ground (1896).

Settlement of Tkhnalo (two kilometers from Kuk). Kern-khal (it is also in Tauro, Tyl'ma, and Takhta; 1896).

Settlement of Kabachi (three kilometers from Tkhnalo). Kern-khal, Takhta-fing, Chalym-fing (1896).

Settlement of Takhta (four kilometers from Kabachi). 1) The former Khydz:yr clan. One family speaks Gilyak; they bury their dead. 2) The Choz'm clan /2887 (from chozmudz: -- to peck in a flock, like birds) Nag: ramlandz: (nag: -- lair and fish milk) came together. The Choz'm are poor people. They quarreled with some Gilyak and entered into a clan union with another clan and merged into one clan. Choz'm also live in Kal'ma. There are also Choz'm (1) in Pilavo. The Tvan-fing and the Chilba-fing

1. See below, "A Legend about Pilavo," 1910.

have Goldi laws and language. Kalma-fing. This khal is to be found also in Chil'mi and Khez'; they seem to have come from Pilavo. Kern-khal came from Tyl'mi; two Manchu, woman and a man, were sailing on a raft and shouted: "sinch arikhal munydz:ná? which clan will draw me up on the bank?" They were seized with hooks on the raft.

Settlement of Chil'ma. Chilma-fing from Pilavo, near northern Sakhalin. One clan of Chilma-fing is from northern Pilavo. Three brothers: one went south (Pilavo); another came here; the third went to the Goldi (1896).

Amur

/289 cont./

117 by two brothers. The Keg:n -- came from southern Pilavo. Re-
103 cently arrived Olcha are here also; the starosta arrived here 12
614 years ago. The Keg:n arose from the Goldi from Sofisk and the Ainu from Kryus-pal', their ancient settlement (1896). The Shafping are Amgun from Dal'dzhi; many many generations ago their fathers spoke Amgun. The Hirlung are the old inhabitants. Their clan is in Chil'bi and Kekhrvo (the Orochi). The Chilbifing are the Ornyr from Kekhrvo -- the Lumr-ping came from Udyl' (Hurulong in Gilyak). There is no more of this clan in any other place (1910).

They came to be one clan in the following fashion: An Olcha married a Keg:n widow, and then he bought a bear for a dead man. Without taking a woman, it is impossible to become a (common) clan. When the clans united, they had one Lezing and one Uigryf ("sinning" house, i.e., forbidden.

• [361] Settlement of Yali (Eg:li), four kilometers below the settlement of Mokraya; seven yurts. Clans: /290/ 1) Lezing-ran (one house); 2) Chilng-fing (Kedu'-Orel' -- lake), probably Negidal; 3) one family from N'anivo (1910).

Amng-khal, Narmlang, Jarli-fing (Goldi from the Khungari), Jegni and Njenkhajfing. With regard to the origin of the last clan, there is the following legend. One Goldi brother wanted to take off the or (see below, the settlement of Kol') from a girl, and another suggested killing her. The killer left for N'enkha (near Nikolayevsk).

117 Settlement of Karki (13 kilometers from Vaydy). Before
103 the epidemic there were 20 houses here; 5 yurts. Three
731 Russians, one Uigryf. Clans: 1) Tvabifing -- 14 persons. 2)
173 Amng from the Amgun: only three persons were left, the rest
[361] died. Three houses died out during the last epidemic (1910). 3) Kegnang from Choma. 4) The Tvan-fing. One old man says that he is down from the Goldi, another from the Ul' River near Avra. 5) Amn-khal -- Goldi; they came from above; the first master of this village; this is the oldest khal. In the past this was a large khal but then all of its inhabitants died out (1896).

117 Settlement of Chkharbakh. Torkhung-khal (1896).

words in explanation of it, as well as point out several analogous phenomena in the eastern part of Siberia.

Gi Gi A 101 If we now sum up the ethnographic picture of Sakhalin, there are, aside from the Japanese and Russians, three peoples of quite different tribes, Gilyak, Ainu, and Orok, who share the possession of this island in the very unequal manner described above. Certainly a rich ethnographic assemblage in view of the, to be sure, great length, but only very small breadth! Through the Gilyak the island is joined to the coasts of the Sea of Okhotsk and the mouth of the Amur River, through the Orok to the rest of the Amur region with its Tungusic population, and, finally, through the Ainu, to Jesso /Yesso/, the Kuriles, and Japan (1).

G. Gi A [113]

1. See my travel report in the Bulletin de la classe physico-mathématique de l'Académie Impériale des sciences, Vol. XIV, p. 186; Mélanges phys. et chim., Vol. II, p. 449.

G. Gi 101 361 Let us now return again from Sakhalin to the mainland, and, if we go southward from the borders of the Gilyak area already known to us, we first strike the area of distribution of the Orochi on the seacoast. In its farther reaches this includes the entire continental coast along the northern part of the Sea of Japan, the coastal mountains (Ssichota-alin /Sikhote-Alin/), the upper course of the rivers running from these mountains to the lower Amur and to the Ussuri, and the sources of those streams. Along the seacoast, however, the Orochi territory does not directly join that of the Gilyak, but rather between the two there is a wide stretch of uninhabited country, since the last, southernmost place of the Gilyak is Tschomi on the Liman, while the first, northernmost point of the Orochi is Nangmar or de Castries /De-Kastri/ Bay. Between the two and only slightly north of the last-named bay there is the ancient trade route to the sea used

G. Gi [487]

Goldi RX3
Orochi
Olcha

G Gi 361 101 [487] /21 cont./

by the Olcha, Goldi, and probably now and then also the Gilyak, which leads from Lake Kidsi /Kizi/ to Taba Bay and, regarded to some extent as international, perhaps has acted as a barrier to the reciprocal spread of peoples. Moreover, the Orochi population on the coast is so sparse that there probably was no reason for them to advance northward beyond de Castries Bay. The Liman-Gilyak, for their part, however, if they were to spread southward along the continental coast, would be moving farther and farther away from the island of Sakhalin, with the population of which they have a natural and permanent connection through a partial tribal union as well as through many trade interests. Thus, with respect to the Gilyak, there is no /22/ stepping over the mutual boundaries between the peoples (1). It is different

G [114] [113]

1. A completely erroneous and, as we shall see, frequently recurring confusion to be noted in this statement by Dm. Romanof ("Prisoedinenie Amura /Annexation of the Amur/." —Russkoe Slovo, 1859, Aug., Sec. I, pp. 131, 135), Bickmore ("The Ainos or hairy men of Jesso, Saghalien and the Kurile Isl.," Amer. Journ. of Science, May, 1868, p. 14), and others that de Castries Bay is inhabited by Gilyak -- the same people, as the latter believes, whom Rollin, too (in La Pérouse's travel account) has described from there.

Gi 101 361 It is different with the Olcha. For them Lake Kidsi offers a natural route to the sea, on which south of Taba, de Castries Bay is the first deep and protected bay. Therefore, besides the Orochi, they, too, have their permanent habitation sites in it.

does not mean much, since the Shantar islands lie there all in a row approximately from west to east.

Kyakhta, Kyakhta Kyo 6.

Pallas, Reise, etc., Vol. I. p. 171. Schmidt obtained this information from traditions and stories, since he himself was never on the Shantar Islands, or even near them. Moreover, it is very reminiscent of the above-mentioned story about the burning of the forest on Large Shantar Island, which does not exactly serve to increase its credibility. Kosmin's statement in the northeastern part of Large Shantar Island not far from Lake Kolbinsche he had seen dilapidated yurts in which Gilyak were said to have formerly lived (2) seems more important. But we encounter uncertainty

3. Zap. Gidrogr. Depart., Part IV, p. 46.

even with respect to this report, in that the traditions that Schmidt discovered in Ishkin Cape (Ishkinskoe Nos) behind Chine yurts to Russian fur trappers (4). In spite of these few and

4. Reise, etc., Vol. IV. p. 108, note 1. Middendorff adds that this seems much more probable to him.

uncertain reports, I do not doubt but that the Gilyak visited the Shantar Islands in former times. Full credence should be given to the above-mentioned report to this effect by the Tungu, which carries with the very first report concerning these islands. Whereas the Tungus along the Sea of Okhotsk are essentially hunters and come to the sea only temporarily to fish, the Gilyak stay there continually and are therefore much better seafarers than the former, as Müller has already correctly noticed (5). Hence it seems entirely plausible that from time

/116 cont.)

vague and the least useful for our purposes (3).

3. As was mentioned above (p. 234, note 5), Fischer, on the contrary, was inclined to regard Stepanof's account as the most both and most highly. For this reason, on his map of old Siberia (Sibir. Geneh., Vol. II, Pl. II) he showed the Nahrem, who, perhaps in his opinion, could only be identical with the Gilyak, below the Atchansen, whereas, according to our interpretation of these names above, it should have been the other way around.

The last, and still from the seventeenth-century, Russian accounts concerning the Amur region, and especially concerning the habitation sites of the Gilyak in it, such as we find in the Tr'ate from the Amur region published by Spafarii (4) and by Witsen, have already been discussed (4). The pertinent statements are very

4. See above, pp. 196 ff.

general and in part even erroneous, because they are only taken from collected stories and not original reports, like those mentioned above.

The next detailed reports concerning the habitation sites of the Gilyak, especially along the Amur River, do not come to us until more than a century later, and to be sure, from quite different sources, from the Japanese. We owe them to the Japanese traveler, Mamia Rinsō (Rinsō Mamiya), who, upon orders from his government, explored the west coast of Sakhalin in 1808 and 1809 and also the Tatar Strait, the Amur region, or Santan, as the Japanese called it. From /117 Cape Kakka (Lak) (1) on Sakhalin he went over to the mainland, followed its

1. (cont.)
VII, pp. 147-196), thinks it highly probable that Cape Rakka referred to Cape Takka, and the first name arose only through confusion of the very similar Japanese characters for Ta and Ka (op. cit., p. 195, note 6). From my own knowledge of these localities, however, I must deny this. Cape Rakka is undoubtedly the low promontory of Lak, inasmuch as the Japanese, locating the Lakes in their maps as well as in well known, substitute an r for ts: Cape Takka, however, is the somewhat more southerly Cape Tyk.

coast southward to Cape Moshio (in Taba Bay), pulled his boat across the much-traversed towpath to the small Taba River, and sailed downstream to the Amur Estuary. He then sailed the large village of Kidni located on the Amur. From there he went up the Amur to what was then the trading station of Deren, stayed there a few days, and then returned to Kidni, having following the Amur downstream to its mouth and crossing the Liman three times. On this trip he came into close contact with the Gilyak and their southern neighbor on the Amur River, the Orochi. Both were already known to him and to the Japanese generally, from the former being prominent inhabitants of north Sakhalin and as frequent visiting traders in Sajamami; the latter only as occasional traders crossing over from the mainland. Mamia Rinsō even spent the entire winter of 1809/10 on Cape Notesto (2) among the Sakhalin Gilyak. "Smerenkur" is the

/119 cont.)

Apart from along the Amur River, we also learn from Mamia Rinsō the southern boundary of the Gilyak along the seacoast at that time. In the Amur-Liman he visited the village of Tyjemen, which consisted of large dwellings of the Jennemkur, scattered along a small river of the same name (4).

"Tō-tan ki ko," op. cit., p. 178.

Today's Tchomi, the southernmost coastal village of the Gilyak, is arranged in precisely the same way, as I can confirm from experience. And that at that time, too, it was the last village in the Gilyak country, I can conclude from the fact that on the Amur to the seacoast directly south of Tyjemen and undoubtedly is supposed to designate the southern boundary of the Jennemkur along the coast. Mamia Rinsō then southward to beyond Taba Bay stretched at that time, too, only an uninhabited coast; as one likewise understands from Mamia Rinsō's statement: on his return trip to Sakhalin, he sailed around Cape Waubundi (Cape Lazarev/Lasarev), called Waibun by the Gilyak and into the channel which Sakhalin Island separated after him, but on his outbound voyage he had sailed along part of the coast north of Cape Waubundi and named on a series of place names, but with the express remark that the coast was uninhabited and these places were only anchorages (5). Thus, in

5. Op. cit., pp. 170, 178.

"Tō-tan ki ko" (Siebold, Nippon, VII, p. 179).

Chjore, the first Gilyak village going downstream. As further proof of this there is also the fact that directly above Horo on Rinsō's map is shown the village of Fum, which one easily recognizes as today's next to last Gilyak village of Fulo. Thus, in Rinsō's time (1810) the boundary between the Gilyak and the Chika was exactly where I found it 45 years later (3).

Gilyak, their last village to the south, where they already live intermixed with the Aina. At the present time a mixed population of this kind is advancing to the north of Pilja-wo, as was explained in detail above. This may not have been the case at that time, or not to the same extent, and the two peoples concerned may have been much more distinctly separated, though the Japanese through marriage has always taken place. If that is true, then the entire change in the boundary situation between the Gilyak and the Aina can have taken place in the same manner as that of Mamia Rinsō's visit to these regions to note is only that a somewhat more pronounced or more widespread mixture of the two had occurred, probably because even then some of the Aina fled northward to the Gilyak out of fear of the Japanese, just as happened quite notoriously later when the Japanese colonization

2. Schrenck--283 E-5 (1854-1856) 1881-1895 RXI Gilyak RX 2. Gilyak RX 3. Fischer RX 2. Samoyed RX 2. Tungus RX 2. Manchu Kiang

/136 cont.) A Gilyak from Tkeyen in the Tatar Strait, very well versed in his means in the geography of the Amur region and who had undertaken many trading voyages in the mainland was acquainted with the Aina and Orcha languages, named for me, among other peoples on the continent already known to me, the "Kikai," who were said to live along the seacoast to the south of de Castrie /Ge-Kasuri/ Bay. There has already been mentioned many times where a village located on the east coast of Sakhalin and at present inhabited by Gilyak and in addition by Orok, which, according to the former people, bears the Gilyak name of "Kikai-wo" (1). A conjecture as to what circumstances

10. "Wo" means "village" in Gilyak.

responsible for this name is /137/ to be expressed later. If, however, we first continue to discuss the name of the Gilyak, I would draw the conclusion from the fact that among the Orochi people there is also the same as among the Gilyak, with minor modification, also among the Manchu that the first borrowed it from the latter, and not vice versa. For along the Amur River, as far as the Ussuri and the Sungari, the Orochi and Goldi are the immediate neighbors of the Orochi, they have all kinds of connections and contacts with each other, and have repeatedly met Orochi passing through Goldi territory; between the Gilyak and the Orochi, on the other hand, there extends a large stretch of land with the Aina. At the present time a mixed people can only be exceedingly few. Though the Gilyak in the interest of trade often come along the west coast of Sakhalin as far as Sirammu, the deserted mainland coast, only very sparsely inhabited by Orochi, remains alien and unknown to them. The sea, too, becomes a barrier between both and also freezing in the middle in winter, precludes any contact between the Orochi and the Sakhalin Gilyak. Hence they know them — and, of course, to a greater extent the Aina as well. Judging by those designations, then, the Gilyak seem to have first become acquainted with the Orochi through the Goldi. If one

2. Schrenck--290 E-5 (1854-1856) 1881-1895 RXI Gilyak RX 2. Gilyak RX 3. Fischer RX 2. Samoyed RX 2. Tungus RX 2. Manchu Kiang

/140 cont.)

The Olcha are lumped together with all their neighbors in the vaguest manner by the old Jesuit missionaries, who used the collective name of "Yankinsky," "Kenchengs," or "Kenchingtatse" to designate all the peoples along the lower Amur River from Dondon down to its mouth, and on the west coast there are two villages which bear the name "Pilja-wo," that is, great village, the one on the Sea of Okhotsk, the other on the northern part of the Sea of Japan, both are highly inhabited, and also today (3).

3. According to Glehn ("Reiseber. von der Insel Sachalin /Travel Report from the Island of Sakhalin/," Bull. sur Kenntn. des Russ. Reiches, Vol. XXV, p. 558), the first of these villages has only one yurt today; concerning the other village he has been, of his own, see above, p. 29, note 1. Incidentally, when Glehn, while discussing these traces of a formerly large population on the Gulf of Sakhalin, also mentions the smallpox which broke out among the Gilyak, he has nothing to do with the depopulation under discussion here. This is the above-mentioned epidemic of the years 1854 and 1855, which at that time was still fresh in the memory, whereas that village had been deserted long before. But the smallpox left other marks of devastation behind, which will be discussed later.

Nevertheless, this west coast of Sakhalin, turned toward the continent and the mouth of the Amur, is now, next to the Tym'/Tym'/ Valley, the most populous part of the island; the east coast with its much harther climate is understandably much more sparsely inhabited.

/141/ I must content myself with these general remarks concerning the extent of the population of the Gilyak along the Amur region and forgo numerical values because of the lack of adequate data. To be sure, one does occasionally find statements concerning the number of individuals for particular Amur peoples, but these figures have little value. That the data

2. Schrenck--445 E-5 (1854-1856) 1881-1895 RXI Gilyak RX 2. Gilyak RX 3. Southern Sakhalin Kiria AB

/318 cont.)

1. Gilyak	in 39 villages (28 on the right bank and 13 on the left)	1400 souls
2. Manguntsen (Olcha)	in 40 villages (36 on the right bank and 4 on the left)	1300 souls (2)
3. Goldi	in 12 villages (all on the right bank and 37 on the left)	2000 souls
Nomadic and dispersed tribes		2000 souls

3. At another place (in the San Francisco Herald, see Petermann's Geogr. Mitth., 1858, p. 437), Collins, without giving any reliable data, gave the number of Gilyak as 1400, that of the Olcha ("Mangunsen") as 1300 persons.

Gilyak gave it as no more than 2,200 souls (3). These statements

4. Brykin, "Statist. o. upogr. Nachr. Ober

2. Schrenck--463 E-5 (1854-1856) 1881-1895 RXI Gilyak RX 2. Gilyak RX 3. Southern Sakhalin Kiria AB

/317 cont.) A move numerous Gilyak population on the island in former times is indicated, among other things, by the fact that on the west coast there are two villages which bear the name "Pilja-wo," that is, great village, the one on the Sea of Okhotsk, the other on the northern part of the Sea of Japan, both are highly inhabited also today (3).

3. According to Glehn ("Reiseber. von der Insel Sachalin /Travel Report from the Island of Sakhalin/," Bull. sur Kenntn. des Russ. Reiches, Vol. XXV, p. 558), the first of these villages has only one yurt today; concerning the other village he has been, of his own, see above, p. 29, note 1. Incidentally, when Glehn, while discussing these traces of a formerly large population on the Gulf of Sakhalin, also mentions the smallpox which broke out among the Gilyak, he has nothing to do with the depopulation under discussion here. This is the above-mentioned epidemic of the years 1854 and 1855, which at that time was still fresh in the memory, whereas that village had been deserted long before. But the smallpox left other marks of devastation behind, which will be discussed later.

On the size of the Gilyak population in 1854 and completed in 1857, Budashkin reckoned the total population of the Amur on Sakhalin at 5,000 (5). In 1861,

5. Budashkin "Otcet" (Report) o Sakhalina /Survey of the Country of Sakhalin" (Voenschoe Pontor'e, 1866, p. 99).

/319 cont./ 3. (cont.)

not only all the Olcha, who are regarded as Gilyak by the ordinary Russian along the Amur as a rule and hence unfortunately very often by Russian travelers (see above, p. 213 ff and elsewhere), but also the Orochi of the seacoast from de Castries Bay to Kaisenhafen. How strange it must seem to one to find at the very beginning of an article supposedly dealing specifically with the Gilyak such a confusion of them with their neighboring tribes who are completely different linguistically and to some extent in their ways of life!

55 56 114 116 36 [121]

Account of the native population, a rather accurate yardstick for an approximate estimate of their strength might be found in the number of their winter dwellings, if this could be learned with certainty. One may easily convince himself of the correctness of this assertion with a more exact knowledge of how the dwellings are made among the Amur peoples. Let us now proceed to a

55 56 114 116 36 [122]

description of this situation among the individual Amur peoples.

A people such as the Gilyak, who provide for the direct satisfaction of their needs with regard to food, clothing, etc., almost exclusively by fishing and seal-catching, understandably settle

114 116 [125]

along the largest bodies of water with the most fish in their territory and as close as possible to the water. Hence, all the Gilyak villages lie directly on the Amur River and the Liman, along the seacoast or along the Tymy River, the main artery of the northern half of Sakhalin; one would seek them in vain in the mountains or /320/ at any distance from the waters named. A more or less favorable locality is always chosen as a place to live -- along the seacoast, a bay or inlet protected by a rock ledge against the prevailing gales; along the river, a dry bank towering above the high-water level, but with sufficiently deep water for landing the boats, with high woods or dense brush for protection against the wintry snowstorms, etc. Wherever the locality is favorable in

/320 cont./ respect and meets the requirements in winter and in summer, one always sees inhabited villages, even though the houses are different materials and construction depending on the season of the year. If, however, it offers considerable advantages in only one season and great disadvantages in the other one, the summer and the winter houses are erected at different places, and then there is a summer village and a winter village, and, accordingly, a change of location takes place twice a year. Often the affiliated summer and winter villages, or single houses, lie not very far apart; along the seacoast, for example, on the mainland as well as on Sakhalin, I have seen the summer dwellings as a rule close to the shore, but the winter dwellings lie somewhat inland, where mountain and forest offer more protection against the frequent snowstorms and where the necessary firewood is present more easily. Sometimes, however, there is a considerable distance between the corresponding summer and winter villages. Along the Amur, for instance, it may happen that one lies on one bank of the river, the other on the other bank. Also, for instance, located on the right bank, is nothing but the summer village of Kuik (or Kolgoi), at the Russian call it), which is on the left bank, or the latter is the winter village of the former. In summer all the inhabitants of Kulk move to Ildke, which has a better location for fishing, since it lies closer to the river channel that is followed by the salmon going up the Amur, the bank is higher there and more convenient for landings, etc. In the fall, however, they return to their winter dwellings lying diagonally opposite, where a bay in the bank and extensive forests give protection in winter against the prevailing bitingly cold west and northwest winds and snowstorms, and in addition there extends a larger, more convenient, and more productive tundra in winter and better fishing grounds in the spring

[113] 114 116 36 342 [123]

1. In the fall of 1854, this name of the Gilyak from Mão to Kulk took place in the second week of October (new style), shortly before the

/320 cont./ 1. (cont.)

Amur was covered with ice. In the spring of 1855, I found the Gilyak in the village of Sabach, the first above Nikolayevsk, already in their summer dwellings located beside the winter houses on May 16 (28). In the fall, the villages farther upstream, however, up to Tachi, they had not yet moved into them at that time.

361 342 114 116 342 [113]

Sometimes, when Gilyak live on the Amur, they find it necessary to go to different places for the summer, only to come together again in the fall. If the winter and summer houses are located beside one another, as, for instance, in Wuik (or Wait, as the Russians call it), the village seems much larger and more populous than it actually is. More than half of all the houses are empty. Sometimes, however, there is a considerable distance between the corresponding summer and winter villages. Along the Amur, for instance, it may happen that one lies on one bank of the river, the other on the other bank. Also, for instance, located on the right bank, is nothing but the summer village of Kuik (or Kolgoi, as the Russians call it), which is on the left bank, or the latter is the winter village of the former. In summer all the inhabitants of Kulk move to Ildke, which has a better location for fishing, since it lies closer to the river channel that is followed by the salmon going up the Amur, the bank is higher there and more convenient for landings, etc. In the fall, however, they return to their winter dwellings lying diagonally opposite, where a bay in the bank and extensive forests give protection in winter against the prevailing bitingly cold west and northwest winds and snowstorms, and in addition there extends a larger, more convenient, and more productive tundra in winter and better fishing grounds in the spring

[113] 114 116 36 342 [123]

1. Kruzenstern (Reise um die Welt / Journey around the World), St. Petersburg, 1812, Vol. II, p. 167: counted 27 houses in one Gilyak (according to him, "tatarischen") village, which was located on the northern end of Sakhalin between the capes Elisabeth and Maria. For another village, on Nadezhda Bay, he given 16 or 18 houses, but the description of it clearly permits one to recognize summer and winter dwellings (the latter of which, moreover, stood empty (op. cit., pp. 178, 182, 183). Orloff, on the occasion of his first trip to the Gilyak on the Sea of Okhotsk (in July, 1849), gave the number of houses in the village of Kuli as 46 (cf. Tikhmenev", Istor. Obozr. obraz. Ross.-

/320 cont./ The question now arises as to which one of the two types of winter houses described above prevails among the Gilyak in the various parts of their territory. At the time of my stay in the Amur region (1854-1856) the earth yurt was almost exclusively confined to Sakhalin, but there it far predominated over the Chinese winter-yurts. The east coast of the island and the Tymy River were fully only the earth yurt (1). On the west coast of Sakhalin,

[113] 114 116 342 [123]

1. Mizuki's /Mizuki/ statement (Ochota" ont. Sakhalina v" sel'sko-khoz. otnosh. /Agricultural Outline of Sakhalin Island/, St. Petersburg, 1875, p. 134),

342 [123]

as far as it borders on the northern part of the Sea of Japan, i.e., from Pilitun to Ildyakan, it is necessary to go to Pogbohi, where also only earth yurts (2). But from there northward,

[113] 114 342 [123]

2. In 1861, Glehn ("Reiseber. von der Im. Sachalin /Travel Report from the Island of Sakhalin/," -- Beitr. zur Kenntn. d. Russ. Reiches, Vol. XXV, p. 236) found the village of Pogbohi a "large Manchurian" yurt (or two?), which, however, did not exist in my time, as I can definitely assert from the fall of 1856 I was at this place no less than four times.

342

along the Liman and the Sea of Okhotsk up to the northern tip of the island, there were villages consisting sometimes of earth yurts, sometimes of Chinese yurts, and at times both types of winter dwellings occurred beside each other. I myself have not been in the northern part of Sakhalin, but have collected information on the villages in it, as well as on the number and character of their yurts, from, among others, Gilyak residing there, who visited me at the Nikolayev post in the company of Tschchachach-Gilyak friends of mine (3). A few years later

/320 cont./ 3. Specifically they were the Gilyak Jaftun and Pryngan from the village of Dshongi, and Tamkun from the village of Ngani-wo on the Liman.

A few years later (1861) Glehn travelled through a section of this coast and made a list of all the villages there, as well as the number and nature of their yurts (4). In comparing my data with his, though they

[113] 114 116 36 342

4. Op. cit., pp. 232 ff.

/321 cont./ essentially agree, they nevertheless show some differences which are almost entirely of such a kind as to lead one to conclude that there has been a decrease in the population in this part of Sakhalin during this interval of time. For instance, the number of villages in my list, especially the small ones with only one earth yurt, is larger than in Glehn's, in which the names also occur, but combined with other designations as referring to one and the same, no smaller settlement. Likewise, for the larger villages, my list almost throughout gives a larger number of yurts than Glehn's. This depopulation which took place after my time is fully explained by the above-mentioned smallpox epidemic which ravaged precisely this part of the Amur region in the winter of 1857/58. As has been noted, many a yurt died out completely, and many a village of many small settlements which numbered no more than one, only the name survived, which could easily have been taken by later travelers as a synonymous designation for one of the adjacent villages. Where /321/ our reports differ with regard to the nature of the yurts -- whether earth yurts or Chinese yurts -- they always deal with villages which Glehn had not visited and concerning which he therefore could only report on the basis of statements by the natives. For this reason and because in the intervening period I have collected information and view the Amur region as of the time of my stay there, I must describe the distribution of the earth yurts and the Chinese winter-yurts on Sakhalin in accordance with the data that I myself collected.

/321 cont./ collected. Accordingly, at that time, to begin with, three villages, each consisting of a single earth yurt, still lay in the north of Popholi. In Dshongi, coming from the south, one encountered the first Chinese winter-yurt, which, however, was in turn followed by four villages, each consisting of one earth yurt. To the north of Talvant-tigr-wo, which contained one earth yurt and one Chinese yurt, beginning with Tulibi (1),

114 116 36 342 342

1. In Glehn it is called Jardém-tigr-wo.

there is a series of villages which consist only of houses of the latter type. This, as has been said, is the most populous part of Sakhalin, with the largest villages, among them Tamla-wo, in my time sometimes for its predatory population, in his part belonging to the Gilyak, numbering over 12 houses (2). The last of these

114 116 [102]

2. Glehn found only nine. The great number of houses and inhabitants of this village is indicated by its name, for tamla, tamlasch, or tamlamsch means "numerous" in Gilyak.

[197]

Tschadrayf villages on Sakhalin, lying in an uninterrupted row, in Pomyr-wo or Pomyr-wo on the Sea of Okhotsk. Glehn did not go northward beyond this village and gives only earth yurts for the remaining part of the west coast of Sakhalin up to the northern tip of the island. According to my information, however, the Chinese winter-yurt also predominates there, for after a small tsyr village, Mustih-wo (in Glehn, Mustyr), there follows Pilja-wo with one earth yurt and one Chinese yurt, which was formerly probably larger, and then there are two more tschadrayf villages, Tumi-wo and Nigyr-wo (in Glehn, Tumi-wo), the latter of which is quite large (five yurts) and does not lie far from the northern tip of the island like Mif-tych, as the Gilyak designated it to me. According to an inscription on a cross which Lt. Kruzenstern called Nadeshda Bay, Ngyr-wo must be the same village that this navigator visited in 1805. From his quite detailed

/322/ Among the Gilyak of the mainland the Chinese winter-yurt appears to have spread to a much greater extent than the earth yurt

342 342 114 116 36 342

Sakhalin. Indeed, in my time there was only one earth yurt left which presumably has since disappeared: it was the small earth yurt of Pilitach, directly on the Liman just north of the mouth of the Amur. I visited it in March, 1856; it was located at some distance from the Chinese winter-yurt of the same place and was continued exactly like the smaller earth yurts on Sakhalin. It can be maintained with some certainty that it was in fact the only one of its kind on the mainland. Elsewhere along the Liman on the Amur and in the Sea of Okhotsk, from the Liman to Kuik, the largest village on that coast, numbering 10 (7) winter yurts,

n the north, along the Anadyr, and, finally, far to the west, g the sources of a northern tributary of the Amur, which on map bears the name of Urka and presumably is the Urkan. Like almost all the Siberian names for places and peoples Vitsen's map or in his work, the above designations for the vak and their region also reveal by their endings their unbtedly Russian origin. Witsen himself repeatedly states, both he individual cases concerned and in the introduction to his k, that he has often drawn on Russian sources (9). He used

9. According to Müller (Samml. Russ. Gesch., Vol. I, p. 202), in collecting the reports on Siberia he also found especially helpful Andr. Winiu's "Dumnoi djak," which, however, he does not mention. Recently Spasskij ("Svied. Russk. o riekie Amurie v" XVII stolietii /Information from the Russians concerning the Amur River in the Seventeenth Century/," in Viestn. Imp. Russk. Geogr. Obshch., Part VII, 1853, Sec. II, pp. 17 ff.) published a "Story from the Amur River," which he found in a collection of seventeenth-century manuscripts and which evidently was written before the Nerchinsk treaty (1689) was concluded. It bears the inscription, "Skazanie o velikoi riekie Amurie, kotoraia razgranila Russkoe selenie s" Kitaitsy" (Story from the great Amur River, which forms the boundary between the Russian settlements and the Chinese). One recognizes it as one of the

as they are generally as well as in details, rather favor such an interpretation.

alleged habitation sites of the peoples in question likewise ar to argue in favor of this interpretation, as the Kileng are to live chiefly along the Amgunj (2), the Fiaka along the

2. Khenkhoûn in Klaproth (loc. cit.), Henkon on the maps by d'Anville (Nouv. Atlas de la Chine, de la Tartarie Chinoise et du Thibet, La Haye, 1737, Nos. 1, 18).

oast near the mouth of the Amur. There seems to be almost urther doubt but that the Fiaka are the Gilyak when Iakinf (3),

3. Statist. Opis. Kitaisk. Imper. /Statistical Description of the Chinese Empire/, St. Petersburg 1842, Part II, p. 30, footnote.

ne basis of Manchu-Chinese sources and without any com- t of his own, states that there are three peoples on Sakhalin, ã (Fyake), Eluntschun, and Kuã, obviously Gilyak, Orok, Ainu. Finally, among the statements by the old Jesuit ionaries, too, there are some that cannot be interpreted in way other than in the above sense; Gerbillon's statement (4),

4. J. B. du Halde, Descript. de l'Emp. de la Chine et de la Tartarie Chinoise, Paris, 1735, Vol. IV, p. 37.

nstance, that the lowermost part of the Amur River down to ea was inhabited by the Fiatta or Fiattu (5) people, who

Tungus RU5
Goldi RX3

/383 cont./

dwellings of the successive peoples in this direction. One need only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

In these housing conditions of the indigenous Amur peoples it is evident that there is a feature fundamentally different between the anciently sedentary, Paleo-Asiatic Gilyak and the Tungusic peoples surrounding them, who wandered in later, indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way of life and subsistence of the peoples mentioned. The Gilyak are predominantly fishermen and, along the seacoast, also seal hunters; correspondingly, they are almost exclusively ichthyophagous, as is their only domestic animal, the dog. Now, in order to support themselves and their many dogs, required both for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

Tungus RU5
Goldi RX3

/384 cont./

most surely and best obtained by stable, permanent residence in a place known to be favorable by experience, be it on a river rich in fish, like the Amur, or on the seacoast. Hunting comes into consideration among the Gilyak only insofar as it provides them with the precious pelts so necessary for trade with the Chinese and Japanese, and in exchange for which fabrics needed for clothing, tobacco, liquor, and other luxury items are obtained.

The situation is different among the Tungusic tribes surrounding the Gilyak. Among them hunting is a necessary, indeed essential means of subsistence and existence, and the more so the farther upstream and the deeper inland one goes. Moreover, in view of the more limited talents for trading of these peoples in comparison with the Gilyak and their less frequent and less extensive winter trips and journeys, the number of dogs to be fed, and consequently the need for large supplies of fish, is reduced. Also, with the distance from the main river to the mountains that skirt its tributaries, fishing becomes less rewarding, whereas the abundance of game, increasing in the same proportions, makes hunting /385/ all the more tempting. The more that fishing recedes into the background and hunting, requiring a frequent change of locality, comes to the fore, however, the life of the people becomes more unsettled. It has been repeatedly pointed out above that the Orochi living in the forest and mountain wildernesses along the left tributaries of the Amur and Ussuri are already more hunters than fishermen. And this is far more the case for the peoples of the upper Amur region, the nomadic Birar, Manegir, and Orochon. Among them, completely in contrast to the Gilyak, hunting is the first and foremost source of subsistence, whereas fishing comes into consideration only to a subordinate degree, in that they leave their hunting grounds only temporarily in summer and move to the Amur, the Dseja, or the Bureja to fish. Also, they do not need any supply of fish for their domestic animals, since they use the dog at most for hunting, and not as a draft animal, as is possible only among sedentary peoples. Their domestic animals, in particular riding and draft animals, the horse and the reindeer,

Goldi RX3
Tungus RU5

/385 cont./

are, on the contrary, of such a type that they find all the more abundant food with a nomadic life because of the change of grazing areas and therefore in a way give their owners an additional motive for the nomadic life.

/386/

Section 5

External Appearance: Clothing, Hair Style, Ornaments, Tattooing

The clothing of primitive peoples, even more than the dwelling, is intimately bound up with their total way of life and means of subsistence. For insofar as the materials required by them for clothing are not obtained through barter with a civilized people, they secure them from the same source as their food, whether this be fishing, hunting, or the raising of domestic animals used for food or for transport, and give them a style suitable to their life and activity, their crafts and occupations.

As for the Gilyak, with whom we shall again begin our discussion, it must first of all be repeated that fishing and sealhunting are their chief occupations, whereas hunting takes only second place among them; furthermore they keep only one domestic animal, the dog, but this in large numbers as draft animals; and finally, as the oldest reports that the Russians had about them said (1), they maintain constant trade with the

1. See p. 203 above.

Chinese. Accordingly, their principal materials for clothing, besides cottons, which since ancient times they have obtained from the Chinese and at the present time also from the Russians (Gilyak, possj; Russian-Siberian, dabá), are the skins of dogs and seals and fish skins, while the furs of forest animals, fox, otter, sable, squirrel, etc., are used only for trimmings or for smaller articles of clothing, such as caps, gloves, scarves, etc., but otherwise

/427 cont./

campfire, will serve him very well. Jukola, by the way, is not only eaten au naturel, but is also an important ingredient of many dishes, whose composition and preparation I shall come back to later. Finally, in addition to the chark, it is the principal food for the dog. In view of the importance of jukola for the Gilyak, it is understandable that, despite the indolence and carelessness more or less characteristic of all primitive peoples, they are very intent on preparing the largest possible supply of it and do not hesitate to make long trips and even temporary changes of residence for this purpose. Thus, for example, when those types of salmon come up into the rivers, some of the Liman Gilyak come to the Amur in order to take advantage of its surplus; others, such as some of the Tschomi Gilyak and the inhabitants of some places on the west coast of Sakhalin, move to the Tymy /Tym'/ River in the interior of the island, which is especially rich in fish, and do not return with the acquired supplies until winter. On the other hand, at the other times, for instance, when the kangi-tscho (Gadus wachnja Pall.) migrates in large numbers along the sea coast, some of the Tymy Gilyak, conversely, betake themselves to their countrymen on the west coast of Sakhalin in order to feast for a while on these fish. In this respect there seem /428/ to have developed in the course of time certain mutual agreements and relations based on reciprocity between the inhabitants of certain places, for example, between the Tschomi and the Tymy Gilyak, or between the latter and the Gilyak of Duf, Arkai, Tangi, and other places on the west coast of Sakhalin.

However plentiful the jukola supplies might be, however, they would never suffice to make the life of the Gilyak secure if there were not at every season of the year more or less, depending on the locality, many other kinds of fish, which the Gilyak eat fresh, besides those salmon. In this connection the most favorable locality in the Gilyak region is, of course, the mighty Amur River, and therefore along its banks, as discussed above, one also finds the largest concentration of the population and the richest development of the Gilyak individuality. The dwellers along the banks of the Amur scarcely ever lack fresh fish to eat.

/429 cont./

Next to the Amur the Tymy River on Sakhalin is the Gilyak locality richest in fish. It is therefore the vital artery of the entire Gilyak northern half of the island, and especially along its upper course, where it does not freeze even in winter, despite the low air-temperatures dropping to below the freezing point of mercury, small Gilyak villages lie more tightly packed than almost anywhere else in the Amur region. To be sure, the tastiest and largest fish of the Amur River, the above-mentioned sturgeon, is missing in the Tymy River, but it is especially rich in salmon, and, to be sure, not only in those above-mentioned species generally widespread in the Amur region and, as a result of their great quantity, principally used for the preparation of jukola, which annually in the fall, as previously mentioned, also attract the inhabitants of more distant localities to its banks (1), but also in

1. During the past few years even the Japanese have come to the mouth of the Tymy to fish there when the Salmo lagocephalus come up, and, as Mizzul (Ocherk" ostr. Sakhal. /Sketch of Sakhalin Island/, 1873, p. 120) and Poljakof (Putesh. na ostr. Sakhalin" v" 1881-1882 gg. /Journey to Sakhalin Island, 1881-1882/, pp. 70-80) reported in detail, they return home with a rich booty.

various other species, such as the nem(a)lja, (Salmo coregonoides Pall.), the longr(sch) (S. callaris Pall.), njalych (probably S. sanguinolentus Pall.), loimang (a species of trout), etc. Indeed, there are even species there that are absent in the Amur River, such as choi-tscho (Salmo orientalis Pall.) and the tschawytscha of the Kamchadal, the largest and most prized salmon species of the shores of the Bering Sea and the Sea of Okhotsk (2). The

2. The Nyi Gilyak, among whom I saw two large specimens of choi-tscho in

/429 cont./

226 2. (cont.)
February, 1856, thought that it occurred only along the coast of Sakhalin, without going up into the rivers.

221 The
222 mainland Gilyak, upon returning home from Sakhalin, not infre-
* 262 quently bring some pieces of choi-tscho to the Amur as a special delicacy.

226 Finally, with regard to those Gilyak who have their habita-
* 262 tion sites directly on the seacoast where there are no river deltas
● [361] or only small, insignificant streams, although their situation is worse inasmuch as most of the above-named fish are lacking for them and they /430/ can prepare only small stores of fish, nevertheless even in winter the sea supplies them with fresh fish. Of greatest importance to them is a fish which is insignificant in itself and not very tasty, but which, at a time when their supplies are running short, appears in shoals directly under the ice in the vicinity of the shore and can be caught in quantity with the most primitive methods. It is the aforementioned kangi-tscho, Gadus wachnja Pall. In February and March, 1856, I saw the people and dogs living almost exclusively on this fish in Nyi on the east coast of Sakhalin and even more in Dul', Arkai, Tangi, and other
252 places on the west coast. It is only eaten raw and the treatment is
* 227 always the same, in that first a thin slice with the three dorsal fins
[231] is cut out along the back and thrown away, and then the meat is cut from either side with one slice and is eaten; the remaining head with the backbone furnishes the kangi-chark, some of which, together with the rest of the scraps, is immediately cooked into a soup for the dogs and some is stored as food supplies for them, but, of course, it is far inferior to the laghi-chark and tengi-chark. Because of the importance of the kangi fish for the coastal Gilyak, more superstitions are connected with the preparation and eating of it than with the use of most other fish. Thus, it must be eaten
[264] without any accompaniments, placed on the sleeping bench of the
ooo yurt in only an open container, a bowl or a basket, etc. Moreover,

/472/

Section 7

ooo Means of Moving and Going from Place to Place by Land and Water: Ski, Sleds; Draft, Riding, and Pack Animals -- Dog, Reindeer; Horse; Boats and Canoes.

SS As has already been mentioned frequently, the three principal
433 occupations which provide the Amur peoples with clothing and
484 food, as well as the luxuries that have become necessities, are fishing, hunting, and trade -- occupations that cannot be pursued except with various and more or less considerable moving from
SS place to place. Hence, before I start considering these principal
121 occupations, I think that it is necessary to go into a special dis-
481 cussion of the manner and type of locomotion among the Amur peoples and the means used for it. This will naturally fall into two parts in that it has to deal, on the one hand, with locomotion by land or on the ice-cover of the water and, on the other hand, by water.

G A fishing people like the Gilyak, who always set up their
484 dwelling places in the closest proximity to the water, from which
● [361] they get their food almost exclusively, and, furthermore, before whom, on the Amur River as well as along the west coast of Sakhalin, direct waterways stretch out for trade and intercourse with the neighboring tribes and with the closest civilized peoples, the Manchu-Chinese on the Sungari and the Japanese on southern Sakhalin, such a people must naturally spend a great part of their lives in moving and going from place to place on the water. But the climatic conditions of the Amur region are such that locomotion by water is possible only during about five months, from May to September -- during the remaining and longest part of the year it must be done by land. And when winter shackles the waters and covers the surface of the earth with a thick layer of snow, it makes it possible for the Gilyak to move and go from place to place by land, or on the ice cover of the water, and opens up new
ooo territories and routes of communication for them. The

G /494 cont./
114 He had no knowledge of the Orok migrations through the Tymy
492 Valley studded with Gilyak villages in which there are many
484 dogs. And on these migrations, which take place every winter
[221] for the purpose of trade with the Gilyak, Ainu, Chinese, and
[437] Japanese, and which have already been discussed above with regard to their direction and final aims (2), the Orok use, as

2. See p. 38 ff. above; also Vol. 1, pp. 169 and 170, of this work.

has just been described in detail, the reindeer for harnessing in front of the sleds.

G Although in the above I had to reject the idea that a change
492 in the way the reindeer was used could have taken place among
114 the Orok on Sakhalin since Mamia Rinsô's trip, on the other hand,
177 this seems to me quite undeniable much farther back in time.
648 Undoubtedly the Orok formerly, when they roamed on the mainland with their tribal relatives, the Olcha, used the reindeer, like other Tungusic tribes, only for burden-carrying and riding. It was not until they went to Sakhalin that they also learned to use it as an animal to harness to the sled. But how could this have happened? I think that it must be ascribed merely to the influence of their new homeland, especially the inevitable contact with the Gilyak surrounding them everywhere there. Even though the Orok, when they migrated from the mainland to northern Sakhalin with their reindeer, found favorable natural conditions for a continuation of their nomadic life in its coniferous forests rich in moss and lichen, they could nevertheless gain a permanent foothold on the island only if they established friendly relations with the peoples there and the latter
G also benefited from the newcomers. This was particularly neces-
● [361] sary with regard to the Gilyak, because they occupied both
[648] coasts in the northern part of the island and all of the Tymy Valley, and it always lay in their power, because of their greater numbers and energy, to deprive the encircled newcomers of all means of existence and to destroy them.

SS /500 cont./
494 of Sakhalin, in that on the former, among the Orochon and
184 Reindeer Tungus, the reindeer serves only as a riding and pack
G animal, but on the latter, among the Orok, it serves also as a
T 492 harness animal, and in this its use joins that of the dog.

SS As dwellers on a great river and its tributaries or the sea
501 and its coastal rivers, all the peoples of the Amur region are
184 more or less oriented toward moving and traveling from place to
481 place by water for the purposes of fishing, hunting, trade, and communication. The diverse nature of the waters on which they dwell, however, makes necessary a multiplicity of vessels for staying or moving on them. In comparison with the dog sleds, always built after one and the same pattern, the boats used by the Amur peoples are very different in form and nature; but it must be stated at the outset that the actual forms adapted to the character of the waters are repeated with minor variations among all these peoples and only a few of them bear a peculiar national stamp.

G None of the Amur peoples spends as much time on the
501 water as the Gilyak, who for the most part live by fishing and
481 who are inclined by their genius for trading to undertake long
[226] river and sea voyages. Nevertheless, in spite of the fact that in large part they live along the sea and obtain their food from it, they are by no means bold and skillful mariners and hunters of marine animals, who in small, easily maneuverable vessels, like, say, the Aleut in their bidarkas, /501/ would be inclined
G or able to battle the high ocean waves. Principally concen-
● [361] trated around the lower course of the Amur River, which offers
[181] them, in addition to an extraordinary abundance of fish, a natural and easy route of communication with their close and more distant neighbors as far as the Manchu-Chinese along the Sungari, and, on the other hand, favored by the nearness of a large island stretching immediately in front of the Amur mouth, which cuts them off from the open sea and, with its long meridional expanse, gives them a bridge, so to speak, to Japan, the Gilyak, on the contrary, in their over-all pursuits

/501 cont./

501 for subsistence as well as in their nature and character, are
184 timid, circumspect, and cautious river and coastal navigators.
G And the single vessel serving the Amur Gilyak as well as the
● [361] coastal Gilyak for fishing and for their communication and
[181] trading voyages matches this. It is a keelless, shallow-draft
501 boat in no way equal to the high waves of the sea, and essentially consists of only three long boards, forming the bottom and the two side-walls, to which, for closing off the front and rear ends, a few small boards are joined. The most significant and characteristic feature of it is that the bottom board projects toward the front quite a distance beyond the prow (see Pl. XXXVIII /see p. 1018/, Fig. 1). It is not level, but curved in such a manner that it goes deepest in the middle, but gradually slopes upward toward both ends.

396 In order to learn more about the construction of the boat in greater detail, let us follow it as it is produced by the hands of the Gilyak. When the three long boards, each necessarily
[192] consisting of one piece, with which the boat is to be put to-
[824] gether have been readied, by means of an ax, from the trunks of Picea ajanensis Fisch. (Gilyak twisjk) or the larch (Gilyak koi), and their upper surfaces properly smoothed with a knife, the bottom board (Gilyak moch), about 3-5 fathoms long and one to one and a half feet wide, is given the above-mentioned necessary curvature. For this purpose it is placed with its two ends on two low trestles erected on level ground, each of which consists of two crossed poles driven diagonally into the ground. The unsupported center of the board sags, but, in order to achieve the proper curve, it must be pressed down farther until it touches the ground, which is done either by weighting it with stones or, more simply, by having one or two people sit on the board. It is fixed in this position with a pair of knee timbers driven into the ground on either side and gripping the board from
[192] above. Now the two side-boards (Gilyak arp), each about two feet wide and with their lower edges beveled to correspond to the bottom board, must now be accurately fitted to the latter at a certain obtuse angle and temporarily held in this position.

/516/

Section 8

ooo Fishing, and in particular Sturgeon, Hausen, and Salmon. Fishing. Fishing Equipment. Marine-animal Fishing: Seal, White Whale.

226 In the preceding chapters it has been repeatedly stressed
[191] that fishing plays a more or less important role among all the
[433] peoples of the Amur region, and that in particular its importa
increases all the more the farther one goes downstream, until finally, in the region of the mouth of the Amur River, it becomes among the Gilyak the conditio sine qua non for their e
tire existence. The intermeshing of the various conditions an
aspects of life made it necessary for us in the above descripti
of the housing, clothing, and locomotion of the Amur peoples
to make many references to fishing itself or to the consequenc
● [361] of it. For example, one must consider the influence that fish
[221] exerts upon the lesser or greater sedentariness of the various peoples in the Amur region, in that, to be sure, in contrast t
hunting, it gives them in general a more sedentary life, but
even so requires a change of locality and dwelling twice a ye
and commonly during the summer repeated moves along the
water. Furthermore, the more or less predominant part that
fishing has in the procurement of their food, clothing, and o
necessities of life was discussed. In this connection the kind
fish most important to the Amur peoples were named, and be
the way they are eaten and the preparation of provisions out o
them for the use of people and dogs were described in detail.
[192] And so, after all of that, there only remains for us to learn th
way, how and by what means, fishing for at least the most in
portant fish is carried on by the Amur peoples, as well as the
times when it is done and some of the details connected wi

/517/ As usual, we shall again start with the Gilyak, a
to be sure, with the Amur Gilyak, who are in every respect
superior to their countrymen. To be sure, fishing in the Amu
is also done in winter, but then it is relatively not very profit
and ceases completely toward spring when the ice becomes so

/332 cont./
there are certainly no longer any earth yurts. Along the bays of Tugur and Ulban, where Middendorff became acquainted with the Gilyak, they live in the winter, as I gather from his handwritten notes (1), in exactly the same type of houses as on the

1. In his travel report, too (see Beitr. zur Kenntn. des Russ. Reichs, Vol. IX, Part 2, p. 619), he mentions the "functional pipes carrying heat under the sleeping benches in the houses" of the Gilyak there.

Liman and Amur. It therefore cannot be assumed that matters are different in the area between Kulj and Ulban Bay, the only stretch for which we do not have eyewitness accounts. The Gilyak, too, though I often asked them about it, knew of no earth yurt on the mainland to report to me other than the above-mentioned one of Pättach.

In brief, therefore, among the Gilyak on the mainland, as far as their distribution extends, the Chinese yurt at present represents the only form of winter dwelling; on the island of Sakhalin, however, it occurs only on the west coast opposite the mainland, along the Liman, and on the Sea of Okhotsk, interspersed with earth yurts, while in all the other Gilyak parts of the island, only this latter form is found. From this distribution of the two types of winter dwellings one may conclude that the earth yurt is the original dwelling peculiar to the Gilyak, which was formerly also used generally on the mainland, but later was driven out, little by little and finally entirely on the mainland and in large part on the coast of Sakhalin adjacent to it, by a foreign form that came down the Amur, and /333/ has been preserved only among the more remote insular Gilyak. Finally, arguing in favor of the view that the earth yurt is in fact the original winter dwelling of the Gilyak, apart from its above-mentioned exceedingly simple and primitive construction in imitation of a tent, is the fact that with only slight modifications it is also found among all the other Paleo-Asiatic peoples.

/355 cont./

342 the low threshold and soaks the floor when the snow melts quickly or when there are heavy rains. Even these dwellings, however, become impossible in summer because of the warm sleeping benches, which inevitably are heated each time food is cooked, and because of the above-mentioned vermin, and, finally, the catching of fish carried on in this season of the year requires the move into the summer dwellings, which are more favorably and conveniently located for it.

[184] The summer dwelling of the Gilyak is of the same type everywhere, on the continent as well as on Sakhalin, and bears the same designation in both places: käryf. The most striking exterior feature is that it rests on piles which rise four to five feet above the ground. Only at isolated points on the west coast of Sakhalin, south of the Amur-Liman, especially in Tangi, Choji, Arkai, and Dui, did I see summer houses set on level ground, but otherwise of exactly the same type, outside and in, [251] as those resting on piles (1). The aim that the Gilyak have in

[36]

1. The large village on Nadeshda Bay at the northern tip of Sakhalin (Ngywr-wo, see p. 467 above), which was visited by Krusenstern, had summer houses resting on piles. See his Reise um die Welt, Vol. II, p. 182.

in mind with this construction on piles is a twofold one: first, to protect their dwellings against inundations, since the Amur, as a result of prolonged rainfall, often rises considerably and floods the lower stretches of its banks; and then also to make the houses airier and drier by setting them not directly upon the damp ground but somewhat above it, with a constant flow of air under them and penetrating even into the house itself through the crevices in the floor; this is all the more necessary since part of the fish supply is stored in them. Both may also [84] have been decisive for the Gilyak living along the seacoast, for there, too, depending on the locality, a sudden rise of the waters as a result of stormy winds must be reckoned with, and

/360 cont./

n general and in the individual areas. Such principal and entral points are of special importance for the ethnographer, ecause here the national character of a people as a rule appears nore sharply and precisely stamped and the peculiar usage and ustoms remain protected longer against foreign influences, hereas in smaller villages it more readily happens that, as a esult of personal intercourse, the mixed marriages of the few esidents with members of a neighboring tribe, etc., many a ational characteristic is obliterated; indeed, in the course of ime many a foreign idea or custom finds entry, for which I hall have more than one opportunity to cite examples in the ollowing.

Unfortunately, I am not in a position to give the num- er of winter dwellings in the whole Gilyak area. In those arts through which I traveled, such as along the Amur River nd the Liman on the mainland, on Sakhalin along the west oast from Poghobi to Duĭ and in the interior along the entire Tymy River to somewhat north of its mouth, I have been able o ascertain it myself by my own count, and in other adjacent arts, such as on the west coast of Sakhalin north of Poghobi nd south of Duĭ, by means of many inquiries among the Gilyak. or the east coast of Sakhalin a few statements by Glehn are vailable (1). Only on the parts of the Gilyak territory along

1. "Reiseber. von der Insel Sachalin" (Beiträge zur Kenntn. des Russ. Reiches, Vol. XXV, p. 235).

he Sea of Okhotsk do we not have /361/ any data at all, except or the small stretch between Kulj and the Amur Liman likewise isited by me (1).

1. Middendorff was told during his stay on Tugur Bay (in 1844) that there were four large Gilyak villages between Cape Umelongte (Muktelja), the point of this coast

/361 cont./

342 131 ● 361 113

1. (cont.) which projects farthest to the north, and the mouth of the Amur (Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, St. Petersburg, 1855, p. 618).

103 361 342 114 129

For the sake of clarity and because many of the individual villages of the Gilyak will be mentioned repeatedly in the course of this work, I give the following tabular list of all the Gilyak villages, in part from me, and mostly from personal experience, and in part from Glehn's statements, and the number of their winter dwellings.

000 /The following chart, which runs across pp. 362-363 in the original text, is given on four pages in the translation, the first page bearing the four columns pertaining to the mainland, the second page bearing the four columns pertaining to Sakhalin, and the next two pages containing the final column of notes./

361 5) With the single exception of the one earth yurt of Pättach mentioned above (p. 469).

6) According to handwritten information collected by Middendorff among the Gilyak on Ulban Bay and made available to me.

G
114 7) The villages located along this coast of Sakhalin on the Liman and the Sea of Okhotsk, have already been enumerated above (p. 469) for a comparison of Glehn's information on them with the data collected by me, which do not entirely agree with his statements on the number and nature of the winter dwellings and in part on the names of the villages. It might therefore be excused if they are given again here for the sake of a general survey. Since, however, the comparison shows some decrease in

G
161 128 the population of this coast in the years 1857 to 1861, and the point here is to substantiate the conditions present in the Amur region at the time of my stay before that, only the data ascertained by me personally are considered in this list.

G
162 128 8) Since this village and Pilja-wo to the south with the same number of yurts have a population consisting half of Gilyak and half of Ainu, only three yurts are counted for both places in the summary.

9) The villages Pud-wo and Tschchar-wo lie on both banks of the river, with the indicated number of yurts.

G
114 10) With this village Glehn begins the series of villages located along the west coast of Sakhalin, but he himself states that it lies at the northern point of the island, between Capes

361 114 /363 cont./ Elisabeth and Maria, and believes that it is the same village that Krusenstern saw on "North Bay." Since the latter, however, was a very large village ("with 27 houses," among which some were certainly only storehouses), larger than the one later visited by him on Nadeshda Bay (Krusenstern, op. cit., pp. 162 and 184), and this village, Ngywr-wo, still had five Chinese yurts in my time, it is inconceivable that only a few years later the village on North Bay should have been reduced to one small earth yurt, as Glehn thinks (op. cit., p. 232, note 1).

361 11) Presumably this is the same village that Glehn lists under the name of Takr-Nyi (i.e., Nyi on the other side), in contrast to the above village of the latter name, which he calls Tukr-Nyi (i.e., Nyi on this side). I must therefore apply the number of yurts given by Glehn for Takr-Nyi to this village of Tagri and the neighboring village to the north, Milk-wo, the first villages located to the south, or, proceeding from the north, on the other side of the Tymy mouth.

2: Schrenck--539 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

361 342 /364/ As may be seen from this list, very many Gilyak villages consist of only a single winter dwelling, be it a Chinese yurt or an earth yurt. Most Gilyak villages contain only two or three winter yurts. As one can see for himself from the above list, this is the average number of yurts in the Gilyak villages, and, to be sure, on the continent, along the Amur River and Liman, the average is three each, and on the island of Sakhalin, on the west coast and in the Tymy valley, two yurts to a village. For

128 this reason, in determining the total number of the winter yurts on the east coast of Sakhalin for the six villages whose number of yurts remained unknown to both Glehn and me, I reckoned two earth yurts for each village. Villages with four or five yurts belong among the large ones and are few in number in all the individual areas of the region occupied by the Gilyak; but in each of these areas there are individual places with a larger number of yurts, from six to ten and more, and they can be designated as the principal and central points of the individual areas, indeed, the largest among them as the principal and central points of the whole Gilyak region. The largest Gilyak village on the mainland is Wair, or Wait, as the Russians customarily call it. Located in the estuary part of the Amur River, nearly equidistant from the area extending above its last bend and the Amur-Liman, from North Sakhalin and the coast of the Sea of Okhotsk, Wair lies at the center, as it were, of the entire habitation area of the Gilyak, continental as well as insular. With its 16 winter houses lying somewhat inland from the river in two rows, the many summer yurts rising close to the bank in front of them, the numerous large and small storehouses scattered alongside and in between, open or roofed drying racks, and the like give an impression of a large, heavily populated village, a metropolis of Gilyak life. Only a little above Wair there is another large Gilyak village, Mägho with eleven yurts, and diagonally across from it Tebach with seven yurts, which, located at the last bend of the river toward the east, belongs to both the estuary part of it and to the adjacent part upstream. In the latter part of the Gilyak habitation area the villages are closest together, though they are almost purely small villages with two or three yurts, and only the two Principal Points, Tacht and Patt, exceed that number.

361 /364 cont./ principal points, Tacht and Patt, exceed that number. Along the Liman, Langr in the north and Tschomi in the south are in dominant positions, the former as the chief exchange point between the mouth of the Amur, the coast of the Sea of Okhotsk and North Sakhalin, the latter in constant communication with both the west coast of Sakhalin, the Tymy and Tro Gilyak, and, on the other hand, with the villages on the Amur beyond the mountains. Along the coast of the Sea of Okhotsk, Kulj or Kolj is the principal village, about whose existence Middendorff received information even at Tugur Bay (1), and, according to the

113 103 1. In Middendorff's handwritten notes on his visit among the Gilyak the place is called "Kwol," and in Baer's report on his journey (Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, p. 620) "Kwel."

descriptions of the Gilyak, seems to play a role there similar to Wair's on the Amur River. /365/ Along the Liman coast of Sakhalin the same significance belongs to the above-mentioned Tamla-wo, of bad repute because of the predatory tendencies of its, as the name indicates, large population. The part of the west coast of Sakhalin that is washed by the northern part of the Sea of Japan has only small villages almost entirely, in that the village of Tyk with its six earth yurts is the only larger place and the principal point of the entire coast. In the Tymy Valley on Sakhalin, which has a great number of small villages in its upper part in particular, Pud-wo and Udmk-wo are the principal points, and, finally, on the east coast of Sakhalin Tschai-wo and Nyi are the principal places.

342 592 161 Now, if one wants to draw any conclusions about the size of the Gilyak population in its individual areas, as well as in general, from the number of winter dwellings, it must first be determined how many permanent residents on the average may be reckoned for a Chinese or an earth yurt. Just as the

/605 cont./

37 barter commodity, which is practically the only one that is con-
39 sidered by the Chinese on the Sungari, the long journey would
84 not only be unrewarding and hence purposeless, but could hardly be made in view of the unavoidable payment of tribute and bribes to the Manchu officials. Since such a supply can at first only be procured with difficulty, several usually make /606/ such a journey together, under the leadership of a traveled and experienced man. Or it may be started by an experienced man who invites other and younger men to participate in it in return for an appropriate share in the profits or for a definite wage. An association of several persons is always required for its accomplishment. For a Sungari journey cannot be carried out, like the shorter trading trips, in winter on sleds drawn by dogs, with each one his own master. This is impossible for the Gilyak simply because of the length of the trip, as well as the fact that it leads through the territory, not only of their neighbors, the Olcha, but also of the more distant Goldi, among whom they cannot always count on a hospitable reception for themselves and their dogs, and, from the Ussuri to the Sungari, cuts through a sparsely populated area where they could quite easily lose their dogs altogether, and through that get into the greatest difficulty. Moreover, at best by this method such a small quantity of wares could be transported that the journey would
87 pay only slightly, if at all. The only way to do it safely and profitably is by boat up the Amur and Sungari. For this, however, a number of men are needed to propel the boat, loaded with furs and some supplies, even though not heavily, against the occasionally very strong current, sometimes by rowing and sometimes by pulling on ropes. Hence, a small, but well-organized company, with an authoritative and commanding leader at the head, is always required for such a journey.

61 The goal of the Sungari journeys of the Gilyak is always the town of Ssan-ssin, or Itscha-choton, as it is called by all the Amur peoples, located at the point where the Churcha or Mutuan-ho empties into the Sungari. They are not permitted

SS /620 cont./

175 questioned them as to how they came to be tributary to the
648 Manchu, he received the following information from several
439 inhabitants of the island: "In former times," they said, "when
622 they were not yet tributary, some Manchu vessels came to them every year in order to buy furs. The crews, however, behaved in an unfriendly and dissolute manner toward the inhabitants of the island, so that quarrels and brawls frequently broke out between them, whereupon a great number of Manchu landed one day, inspected the island everywhere, and took possession of it. Most of the inhabitants fled to the mountains out of fear, but some of those who had remained on the coast were summoned by the Manchu, who conferred with them and appointed one of them harata, that is, chief or elder. This event took place on the west coast of the island near Itoi (Itoikotan, Itoje). Similarly, they invested two men from the northern part of the east coast with this office (3), and in the same manner they also

3. Mamia Rinsô also knows the names of these three harata who were the first to be named.

appointed kasinta, or second elders. A black sea-otter fur was agreed upon as the annual gift (tribute) that the elders were to bring the Manchu, for which the Manchu gave them as a return gift a piece of silk fabric interwoven with gold and promised to sell them all the other trade commodities at a very cheap price."

SS G 175 That "Itoi, Itoikotan, or Itoje," which, according to the map
174 drawn by Siebold on the basis of the original notes by Mogami
361 Tok'nai and Mamia Rinsô (4), is near Cape Otsisi (the southern
648

4. Atlas to Siebold's Nippon, Plate XXV.

tip of the Bay de la Jonquière), is undoubtedly the Gilyak village of Duĭ, and thus the whole of the above incident refers to the subjugation of the Sakhalin Gilyak, or making them tributary.

We were nearing Ado Tim, the last Russian penal settlement of all in the northern terior. The native village of that name was situated on the banks lower down, but the ttlement lay half a verst from the river.

We had no wish to arrest our progress here, the settlement had a very bad reputation, d we would rather camp in the open, or among the natives, from what we had heard; t the natives refused to take us further except at a prohibitive price, and we went hore, hoping that time would settle our difference.....[138]

n either side of the broad grass track of the settlement was a row of higgledy-piggledy, iserably poor, out-of-repair log-huts, with tiny windows, some roofed with boards, hers with loose pieces of bark. Pigs, a foal or two, and a few children, miserably ad were indiscriminately scattered on the 'road.' Kita (1) hung curing in the smoke of

1. The East Siberian name for Salmo lagocephalus.

fire kindled beneath, and bunches of withering green leaves by the hutside in the sun tokened tobacco drying. Women wandered about barefooted, and they and the men were the scantiest of clothing, the latter in a cotton shirt and trousers, and the former mply in a frock and an extra bodice. It was always a matter of wonder to me how in tumn mornings and late afternoons they could stand the cold so miserably clothed. Each village has its overseer, who is a soldier. In rank he may be compared to a

ergeant, but his duties are as varied as those of a prefect in France, or even a deputy-
ommissioner in India. Police, military, the census, agriculture, and 'roads,' all
hese and more come within his cares; and for this he is paid the magnificent sum of
hirty rubles (three guineas) a month. Tracking escaped convicts was not the least
mportant of his functions at Ado Tim, and he was away down the river on this errand
hen we arrived."

43 cont./

Just as in the case of fishing, so also in these two branches work the Gilyak stand first among all the peoples of the Amur gion. One can see well enough from the above descriptions w great and manifold the direct use of the seal is among them r food and clothing, for feeding their dogs, in preparing the eans of locomotion, and for other needs of daily life. Next fishing, hunting seals is therefore their chief occupation, ich, thanks to the geographic location of their habitation ea, they can pursue everywhere: along the coast of the Sea Okhotsk, on the mainland as well as on the island of khalin, along the Amur-Liman, and on the Amur River, which, as was already pointed out, the seals migrate as far the Olcha territory. In fact, among the coastal Gilyak, ong the Sea of Okhotsk and on the Liman, seal-hunting often en comes before fishing. It can be seen merely from the othing of these Gilyak, consisting to a great extent, indeed, en wholly, of sealskin, that among them seal-hunting plays far more important role than among the Amur Gilyak. It ould also be noted in this connection that on the Amur-Liman ere are two places that bear the names of "Langr-wo," or angr" for short, and "Langri," that is, seal village, perhaps cause they are especially favorably located for seal-hunting perhaps because their inhabitants practice it with special d traditional skill and success. I cannot say anything further out one of these places, Langri, located on the west coast Sakhalin, which, according to Glehn (1), is merely the

1. See p. 467 above.

nmer village of the Gilyak of Tulka). /543/ The other one, wever, Langr, located on a small island at the entrance to Amur-Liman from the Sea of Okhotsk, which I have visited self, seems fully to justify its name and the conjectures ociated with it. It is one of the largest villages of the Amur-man, and its inhabitants carry on a lively trade with the ur Gilyak, using in particular the products of their seal-ting, such as sealskins and furs and seal oil as articles for xtering with them.

/544 cont./

000 bartering with them. Tschomi plays the same role in the south-
225 ern part of the Amur-Liman that Langr does in the north. In
184 particular the small group of the Hagimif Islands is one of the
[361] localities there frequently visited for hunting seals by all the mainland Gilyak living adjacent to it. In order to hunt seals, however, the enterprising Tschomi Gilyak also go south of the Amur-Liman into the Mamia-Rinsô Strait and to the northern end of the Sea of Japan, as well as to the opposite coast of Sakhalin, where I saw them staying, for example, at Poghobi, for this purpose. Scarcely less than in the rest of the Amur-Liman, seal-hunting is also practiced immediately at the mouth of the Amur River, at Tschcharbach, Ngale-wo, and Pronge, where in particular the small island of Ulsut is an especially favorable spot for it.

225 According to the Gilyak, all the species of seals of the
136 Amur-Liman also enter the Amur River, with the sole exception of the "alch," Phoca equestris Pall., but the old animals are said to go only a short distance from the mouth, whereas the younger ones go up farther. In any case, Ph. nummularis Schleg., which in the adult state is called phghi-langr by the Gilyak, gjäuchssa by the Olcha, goes farthest upstream. It is
225 therefore the most important species of seal for the Amur Gilyak.
237 One sees its more or less densely spotted fur everywhere among
136 them and used in all kinds of ways, for clothing, as was discussed in detail above, ski, bags, small pouches, etc. Scarcely less important for them, however, is the kighitsch, the Ph. barbata Müll., which is less common in the river and whose thicker skin, with the hair removed, is used for making the foot part and the soles on their boots, the dog harness, and the
225 straps needed everywhere. The seals are said to go about 60 versts upstream in the two largest rivers of Sakhalin, the Tymy and Plyi or Poron-ai (1), but as yet nothing is known about

[113] 1. Mitsul', Ocherk" ostr. Sakhal. /Sketch of Sakhalin Island/, St. Petersburg, 1875, p. 48.

the habits of the individual species.

/566 cont./

326 especially well-worked pieces and which causes them neither to
411 use such pieces nor to sell them, but rather /567/ to store them
556 away carefully as capital, so to speak, and to bequeath them, or at most use them to buy a wife, whereby they change owners, to be sure, but still remain in the realm of the Gilyak. Moreover, in view of the inadequacy of their tools, much time may be spent on the manufacture of each individual piece of this kind, and, as is always and everywhere the case, not everybody may
361 have a great skill. At the time of my stay in the Amur region,
326 the village of Chylk (1), located on the Amur directly above
411
126
[128]

1. On the ethnographic map of the Amur region appended to this volume, the location of this village is indicated, but its name is not entered.

Patt, was regarded as the place where the most beautiful spears, lances, and knives were manufactured, and the specimens illustrated on Plate XXXI /see p.1011/, Fig. 2, and Plate XLVI /see p.1026/, Figs. 4 and 5, which belonged to the wealthy Gilyak Judin in Tebach and his sons and which I acquired from them for a high price in exchange for various wares were said to have been made there. Unfortunately, I passed this unattractive settlement consisting of only two houses at a time when I as yet knew nothing about its industrial importance for the Gilyak.
361 In the summer of 1855, the Russian settlement of Michailofskoje
648 was founded directly beside it, indeed, almost at the same spot (2), which presumably later prompted the Gilyak to abandon

[128] 2. This appears on the map of the Amur region which is appended to the first volume of this work.

their home there.

/586 cont./ the help of snares (1) in a manner similar to that of the Ainu,

1. Margaritov", Ob" Orochakh" Imperatorskoi gavani /Concerning the Orochi of Imperial Harbor/, St. Petersburg, 1888, p. 13, Pl. II, Fig. 2.

and from which they use the contents of the musk sacs in particular in trade with the Chinese. In converting their hunting booty into profit, however, the Orochi, because of the great isolation of their homeland, find themselves at a great disadvantage in comparison with all the other peoples of the lower Amur region. In the southern part of their territory, where, as so-called Ta-dse, they live intermingled with the Chinese they do find, to be sure, a ready market among the latter for all their hunting but, as a rule, they are greatly exploited by them in connection with this /587/ and not infrequently, through advance payments, are made their lifelong debtors. Farther to the north, however, where the Chinese element is missing, the Orochi, living almost exclusively by hunting, rely on their neighbors, the Goldi and Olcha, to sell their booty.

In concluding the above consideration of the way hunting is practiced among the peoples of the lower Amur region and its greater or lesser importance for the total pattern of their lives, I cannot but make room for an observation which the traveler who has ethnographic aims in mind is involuntarily forced to make. Whereas winter is by far the most favorable season of the year for ethnographic research among the Gilyak, and summer the most unfavorable, this reverses itself more and more into the exact opposite in an upstream direction along the Amur and its right tributaries toward the Goldi and Orochi. During the summer the Gilyak are wholly occupied with fishing and the preparation of supplies of fish for the winter and even bring something nomadic into their lives, inasmuch as many, in order to seek localities more favorable for fishing, then change their place of residence temporarily and often simply camp in tents scattered on the

Goldi RKB
Tungus RUS

/587 cont./ islands of the river and along the tributaries. With the onset of winter, however, all of them again assemble in the more comfortable and spacious winter dwellings, and there begins a long period of a quieter and more settled life which, in its regular routine with the hunting carried on only in the vicinity, the sturgeon fishing on the ice, the trade and communication, the manifold domestic tasks and handicraft, the peculiar and prolonged bear festivals, etc., offers the ethnographer a rich field for observation and study. It is almost the same among the Olcha. Among them, however, and to an even greater extent among the Goldi, life in summer assumes an even more nomadic character as a result of the easily transportable tent dwellings solely used then, and the farther upstream one goes, the more the winter dwellings are deserted, because part of the men have left to hunt in more or less remote regions. As we saw, among the Ussuri Goldi only women, children, and aged people are to be found in them in winter, because all the able-bodied men go hunting, and, finally, the Orochi not infrequently take their wives and children along into the wilderness on their hunting, which takes up the entire winter. With respect to them, therefore, summer, which calls them back from the forests and for fishing and seal-hunting assembles them in the summer dwellings, which, though likewise only tent-shaped, are located at definite points along the seacoast and at the mouths of the rivers, offers the traveler the best time, in fact, almost the only possible time, for ethnographic research. Thus, all the living conditions of the lower Amur tribes vary and change greatly, depending on whether and to what extent fishing or hunting plays the principal role among them.

/588/ I cannot discuss in detail the hunting practices of the peoples of the upper Amur region, the Birar, Manegir, and Orochon, because I had only fleeting contact with them, and at a time when, far from their hunting areas, they were still in part occupied with fishing in the Amur River. With respect to

Negidal
Samagir

/602 cont./ First of all, the Amgunj offers them a direct and convenient route to the Chinese merchants along the Amur; secondly, in winter only a short distance separates them from the Samagir on the Gorin, who are likewise visited by Chinese merchants; and, finally, close to the northern border of their habitation area, separated from the Nemilen, the chief northern tributary of the Amgunj, by only a low watershed, where each year in December Yakut and Russian merchants congregate specifically in order to trade with the surrounding Tungusic tribes and, among them, with the Negda in particular (1). Under these circumstances

1. See p. 166 above. Cf. also Fr. Schmidt, "Histor. Bericht über die Sibir. Exp. der Russ. Geogr. Gesellsch. /Historical Report on the Siberian Expedition of the Russian Geographical Society/" (Beitr. zur Kenntn. des Russ. Reiches, Vol. XXV, pp. 134 and 150).

Under these circumstances the chances of the Gilyak middlemen for success among the Negda are not very great, except perhaps in those places where the latter live in the closest proximity to the Gilyak, far from those trade opportunities, namely, on Lake Orell and Lake Tschlja, where there is also a Gilyak village and which, moreover, lie on the route from the Amur to the southern coast of the Sea of Okhotsk. Like the Negda, the Samagir, too, in addition to their principal territory on the Gorin (Gilyak Kyr), have still other habitation sites remote from it and closer to the Gilyak -- these are their settlements on Lake Udyl, and, like the Negda lakes, these, too, are /603/ visited by the Amur Gilyak for trade, and, to be sure, in winter as well as in summer. Thus, on May 18 (30), 1856, I met the Gilyak Mesgun in Patt at the moment when he was about to set out in a boat laden with various Chinese commodities to travel to the "Rdhy" (Samagir) living on Lake Udyl. On the whole, however, the latter lies, geographically as well as on the basis of the linguistic relationships of the dwellers on it, closer to the Olcha than to the Gilyak.

I. Religious Conceptions of the Amur Peoples. -- Idols, Amulets -- Shamans.

Religious Conceptions

1. Gilyak. It is very difficult to obtain information concerning the religion of the Gilyak. I learned the following from Jutschin and Labgun (*). They call "God" ýżigy (**) and designate

* From the villages of Patchá and Wassj at the mouth of the Amur.

** Wherever the author used ы and я from the Russian alphabet, they have been replaced by y and ja /according to the system used here, these letters would be transliterated as y and ya, respectively/.

him as the good one, kíngulātsch, an attribute that means the same as good (sontz). They did not understand my question as to whether "God" lived in heaven, or where else? -- and said only that they did not have any god (idol) in their yurts. I all the more doubted the assertion repeatedly given to me by the Gilyak that they did not have any idols, since I myself have human and animal figures carved in wood from the village of Kuĭk (***). But they

THE NIVKHI

S. V. IVANOV, M. G. LEVIN and A. V. SMOLYAK

(based on data by A. M. Zolotarev)

General Information

The Nivkhi live on the lower reaches of the Amur and adjacent areas, as well as on Sakhalin. They are sharply different in language from their neighbors, who speak languages of the Tunguso-Manchurian group, and belong to the so-called paleo-Asiatic peoples.

The name of the people derives from their name for themselves, Nivkh, or "man." They were known in Russian pre-Revolutionary literature as "Gilyaks." This word evidently derives from "Gileke" and "Gilyami," as the Nivkhi are called among Tunguso-Manchurian peoples.

The census of 1926-27 set the number of Nivkhi at 4076 persons (1700 on Soviet Sakhalin and 2376 on the continent). In addition, according to data in 1928, 111 Nivkhi lived in the formerly Japanese part of Sakhalin.

Thus, the Nivkhi consist of two groups territorially: the continental, or the Amur, group, and the Sakhalin group. The continental Nivkhi live along the Lower Amur, along the coast of the Amur Estuary, and in the adjoining areas along the Tatar Strait and the Sea of Okhotsk. On the Amur, the Nivkhi villages are interspersed among Russian and Negidal villages. The Nivkhi village farthest up the Amur is Pad; others are situated lower on the Amur and its estuary; in the south they reach as far as Cape Lazarev; the northernmost village in the estuary is Kul' (181 km from Nikolayevsk-on-the-Amur). Individual families live among the Ul'chi. In the past, some Nivkhi groups were found as far as the Uda River. In 1884, the well-known Russian traveler Middendorf encountered them on the Chumikan. In Sakhalin, the Nivkhi are living today both on the western and eastern coasts, as well as along the middle reaches of the Tym' River. On the western coast, their main mass is concentrated in the Rybnovskiy Rayon. In the Aleksandrovskiy and Shirokopadskiy Rayons there are only small groups of Nivkhi, who remained there after the resettlement of a large group in the Kirovskiy Rayon. The population of the latter is today almost entirely concentrated on one large collective farm, Chir-Unvd. On the eastern coast, the southernmost point is the village of Nyyvo; farther north, there are large villages, Dagi, Chayvo and Pil'tun, where the former residents of the tiny hamlets scattered along the coast have

resettled. In southern Sakhalin, individual families live in the village of Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-gan—big dog). The agglutinating features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives have many similarities with verbs. The Nivkhi numerals are interesting: in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasilly Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to as "Gilyak peasants." According to these reports, they lived in large villages in wooden winter houses, flanked by barns, racks for hanging fish and log structures for bears. The Nivkhi wore clothing of fishskins and animal pelts; they kept many dogs, engaged in fishing, and their diet consisted mainly of fish. They traded with the Chinese, Ainu and Tungus.

with the Chinese. After the appearance of the Russians in the Amur region, the Nivkhi began to use small quantities of bread, sugar and salt.

The immemorial, and until recently the only, domestic animal of the Nivkhi was the dog. It served as a draught animal and provided for fur clothing and meat for food; it was widely used as a medium of exchange and played an important part in religious ideas and rituals. The number of dogs in a household was an index of wealth. As a rule, every household kept 30-40 dogs, which demanded considerable care. They were fed chiefly fish and seal-fat; feed had to be stocked for the whole winter, when dogs were used most as draught animals.

The old sled of the Nivkhi, which was still found in use by Shrenk in the middle of the last century, was so narrow that the driver sat astride it, resting his feet on small skis; sometimes he raised himself and ran in this position on skis. The runners of this sled were curved both in the back and in front. The dogs were harnessed to the towing strap alternately on either side, rather than in pairs. The harness was a simple collar, so that the dog pulled with the neck.

Until quite recently, dog races were still a part of the bear festival; in these, the Nivkhi used the old sled and the old type of harness. The harness and the sled which appeared among the Nivkhi in the beginning of the 20th century were considerably different from the old type. They were of the so-called Eastern Siberian type; the sled was of greater capacity and equipped with a vertical shaft-bow and paired harness, not in collars but in yokes, which the dogs pulled with the chest.

The development of the carting trade brought with it a new type of sled. Its greater size and stability permitted the transportation of up to 200 kg of goods. It was usually drawn by 9 to 11 dogs. The best trained and most valuable dog was the leader. The driver—kayur—usually called out his directions to this dog. The dogs were stopped with a shouted order and a brake pole. Dogs were sometimes also harnessed to a boat on a longer tow strap.

The horse as a draught animal appeared among the Nivkhi relatively recently.

In addition to dog transportation, winter travel on land was done by skis—bare skis without fur lining, or skis lined with seal fur. The former were used for short trips; the latter, for distant expeditions during the fur-hunting season. The Nivkhi skis were distinguished by the wooden strips nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed boats made of poplar. These dugouts were so light that they were carried by hand across barriers (shallows and isthmuses). They were propelled with oars or poles (usually employed for upstream travel). For long-distance travel, the Nivkhi had a large boat similar to that of the Ul'chi, Nanays and Orochi. It was made of three wide cedar boards, of which the bottom one was bent upward in front, projecting like a spade. It was rowed with 2 to 4 pairs of oars, by lifting alternately the right and the left ones.

The Nivkhi villages were usually situated near the mouths of spawning-rivers, and seldom exceeded 20 dwellings. Until recently, the dwellings of kinsmen were set side by side. Some 40 to 50 years ago, the Sakhalin Nivkhi still widely used the dugout house. It was made by digging a pit some 1.25 meters deep, over which a wooden framework was built of thin logs, and covered on the outside with earth. The smoke vent served as a window as well; the hearth was built in the center, and plank beds were set around the walls. At the end of the 19th century,

Among the Sakhalin Nivkhi, who differed in their economy and material culture from the above peoples, socialist reconstruction followed a somewhat different pattern. Many Nivkhi went to work in fishing and lumbering enterprises. The first Primary Productive Organizations were organized among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize the instruments and means of production—nets, boats, dogs, etc., and went on to a more advanced form of social production—the agricultural cooperative. A part of the Nivkhi population joined Russian collective farms, situated near Nivkhi villages.

As they learned new methods of conducting their economic activities and mastered new techniques of production in the collectives, the Nivkhi began to develop new economic activities, formerly unknown to them; tillage, gardening and cattle-breeding. At first, the work of the Primary Productive Organizations, particularly on the eastern coast, where villages lie at considerable distances from one another, was seasonal in character. The Nivkhi gathered at the fishing camp from several nearby villages and fished cooperatively for 3-4 months, after which they dispersed. In winter, they engaged in carting, using dogs as draught animals. Later the cooperatives became permanent. As a rule a collective farm was first made up of the inhabitants of one village. But larger collectives also developed, such as the "Chir-Unvd" ("New Life") collective, which united the economies of three villages along the middle course of the Tym' River (Kirovskiy Rayon). An important role in the organization of collectives was played by the Nivkhi youth, particularly by members of the Komsomol.

The organization of collectives and their successful development were openly resisted by the rich Nivkhi and former elders. The greatest resistance was to the building of new collective-farm villages and the resettlement of the members in new sites. The resettlement was necessitated by the need to enlarge the villages, which had often consisted of two or three houses, and to transfer them to more convenient places, nearer to good fishing areas. The Soviet government spent large sums on this. Most of the collective members left their old smoky dwellings and moved to new, bright homes.

At present, fishing occupies an important place in the Nivkhi economy. The former primitive fishing methods have been abandoned. Along with seines, the fishermen set up more efficient zayezdki; manually worked scoops have given way to winches; fish is transported on Amur sailboats (kungasy) and cutters; and Motor-Fishing Stations (MRS) provide extensive aid to the collective fishermen.

Many Nivkhi collective members participate today in fishing expeditions. To do so, they travel to Okhotsk and other districts. Expedition fishing usually lasts from April to August. It is also carried on in Sakhalin, where the continental Nivkhi also come to work. In spring, the members of the fishing collectives hunt seal in the estuary and on Sakhalin. In winter, they hunt fur-animals.

Agriculture is a new branch of economic activity among the Sakhalin Nivkhi. The first Nivkhi agricultural collective, "Chir-Unvd," was organized in 1930 along the basin of the Tym' River in northern Sakhalin. In 1937, the collective already consisted of some 50 households. Its acreage under cultivation rose from 1.5 hectares in the first year of its existence to 61 hectares in 1937. The main crop was potatoes. The collective farm has its own skilled agricultural personnel—brigadiers and team leaders—although there was a time when the Nivkhi considered agriculture a great sin. As the old men used to say, "He who digs or plants will die."

In 1951, the Nivkhi collective "Chir-Unvd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Unvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the construction of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Before the Revolution, most of the Sakhalin Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese fanza.

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an administrative building, and buildings devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, placards and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They also use underwear, which was entirely unknown in the past. In winter, the continental Nivkhi wear city-type coats, felt boots, high overshoes, and also footwear of elk or seal skins. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and headdress remain of the traditional cut and materials. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the wide network of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi.

foxes, etc.

their mouths and chew it. Each person spits out what he has chewed into an individual small basket made of birch bark. The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

Gilyak villages lie along the river banks in low places which, however, are usually not reached by flood waters. The houses stand in a row, usually three in number, seldom 12 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened.

Their house (2) somewhat resembles a common farm house,

2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes weighted with stones, to offer resistance to the wind. The few

Sometimes the dogs also draw sleds in these races.

Dog racing, besides being an amusement also has a practical significance, for the good runners find immediate buyers. In fact, the bear festival is a sort of fair, where various things are bartered.

The chief figure of the festival, namely the bear, is well-fed throughout the whole period and is repeatedly led through the village, at which time he pays a call at each house and this is done in such a way that he has to go from one house to another at an angle, by way of the adjacent section of the river. This symbolic procedure assures the house of "an abundance of fish". He is always led by several men who put up the necessary number of chains and ropes on all sides. In the houses he is treated to fish, millet, and cranberries, and sometimes he is also teased. Some Gilyak also prostrate themselves before him. This is by no means worship, however, as some have assumed. Some do it for fun, some in earnest, calling on the spirit of the bear not to seek revenge on them after he is dead. Sometimes the bear is not given such expressions of veneration.

When the bear's immolation nears, he is tied to a stick which has been driven in the ice, and then he is shot with arrows. In this procedure the archers seek to outdo themselves. At last the unfortunate bruin is given a merciful blow with a lance. He usually dies in peace and majesty, with his fore-paws resting on his wounded chest. When this happens the woman who has had charge of him is often heard to weep loudly. Finally, funeral pyres are lit and the Gilyak seat themselves around them. Pieces of bear meat are passed around and before they are eaten they are lightly [237] roasted. Eating and tea-drinking are the main activity at a bear festival. The stick music which is here offered as entertainment has been described. Special music is produced in the village of Kola. This village is the northern outpost of the Gilyak settlement, on the coast of the Sea of Okhotsk, about 200 versts from Nikolayevsk-na-Amure. (1) Here are

1. This distance is measured according to the curves in the coast line; in a straight line it would be much shorter.

edition), p. 390 and note 7. Veniukov's observation that the language of the Gilyak is radically different from that of the Tungus is completely confirmed by Jakobsen. That is the reason for the wording of the text.

differentiated from the neighboring Goldi with regard to language whereas in biological make-up they are only slightly different from them. According to photographs that the traveller acquired on the spot and has brought with him, the beard growth of the Gilyak seems to be somewhat heavier than that of the Goldi, without however, reaching the thickness of growth of the Ainu on Sakhalin Island. Originally they probably occupied the bank of the Amur up to the Gorin, while nowadays the southern boundary of their territory lies about 100 versts above Nikolayevsk and their former territory is now inhabited by the transitional people that we mentioned repeatedly in number 10 of this volume [see Goldi source 18: Genest--Analyst]. They occupy the northern part of Sakhalin Island but one will also encounter them among the Ainu in the southern part of the island where they probably came as laborers for the Japanese fishers (3) or

3. We will have more to say below about the Japanese fishers on Sakhalin Island. Jakobsen encountered Gilyak even on Aniva Bay.

for the purpose of hunting sable. Formerly their settlements were particularly numerous along the shallow shore of the island across from the mouth of the Amur. But these had [379] disappeared by the time Jakobsen passed along this stretch of shore because the Gilyak who used to live there had fled from the maltreatments of the convicts deported to Sakhalin Island. They had, however, established new settlements near their former residences, for the traveller observed a large number of boats the occupants of which were Gilyak engaged in fishing in the sound (1).

1. In all these boats there were also dogs which were set on land to pull the boats along whenever the wind was against the fishermen as well as whenever they were struggling against the strong north-south current that predominates in the Tatar Strait.

161 It is as impossible to estimate with any certainty the number of Gilyak, as it is the number of Goldi. Rittich estimates their number to be about 3000. On the Amur Jakobsen found quite a large number of villages; on Sakhalin Island, on the other hand, there were far fewer villages.

439 Like their neighbors, the Gilyak are fishermen and hunters;
433 only now and then do they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and flour for the inhabitants of Sakhalin. In accordance with their primary occupations they spend their summers on the river banks while in winter they move into the mountains and roam through the woods. I am unable to say with certainty whether they have summer and winter dwellings like the Goldi, but I think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-brick ovens and the benches, warmed by the pipes, along the
342 walls are also to be found in these houses. On the other hand,
361 the traveller found in September 1884 above Nikolayevsk a whole number of Gilyak villages that were at a considerable distance from the river bank, while the summer settlements of the Goldi by their nature as fishing villages used to be situated right by the river. One might conclude from this, perhaps, that these Gilyak villages were not simply fishing villages for the summer, but served as dwellings for the whole year; unless one wanted to assume that the Gilyak were forced to withdraw from the immediate neighborhood of the river in summer because of the partically marshy and therefore unhealthy river bank. In Sakhalin, moreover, there was not a trace of the larger houses of the Gilyak such as those mentioned above; rather, the huts were only small and half under-ground, so that they had a certain similarity to the
511 dwellings of the Eskimos in Labrador and in Alaska. They
515 offer a very unenviable abode for the European traveller, for with their confined space one can hardly avoid close contact with the inhabitants and the dangers connected with that, in short, being tormented by a multitude of vermin. In addition the atmosphere created by the crowd of people present, by the presence of the dogs, by the manifold provisions hung up for drying or smoking, and by the smoke which can only
511 escape with difficulty, is hardly bearable. The large houses
136 on the main land are in better condition, but they, too, have

y do on the ocean. The current in the middle of the stream torrential. In general the water here is pure and does not ve an admixture of particles. (1) It is very soft. (2)

1. The middle section of the lower Amur, on the other hand, at the mouth of the Sungari, contains many earthy ingredients which only gradually sink to the bottom.

2. According to my analyses (Reports of the Commitee of the Medical Society of Eastern Siberia for 1879), the water taken from mid-stream, opposite Nikolayevsk, contains only 0.050 to 0.053 soluble matter per liter of which 0.033 is inorganic. Its hardness is only two degrees according to the French scale.

The Amur takes up a great many rivers and brooks from h sides; in many places it forms wide branches and low ands. The general character of the land is that of a ma- tic wilderness. The mountains along the shore appear tly as bare rocks, partly as green hills; farther inland y are terraced or form chains, and the peaks are gener- y not more than 1000 to 1500 feet high. The whole region overed with vast dark green forests. Only here and there stillness and loneliness of the wilderness is enlivened by sights and sounds of human or animal life. On high, iso- ed spots along the shore there are Russian villages sur- nded by grain fields and kitchen gardens. Lower down, he foot of a mountain, insignificant-looking Gilyak ages nestle, surrounded by swarms of barking dogs. casionally a noisy steamer hurries by, or a Russian bark Gilyak row boat glide by. Here and there a motionless on is seen on the shore, or an eagle floats high up, a fish ashes in the water, or the snow-white body of a dolphin emerges y to disappear again instantly. In general, however, the ge animal kingdom is not so frequently revealed to the veler as he might have expected and as is the case in other ions, - for instance, along the Sungacha, a tributary of the uri.

The forests are permeated with the refreshing odor of fir larch; occasionally the pungent odor of ledum palustre is ted toward one. The stillness of the forest is broken by

frequent intervals with the evergreen pine, rivalled the October hues of our New England landscape. Hills and low mountains rose on both banks of the river and made a beautiful picture. The hills, covered with forest from base to summit, sloped gently to the water's edge or retreated here and there behind bits of green meadow. In the distance was a background of blue mountains glowing in sunshine or dark in shadow, and varying in outline as we moved slowly along. The river was ruffled only by the ripples of the current or the motion of our boat through the water. Just a year earlier I descended the Saint Lawrence from Lake Ontario to Quebec. I saw nothing on the great Canadian river that equaled the scenery of my first day's voyage on the Amoor.

Soon after leaving Nicolayevsk we met several loads of hay floating with the current to a market at the town. On the meadows along the river the grass is luxuriant, and hay requires only the labor of cutting and curing. During the day we passed several points where haymaking was in progress. Cutting was performed with an instrument resembling the short scythe used in America for cutting bushes. After it was dried, the hay was brought to the river bank on dray-like carts. An American hay wagon would have accomplished twice as much with equal labor.

The hay is like New England hay from natural meadows, and is delivered at Nicolayevsk for six or eight dollars a ton. Cattle and horses thrive upon it, if I may judge by the condition of the stock I saw. For its transportation two flat-bottomed boats are employed, and held about twelve feet apart by timbers. A floor on these timbers and over the boats serves to keep the hay dry. Men are stationed at both ends of the boats, and when once in the stream there is little to do beside floating with the current. A mile distant one of these barges appears like a haystack which an accident has set adrift.

We saw many Gilyak boats descending the river with the current or struggling to ascend it. The Gilyaks form the native population in this region and occupy thirty-nine vil-

lages with about two thousand inhabitants. The villages are on both banks from the mouth of the river to Mariensk, and out of the reach of all inundations. Distance lends enchantment to the view of their houses, which will not bear close inspection.

Some of the houses might contain a half dozen families of ordinary size, and were well adapted to the climate. While we took wood at a Gilyak village I embraced the opportunity

A GILYAK VILLAGE.

to visit the aboriginals. The village contained a dozen dwellings and several fish-houses. The buildings were of logs or poles, split in halves or used whole, and were roofed with poles covered with a thatch of long grass to exclude rain and cold. Some of the dwelling houses had the solid earth for floors, while others had floorings of hewn planks.

The store houses were elevated on posts like those of an American 'corn barn,' and were wider and lower than the dwellings. Each storehouse had a platform in front where canoes, fishing nets, and other portable property were stowed.

362

362 HOUSING--adequacy of housing facilities (e.g., for physical protection, for comfort, for privacy); housing shortages and overcrowding; effects of poverty, war, and natural calamities; public and private housing and slum clearance programs; etc. See also:

The Gilyaks are unfamiliar with scurvy, although the Russians suffer from it more than in Europe. I have spoken in another connection (1) of the fact that I believe

1. St. Petersburg Med., Wochenschrift, No. 2-3. 1882.

this illness can be traced to earth miasmas, and particularly to external ones rising up from the extensive marshes and bogs, as well as house miasmas. The fact that the natives are immune [248] may be attributed partly to habit, (for Europeans suffer most from it when they first arrive) and especially to the functional construction of the houses. Russian barracks and private houses stand on frame work which soon rots. Below the wood floor there is rotten wood and damp earth which does not freeze even in winter. The houses are badly ventilated and frequently have a definite odor of mould. The Gilyak house has a solid floor of pressed clay which does not let the earth miasmas penetrate; it is well ventilated and is often filled with smoke whose disinfectant qualities perhaps have an effect. Diet seems to be only a limited factor in this question.

Another endemic disease, chronic stomach and intestinal catarrh, occurs among the Gilyak, but relatively seldom and soon disappears. It is usually accompanied by unbearable colic. This catarrh is also of miasmatic origin.

In spite of the constant fish diet, the Gilyak seldom suffers from tape worm. Among Russians, too, it seems to come mainly from pork, but the Gilyak rarely get this meat.

Bronchial catarrh occurs frequently, and pneumonia seems the most frequent of the serious acute illnesses of the Gilyak. The children of the Gilyak villages also suffered from a whooping cough epidemic that was prevalent during my time in Nikolayevsk-na-Amure.

Eye diseases occur more seldom than one would expect, for in general, tribes that live in smoky houses frequently suffer from them and present many one-eyed and blind cases. The Gilyak houses are not always full of smoke, to be sure, but so frequently that the relative absence of these diseases must be attributed to a greater insensitivity of the eye nerves. Actually, everyone who has been inside a Gilyak house will be convinced that the natives can remain calmly seated in smoke clouds that would immediately drive a European out. However, the Gilyak do not escape entirely unpunished. One finds among them people with chronic

372

372 FIRE--generation of fire; techniques and apparatus (e.g., fire plow, fire drill, flint and steel, fire piston, matches); borrowing, preservation, and transportation of fire, tinder and kindling; fuels; uses of fire; beliefs about fire and associated practices; etc. See also:

/64 cont./

796 cutting up /65/ the bones, and so forth -- everything is done in conformity with permanently established rules. The first moment of this procedure, immediately following the removal of the skin, presents a very imposing sight for the Gilyak. The white (from the heavy layer of fat), soft body, stretched out on its back, those front paws with long and even fingers, resembling, to the point of illusion, human hands, amid the gloom of night, must irresistibly evoke in the savage the notion that he is not in the presence of a dead beast, but of a man of a particular nature, who has taken off his hairy skin and now majestically rests, following the least movement of his knife. The entire, detached skin of the bear, together with the head, is carried into the yurt, not through the door, but through the smoke opening, and down the high pole with the crown of coniferous needles, which still rises above the earth yurt. The clan elder carefully takes hold of the skin and, striking it lightly with a stick, says: "Remember that you were fed by such and such old man and by such and such old woman." Meanwhile the women greet the sacred head with a solemn [534] march played on a most original instrument. This is a dry log of larch hung on a frame, on which several people in turn beat out in rhythm relatively monotonous sounds. To the sounds of this charming music the clan elder installs the head of the bear on the plank bed of honor, covered with coniferous needles. Under the head there is a quiver with arrows and, by its side, tobacco, sugar, and other viands. [974] The bear takes along the souls of all these things. The carcasses of meat stay outside on a special wooden platform, and parts are brought in through the smoke opening. The day ends with eating, conversations, games of the youth, dances, and fencing with sticks. The next day is called the day of the feeding of the head. From morning until night kettles boil inside the yurt, and all kinds of dishes of the Gilyak cuisine are prepared. A portion of each dish is put in a separate vessel and placed next to the bear's head. This, then, means "to feed the head." ● [372] On the same day the boiling of the bear meat begins. The meat is boiled outside in a special kettle; the fire is ignited with the sacred steel, which is not used on any other occasion.

/86 cont./

*614 597 173 with full right call the Ainu their founders. And so it is everywhere.

Ordinarily, however, the composition of the clan is homogeneous, cases of /87/ adoption are quite rare, and the earlier phenomena of endosmosis and exosmosis have long effaced themselves behind the mists of legend, and they show no influence on the integrity of the conscious kinship union.

*614 ● 372 776 2. One fire. The common clan fire is the symbol of clan unity. As among all primitive peoples, fire is a clan deity for the Gilyak. In each hearth there sits, according to one conception, the old woman of the fire, the ancestress of the given clan; according to others, an old man and woman with their descendants. The role of these "masters of the fire" is not only in the beneficial activity of the benevolent burning element. As the divine ancestors of the clan, they are held in respect not only by their living clansmen, but also by those who, having gone to the other world, have become the clan gods of other elements, the forest, the sea, etc., and through these they can exert a mighty influence in all spheres of human existence.

Thus, the master or mistress of the fire is not only a deity that warms man and protects his domestic hearth from any evil machinations of the spirits, but is also an intermediary (1) between the clansmen and all the numerous deities

[171]

1. In the Vedas, fire (Agni) also plays the role of intermediary between human beings and the gods; he intercedes for human beings, he is herald and priest.

who influence the fate of man.

/87 cont./

*614 372 776 782 On all the important occasions of life, in case of sickness, on the hunt, before setting out on a dangerous journey, etc. -- the clansman throws into the fire his modest sacrifices -- a leaf of tobacco, sweet root, a drop of arrack -- and asks the old woman of the fire to fulfill his request. And she knows all the means necessary to insure that a petition to one or another clan deity -- if they are outside the sphere of her immediate influence -- reaches its destination.

*614 372 776 775 In order to understand the real basis of the "clan" attitude toward the master of the fire and his functions, it is necessary to keep in mind the following: 1) the deceased are given to burning, i.e., to the common master of the fire, who can receive his favorites into his clan, so that these latter in turn become "masters" of the clan fire; 2) in particular all those who perish by fire and lightning (2)

[171] 2. It is curious that a similar view exists among the Buryat: a man who perishes from lightning becomes a powerful and beneficent spirit to whom sacrifices are made and prayers are raised.

become such masters; 3) the concept of /88/ an "old woman" (mistress) of the clan fire, instead of a "master," is a faint echo of the maternal clan; 4) the "universality" of fire, its ability to spread quickly, its many tongues (tongues of flame), which all primitive people (compare the Rig-Veda) understand in the most realistic sense -- give the "fire" special advantages over the other "masters" -- namely, the rapid and eloquent transmission of messages and petitions; finally, 5) the fire is a warming and purifying substance, i.e., a substance that drives away evil spirits.

/88 cont./

*614 372 Externally the clan unity of the fire finds expression in the following ways. Only a clansman has the right to light a fire in the hearth of a clansman. Only a clansman has the right to take fire out of the yurt. A member of another clan who has lighted his pipe at the clan hearth may not leave the yurt until he has finished his pipe. Any [688] infraction of these rules of the inviolability of the clan fire by a member of another clan inevitably incurs dangerous consequences for the clansmen and the obligation for the member of another clan to pay blood money.

Each clan has its own clan steel, guarded by the oldest member, and only with this steel can the fire be lighted when bear meat is cooked at the bear festival, which plays such an important role in the religious and clan life of the Gilyak. When it becomes necessary for the clan to divide, i.e., when a part of the clan is compelled to emigrate to a very distant place, the oldest member of the clan breaks the clan steel and entrusts one half to the oldest of the emigrants, and only after this is the clan formally divided.

The mistress of the fire, as the representative of the akhmal'k clan, plays quite an important role in interclan relations, binding, through her cult and protection, the clan in whose midst she dwells and to which she gave birth with the clan from which she came; from generation to generation she brings into it the daughters of her brothers and their descendants.

*614 775 3. One mountain man, sea man, etc. -- the common benevolent clan masters of the mountain, sea, earth, etc. In the section on religious beliefs we have already explained the nature and significance of this type of deity. These are not the fantastic heroes of the classical clans, not the vague, mythical beings whose clan celebrations were a simple traditional ritualism, but clansmen close to each living generation, who either died some kind of unnatural death (in the water, slain by a forest beast, and so forth) or,

/91 cont./

000 574 688 372 775 very great sin; one might die." It is a sin not to be hospitable, not to share edibles. And the reason is clear: the gods, as we have seen, are the ones that "feed" man, and principally the clan gods, who provide for not one man, but the whole clan, which brings them sacrifices and which is bound to them by clan ties; to eat, therefore, without sharing with a clansman who is present and, in general, not to feed him, is a "sin" and a direct risk of losing the benevolence of the gods-sustainers. It is not by chance that in all this the "hearth" plays a great role. In the fire of the hearth lives the "master and mistress of the fire," a clansman or even an ancestor, who does not miss a single thing that takes place in the house; they, as we have seen, are the intermediaries between the clan and its clan gods, and there is nothing more natural than that the gods of the hearth should above all be the guardians of the principle of hospitality.

*614 433 476 But the ties of the clansmen, living by the favors of their gods-clansmen, are not delimited by reciprocal "regaling" alone, but by the real, most extensive principle of the community of earthly benefits. If this does not find expression in a purely communistic form, it is only because there is no necessity whatever for it. Life is so simple, the conditions of acquiring food are so simple, the gifts of nature lie so widely and freely before each person, that there is no necessity for communistic production and distribution. Yet *614 476 the principle is in full force. In the communal hunting for sea animals, for example, in one boat, it is the owner of the boat who is generally also the most skillful hunter, but he receives no more than the last adolescent rower, and, in addition, a part of the catch is distributed to those families whose members for one reason or another could not participate *614 476 261 [262] in the hunting. Dried fish, the principal food of the Gilyak, is regarded almost as communal property, and anyone whose supplies have run out takes some from his neighbor without any objections. At any rate, no one goes hungry as long as any clansman has provisions. All the hungry individual has

/313 cont./

796 morning it is necessary to take back the ski and so forth quietly
782 and stealthily. These things are placed so that the Tly-n'ivukh descend the tree, and by these objects they find out the nature of the Tly-n'ivukh and "if he has a good heart," if he will give a "risk" /fart/ or not. "After all, five of us go, one caught something while another goes on and on pursuing but gets nothing. What is the reason for this?"

731 During a takh -- smallpox epidemic -- in Tyr all the
782 Gilyak assemble, make a sacrifice -- bow, present rice, roots,
[165] and berries. First the 120-year-old man Zyavkayu from the village of Dyl'myu sacrifices. They pray before the tree chêdzigr. This old man remembers four big takh.

796 Pal likes a tree with different peculiarities, and on solemn
782 occasions such objects are selected. A sacrifice is always made to one's clan Pal-yz' (the master of the mountains), but they are
[372] not made to Pila-yz' (the great master). He is most frequently seen on a knoll. One must not shout to him. There is a conversation going on on the other side -- that is Pal-yz'. Pal -- mountain master -- likes a black dog; Tol -- sea master -- a
[354] white one. Each large house has two fires, Pal-tuur and Tol-tuur. If a person has one stove, it is only Tol-tuur, and if he must boil bear meat, he goes to a clansman of that khala who has two stoves.

798 Tol-takhej -- a takhej of larch; a hammer, chong-chtäs',
787 is hung on it. Near it is a halynyr (bench /labaz/) on which are
224 placed the carcasses of dolphins, kaluga, and reindeer. And here
225 they invariably boil the dolphins, here the bones are left to lie, except the skulls and heads, which are carried away to k:khork n'angof, i.e., a place where they put skulls. During the fynyndz: only two dishes are placed on the halynyr -- mos' and muvi (kissel/ a jelly-like dish/). It is also from here, in the presence of the entire khala, that they throw a little of everything into the Amur, but say nothing -- otherwise another misfortune will occur. -- Then on the takhej they hang tobacco, ag:a (akhydz') -- a bunch, yukola -- pys' and announce that everyone should come out and feed it. This is the main office of Tol. People are sent

342 Sanctifying the house. On the eve of sanctification, on the day of
787 the completion of the building, with the setting of the sun, a reliable man must make his way there and be attentive for a cracking sound or streaks of light.

342 If a cracking sound is heard during the sunset, or purple
787 streaks of light are noticed, this is a bad sign. If the cracking
789 is at dawn or the streaks of light are bright light -- this is a good sign. The bad sign means that not a real "master," but a
[776] devil -- kins has settled in the house. Then the shaman must be called, and he makes a chkhnyr chkhnaj, a grass figure, and
342 drives out the demon. A real "master" is fed two times -- in
776 autumn (cleaning) (1) and another time when one wishes. They
782

[372] 1. Evidently speaking of the cleaning of the hearth by feeding the "master" of the fire.

feed all the posts, the door posts, the threshold, the matka, the stone under the threshold near the door, where the old man or the old woman lives, guarding the house against the entering of the evil spirit.

342 /318/ Driving out the evil spirit takes place in the follow-
789 ing fashion: a grass figure -- chkhnaj, on three legs, is placed in the middle of the yurt. A man holds it by a string tied to his hand; in his other hand he holds a club. A shaman shamanizes
[534] with a tambourine. The evil spirit must hide. The shaman
[756] enumerates the walls, boxes, and various things in the yurt from which his kekhn must drive out the evil spirit, and he does not mention only one corner -- it is there that the evil spirit is hiding.

342 The shaman then says: "gy, gy (i.e., 'good'), in such and
756 such a corner there is no evil spirit." And all answer: "Gy-gy,
789 gy-gy, such and such a corner does not have evil spirits." Finally the shaman says: "The kings has hidden in such and such a corner.
[776] Massi (apparently the spirit -- assistant of the shaman), go and get him, and the rest make a battue!" "There, he went out, he went out as a dog..." (speaking to the kekhn, i.e., to the spirit).

/327 cont./

764 facing west, is placed upon the stacked firewood -- hap, the arms folded with the palms toward the breast, and the legs bent with the knees up (the favorite position on a plank bed. Then they pre-
[372] pare the wooden device for obtaining fire -- chkhach: tugur, namely, a vertical stick, lung (drill); the tinder is placed in the middle of a small stick, the fire is obtained by rubbing the lung against this latter, and the master of the house sets fire to the shavings.

Before (lighting the fire) they get up on the firewood and
[152] cry over the deceased. The crying is begun by women. It is a sin for a man to cry over the deceased, except for his wife. The wife of an elder brother, but not of a younger one, goes to cry on the hap of a deceased bachelor.

The lamentations over the body of a husband: "My husband, oh woe, the gay devil (crying), the gay ones killed, above me now they go; another man now; (those who are) poorer than I will grow rich, (be) richer than I from now on. I shall now eat only my tears."

[152] When the fire is well under way and the flames begin to approach the upper part of the body, they take firewood from a prepared stack and throw it in the fire; even a small child throws some kind of little stick; others poke the body with long
[763] sticks; this is an expression of love. If under the influence of the fire the hands of the deceased stretch out, this is an evil omen of the imminent death of some close kinsman, and the hands are restored to their original position with sticks.

At the completion of the ceremony of cremation, a dog is sacrificed, and upon killing it, its head is bent downward and toward the appropriate deity: to Pal toward the east, to Tol -- toward the sea. Some throw away (put into a pit) the dog's skin /328/ together with the meat; others boil the meat, for which a special fire is laid by the side of the hap, and the meat is partly eaten, partly scattered around. After this they set out for the yurt of the deceased, eat a spoonful of food each, smoke a little, and disperse.

/334 cont./

834 One may not sleep with a woman when nooses and trap
are being set, i.e., during the narkhund, and also during a b
festival and when a man has died.

372 In the fire nearest the exit is the tugur-mam, and beyo
782 the fire the old man tugur-ychkh. The tugur, the master of t
fire, is fed with all sorts of viands; they throw them into the
and say: "Urgur injä, urlantaf mujä!" (i.e., "eat well, be a
house!"). Next they feed each /335/ corner, repeating: "Ur
tugur mujäik urlaf parkjä, hiulan taf mujä ta chos'khejä" --
a good fire, do everything well, be a house that brings luck i
the hunt, do not get broken!" (it is understood that the old w

/335 cont./
372 of the fire, the tugurmam, lives there). Then they feed the four
382 inau. Furthermore, a hole is dug at the left front corner of the hearth, and they put sacrifices there, saying, "Urgur n'ŭ, nekhlang kin kekholaf khavryr hunivaguja" -- "after eating well, make your children live without sickness," and after these words the hole is filled up. Finally, they feed the kel'nung ankh --" the bitch looking into a behind." At night, when everybody has gone to bed, it is necessary to burn a fir and say a prayer.

When the hearth is renewed in the winter quarters, small inau are set with sacrifices. In the evening they place three firs, tie them up with saranka and puchka, and then, when everyone has gone to sleep, they throw sacrifices up through the pipe: one is thrown by the women, another by the men. Before the beginning of the festival, the hearth is cleaned, covered with fresh earth, and lighted with the clan steel.

The spirits living in the house. Tav yzin -- the master of the house -
76 four chkhnaj, two male, two female, all pila hejmar -- old men.
42 Tavyzing tugur yzing. This yzing was a tribesman in the past. His soul lives in the yurt in the tugur (flint box).

When the yurt breaks, the tugur must not be touched.

(688) If one breaks the tugur (box), he pays a fine.

Lymyz'n-mam -- mistress of the threshold. She is in fish skin, hunchbacked, gray, lulls crying children. When the ceremony of stamping the threshold is held, when a woman leaves for another clan, she sits in the corner at the entrance, near the cups which are placed on both sides of the threshold.

IV.

Women, Childbirth, and Children

/32 Means for love. There is medicine to make another person
25 fall in love with one. The brain of a cuckoo is mixed into tobacco (then a man soon dies), or a cuckoo feather is sewed in a dress. The girl then goes around like a mad person.

/350 cont./
177 themselves give a reason other than the scarcity of iron for this,
325 As recently as a generation ago a steel was a valuable thing, /351/
and sometimes an entire clan possessed a single communal steel.
372 Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in
177 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is
241 the ready products of nature -- fish, fowl, berries, roots; he
181 is as yet incapable of helping nature along and accelerating her
492 creation of foodstuffs. He does not plant or sow, or raise domes-
252 tic animals for meat. This is the fundamental feature of a
415 "savage" state. Moreover, Gilyak traditions of times when
323 water was boiled in troughs by means of hot stones and their
174 memories of wooden dishes coated with clay, and the absence
173 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

182 /354 cont./
614 5. The members of the clan are bound together by common
896 sacrifices and festivals. The "festival of the bear," known to
[574] everybody, is held, not by an individual settlement, but by the clan, even though /355/ guests from other clans are invited to take part. The bear is bought by someone in the clan, but all the expenditures in connection with the festival are covered by the clansmen. These expenses often reach a sum of several hundred rubles. Clansmen assemble from all directions, as well as great numbers of specially invited guests from other clans, who have to be entertained and fed for many days, and not only they, but their numerous dogs as well, devour a great amount of food during the festival. The opinion that the bear festival has a religious character or that the bear is considered to be divine or a spirit by the Gilyak is completely unfounded. The bear festival is purely a
[224] clan festival. Naturally, there were times when a successful attack on a bear, an attack conducted in those days collectively, by the whole clan, was a real triumph for the clan, which devoured the huge beast at a common feast. Since the attack on the bear was most conveniently made in winter when the sleeping animal was captured in his lair, the custom of celebrating this holiday in winter was perpetuated. The experience of centuries evolved a full ritual for the festival, which, like everything old, assumes in the eyes of the barbarian the character of something sacred and inviolable.
[782] All the sacrifices during the festival are made, not to the bear, but
[706] to the god of the taiga, the master of the bear -- "Pal'-nivukh."
[825] It is also understandable that the bear itself has acquired a position of honor: Its meat cannot be thrown to the dogs, it cannot be eaten with seasonings, etc. "Pal'-nivukh" himself will exact revenge for such offenses, ordering other bears to bite especially hard. To sum up, the bear festival is a clan festival, and, on
[562] this basis, women, as the nonpermanent element of the clan, are not present at the killing of the bear, although they
614 participate in the eating of it. The fire in the stove in which
392 the meat of the bear is cooked is started only by the clan
[252] steel. A touching custom among the Gilyak is

614 /355 cont./ A touching custom among the Gilyak is
377 connected with this steel. When a clan is divided and part of it
167 emigrates to another place, the elder in the clan (khal'-geymar) breaks off a half of the steel and hands it over to the elder among the departing clansmen. With this steel the new settlers will light the fire on a new hearth at the bear festival, and it will be handed from clan to clan for the same purpose. Hence the expression "to break the fire" came to signify the separation of the clan. This custom reminds us of Greece, where those leaving their native land to found new colonies used to take with them the sacred fire of the home altar.

Another clan festival is held in the spring before the hunting
614 of the seal. On this occasion, too, the expenses of the refresh-
825 ments are borne by the /356/ clan. With the approach of even-
782 ing, when the moon rises, the entire male population of the clan
[562] (again the women are excluded) goes to the seashore. Here, in long troughs, they bring all the choicest viands which, carefully prepared, had been left untouched for the moment of the sacrifice. Then all those present squat down and each throws into the sea a handful from each trough as a sacrifice to the deity, pronouncing the customary formula of prayer: "Kur niongu-khia!" ("God, please!"), after which they gather in one yurt, where the refreshments begin, in which the women take part.

614 6. The khal' guarantees life and security to each of its
682 members from encroachment on him by the individuals of
628 another khal'. The means is clan vengeance.

The settling of Russians in the region, it is true, has
[177] weakened considerably the efficacy of this institution, but has not destroyed it. Every murder, intentional or unintentional, calls for clan vengeance. The closest clansman of the murdered man -- his father, son, or brother, and in their absence his other clansmen -- must, in the figurative expression of the Gilyak, "raise up the kindred bones" (nyn'vo yozynedzh), i.e., kill the murderer or at least some person of the male sex of his khal'. And the wrath of vengeance is so great that not even newborn children are spared. I have heard that the unhappy mothers of such children, out of fear of the avenger, have resorted to

/363 cont./
177 deception and exploitation everywhere, but by degrees they will end up by making use of the same weapon. The Sakhalin Gilyak have a good chance of maintaining themselves longest of all since they are farthest from the center of settlement. But Russian influ-
177 ence makes itself felt even on them. From all the settlements
464 they go out to work for wages and go to make their purchases at
[439] Nikolayevsk, and every Gilyak who returns from work to his native settlement brings back the same atmosphere as the youth who returns to a Russian village from work in the big cities. Moreover, work in the towns, with its varying fortunes, ever more /364/ and more destroys that primitive equality which constitutes the dominant feature of the simple economic life of such peoples as the
[454] Gilyak. Together with the wealth that they have amassed in the new environment, people bring back the economic customs of the environment. But for the present, let us not look into the new phenomena in the life of the Gilyak; let us turn now to their still unshaken foundations.

III.

Religious Views

776 Though the dominant feature of the polytheism of the Gilyak
392 is its anthropomorphism, the worship of the powers of nature lies
[791] at its foundation. Thus, among them, fire is a deity, "a small-small deity," it is true, but one nevertheless. To the question "why?" a Gilyak replies: "But without fire how can one live?" It is considered a sin to put out a fire in the hearth; even damage the fence of a hearth is a sin. During the season of seal hunting,
[688] or when a newborn child is in the yurt, and in many other cases, it is considered a sin to carry the fire out of the yurt. It is to fire as to a divine element, that the Gilyak entrusts the bodies of his dead. In the hierarchy of deities, however, fire is far from occupying first place. The fact that obtaining fire is within the power of man greatly diminishes its majesty in the eyes of the

396 /364 cont./
[372] Gilyak. Finally, the hierarchy of the deities is based on the number of benefits received by man from each of them, and the sea
[191] and the taiga give the Gilyak more than fire does. Imagining the elements and the powers of nature as divine, even often referring to them as gods, a Gilyak at the same time believes that each element has its own master -- nivukh, who is a god -- "kur." These nivukhi are real Gilyak, not only in their striking similiarity, but even their dress (let us remember that "nivukh" also means "Gilyak"). These are not a product of the imagination; "one can see them." "A certain man," -- a Gilyak acquaintance told me seriously, "once met the master of the sky ("kur"). He was riding on a sled pulled by wolves, but, upon encountering the Gilyak, the wolves turned upward and disappeared into the sky with their rider." One can hear about many "nivukhi," that a Gilyak of such and such a settlement has recently seen "him" in this or that place. Like the Gilyak, the nivukhi have children, perhaps there are whole clans ("khal'") of them, and, like the Gilyak, finally, they are mortal. The god of the taiga and of the mountains, the master and the father of all forest beasts, is called "Pal'-nivukh" (pal' -- mountain, taiga). All the sacrifices /365/ at the bear festival belong to
[182] [196] him. It is he who orders the bear to bite "very hard," in case of a violation of the ritual of the festival. The god of the sea, the father and master of all inhabiting it, is called "Tolles," "Toll'-nivukh, and is just about the most powerful deity of the Gilyak; it
[82] is he who sends illness and healing. The sun, the moon, and the stars are all deities of the Gilyak, and the first two are spouses; the sun is the wife; the moon, the husband; and, of course, on these heavenly bodies are gods -- masters. "Have you never seen a Gilyak said to me with assurance, "the nivukh on the moon when it is large? He is fully a Gilyak!"

There is among them an idea of something like devils ("ncuidharush"). This is a whole khal', living in the sea and dangerous for the Gilyak when they are hunting seals. They ride about in boats and when they see a boat with Gilyak killing seals, they loudly ask: "What are you doing here?" Woe if the Gilyak repl

293 /395 cont./
412 and copper arabesques and various engravings (ibid., Fig. 2).
[53] The sheath is always of thick seal leather (from Phoca barbata)
[237] adorned with various kinds of embossed arabesques, and it is very uniform in shape, widest in the middle, tapering toward the bottom, and not closed at the tip, but only provided with a bundle of leather lappets to protect the point of the blade (ibid., Fig. 3, and Pl. XIX)[2] (5). Usually a second knife is also worn at

[128] 5. On Pl. XVIII,[2] the never absent, large belt-knife was omitted by mistake.

the belt: the yi-dshakko (Pl. XXXI, Fig. 4),[3] quite indispensable to the Gilyak, with a small, pointed blade on a strong wooden handle, which, for greater firmness, is equipped with a bone ring
[237] at the lower end. It is always inserted in a firm sheath made of sturgeon skin, with a wooden or bone tip (ibid., Fig. 5). The yi-dshakko is used for cutting wood and making all kinds of crude as well as delicate articles out of it. It should be noted that the Gilyak always cuts toward himself, not away from himself, as Mamia Rinso points out about the Ainu, too, in contrast to the
415 /396/ Japanese (1). Just as rarely lacking in a Gilyak's belt as
372
293

1. Cf. Mamia Rinsô, "Tô-tats ki ko," in Siebold's Nippon, VII, p. 188, besides the latter's note, p. 202.

the above-mentioned knife is the fire apparatus: a container
[53] for tinder and flint, and a steel. The former is either a small
[237] bag of sealskin leather (Gilyak tschondaR, Pl. XXVIII, Fig. 5),[4] usually similarly decorated with embossed arabesques or with small fur rosettes sewed on it (2), or a box (Gilyak mlo; ibid.,

2. In the village of Tyk on Sakhalin I saw a specimen of this kind that was decorated with small pieces of the fur of Otaria ursina, the first from this animal that I had encountered in the Amur region (see Vol. I, p. 189, of the present work).

[2,3,4,5] [See Category 116, pp. 999, 998, 1011 & 1008 respectively --Analyst]

293 /396 cont./
398
415
[53] Fig. 4) that is very peculiar with regard to the material as well
[237] as the form and arrangement. It is made out of the skin of a sturgeon that is softened beforehand for the purpose and later hardening like wood: on the Amur out of the skin of the tukki-tscho of the Gilyak (Acipenser Schrenckii Brandt), on Sakhalin out of that of an allegedly similar kind occurring in the northern part of the Sea of Japan and called okras by the Gilyak. The mlo consists of two quite similar pieces that may be inverted over each other and at their upper or lower edge are bent into a spiral and attached to a leather strap in such a way that, after pushing away a bone tube running on the latter, the upper
372 piece can be lifted off the lower one. Like the tinder box, the
293 steel, too, often hangs down from the belt on a long chain (Gilyak kessj-kessj) equipped with various appendages (Pl. XXVIII, Fig. 1,[2] and Pl. XXIX, Fig. 1).[2] Sometimes there is also found
293 on this a bent, little iron rod pointed at the bottom (Pl. XXVIII,
/412 Figs. 1 and 2), which is also carried separately and serves for all kinds of purposes, at one time for making a hole in a strap, at another time for loosening a knot or cleaning the pipe, etc.
[321] This instrument (Gil. kedak) is not infrequently also made of
[53] horn or bone, and as insignificant and unessential as it is in itself, nevertheless it is usually decorated with all sorts of carved
293 figures (Pl. XXVIII, Fig. 3). Finally, various other odds and ends usually hang in the belt of the Gilyak as he happens to find them, for instance, a boar's tusk or tooth, a piece of antelope horn or deer antler, etc.

291 In winter, the Gilyak women also wear coats of dog fur,
237 which are made like those of the men; nevertheless they are sometimes seen, though rarely, in coats of more precious furs. In the winter of 1856, for instance, in Tangi on Sakhalin, I saw one of the wives of the Gilyak Kombrein wrapped in a coat of fox skins with the fur turned to the outside, under which two under-coats of blue and of patterned Chinese material trimmed with otter and sable furs were visible. On neatly dressed girls, children of well-to-do parents, one sometimes sees on the dog-fur coat a narrow fox-fur collar, the so-called mungrusk in Gilyak,
[2,3] [See Category 116, pp. 1008 and 1009 respectively--Analyst]

412 /502 cont./ Two Persons are required to
[372] work with this drill, in that, by means of a piece of wood, one person presses it from above, where a little iron peg set into the handle is found, against the place where the hole is to be, and the other one sets it in rotating motion by quickly pulling a strap looped several times around the handle -- a procedure which I also observed in connection with the Gilyak method of making fire by friction to be discussed later and in another connection. For this reason, I am inclined to regard the lung,
[192] as well as a second, quite similar and also similarly operated,
[194] but somewhat thinner drill, which the Gilyak call pisk, as ancient instruments perhaps invented by them themselves, whereas the small drill for finer work and similar to our tools of this type (ibid., Fig. 8), whose Gilyak designation is still unknown to me and which is wholly of iron, may be later and foreign in origin. (1). This is undoubtedly also the case for another

1. The Olcha-Tungusic designation for this small drill, according to Maximowicz, is sselgefó and sseldschefó.

[192] instrument, the saw. I myself never encountered this among the Gilyak, but in the village of Tylm Maximowicz saw a specimen of it which looked exactly like our ordinary carpenter's saw and was called puf by the Gilyak, pófo by the Olcha -- a correspondence in designation which likewise indicates a common borrowing of the object concerned by both peoples from a foreign source.

396 But after this digression let us return to the construction
[192] of the boat. The rear end of it is closed off with a vertical stern-board, and above it and between /505/ the two side-boards a horizontal board (Gilyak ott(o)ma), projecting somewhat toward the rear, is put in to serve as a seat for the steersman. The bow is closed off in front by two obliquely placed boards (Gilyak alo), the left one always riding a little higher than the right one, which gives the prow a pointed shape. All the seams, and especially the two longest ones, between the bottom and the two side-boards of the boat, are calked, but this must be done

764 After the narte had been set down, the dogs were unhitched, and one of them led back to the village, while the other two were tied to a tree. Now the wife of the deceased stepped up to the corpse and removed the pieces of cloth and the spears, the gray shroud, the jukola, the tobacco, and the pipe, and put these articles aside on the ground. She also untied the eye binding and threw it away, as well as the bundle of wood shavings from the neck. Then she took from one of his hands a pinch of fine tobacco and from the other a root which had been placed between the fingers, and finally, untied the string which tied the corpse to the narte. In the meantime an old Gilyak had been busy spreading fir branches on the pyre.

When this bed was ready, the corpse was lifted from the narte and put on the pyre (Plate LXIV /p. 1264 /). On the bottom of the narte lay a board and on it a large piece of birch bark which showed traces of its use for storing berries and which had now served as the underlayer immediately under the corpse. The board and birch bark were thrown off, and the sled was pulled aside, where a Gilyak broke it in two and left the pieces lying there. In the meantime, others were busy killing the two remaining dogs, which was done in the following way. One of the Gilyak held the dog on a cord, another threw him a piece of jukola, and, while the dog was eating it, a third hit the dog's neck with a cudgel and pressed it /766/ to the ground with it, whereupon a fourth pierced the animal's heart with a small pointed stick. Both dogs were
764 372 killed in this manner and laid aside (*). Meanwhile, still other

* On Plate LXIV /p. 1264 /, due to an error, all three dogs are pictured as present during this act.

Gilyak made the fire for the cremation of the corpse. According to the Gilyak view, this may not be produced in the ordinary way with flint and steel, but must be made by rubbing pieces of wood together. For this purpose a kind of spindle was carved out

/766 cont./

764 372 of dry larch wood, as well as two elongated pieces of wood with a cavity in the center of each one, into which the tip of the spindle exactly fitted. A small piece of fungus was put into these small depressions in the pieces of wood; the spindle was put into them with its tips vertical, and turned with the help of a strap, which ignited the fungus after a few moments. The fire obtained was then maintained with fungus. (Plate LXIV /p. 1264 /, left foreground.)

764 Meanwhile the other preparations were made at the funeral pyre. After the corpse had been placed upon the layers of fir branches, as has been mentioned, it was covered up with a thick layer of fir branches, but in such a way that the forehead and the crown with the gray hair were visible in the brushwork. Now long logs, of the same dried larch wood as all the rest, were put around beside one another in the form of a pyramid, with only a small space left open at the head end, through which one could still see the gray crown. At the same time, several long logs were placed inside the pyramid on the fir branches that covered the corpse. When the pyre was ready, the place around it was cleared somewhat, in that the dry brush, the smaller roots, and the grass around the pile of wood were removed with the ax, so that the fire would not spread. Now the widow of the deceased took the glowing fungus, wrapped it in dry moss, wound a wide strip of birch bark around it and, by swinging it back and forth, made the flames which she fanned into bigger ones with another piece of birch bark. Since, out of lack of experience, she did not know where the fire must be put first, an old Gilyak gave her the necessary directions, and she now put the fire under the head part of the pyre (Plate LXV /p. 1265 /). As soon as that was done, other Gilyak came to help, took fire from the wife, and put it at corresponding places on the other side of the pyramid, under the corpse and then all around it, for which they used the birch bark that had lain under the corpse on the narte. The dry and easily inflammable material quickly caught fire, and with the moderate breeze the whole huge wooden pyramid soon stood in blazing flames. The heat streaming from it forced the

516

Child's cradle.

The Nivkhi clans could split up and settle in different places; they could also access (adopt) people of other clans and tribes. When a clan divided, the Nivkhi broke the flint which was kept by the eldest in the clan (the flint was used to obtain ritual fire, such as the fire for cooking bear meat), and gave a piece to the part that split off. 614 372

Long ago, the Nivkhi had the institution of vendetta. All members of a clan were bound to avenge a murder upon all the men of the murderer's clan. Later, vendetta began to be replaced by blood-money (khusind). In reconciling clans through the payment of blood-money, the principal role was played by intermediaries of a neutral clan (khlay-nivkh). It was their duty to negotiate the size of the blood-money and to persuade the enemy 614 647

764 burned their dead, but they also buried them in the earth. During the burning, they broke the sled on which they had brought the corpse and killed dogs. Their meat was cooked in large cauldrons and eaten on the spot. The "sendoff of the soul" took place several days later, on the day of the "lifting the tree," as the cemetery was called. There they built a raf—a little hut for the figurine which represented the dead.

At the cemetery more dogs were killed on this day. The women sewed clothing for the figurines. Models of hunting and fishing gear were attached to the figurines, and a variety of household articles were laid with it. The real gun, kettle, teapot and other articles were broken nearby. It was held that on this day the soul migrated in a sled into the world of the dead, situated underground. The dead were buried only by members of their clan. [795] 614

A variety of taboos were connected with the fire, whose "master" spirit was an old woman. The shaman's duties among the Nivkhi were connected with "healing" and with the constant struggle with the evil spirits, milk and kinr, which caused illness and death. The shamans had their own helping spirits (kekhn). However, shamanism was not greatly developed among the Nivkhi. It is interesting that the shamans did not take any part in the clan cults. 372 784 756 795 614

538 Folk Arts

The traditional poetic works of the Nivkhi are varied. There are songs of various kinds, tales, proverbs and sayings, and also myths, reflecting the most ancient ideas about the origin of the world, of nature, of various natural phenomena, and of spirits. There are also epic and historical tales (tyfugh), describing hunting feats, wars between clans, etc. The Nivkhi myths also include the Tunguso-Manchurian myth about the three suns. According to one of the Nivkhi myths, people descended from trees: the Nivkhi descended from the larch, the Orochi, from the birch.

531 Among the decorative arts, the most developed were carving on wood and bone, embroidery and appliqué on robes made of fabrics and fishskins. Most of the articles of daily use—wooden troughs, spoons, dippers, birchbark boxes, knife handles, spear-tips, pillows, blankets, robes, hats and mittens—were covered with spiral-ribbon designs, executed with great taste and skill. Wood-carvings also decorated barns, burial huts and dwellings. In motif and style, the Nivkhi design is related to the design of the Ul'chi and Nanays. The principal motifs of the ornamentation of clothing and birchbark utensils were symmetrical combinations of bent lines, often almost spiral, and stylized representations of birds. Appliqués from fishskin, fabrics and birchbark were cut out according to birchbark or leather patterns, transmitted from generation to generation. Robes, birchbark boxes and hats, and other articles had standard combinations of ornamental motifs, reproduced on articles of specific groups. The main colors in appliqués of birchbark, fishskin and fabric were black, white, red and blue. Appliqué on birchbark, fabric and fishskin was women's work; carving on wood and bone was done by men. Many women were famed for their skill and craftsmanship. [462]

The origin of the Nivkhi ornamental art, as well as the art of other Amur peoples, has not yet been sufficiently established. Some of the motifs (such as roosters, dragons and monster-serpents) were unquestionably suggested by Chinese art and mythology, but underwent considerable local transformation; others (spirals) probably date back to neolithic times. [197]

225 the boat; just as in the Siberian salmon fishing season they
501 unite in a collective which centers around the seine or the
476
422 zayezdka.
466 When the hunting season opens, the owner of such a boat starts collecting his companions. If the owner happens to have
225 a son-in-law (ore) in the village, he asks him to join him in
514 the hunt. In general, however, the owner of the boat selects
476 hunters regardless of clan membership.
466 Thus, for instance, the boat owner, Gilyak Norp of the clan
556 Tf-nu , was accompanied by hunters from the following clans: Otaq from clan Hutevi-, Potaq from clan Neo afi-, Ot from clan a ramla , Onkan from clan Lez-ran and Tesk from clan Tf-nu-.

A similar situation existed in collectives of hunters who went hunting in 1931.

The hunter collective centering around a boat is sometimes named after the owner of the boat. For instance, l tun-munim ('one boat of Gylkhtyun') Xitkun-mu-nim (one boat of Xitkun).

225 The owner of the boat is the organizer and leader of the
556 collective of hunters grouped around him. Those who travel
476 with him are his subordinates. The leader of such a collective
466 of hunters is called pila ('bolshak') (2) (from pila-d--'to

2. This is the name of the oldest in the clan and generally of any foreman in industry.

be big,' - suffix used in forming verbal nouns.)

225 The duties of pila are many. A pila is supposed:
476 1. To look over the boat, the rowlocks and, if need be,
502 to effect repairs.

2. To prepare and to take along a strap, harpoon tips (tamra), harpoons shafts (ve-l), his gun and the guns of his fellow-hunters, a kettle and a tea-pot (the hunters are obliged to take only cups with them), a tent, a sail, a tripod for the tea-pot and the kettle, and a compass. (3) Most of these items

3. Earlier they used to take to sea afq-va ("friend-stone" or "friendly stone"). See the remark in the supplement to "Seal Hunting."

are the property of the pilaf.

225 3. To perform a number of religious-magical ceremonies
782 before setting out for the hunt as well as during the hunt. In
372 this capacity the pilaf exposes the boat to smoke, performs
476 mu-zi-d and tra-j; ceremonies to be described in detail below.

CONTINUED ON NEXT FICHE

462 fragments. Finally she threw into the water grass muzisger.
782 Soon the sea closed quietly over the remains of the sivuch
225 thrown into it.

Now Xitkun's wife bent and picked up as many pebbles as
372 there were sivuch heads. At home she threw them into the
782 fireplace. These pebbles are called uŋkis 'pay' (j-uski-d
225 'to pay.' s - suffix of the implement of action).
775 There arises the question why this pebble is called pay and why the Gilyaks pay for the hunt to the master of fire?

Of some help in answering this question may be the following opinion of the Gilyaks of which I was told on Sakhalin in 1927 by the Gilyak Murmur of the village Chayvo. Murmur informed me that while the hunter is still asleep the master of the fire hunts seals for him. If the master of the fire fails to kill a single seal, then the hunter will fare no better. "We sleep, fire first kill seal. Fire seal not kill, we also not kill."

The ceremony of throwing the heads into the sea concludes the seal hunt.

115 A seal hunt. (1) Supplement
225

1. This is a translation from the Gilyak language. The text was taken down in the village Hiski, 40 versts from Kul, on July 10, 1931, and was told by old man Jajpan.

225 In the spring we came to a summer village, we were suffering hunger, we caught only fish, catching bullheads on hooks, only ate. Then the sea ice moved. The pilaŋ said: "Let's hunt seals. How many will go? Six gathered to go. "Women make mos, make muvi." Then we slept. In the morning we got up and ate."Prepare your things, harpoon tips, harpoon shafts, oars, small benches, and put everything in the boat." Then we brought out things to the boat and put them down. All got down into (entered) the boat. Then we pushed off the shore. Five rowed. Then, rowing, we got to sea. After we got to sea, we came alongside the shore. When we came alongside the shore, we pulled out the boat and lighted a fire. The fellows said: "Big man (2) make

2. i.e. pilaŋ

tŋaj." The big man made tŋaj. He made two tŋaj; one was at

corpse is placed on the pyre ready for cremation, and all is now ready save the hich must be procured in a special manner. In memory of the earliest traditional s of obtaining it, flint and steel may not be used, nor of course the Russian, or Japanese, matches. A pointed stick is inserted in a hole made in a piece of plank on the ground. Four men take each an end of a thong attached to and twisted round ck, and pull it. This rotates, generates friction, and ignites the dried tinder in close proximity. The top of the stick is steadied by pressing on it a flat piece d, or if need be a Gilyak applies his chest. Torches are lighted, and fire is ap- is chest. Torches are lighted, and fire is applied to the pyre, first by the widow, eceased leave one."

d of that element."

10: Coxwell--128 [2] B-3 (no date) 1925 Gilyak
116, 372, 539, 776

"THE GILYAK WHO OFFENDED THE FIRE LORD

[LSS: For the text of this tale, see category 539, p. 121.]

The Lord of Fire is considered by the Gilyaks to be an intermediary between man and all the deities; and the hunter who sacrifices to fire considers that he thereby propitiates the Lord of the Forest, and secures success in the chase. In the Gilyak story, 'The Mountain-devil in the form of a Tiger,' a party of hunters sacrifices to fire. In the Yakut tale, 'Al-Iot: the Spirit of Fire,' a spoonful of all food is thrown to the Fire. Among the Yukaghirs, a definite form of words is employed before a fire when a new net is dedicated."

13: Seeland--27 E-5 (no date) 1882 Gilyak

462 takes trips on various business matters, and so forth; he
also takes care of fishing. The woman spins, makes nets
and clothing, cooks, takes care of the children and the dogs.
286 Weaving is entirely unknown to the Gilyak, artificial ma-
326 terials, such as twine and needles are bought; the latter,
463 moreover, they formerly fashioned in a very primitive
manner. In general it can be said that every Gilyak man
and woman knows how to do all the work necessary for their
existence, although not in the same degree. For instance,
with respect to metal work: everyone knows how to make a
knife, not everyone can make a hatchet, and only a few,
finally, concern themselves with the making of a jew's harp
(to be described below) and the more intricate weapons, as
for example lances with silver decorations.

● 372 This is the place for us to say something of fire-making.
The Gilyak customarily wears a pouch on his belt, containing
flint, steel and tinder. The birch fungus is used as tinder,
flint is found in abundance on the banks of the Amur. If they
should lack fire tools they make fire, just as other primitive
peoples do, by friction. A dry stick, on both ends of which
is tied a bit of fungus, is put into a groove on a block of
wood; one person holds the stick upright, another winds a
string around it, takes the ends of the string in his hands
and makes a sawing motion back and forth. Usually fire is
produced after a half hour.

IX. Weapons

411 The Gilyak customarily carries no other weapon except
his knife which is seldom used for defense. The knife con-
sists of a pointed blade and a wooden handle. The blade and
half the handle are carried in a leather sheath which is worn
on the belt. To the actual weapons belong lances, bows and
arrows and at present also the gun which many of them have
obtained.

The bow is made of wood but has an underlayer of whale
bone which is glued to the wood with fish glue. They like
best to use ash wood (frax. mandshurica). On the inner, i.e.,
the whale bone side not far from the ends there are two [125]
small grooved strips for the bow string. The unstretched
bow is bent so that the whale bone faces outward, but in use
it is on the inside, otherwise it might be damaged. The
string consists of intertwined sinews of rope. It requires
some effort to stretch the bow, and the shot is powerful. The
arrow has three small feathers at one end, the other end is
somewhat thicker and has an iron point which is barbed, but

13: Seeland--53 E-5 (no date) 1882 Gilyak

755 softly or whispers magic formulas, walks back and forth
534 like a pendulum, far into the night. Sometimes he leaps
over a burning pile of wood, or he makes the sick person
755 run about if he is able. Some shamans impress their public
786 with more difficult tricks. They appear laden with chains,
778 whirl about like mad, and in a state of ecstasy may hurl
themselves into the fire and make believe it does them no
harm. Narcotic drinks are not given, but the sick person
sometimes gets certain herb infusions from which the
shamans expect healing effects. The magic feats are
corroborated with various prescriptions relative to the
spirits. For instance, an idol in the shape of a human being
is placed next to the sick person, its face smeared with
cranberry juice, and the sick person himself has wood chips
hung around his neck, etc. Or the shaman orders that the
clothes of the sick person be hung out in the woods and that
he be [244] dressed in others. This is done in order to
outwit the kobold who saw him only in his old clothes.

755 This medical magic is usually begun in the evening, at
789 twilight, when the imagination is more active and also when
deception can be more easily concealed. The shamans also
seek to consolidate their authority by means of various
magic tricks that otherwise have no practical meaning. For
instance, they swallow knives and needles. Not long ago
there lived a celebrated magician near Sofiyskoye who
gouged out his eyes and thrust a knife into his belly, which
was afterwards excreted. He was later exposed in these
juggling tricks by an itinerant Russian merchant. It was
shown that the knife blade, instead of penetrating his belly,
disappeared into his pants and passed into a receptacle.
After that the magician was completely discredited.

789 Finally, there are a few superstitious practices we must
● 372 mention. If a Gilyak goes on a journey he must drink some
271 water in the yurt shortly before he leaves; he does the same
thing as soon as he has returned. The hearth fire is also
to a certain extent sacred for the Gilyak; it is not carried
outside and the Gilyak do not like to have a traveler light
his cigar at it and then leave the house.

177 This chapter is also the place to say a few words about the
797 baptized Gilyak. There are not many of them, but no one
knows exactly how many, first of all because many of these
"Christians" let themselves be baptized several times, in
the city, for instance, as well as by their village divine.
From this we may see how much they really understand of
their new religion. We have said before that they regard

19:Genest--4 U-2 (1884-85) 1887 Gilyak

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so
bold that they nibble at the clothes that the inhabitants are wear-
ing on their body. Jakobsen was told that they even gnaw at the
fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons
customary among the Goldi women (see above, number XI, p. 173)
[see Goldi source 18: Genest--Analyst] do not exist among Gilyak
women; the latter generally seem to be interested less in grace-
fulness than durability in their clothing. The curious belt worn
not only by the Goldi but also by the transitional people mentioned
repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are
already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon
often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use
larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will
find a large number of dogs in the Gilyak settlements just as in
the Goldi villages. These dogs are highly vicious and on occasion
even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The
Gilyak are no less superstitious than their neighbors. The
amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

19:Genest--5 U-2 (1884-85) 1887 Gilyak

171 among the Goldi, are in use throughout the Gilyak people
751 and are essentially the same as those discussed earlier
301 (Number XIII, p. 207) [see Goldi source 18: Genest--
Analyst]. The Gilyak on Sakhalin Island whose houses
372 Jakobsen entered were likewise highly indignant whenever
462 he left the house with a lighted pipe or when his companions
776 extinguished the fire burning in a hut by pouring water on it.
For in their opinion such things tended to conjure up des-
truction not only over the inhabitants of the one hut but over
the whole tribe. The inhabitants of one house in the village
of Varki below Nikolayevsk predicted the same result when
Jakobsen was about to light a fire for making the tea, and
they forced him to wait till the house-wife saw to this task,
since, in their opinion, this was a job only to be performed
by her. Plainly this conduct has its basis in the sacred
position of fire. [380] Though this no longer leads to a
personification of a fire god among the Goldi and the Gilyak,
it no doubt existed among them at one time as it still does
today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious con-
ceptions of the Goldi; the most important difference seems
to me the one that was touched upon earlier (XIV, p. 223),
[see Goldi source 18: Genest--Analyst] the fact that the Goldi
pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are
fed plentifully for an extended time by means of large wooden
spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually
held late in autumn and in winter and they are affairs of
the greatest importance to their celebrators. I will now
give the description of the festival that Jakobsen had the
opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a
festival was to take place on that day. From several other
villages, some of which were considerable distances away
large numbers of guests had come in already, and the whole
place was astir in anticipation of the festival at hand. The
opening of the bear festival is in the hands of the village

225 mu-ziv-d on the boat supports the assumption that at one
789 time or another the Gilyaks, it seems, regarded a boat as
774 a living thing. Mu-ziv-d on the boat serves, it seems, as a
751 means of guarding the boat against and protecting it from
misfortunes.

782 Aside from mu-ziv-d, traj is performed on the boat. Traj
778 means 'image', 'figure,' 'picture.' With shavings (inau) of
532 a branch of rowan (qosk-aks) the pilaŋ makes two figurines.
225 One of the figurines is placed at the prow of the boat and the
789 other - at the stern. I once saw such a figurine on the neck of
a representation of the bird ugŋ, placed by the Gilyaks at the
bow of the boat. The figurine placed at the bow has its face
turned to the sea. We shall come back to these traj elsewhere.

782 There is one other ceremony performed on the boat. Before
789 setting out on a hunt the Gilyaks expose the boat to smoke.
225 They light fires of spruce and bogulnik on both sides of the
372 boat and they try to build the fires so that the smoke hit the
boat. The pilaŋ takes a branch of spruce or of bogulnik and,
starting from the bow and going towards the stern, hits the
outside and the inside of the boat as well as the rowlocks
with the branches so as to elvlaf-p-k-azd --"lose bad places
(evil)". Then the hunters push the boat past the fire into the
sea and are off.

225 I watched Gilyak Xitkun who, having already returned from
502 a hunt, put out to sea with the hunters a second time. Five
554 hunters were at the oars. Propelled by strong and simultane-
ous strokes of five pair of oars the boat took lightly and
quickly to sea. Xitkun, firmly gripping the rudder, set the
bow of the boat northward, towards the cape barely visible in
the distance. The Gilyaks rowed calmly and quietly. They
need fear nothing. At the stern of their boat sits an exper-
777 ienced pilaŋ, tested in trips. At the bow are placed a rep-
resentation of the sea bird ugŋ and the figunines traj. They
will vigilantly look out for and protect their course.

When the boat became a tiny spot in the distance and its
outlines blended with the water, the women who saw off the
hunters left the shore for home.

225 After leaving the village the hunters turn northward. They
823 first go to Ui-kr "sacred cape." (1) Once there, they pull
766
782

the boat out of the water. The pilaŋ picks up a scoop con-
taining the usual refreshments called for by the occasion and

/501 cont./
501 for subsistence as well as in their nature and character, are
[184] timid, circumspect, and cautious river and coastal navigators.
[361] And the single vessel serving the Amur Gilyak as well as the
[181] coastal Gilyak for fishing and for their communication and
trading voyages matches this. It is a keelless, shallow-draft
501 boat in no way equal to the high waves of the sea, and essentially consists of only three long boards, forming the bottom and the two side-walls, to which, for closing off the front and rear ends, a few small boards are joined. The most significant and characteristic feature of it is that the bottom board projects toward the front quite a distance beyond the prow (see Pl. XXXVIII /see p.1018/, Fig. 1). It is not level, but curved in such a manner that it goes deepest in the middle, but gradually slopes upward toward both ends.

396 In order to learn more about the construction of the boat in greater detail, let us follow it as it is produced by the hands of the Gilyak. When the three long boards, each necessarily
[192] consisting of one piece, with which the boat is to be put to-
[824] gether have been readied, by means of an ax, from the trunks of Picea ajanensis Fisch. (Gilyak twissjk) or the larch (Gilyak koi), and their upper surfaces properly smoothed with a knife, the bottom board (Gilyak moch), about 3-5 fathoms long and one to one and a half feet wide, is given the above-mentioned necessary curvature. For this purpose it is placed with its two ends on two low trestles erected on level ground, each of which consists of two crossed poles driven diagonally into the ground. The unsupported center of the board sags, but, in order to achieve the proper curve, it must be pressed down farther until it touches the ground, which is done either by weighting it with stones or, more simply, by having one or two people sit on the board. It is fixed in this position with a pair of knee timbers driven into the ground on either side and gripping the board from
[192] above. Now the two side-boards (Gilyak arp), each about two feet wide and with their lower edges beveled to correspond to the bottom board, must now be accurately fitted to the latter at a certain obtuse angle and temporarily held in this position.

/501 cont./

501

Gilyak Boat Construction

396 For this purpose several sticks are driven into the ground opposite one another on either side to serve as supports for the boards; around the upper end of each pair of the sticks standing opposite each other a strap or cord is looped (see the accompanying woodcut), and by a stronger or weaker tightening of it the side boards can be brought precisely into position so that their lower edges coincide with those of the bottom board. Once the boat has been tied together in this manner, its final strengthening can
[192] /502/ begin. First several crosspieces (Gilyak tschylch) are put between the side boards, connecting them with each other. One such connecting stick is found in the rear end of the boat, another in the middle, and a third just before the prow. The fastening
[412] of the side boards to the bottom board, and likewise all the other
[192] boards to one another, is done by means of wooden pegs, which, with the help of a little iron rod (Gilyak ottauws, Pl. XXXII /see p.1017/, Fig. 7), are driven into holes made beforehand with the large drill (Gilyak lung, ibid., Fig. 6) along the edges of the boards concerned.

412 In passing it should be mentioned that these implements,
531 not used merely in making boats, but also on other occasions, for example, for attaching the above-mentioned sole-mountings on the sleds, are always neatly made in Gilyak fashion and likewise provided with many decorations, the little iron rod with fine strips of inlaid copper and silver, the wooden handle of the
412 drill with many graceful carvings. Two persons are required to

/502 cont./ Two persons are required to
412 work with this drill, in that, by means of a piece of wood, one
[372] person presses it from above, where a little iron peg set into the handle is found, against the place where the hole is to be, and the other one sets it in rotating motion by quickly pulling a strap looped several times around the handle -- a procedure which I also observed in connection with the Gilyak method of making fire by friction to be discussed later and in another connection. For this reason, I am inclined to regard the lung,
[192] as well as a second, quite similar and also similarly operated,
[104] but somewhat thinner drill, which the Gilyak call pisk, as ancient instruments perhaps invented by them themselves, whereas the small drill for finer work and similar to our tools of this type (ibid., Fig. 8), whose Gilyak designation is still unknown to me and which is wholly of iron, may be later and foreign in origin. (1). This is undoubtedly also the case for another

1. The Olcha-Tungusic designation for this small drill, according to Maximowicz, is sseligefó and sseldschefó.

[192] instrument, the saw. I myself never encountered this among the Gilyak, but in the village of Tylm Maximowicz saw a specimen of it which looked exactly like our ordinary carpenter's saw and was called puf by the Gilyak, pófo by the Olcha -- a correspondence in designation which likewise indicates a common borrowing of the object concerned by both peoples from a foreign source.

396 But after this digression let us return to the construction of the boat. The rear end of it is closed off with a vertical
[192] stern-board, and above it and between /503/ the two side-boards a horizontal board (Gilyak ott(o)mus), projecting somewhat toward the rear, is put in to serve as a seat for the steersman. The boat is closed off in front by two obliquely placed boards (Gilyak alp), the left one always rising a little higher than the right one, which gives the prow a pointed shape. All the seams, and especially the two longest ones, between the bottom and the two side-boards of the boat, are calked, but this must be done

/503 cont./
396 very delicately and carefully so that the boards, held together
[824] only by wooden pegs, are not driven apart. Therefore, only
[412] with the help of a knife, some moss is stuffed from the inside into the seams wherever they permit it, and then a narrow wooden strip is fastened over them, again with small wooden pegs. In addition, however, stronger and wider strips, obtained by splitting thick willow switches, are put over the two long seams from the outside, so that on land the boat rests, so to speak, on two soles, convex on the outside, which, in addition to protecting the seams, also have the utility of reducing the rubbing of the bottom board on the sand and gravel of the shore in pulling the boat into or out of the water
[192] and thus protect it against damage. The analogy between these exterior mountings on the boat and the soles, or even more the sole-mountings, on the sleds is so obvious that even the Gilyak, despite the absence of generalization in their language, designate them with the same term as the latter (motassj), whereas they have a special term (twy) for the strips put over the seams inside the boat. Finally, two, or in the
[192] case of larger boats even three, pairs of oar-pins /Ruderpinnen/ (Gilyak misgyr), that is, small boards, each equipped with a vertical prong, are put in the front part of the boat on the edges of the sides. They are likewise fastened to the side boards with wooden pegs, so that not a single nail or piece of iron of any kind is used on the entire boat of the Gilyak, or on their sled. Needless to say, the Gilyak do not fail to adorn their boats, too,
[532] with a few decorations. For example, the tip of the bottom board projecting below the prow usually runs out into a crudely carved head of a snake, bird, or other animal, the two prow-boards always bear several carved arabesques on their inner surface, and, as a rule, a carved, black or colorfully painted figure, a square, star, or the like, is likewise found on the back of the stern-board. Finally, before the boat is put in the water, it is slightly charred from the outside on the bottom and the lower part of the side-boards for protection against rot,

/503 cont./
396 which is done by raising it on a pair of rather high trestles and lighting the brushwood spread under it.
[192] The oars (Gilyak ywnj) are provided with a broad, rounde blade tapering off to a point and with a hole at a thicker place on the handle for setting them on the oar-pins (Pl. XXXVIII
501 /see p.1018/, Fig. 2) (1). The Gilyak boat does not have fixed

[114] 1. This illustration has a fundamental error, so that one should visualize the direction in which the oar handle is bored as shifted by an angle of 90°, that is, not perpendicular to the blade, but in the same plane.

rowing benches resting on the side walls of the boat, /504/ for they would tear the side boards from the bottom board by their pressure. Instead, the Gilyak use small removable stools which rest only on the bottom board, without touching the side boards. For the same reason, in loading a boat, it is carefully seen to that the entire load rests on the bottom board and does not exert any pressure on the side boards. To this end several pieces of wood considerably shorter than the width of the bottom board are first placed across it, and upon these several boards which are to bear the load are spread the length of the boat -- a precaution which also serves to prevent the object transported from getting wet in the bottom of the boat. From
114 personal experience I realized how necessary it is to treat a
501 Gilyak boat with such care and precaution. In the spring of 185 when I was about to start on my first summer trip up the Amur and Usuri, I bought from the Gilyak two boats which apparently had been used very little. Still unfamiliar with their construction, I thought it best if I first had them inspected and put in order in the harbor of Nikolayevsk. One of the naval officers saw to it that they were calked like regular sloops by one of the best experts of the harbor and were equipped with rowing benches and a bench for the erection of a mast. But when I wanted to go aboard and the boats were put in the water, both of them

/506 cont./

501 184 [192] trunk. I saw such a boat (Gilyak mlo-mu) (1) in the winter in the

1. Mu in Gilyak means "boat" in general.

village of Ytkyrn, standing on a trestle next to the yurt and with the snow carefully removed from it. It was about 20 feet long, widest in the middle, and narrowing toward the two ends -- the rear end, finally, blunted vertically and board-shaped, the front end provided with a small tip. On the edge on either side a strip as thick as the side walls was added, to which, from edge to edge at a distance of about two feet apart, cross-strips were fastened, which undoubtedly, like the knee timbers at several places in the interior of the boat between the bottom and the side walls, served to give the side walls more stability and power of resistance. Perhaps the boat was not quite new anymore and needed such supplementary bracing. It did not have any oar-prongs on the edges, such as the Amur boats had, and, accordingly, the oars lying nearby lacked the holes for setting them on such, but otherwise they were of the same form as on the Amur, except that the blade was not as wide. These [171] boats are certainly also propelled, especially over shallow places in the river, merely with the help of poles, as the Kamchadal do with their similarly shaped so-called batt, and as is done also among the Tungusic peoples of the Amur region with like vessels. Finally, just as is done there, here, too, /507/ 396 824 171 only trees with soft wood, namely, poplar, are used for making such boats (1). The Tymy Gilyak use the balsam poplar

1. Cf. Steller, op. cit., p. 56, 75; Krascheninnikof, op. cit., Vol. I, p. 257.

(Populus suaveolens Fisch., Gilyak musskrj), which they specifically designated to me as "mu-tschchar," i.e., boat wood. According to Schmidt, the Ainu of Sakhalin hollow out of the trunks of the same tree canoes which they use for communication on the rivers and short voyages along the seacoast, while for

G /507 cont./

396 824 171 longer voyages they use the commonly built Japanese boats (2).

2. Fr. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, p. 99).

G Gi 501 Exactly the same type of boat as among the Gilyak is also in general use among their closest neighbors along the Amur River, the Olcha and Goldi. In appearance it exhibits no differences in shape or construction from those of the former. The Gilyak, however, asserted that their boats curved upward less at the prow end and therefore were better able to travel against the current than those of their neighbors -- an assertion whose accuracy I must leave undecided, though it agrees with some of my own experiences. They are completely different from G Gi one another, however, in the kind of wood from which they are 396 824 made. Whereas the Gilyak make their boats out of the wood of the fir tree (Picea ajanensis, Gilyak twissjk, Olcha and Goldi Gi chassjchta), the Olcha and Goldi always use cedar (Pinus cembra, 184 var. excelsa, Pinus mandshurica Rupr., among the Olcha and Gi Goldi koldong). When, during our summer voyage of 1855, we 114 landed near the Olcha village of Adi, the approaching inhabit- 501 ants of the place, who, among other things, occupy themselves principally with boat-building and who therefore closely examined ours, immediately recognized from the wood in them that one of them (mine) was of Gilyak origin, and the other (Maximowicz's) was of Olcha origin, as was in fact the case. Gi But whereas among the Gilyak on the Amur one sees only 501 boats of this one kind, the Olcha and Goldi have some of quite 184 different shape and construction. This is simply the result of the circumstance that, besides the Amur, they also navigate many of its torrential and, in spots, shallow tributaries along

G 396 [411] At various places in the foregoing, mention has been made of the iron utensils and iron weapons of the Gilyak, in the course of which we have come across, especially among the latter, specimens of very artistic workmanship. This is therefore the place to inquire into the origin and eventually into the manner G of the manufacture of these objects. The circumstance that the [342] Gilyak do not use any iron in the exterior or interior construction 396 of their houses, and likewise in the making of boats, sleds, etc. [493] always use only wooden pegs instead of iron nails to join the [335] individual pieces together, does not lead one to expect them to be masters in the craft of forging, and at first glance suggests the conjecture that the numerous and in part neat and artistically worked iron utensils and weapons found among them are of G foreign origin. Nevertheless, this is by no means the case. Even [175] in the earliest reports they are described as skilled armorers. 000 During his captivity in Siberia at the beginning of the previous

windows have fish skin stretched over them instead of glass panes. The simple, low door has leather straps instead of hinges. There is no ceiling; instead, there are a few cross bars on which lie or from which hang various implements, among other things a kettle which reaches to the front opening of the hearth. The hearth or the stove, if you like, consists of pressed clay; the larger houses have two of them. The smoke passes into a horizontal pipe made of stones and covered with clay, which goes around the room under the sleeping boards, leads out through the side wall and ends in a high wooden chimney that stands separately. The Goldi and Manchurians have the same arrangement. The smoke pipe is seldom cleaned, and yet fire does not often occur. The thin walls of the Gilyak house do not hold the heat, the stove is low and small, and thus the warming of the benches from below is a very practical arrangement. Even so, it is often very cold in the houses, especially when it is below freezing and there is a wind. A large kettle for water is put into the upper opening of the stove and besides that, as we have said, a smaller kettle or cooking pot is suspended from a chain and rests just in front of the front opening of the stove, right next to the floor. The logs are usually so long that [114] they do not fit properly and burn outside the opening of the stove, which frequently causes the room to be filled with clouds of smoke.

The furniture is very simple. Not far from the door is the hearth or, if there are two, they are put on either side of the entrance. Around the walls run the benches, or, rather, one continuous bench. It is low and so wide that a tall man can lie diagonally across it. It is covered with woven mats made of arundo. In the middle of the room is the long and low dog table. The dogs are called in before they are fed and tied on the table; they are let down one by one, fed, and chased out again. Besides, there are hanging cradles, a primitively decorated cabinet, a box, etc. On the benches stand a few stools in case a higher seat is needed for some work. On the cross beams below the roof hang all kinds of skins, fish, cloths, etc.; above these, diagonally, lie oars, lances, bows, and the like. There are no idols to be seen; these are usually kept in the storage houses and are brought out only on special occasions. In the evening the room is lighted in the most primitive fashion: a cloth and a small bowl of fish oil is the lamp, or, if there happens to be no oil, a pine chip is lighted.

In summer their bed consists of mats, in winter of bear skins or other skins. For pillows they use long, cylindrical cloth sacks stuffed with hay, one of which serves for several

291 and wide in comparison with the foot part, are made out of the thinner and more pliable skin of the last-named species of seal, with the hair turned outward; they almost reach the knee and, after the ends of the trousers have been tucked in, are tied under [142] it with a leather strap sewed to or on them. In view of the heavy growth of hair of the Gilyak, a head-covering is usually unnecessary during the summer. Nevertheless, for protection against [824] rain and sunshine, they wear a peculiar, rather shallow-conical [531] hat made out of birch bark (Gilyak chib-hak, i.e., in literal translation, "birch-bark hat"), which as a rule is decorated with different kinds of black and red arabesques arranged to radiate out around the tip and, likewise cut out of thin birch-bark, sewed on the hat by means of fine catgut (see Pl. XVII[3] and Pl. XX, Figs. 1 and 2)[2] (2).

[386] 2. The colors (black and red) are not washed off by rain. I therefore suspect that they are produced by a mixture of Chinese ink or iron ocher with fish or seal train-oil.

291 301 177 The women wear quite similar undergarments, but a longer shirt reaching far below the knees, and over it a robe /Rock/ provided with sleeves, arranged in front for buttoning, and made either of similar material or of fish skins. Shirt and robe usually have a broad edging of material in a different color, over which is put as decoration, especially on the robe, one or several rows of variously shaped brass disks of Chinese workmanship hanging down on little straps, or /388/ of the well-known Chinese copper coins with a square hole, running all around (cf. Pl. XVII and Pl. XVIII). As a result, all the movements of the women, every step that they take, is accompanied by a clatter made by the striking together of the above-mentioned metal disks or coins. This custom, as the ornaments themselves reveal, is undoubtedly of

I found it already in use among the few Russians at the Nikolayev a Mariinski posts. Nevertheless, it is certainly not of Russian origin, as Maack (5) and Brylkin (6) seem to believe. At any rate, I have

5. Putesh. po dol. r. Usuri, Vol. 1, p. 9.

6. Zap. Sib. Otd. Geogr. Obshch., Bk. VII, 1864, Misc., p. 1.

no idea how the Russians would have arrived at such a name, whose etymology is wholly unknown to us. /148/ What argues quite decisively against the Russian origin of this name is the circumstance that we find it, though in a form which at first glance is hard to recognize, outside and earlier than any connection with the Russians, from a wholly different party, the Japanese. On Sakhalin, Mamia Rinsô (1809) heard of a people on the mainland named "Kordekke"; in the following year he met a few individuals from it, and, to be sure, as foreigners on the Amur (Mankô) above Kidsi and in Deren, that is to say, in Olcha territory, to which they had come downstream to trade. He found them dressed exactly like the Santan (Olcha). They are the ones, according to him, who manufacture the armor consisting of iron disks fastened together, which is so highly prized by the Smerenkur (Gilyak) and which will be discussed later; they build vessels for the Smerenkur, etc. (1). Siebold is of the opinion that the

175 167 648 Manchu reached them also and installed elected starosti. The was such a starosta, for example, in Tangak. It was from the Manchu that the Gilyak used to obtain all those objects which could not produce themselves.

174 167 I shall not at this time enter into the question of how lo the Gilyak have inhabited the island. I shall only say that wh they first appeared there they must have been in possession of entire economic inventory which they possess at the present ti (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, e His first cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It be that the Amur River was such a cradle.

177 41 325 342 354 291 292 262 244 The Sakhalin Gilyak, like their fellows on the continent have taken many very basic things from their civilized fellows They have replaced the bow with the gun, their dishes made o wood and birch bark with metal kettles. They forge iron and artfully work with carpenters' and cabinetmakers' tools. They build yurts in the Manchu style and make stoves and tremendo chimneys of stone. They master Japanese sabers and they pres expensive spears decorated with silver inlays. They wear robe and shirts made of Chinese and Russian fabrics. They drink te and boil rice and buda (a special variety of groats). They hav finally begun to plant potatoes. In the near future they may, haps, completely adopt the culture of their civilized neighbors On what did they stop in their own independent cultural develo ment?

177 325 Of all the borrowings made by the Gilyak, the use of iro is the most important and the oldest. Because of their remote from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know ho to process ore, but are even incapable of making tools. Until cently iron itself was very expensive among them. Their boat and sleds do not contain a single iron nail, though the Gilyak

roller-like pillows stuffed with hair or feathers. The favorite position of the Gilyak is either to sit in Turkish fashion or to lie sprawled out on his plank bed. In the depths of the plank bed are placed boxes with valuables, Chinese silks, robes, expensive spears, furs, and other things that play a role on the solemn occasions of one's life: when a beloved person who has died is sent off on the long road to the settlement of the dead; when a daughter is provided with a dowry and sent off to her husband's house; when it is necessary to pay ransom in affairs of vengeance, or to pay the bride money for a bride bought for a son or brother, and on similar occasions.

The summer dwelling is a hut placed directly on the ground, or a pile structure made of spars and poles.

The weapons of the Gilyak consist of a bow, already beginning, by the way, to go out of use, a spear with a long tip and frequently adorned with skillfully made silver inlays, and of late a gun, with which he has already become familiar. In addition one can mention crossbows of various types and a harpoon for hunting sea animals, which is attached to a very long, sectional shaft, several meters in length.

As the means of transportation, sleds serve in winter, boats in summer. The Gilyak dog-sled is in its way beyond perfecting. Being about two meters in length and about 30 centimeters in height and width, put together from slender birch bars with /29/ a light binding in the seat, they are so light that a person can lift them with one hand without any difficulty, and at the same time they are so sturdy that they can carry a weight of a quarter of a ton; in elasticity and sturdiness only the ancient Kamchadal dog-sled can compare with them.

Overturned, runners up, they have the shape of a flattened segment which touches the ground with the smallest part of its surface. Because of the small area of friction, they are very light when in motion, are easily carried over difficult places, and on a smooth road, and especially on ice, they glide like the best English skates. The manner of steering them is very original. Because of their very small width, they are very unstable and lose their balance at the least unevenness. Therefore, the

/358 cont./

in boats or sleds, according to the time of the year. The attack was ordinarily made at night. In expectation of it, the whole adult male population, armed, /359/ gathered in one yurt. The women and children remained alone in other yurts, since, by the international law of the Gilyak, the women, children, and also the property of the foe was inviolate in time of war. In each yurt there was a secret exit in case of an unexpected attack. At the first alarm of war they went out by the secret passage and organized an ambuscade somewhere beyond the yurts. The struggle continued for the night in one variant, longer according to others, but there is no doubt that there was a customary period of time for slaughter. Upon the expiration of the allotted period of time, the foe departed, while those attacked began to count the dead. If a smaller number had fallen on their side than on the side of the assailants, the affair had no sequel; otherwise they were obliged to reply to the attack with war. The attacking side, in any case, had to consider itself satisfied. For the eventuality of meeting at sea an enemy boat which might wish to exchange arrows, boats had a movable parapet in the forward part for defense against the foe's arrows.

Concerning the former warlike propensities of the Gilyak, we have the eloquent testimony of the heavy spears with silver fretwork, guarded today as a treasure, which even quite recently served for more than mere decoration.

7. In certain instances, but quite rarely, the clan adopts persons from another clan. It was always profitable for a clan to have as many members as possible. On the other hand, the existence of an individual outside of the clan or hostile toward his own clan was a terribly burdensome thing. During the census some of the persons encountered declared that their entire clan had died out. In such cases and similar ones an alien clan came to their assistance with the right of adoption. Undoubtedly in time of war, when the whole male adult population might fall in battle, the women entered the clan of the conquerors in the capacity of wives, while the children of the male sex were adopted en masse. The adopted individual is accepted into some

/383 cont./

and other objects. In the second case the adversaries fight it out with cudgels until one side admits defeat. The Gilyak are most proficient at wielding cudgels. The Gilyak study this art from childhood, and the children give themselves up with passion to this noble exercise, even by moonlight on frosty winter nights. In their civil relationships, as a general rule, the Gilyak display veracity, fidelity to their word, and conscientiousness. /384/ Unfortunately, the destructive influence of the rascally population of the Amur region has begun to extend even to the most remote Gilyak settlements. A few individuals imbibe wisdom at Nikolayevsk, and it is enough to enmesh whole settlements in deceit and to breed imitators and a whole mass of interminable lawsuits. The court and mediation of the clansmen, still exerting authority within the clan, are becoming powerless when the quarrel is between members of different clans. The Gilyak have the custom of turning to a mixed assembly of "khlay-nivukhi" of different clans for the resolution of mutual disputes. But at the present time this institution is losing its strength, since the Russified Gilyak, who are simultaneously the chief culprits of dissension and lawsuits, deny to it respect and competence. The Russian administration is going to impart authority to this court of "wise" and honorable men by sanctioning the "khlay-nivukhi" by election, regulating the time of their meetings, the area of their authority, etc. And a first condition is that the "khlay-nivukhi" be of various clans. Observation has shown that the Gilyak are able to elect men intelligently and to appreciate the importance of the elected court sanctioned by the Russian administration.

V

Statistical Data

In conclusion, in order to provide some idea of the number of Sakhalin Gilyak and to present their economic status more

[The Western Coast]

/385 cont./

many of his children had died between the beginning of his marriage and the date of the census. In this way, we obtained an exact number of the children in a given family, living and dead. Hence, it was easy to calculate the rate of mortality.

fertility rate -- 2.7%, although this figure is below the actual c for in the number of married people were included, on the one hand, children for whom their parents had bought child wives, and, on the other hand, adults who were married to child wives There is an average of 12 people living in each yurt, although there are a number of yurts with several dozens of inhabitants; for example, one yurt in the settlement of Nyanivo accommodated 42 persons of the same clan.

As to the size of the winter settlements, the largest of these are the following: Tamlyvo and Lirkryvo (144 persons eac Viskvo (116); Nyur (103), Arkyyvo (87), Tal'votigrvo and Teng (64 each), Kitnidvo and Pomr (59 each), Nyanivo (58); the smallest settlements are Yamy (4 persons), Vaaz (8), Noksy (9). In the summer the most densely populated settlement is Tamlyv

Seals killed in all the settlements during the last season 1,026; sables killed in the settlements nearest to the Aleksandr post, 258 (5). /386/ There are 143 guns, 201 boats (one boat

5. The number of fur animals and so forth killed during the last season was obtained from reports of the Gilyak themselves. These figures are most probably somewhat below the actual ones. The starosta in the village of Kitnidvo, for instance, deliberately tried to persuade his people not to tell the truth to the Russians, who, according to him, would come and take away the bounty . . .

/386/ There are 143 guns, 201 boats (one boat to every five persons), and 2,100 dogs. To make some money,

[The eastern Coast and the Tym' Basin]

/387 cont./

114 settlements the settlement of Mos'bvo
36 on the banks of the Tym' River, seven
103 versts from the settlement of Rykovskoye.
361 In connection with this settlement of
221 Mos'bvo, the author makes the following comment: "It is inhabited only in autumn and winter. In spring and summer the inhabitants pass on to the western coast, mainly to the village of Arkyvo, where in the early spring they hunt seals and during the summer catch fish which are not to be found in the Tym' at this time of the year. At the beginning of August, before the Siberian salmon run, the population returns to their winter dwellings." Editors of the journal, Etnogr. Obozr."

000 with 109 yurts. The total population here is 703 persons (197
16 on the Tym' River, 506 on the Okhotsk coast), of whom 416 are male and 287, female; there are 169 families and 133 households, 483 adults, 175 married persons, 9 male polygamists, average fertility -- 3; 332 children survived birth; 169
402 died. Guns -- 64 (of these 30 are on the Okhotsk coast and
237 the remainder on the Tym'), 121 nets, 122 boats, 1,480 dogs.
30 During the last season 688 seals killed, 586 sables, 134 foxes,
411 433 43 otters, and 63 bears.

162 From this one can draw the following conclusions: here
592 there are, on the average, six persons per yurt, an average family has /388/ four to five members; there are 11 married males for one bachelor (1), one bigamist in 19 married men.

[589] 1. The word bachelor is applied only to older, so to speak, inveterate bachelors.

[The eastern Coast and the Tym' Basin]

/388 cont./

162 The ratio of the number of males to that of females (416:287) is such that there are 694 females per 1,000 males. In Russia there are 1,023 females per 1,000 males, and in Asia as a whole 960
165 females per 1,000 males. The infant mortality rate is 33.7%.
231 Every Gilyak, on the average, has two dogs and each adult Gilyak,
422 three dogs. There is very little hunting equipment, especially
411 guns, on the whole.

614 The Tymovskie and the Okhotsk Gilyak belong to 18 clans (2),
162

[126] 2. The property of each person has been registered to this or that clan, the figures on the number of clans, etc.

of which especially numerous clans are: Chuy-guy in the settlement of Chayvo (114 persons), Ady-Tymovskiy (156 persons), Mymyzi in Nyyvo (94 persons), Urlandzh in Chayvo (55 persons).
36 The most notable settlements in population are: Chayvo (151 per-
103 sons), Kekhrvo (90 persons), Nyyvo (46 persons), Tekhrvo (51
162 persons), and on the Tym' -- the trinity of settlements, Ady-Tym' and the neighboring Khomrvo and Plyuvo (106 persons), not counting the immigrant population from the western coast, Moz'bvo
20 (Rykovskoe, 56 persons), and others. Communication between the
361 first two of these settlements, Chayvo and Kekhrvo, is extremely
[484] difficult; aside from the shallow water, the journey is difficult because in several places it is necessary to carry the boats over long stretches of dry land. As has been mentioned above, there is communication from the settlement of Kekhrvo to the village of Pomr and the western shore.

133 North of Kekhrvo the coast is uninhabited, and summer
484 travel to the north is extremely difficult and completely impossible along the shore itself for lack of any means of transportation across the wide mouths of numerous bays. The only means of
484 transportation is on reindeer by way of the taiga and over the
492 mountain ridges. If one adds to this the fact that a draft reindeer makes its way with great difficulty in the summer, it is clear how difficult and slow such a journey is.

/418 cont./

000 however, is not done by the men, but by the women. As I my-
30 self have seen among the Gilyak and as is reported from other
171 Amur peoples (Olcha, Manegir, Orochon) (2), the thumb ring

[825] 6. And, to be sure, by first watching to see whether birds and beasts of prey eat
[113] any meat from it, etc. (Dawydof, op. cit., p. 200. Golovnin", "Zamiechaniia o Kamchatkie i Russkoi Amerikie v" 1809-1811 gg. /Observations on Kamchatka and Russian America, 1809-1811/." -- Mater. dlia istorii russk. zasel. po bereg. Vost. Okeana /Material for a History of the Russian Settlers on the Shore of the Eastern Ocean/, Issue 2, supplement to Morsk. Sborn., No. 2, 1861, p. 105).

often a hasty consumption of the meat or blubber of such animals is said to have brought about devastating sickness among the people concerned and to have resulted in the dying out of whole villages (7). Such cases may very likely have occurred among the

[225] 7. Krascheninnikof (op. cit., p. 529) wit-
411 nessed such deaths in Alaun on the east coast of Kamchatka and sought the cause in the fact that many whales are killed by means of poisoned arrows.

Gilyak and their adjacent neighbors along the coast (8) and,

[164] 8. For instance, in Vladivostok a newspaper of the same name reported several cases of severe epizootic diseases on Sakhalin, and among them one in 1882 in the Murawjof post, which came about as the result of using the fat of cast-up whales (S. Peterb. Viedom., 1883, No. 272).

/519 cont./
ncient use of this weapon from the Stone Age (1).

1. I myself did not see it among the Gilyak, but received a picture of it through one of my friends in Nikolayevsk, as well as one of a similar instrument used for smashing the bear skull, which are to be shown on a later plate.

When the water is more agitated and the sturgeon or
hausen stay at greater depths, the net, especially at its lower
nds, is weighted with larger stones so that it will sink deeper,
nd at the same time an arrangement is made so that from
ach of the two lower ends of the net a string runs through sev-
eral rings plaited out of willow bast on the side edges of the
net to the hands of the fishermen. Since, in addition, with
more agitated water the entry of a large fish into the net would
not be indicated as noticeably by the wooden floats, there are
attached to the rear wall of it several thin strings (Gilyak
ŋmyss)), the ends of which are likewise in the hands of the
fishermen, and which by their subsequent jerky tension, reveal
he presence of the fish in the net. As soon as this is recog-
nized, the net is raised by pulling on the aforementioned two
trings, and thus withdrawal from it is cut off for the fish,
whereupon it is killed in the previously described manner.

Finally, the Gilyak also use a bag net for catching
turgeon and hausen. It is likewise equipped with stones at the
ower edge of its opening and with wooden floats at the upper
ne. At each of the places where the ones end and the others
egin, there are a ring plaited out of willow bast and a few
trings which serve for holding or fastening the net. Fishing
ith this bag net is done in the same manner as with the above-
hentioned net, in that the fishermen go out in two boats, cast
he net, and, holding it in between at the sides, go downstream
ward the ascending fish. As soon as the movement of one of
he wooden floats or the jerky tension of one of the signal lines

/521 cont./
226 Among the Gilyak this fishing is done in the following way. An
[192] anchor (Gilyak tschabch) consisting of a branched tree-root, or of three wooden pegs connected with one another in the manner shown on Plate XLI /see p.1021/, Fig. 10, and fastened to a stone between them, is lowered into the deep channel of the river by a rope (Gilyak tyk) (2) plaited out of willow bast and

2. Perhaps tyk merely means "rope" in general.

many fathoms long. Extending from this thick rope at certain intervals are thinner and shorter bast cords, and at the end of each one there is fastened a wooden clog (Gilyak kita, ibid., Fig. 9) equipped with a pointed and sharply ground iron hook. From the upper end of each of these clogs a thin string runs to the surface of the water where it bears a wooden or bark float. At certain intervals stones are tied to the main rope so that it will remain lying on the river bed, while the clogs with their iron hooks float some distance above it and, thanks to the floats, assume a more or less vertical or slanting position. Finally, at the very end of the main rope, which is lowered into the water last as the apparatus is being set up, a heavy wooden block is attached as a float, which makes the end of the rope easy to find at any time. The fish going up the river run into the clogs, push past them or even play with them, injure themselves in doing so, thrash about, and only remain ever more firmly hung on the hooks, as is revealed by the movements of the corresponding wooden floats. As soon as the Gilyak notice this, they come along in the boats, wind up the rope from the floating wooden block, and lift the fish into the boat by means of the hooks described above.

226 In fishing for sturgeon and hausen, the Gilyak use the
411 harpoon, though again less frequently than the net, simply because, as was said above, they move on the water with great caution and not too easily and boldly. The fish-harpoons customarily used among them are of two kinds: one consists of a simple iron point equipped with a couple of barbs, which

226 /521 cont./
411 is also used for seal-hunting and is to be described in the following in discussing this; the other is a trident (Gilyak tschak, Pl. XLI /see p.1021/, Fig. 8), with barbs put on each prong. The one as well as the other is /522/ put on the tip of a wooden pole for hurling and, in addition, is tied to the end of a long strap remaining in the hand of the fisherman, by means of which the fish hit is pulled in and out of the water. The former weapon is more common among the Gilyak than the latter and bears the name tugngy.

226 Finally, it not infrequently happens that sturgeon and hausen get into the nets set up for salmon and are caught together with the latter, or, and especially in midsummer with receding water, as I myself have seen, they are stranded in the shallows and then merely need be simply clubbed.

Soon after the opening of the river, the ascent of the species of salmon in the Amur and its tributaries begins, which, all together, lasts throughout the summer and early fall until into October, in fact, even after a new ice cover has formed, not ceasing suddenly and completely. Some species go upstream singly or in small parties, others in mighty processions repeated at intervals, and in particular there are two species of the greatest importance to the Gilyak on account of the great numbers in which they appear. These are the tengi or tengi-tscho,
[136] Salmo proteus, and even more the lyghi-tscho, or on Sakhalin laghi-tscho, S. lagocephalus. How essential and indispensable they are for the diet and the total economy of the Gilyak has already been discussed in detail above. We shall therefore have to go into somewhat more detail on the catching of these fish, and especially the latter. First, however, space might be found here for a few remarks about their seasons of migration both in the Amur and along the adjacent seacoasts to the north and south.

/557 cont./
224 Finally, the Gilyak also set out poisoned pellets in order to
208 catch foxes and wolves, and the poison seems to be strychnine,
192 which they buy for the purpose from the Chinese for a high price
437 and, in accordance with the use that they make of it, call
kätch-ocht, i.e. fox poison (3).

3. Among the Gilyak ocht means "substance" in general -- a meaning which we shall encounter on several occasions in the following, but also "medicine" and in the present case probably "poison" -- a naïve-instinctive identification of curative and deadly agents, medicine and poison!

411 When I was among the Gilyak, firearms were not used at all,
197 though they were acquainted with them, and, to be sure, from two
439 directions: in the first place by way of their northern and western neighbors, the Russian Tungus, Negda, and Samagir, among whom, thanks to Yakut traders, one of the well-known, small-caliber, Russian-Siberian rifles (also called pea-shooter (4) is

4. Accordingly, among the Samagir on the Gorin, the powder also had a name borrowed from the Russian (порохъ): пóроке.

occasionally found, and, on the other hand, by way of their southern neighbors, the Olcha and Goldi, to whom, though likewise only rarely, one of those often-described, long and clumsy ooo Chinese matchlock penetrated (5). The Gilyak also have their

[113] 5. According to Barrow (Reise durch China im Gefolge der grossbritannischen Gesandtschaft in den Jahren 1793 und 1794 /Journey through China in the Retinue of the Ambassador of

/557 cont./
411 5. (cont.)
197 Great Britain in 1793 and 1794/, trans-
439 lated from the German by Hüttner, Vienna,
113 1805, Vol. I, p. 302; Vol. II, p. 58), these are exact copies of the old Portuguese matchlock guns imported to Macao and therefore are by no means very old.

411 The Gilyak also have their
192 own, in part very characteristically formed terms for the gun, its individual components, and various kinds of ammunition. For example, among them a gun, regardless of type, is called mäotscha, the barrel of it -- kolm (6), the gunpowder --

6. Accordingly, a single-barreled gun is designated as njakr-kolm-mäotscha, a double-barreled one as mjakr-kolm-mäotscha.

mäotscha-ocht, i.e., "gun substance," or, according to the above observation, in view of its deadly effect, perhaps also "gun poison," the bullet -- mäotscha-ku, i.e., "gun arrow," shot -- matschi-ku (short for matschi-mäotscha-ku), i.e., "small arrows," ooo and the piston -- pachlan-tur, i.e., "copper fire" (7). It was

7. In the case of the Russian-Yakut gun, the Gilyak call the fork fastened movable to the barrel, and used to support the gun while shooting, simply ngytschch (i.e., foot or feet), and for the powder horn they use the expression notrossj, whose etymology is unknown to me.

411 It was surprising how little /558/ pleasure the Gilyak showed over a gun,
197 whereas a Tungus goes into noisy rapture and shouts for joy at the
154 sight of a neat gun -- obviously they not only lack practical knowledge of the thing, but also a true hunter's heart. At the

/558 cont./
411 same time, however, they did not show any particular timidity
197 or fear in front of the gun, whereas a pistol imbued them with a
152 great, almost superstitious fear. For example, when I often had
[123] to threaten them with the pistol for various acts of insubordination, they beseeched me not to make use of it, because this would bring misery to the entire house, even to the women and children in it. Could this fear simply be based upon the still great unfamiliarity with the use of this weapon, upon the awareness that it could be brought into action at short range suddenly and unperceived, or, as I am almost inclined to believe, on some other superstitious belief or association of ideas (1)?

123
152
203

1. At this point I cannot refrain from mentioning another and similar superstitious fear on the part of the Gilyak, which at first seemed totally mysterious to me, and it was entirely by accident that I later obtained the key for an explanation of it. The case is also noteworthy because it is evidence of how profoundly certain impressions gained through unusual experiences persist in the mind and memory of a primitive people and how easily they spread, going from mouth to mouth, throughout their entire area. I owned one of those walking sticks from which a long fishing rod can be turned out, and I wanted to show it on one occasion to a Gilyak who was with me at the Nikolayev post, with the intention of delighting him, especially since the apparatus was used for fishing. I had scarcely pulled out the tip, however, when the man turned away in horror and implored me to put the thing away and not to cause any misfortune. Exactly

/558 cont./

123 152 203

1. (cont.)
of this event had spread from Ulban Bay to the Amur and Liman, and the Gilyak were afraid that I might have a similar magic wand.

411 171 [192] In my time the only shooting weapons of the Gilyak were the bow and arrow, which they used on occasion against large as well as small animals. The bow (Gilyak puntsch, on Sakhalin punt) is of the same nature as among the Tungus and other Siberian peoples. It is made of the wood of young ash trees or, lacking them, of good birch wood. In the Tymy Valley on Sakhalin the Gilyak designated to me the kind of wood called per by them, i.e., according to Schmidt and Glehn, Evonymus macropterus Rupr., /559/ as their "punt-tschchar" (bow wood) (1), as is also the case among the Ainu (2).

[824] [192]

1. Or, as they said as a rule, "punt-lytynt-tschchar," that is, bow-making wood.

[113]

2. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin, Botanischer Theil /Travels in the Amur Region and on Sakhalin Island, Botanical Section/" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, pp. 99, 213, 215).

411 237 53 In order to protect the wood from dampness and to retain its flexibility, the bow has fine birch bark pasted on it, or, as I have seen on especially fine specimens, for example, on the bow from Tebach shown on Plate XLIV /see p.1024/, Figs. 4 and 5, is covered with fine elk skin on the inside, i.e. on the side turned away from the marksman when shooting, but on the outer side turned toward the hunter, with whalebone (Gilyak asm) (3),

[104]

3. The s is soft here, like the French z.

/559 cont./

411 237 [53] [192] [194] 411 192 237 [283] [415]

which also bears fine silver decorations on the specimen illustrated. Sometimes used for this purpose are thin plates from Chinese buffalo horn, which for this reason the Gilyak call puntsch-ngynif, i.e., bow bones, or from the nose-piece of the Rhinoceros tichorhinus, which presumably reaches the Amur region by way of the Tungus and Yakut. The bowstring (Gilyak kich) is twisted out of fine strips of the skin or gut of the white whale. A case made out of fur or fish skin (Gilyak puntsch-chal) is used to protect the bow, especially on trips. The arrows (ku) have wooden shafts with vanes from the tail feathers of the fishing eagle (Haliaëtos albicilla) set in the lower part of two opposite sides (Pl. XLV /see p.1025/, Fig. 4) (4) and points of various forms,

4. By this characteristic alone they are essentially different from the simple shafts of the arrows used on the self-firer and, accordingly, have a special designation in that they are called uch, but the latter winngyr. The eagle feathers on the arrow shaft are called kyla-ngar in Gilyak; the notch at the lower end of the shaft, used for setting the arrow on the bowstring, is called korm.

depending on the animals for which they are intended. In my time among the Gilyak iron arrow points (Gilyak luch) were almost the only ones used, but there were also some of bone (Gilyak krangch), which were supposedly made of the leg bones of the musk deer in particular. Some of these iron arrow points intended for larger animals, elk, reindeer, and the like, and equipped on either side with a more or less sizable barb and in most cases also with a series of smaller barbs and notches, are illustrated on Pl. XLV /see p.1025/, Figs. 1-3. The two-pronged point (kor) used on the arrows for both the bows and the self-firer for killing smaller animals, sable, otter, fox, etc., has already been discussed above. An arrow with a very special shape, called

/559 cont./

411 [192]

yghli or orkai by the Gilyak (Pl. XLVI /see p.1026/, Fig. 1), is used to kill wild fowl, ducks, geese, and the like. It consists almost wholly of wood, in that at the top the shaft runs out into a knob crowned with a point and in which are found three iron points, but blunt ones, turned in different directions (5). I have

411 171 175 [113]

5. There is mention of similar, knob-shaped arrows among various peoples of Siberia in some of the oldest reports on it. For example, Georg Adam Schleissing in his work, Neuentdecktes Sieweria, worinnen die Zobel gefangen werden /Newly Discovered Siberia, Where the Sables Are Caught/, etc. (Danzig, 1692, p. 49), reports that the people there do not shoot pointed arrows but rather "in order that the rare hide not be damaged, the arrow, instead of a point, has a thick iron knob with which they shoot the sable down from the tree, so that it is dizzy and then they run up and beat it to death." Pallas (Reise durch versch. Prov. des Russ. Reichs /Journey through Various Provinces of the Russian Empire/, Vol. I, p. 323) mentions wooden arrows with knob-shaped points which the Kalmyk use to kill birds and small animals. Sujef (in Pallas, op. cit., Vol. III, p. 49) reports on the arrows with a blunt bone knob used among the Ostyak along the Obj for shooting smaller animals, and in Middendorff's travel work (Vol. IV, p. 1376, woodcuts e and d), there is an illustration of such a knob-shaped Ostyak arrow point.

/559 cont./ I have

411 171

never heard anything among the Gilyak about poisoning their arrows, as is done among the Ainu of /560/ Sakhalin and Jesso /Yezso/ (1) and, according to Steller (2) and Krascheninnikof (3),

[113]

1. Siebold, Aardr. en volkenk. toelicht. /Geographical and Ethnographical Explanations/, etc., pp. 95, 96, 112, on the basis of reports by Hieron. de Angelis, Joan Saris, and Vries; the same, Nippon, VII, pp. 185 and 201, according to Mamia Rinsô; the same, Fauna Japon., Mammalia, p. 29. is said to have been customary among the Kuriles, Italmen, Koryak, and Chukchee, and perhaps in part still is. Middendorff (4), to be sure, says that the same custom is supposed

4. Reise, Vol. IV, p. 1377.

to have been passed on to the Tungus of Manchuria, but he gives no source to support his statement. Maack (5) states that the

/560 cont./

411 171

5. Putesh. na Amur /A Journey to the Amur/, p. 75.

Manegir smear their arrows with a putrid fat acting as a poison, but I am not familiar with anything of this kind among the Tungusic tribes of the lower Amur region.

411 45 [531]

The quiver (Gilyak pi) used for stowing away the arrows among the Gilyak is as a rule made of wood, decorated with carved arabesques or other figures, and is provided at the top with a fur edging or a fur flap for the protection of the arrow points (Pl. XLV /see p.1025/, Figs. 6 and 7). Characteristically it is relatively heavy and clumsy, and therefore is not very suitable for being carried on the hunter's back, which probably happens only rarely and to a very limited extent. If, on the other hand, one holds the exceedingly light and portable quiver of the Orochi from Kaiserhafen, made solely out of animal skins (ibid., Fig. 8)(6),

[101]

6. It is made out of pieces of reindeer and elk leg-fur; the crosshand in the middle is made of otter fur.

this in itself would show that hunting among the Gilyak, in comparison with their Tungusic neighbors, falls far behind.

411 776

I doubt very much that the Gilyak are skilled archers, though I do not have sufficient experience to be able to say anything more definite about it. The one time I saw them shooting was under conditions which would not permit drawing any conclusion as to their skill. It was at the bear festival in Tebach, when the three bears, held by chains and led about, were finally shot. The marksman in each case approached the erect animal from the right side to within about five paces. The first two bears went down with loud roars after the first shot, struck in the right lung; in one of them the arrow had penetrated to the middle of the shaft. The third marksman had struck his victim too low, in the abdomen, and therefore had to send a second arrow, which cut down the animal and caused it to die slowly.

/560 cont./

411

Among the Gilyak the thrusting weapons, bear pikes and lances, are far more popular than the bow for hunting large animals of the forest, and they handle them /561/ m more skillfully than the shooting weapon. The bear pike u [192] [171] versally used among them (Gilyak lachtsch,(2) Pl. XLVI /see Fig. 2) is of the same nature as among the Tunguse and o Siberian peoples -- a large, broad, single-edged, pointed which is attached to a sturdy wooden shaft five to six feet l [192] The lances (Gilyak kach) (1) are of even greater length. T

1. I heard the Gilyak sometimes call the whole lance this and sometimes only the iron lance-point, just as is done in German with the word "Speer /spear/." And yet they certainly must have different designations for them, as we have seen above in the case of the harpoon and its point.

shaft is uniformly thick and does not begin to taper off tow the point until about two feet from it. The spears sitting o shaft are two-edged, long and narrow, and along their mid line have a projecting, rounded keel gradually flattening o the tip. The spears used in daily life are of cruder workm [53] and undecorated, but there are also elegant, very neatly a [126] worked pieces, on which all kinds of animal figures, arabe the like are inlaid in silver,copper,and brass, such as the sp illustrated on Plate XLVI /see p.1016/, Figs. 4 and 5, ski saw and acquired in Tebach (2). Such specimens, howeve

2. The illustrations were made by Mr. Maximowicz on the spot. On one of these spears (Fig. 4), among the identical figures on both sides, are to be found excellent representations of the sable as it bites into a fish, etc.

Gilyak chiefly catch them with nets, which are knotted with large meshes and very strong twine so as not to be torn by the resistance of the large animals. The shape of these nets and the way they are handled differ, however, and in this the season of the year in particular is also a definite factor, for it depends, for example, on whether the fish are present in larger or smaller quantities, whether they stay closer to the surface or at greater depths, whether the river is open or covered with ice, and so forth.

Toward the end of May and in June, when the sturgeon and hausen coming from the sea are most abundant around the mouth of the river and stay near the surface, especially in calm weather, the Gilyak get along with a simple, longish-quadrangular net, on the upper edge of which are fastened a few wooden floats and on the lower edge occasional small stones. In two boats the Gilyak go out in the channel of the /519/ river with this net, cast it across it, and, holding the upper ends of the net, let themselves be driven downstream by the current against the ascending fish. If the surface of the river is calm, they recognize with a sharp and practiced eye the approach of a large fish from afar, by a gentle swirling of the water, etc., and guide their boats with the net between them toward the fish. When it has reached the net and has
92 become entangled in it, the wooden float affected gives notice of it, and now both boats go to the spot where the fish is, the net is lifted, and the fish entangled in it is pulled into the boat by means of an iron hook attached to a pole (Gilyak schab-tschamrch, Pl. XL /see p.1020/, Fig. 2) and killed by a blow on the head with a club. If the fish is very large and the boat small, it is towed by means of a hook and a stout rope and
93 taken to land to be killed there. The proper club for this is made out of a branched tree-root and equipped with an end piece of stone -- a circumstance which undoubtedly shows the

/561 cont./ such specimens, however, are not used as a rule, but rather, carefully wrapped in birch bark, are stored away by their owner as symbols of great wealth.

Bear pikes and lances are the weapons most commonly used by the Gilyak against elk, reindeer, bears, and the like. During the first period of my stay at the Nikolayev post, when it consisted of only a few log houses erected at the edge of the still completely uncleared forest, it happened almost in front of my eyes that an elk came running out of the forest toward the river, and, when it came upon a group of Gilyak camping there, tried to keep on going by swimming; but the Gilyak immediately pursued it in their boat and stabbed it in the water *with their lances, whereupon I received the skin of the animal.* In winter when the all too deep snow greatly impedes movement for the elk and reindeer, the Gilyak pursue them on ski in order to kill them eventually with their pikes and lances. They get at the reindeer, which is especially common on the unforested plains of northern Sakhalin and sets out in small herds on the ice of the Liman, in still other ways. When in early spring, under the influence of the midday sun and the nightly frosts, a thin crust of ice has formed on the snow and is strong enough to support the dogs, but breaks under the reindeer, they pursue it on a light sled harnessed to dogs until they can attack it with their pikes and lances.

Most frequently, however, they use these weapons against the bear. Aside from the tiger, almost only mythical because of its great rarity, and the no /562/ less unfamiliar leopard, which, out of superstitious fear, the Gilyak scarcely dare mention by name (1), the bear is the largest and most powerful beast of

1. I have already discussed this at great length in the first volume of this work (pp. 90-96) in speaking of the occurrence and distribution of these animals in the Amur region. I shall return in the following to the tiger and leopard idols alluded to there.

G 223 [439] /565 cont./ article of trade with the Japanese, among whom, as the former told me, they are used to decorate the windows in the dwellings of prominent persons, thereby distinguishing them from the dwellings of ordinary people. Moreover, the Gilyak use eagle feathers to feather their arrows and to make certain articles of symbolic significance for their little burial houses. In order to obtain the rectrices of the eagle as undamaged as possible, the Gilyak take the young birds out of the nest, in connection with which they fell tall trees that are hard to climb and have nests in their tops before the young can fly. The captured young eagles are kept chained to the fish-drying racks and fed with fish scraps until they are in full feather, whereupon they are killed, but their tail feathers are carefully spread out between sheets of birch bark and in this fashion stored for trading. The number of eagles annually caught and raised by the Gilyak must be very considerable, since one can scarcely enter a Gilyak village in which he does not see several of them on fish-drying racks. In particular, however, the southern coast of the Sea of Okhotsk is regarded as the eagle region proper, because there not only the myghr-tscham is captured, but also the tscharngai-tscham, whose tail feathers are especially prized by the Japanese. Thus, it is not at all unusual for the Amur and Liman Gilyak to go to the coast of the Sea of Okhotsk for a stay of several years in order to obtain eagles' tails there. Like the Gilyak, their closer and more distant neighbors on the Amur, the Olcha and Goldi, also occupy themselves with raising young fishing eagles of the same species (Hal. albicilla, Olcha gussi, Goldi käktscha), and, to be sure, not, as Maack thinks (1), in order to show them religious veneration or to keep

E 239 411 Eagle feathers, however, also enjoy special popularity for the feathering of arrows among the Eskimo of northwestern America, along the Kwichpak, Norton Sound, etc. (1).

E [113] 1. Zagoskin", Peshekhodn. opis' chasti russk. vlad. v" Amerikie /A Foot-traveler's Description of Part of the Russian Possessions in America/, Part I, p. 61.

G 326 [411] At various places in the foregoing, mention has been made of the iron utensils and iron weapons of the Gilyak, in the course of which we have come across, especially among the latter, specimens of very artistic workmanship. This is therefore the place to inquire into the origin and eventually into the manner of the manufacture of these objects. The circumstance that the Gilyak do not use any iron in the exterior or interior construction of their houses, and likewise in the making of boats, sleds, etc. always use only wooden pegs instead of iron nails to join the individual pieces together, does not lead one to expect them to be masters in the craft of forging, and at first glance suggests the conjecture that the numerous and in part neat and artistically worked iron utensils and weapons found among them are of foreign origin. Nevertheless, this is by no means the case. Even in the earliest reports they are described as skilled armorers. During his captivity in Siberia at the beginning of the previous

G [342] [396] [493] [335]

G [175] ooo

175 114 411 326 [101] /566 cont./ During his captivity in Siberia at the beginning of the previous century, Strahlenberg was told that a people living at the mouth of the Amur, the Kilani, whom the Russians call "Kilaki," "make excellent, fine weapons, and among them the best bows, and work in iron" (2) -- a report which was given so little credenc

[113] 2. Ph. Joh. v. Strahlenberg, Das Nord- und Ostliche Theil von Europa und Asia /The Northern and Eastern Parts of Europe and Asia/, Stockholm, 1730, p. 386.

by a later traveler, Gmelin, chiefly no doubt on account of the indeed very strange linking of the Kilani with the Persian province of Gilan and the Awaren /Avar/ to it, that he felt obliged to question the very existence of such a people (3). Gmelin thought

3. See p. 203 above.

that if there were a people there which was especially distinguished by its weapons-making, all of Siberia must be filled with them, and these weapons would long since have been available, if not from the people themselves, at least through the Chinese (4). Nevertheless, the report which came to Strahlenberg

[531] [321]

4. J. G. Gmelin, Reise durch Sibirien, Göttingen, 1752, Vol. II, Preface.

attention more than one and a half centuries ago is now confirmed for both the above-mentioned bows faced with buffalo horn and decorated with silver and the beautiful lances, spears, and knives with inlaid figures in copper, brass, and silver, which have no equal among any of the Siberian peoples, are of Gilyak workmanship. If, however, these beautiful weapons were unknown in Siberia in Gmelin's time, and even today scarcely go beyond the Amur region, the reason lies, on the one hand, in the small quantity of metal available to the Gilyak, and, on the other hand, and even more, in the high value which they themselves put on

326 411 556

/566 cont./

326 especially well-worked pieces and which causes them neither to
• 411 use such pieces nor to sell them, but rather /567/ to store them
556 away carefully as capital, so to speak, and to bequeath them, or at most use them to buy a wife, whereby they change owners, to be sure, but still remain in the realm of the Gilyak. Moreover, in view of the inadequacy of their tools, much time may be spent on the manufacture of each individual piece of this kind, and, as is always and everywhere the case, not everybody may
361 have a great skill. At the time of my stay in the Amur region,
326 the village of Chylk (1), located on the Amur directly above
411
126
[128]

1. On the ethnographic map of the Amur region appended to this volume, the location of this village is indicated, but its name is not entered.

Patt, was regarded as the place where the most beautiful spears, lances, and knives were manufactured, and the specimens illustrated on Plate XXXI /see p.1011/, Fig. 2, and Plate XLVI /see p.1026/, Figs. 4 and 5, which belonged to the wealthy Gilyak Judin in Tebach and his sons and which I acquired from them for a high price in exchange for various wares were said to have been made there. Unfortunately, I passed this unattractive settlement consisting of only two houses at a time when I as yet knew nothing about its industrial importance for the Gilyak.
361 In the summer of 1855, the Russian settlement of Michailofskoje
648 was founded directly beside it, indeed, almost at the same spot (2), which presumably later prompted the Gilyak to abandon

[128]

2. This appears on the map of the Amur region which is appended to the first volume of this work.

their home there.

/575 cont./

G 714 171

1. (cont.)
out of the same material as the Gilyak kä-petsch or a similar one. During the bloody fights which the North Americans had with the Koreans in 1871, they saw them clad in armor which consisted of forty layers of stout cotton material and was almost impenetrable for saber or bayonet (Nordische Presse, 1871, No. 214, according to a report sent to the Times by its reporter in Shanghai). On the other hand, Ditmar ("Ueber die Koräken und Tschuktschen /The Koryak and Chukchee/." -- Bull. de la cl. hist.-phil. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIII, p. 131; Mél. russes, Vol. III, p. 41) relates that the Chukchee use armor made out of whalebone and thick animal-skins.

G 714 [113]

To conclude the remarks concerning the weapons of the
• G 411 Gilyak, I must consider a piece which, to be sure, is harmless in nature, but is nevertheless interesting and characteristic. It
G [192] is their so-called mungtsche (Pl. XLVI /see p.1026/, Fig. 3), a roundish or slightly angular stick of hard wood about five feet long, which from top to bottom bears the characteristic, barely indented spiral design which is found on all the shafts of their lances, spears, and harpoons, and which, despite the smoothness of the latter, nevertheless offers a certain resistance against the palm of the hand pressed on it. The upper end of the mungtsche is rounded off to the shape of a knob, or, more correctly, an acorn, in the lower third it is either merely tapered gradually or flattened somewhat like a saber and is always provided with a
G [191] deep groove on the back. From the Gilyak this strange weapon has also advanced to the Negda along the Amgunj, among whom it is called muketschi, evidently a distortion of the Gilyak designation for it, and is generally widespread. Middendorff
G [114] became acquainted with it among them. In his travel account

/575 cont./

• 411 he gives an illustration of it and calls it a wooden saber (2) and
114

2. Vol. IV, p. 1535. The specimen brought back by him and now in our museum is in fact flattened somewhat like a saber in the last third, as mentioned above.

"cudgel of honor." In his opinion it is used only to settle matters of honor in combat, during which it is seized with both hands, and the blows are parried by moving the stick to and fro. His host, the old Negda Oltungab, on the Nemilen (a tributary of the Amgunj showed him how this weapon was used. This agrees essentially with what I learned about it from the Gilyak. During
411 the initial period of my stay in the Amur region, the Patchä-
[115] Gilyak Jutschin, a very intelligent person to whom I am indebted for the first groundwork of my Gilyak vocabulary, appeared at the Nikolayev post armed solely with the mungtsche. When I questioned him, he demonstrated the fencing movements for me with his wooden weapon. From his total handling of it, however, it could be assumed without any doubt that it was more than a simple fencing stick or "cudgel." For as he held it in front of him with outstretched right arm, like a halberd resting on the ground, he assumed an air of dignity as though he were a most distinguished person. Also, he did not want to be separated from it even when sitting down. Finally, the respect and regard that he rendered to his mungtsche were also expressed in the fact that at several places where it had been damaged /576/ it was carefully covered with birch bark and through that had not only not suffered in the eyes of its owner, but, on the contrary, had gained in value. All in
411 all the mungtsche gave me the impression of a conventional
194 weapon of honor, which originated in ancient times, perhaps in imitation of Japanese lances, and has inherited with the latter its continuing traditional significance. The deep groove always present on the back of the mungtsche, which Middendorff leaves unexplained, but obviously is supposed to represent a channel for the blood, also points to such a prototype.

G
Gi /589 cont./ Thus another
224 characteristic difference between the hunting conditions of the lower and of the upper Amur regions is presented by the sable hunting of the one side and the squirrel pursuit of the other.

G Contributing very essentially to the change from the former
Gi to the latter in the upper Amur region, however, in addition to
T the causes given above, are the handy firearms, the small-
224 caliber, Russo-Siberian rifles, which came from Siberia and
• 411 whose importation and adoption are growing more and more in
197 the course of time. Whereas in the lower Amur region at the time of my stay in it there were no guns at all, with a few minor exceptions (2), these rifles were already in general use among the

2. See p. 868 above.

Orochon, thanks to their immediate proximity to and long association with the Russians, and among the Manegir, too, they were already gradually pushing out the long and unwieldy Chinese matchlock guns, which were not very serviceable for hunting. Since the occupation and colonization of the entire Amur region by the Russians, the spread of good or at least serviceable firearms has made rapid advances in the lower part, which, in combination with the growing number of hunters must lead to a heavy decline in its wealth of sables and other animals in the future. How disastrous the consequences of this will be for the indigenous population of the region living on this wealth is easily grasped and can be judged in greater detail on the basis of the following discussion.

Gilyak hunting equipment: 1, 2 -- weapons for killing seals; 3, 4 -- weapons for killing white whales.

1 -- Old armor-shirt of the Gilyak; 2 -- old Manchurian helmet; 3 -- piece of an old Manchurian armor-shirt; 4 -- Gilyak bow; 5 -- the same on the inside.

Gilyak hunting equipment: 1-3 -- iron arrowheads; 4 -- lower part of an arrow shaft; 5 -- thumb-ring for stretching the bow; 6-7 -- quivers; 8 -- Orochi quiver.

Gilyak hunting equipment: 1 -- arrow for shooting birds; 2 -- ax with long shaft; 3 -- long cudgel; 4, 5 -- spear with inlaid work.

/639 cont./

462 since the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dogs, and the latter fed in order for them to be ready for possible ex-
[251] cursions by the men. The storing of all food supplies and the
[252] preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The
462 main meal, for which hot foods, too, are to be prepared, does
264 not take place until toward evening, for that is when the men
[574] return from their outside activities and when persons traveling through who have ties of hospitality with one of the occupants of the house and claim shelter for the night may arrive. Moreover, through the preparations for this meal the yurt is heated to the temperature which the Gilyak finds agreeable for the night.

244 Making the clothing for the whole family occupies the women
462 even more than the preparation of food for the human beings and dogs. First of all, this involves procuring or putting into proper
[281] condition the materials used for it: to dress the animal pelts and skins; to clean, pound, and dry the fish skins, which, besides being used for clothing, also replace window glass; to prepare the sewing thread from nettle fibers or from animal and fish skins, and so forth. This is followed by the cutting, /640/ sewing, and quilting of the various articles of clothing, which, as we have seen, are provided, in accordance with Gilyak taste, with all sorts of colorful, intertwined embroidery and other decorations
462 and embellishments. There are still other domestic duties, such as making household utensils, bowls, baskets, buckets of birch bark, sewing blankets and large and small bags and pouches out of cloth or animal pelts or skins for various uses, and the like.

462 Thus one literally never sees a Gilyak woman without work
• 411 even for a moment, whereas the man, upon his return from hunting
[517] or fishing, spends much time in rest and idleness and at home he has nothing to do but to make the implements needed for his own activities. Since these are very numerous and complicated, in that, among other things, they include all the varied and in part artistic wrought-iron lances, knives, harpoons, and the like, one

/640 cont./

462 would think that for the man, too, there could never be any lack
• 411 of domestic work. But these objects are by no means made every-
[463] where and by everyone, but rather at only a few places by expert
[439] Gilyak and used for trade (1), so that one need only make a wooden

1. A large portion of them, as was mentioned above (p. 894), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the
462 complete weapon. The situation is similar with respect to bows,
321 boats, and other implements that are used specifically or chiefly
322 by the men. The domestic activities of the men among the
517 Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and he still has much time left for idleness, smoking, and sleeping.

593 The domestic tasks and accomplishments of the wife, however,
[462] are far from exhausted by what has been presented above, for in addition to all that there are still the maternal duties, the care and tending of the children. The Gilyak, husband as well as wife, find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, not even when he was about to leave on a journey or returned from one.
[855] On the other hand, I have often seen a Gilyak man, not to speak
593 of the women, tenderly caress and kiss small children. Every
842 married Gilyak wants as large a swarm of children as possible, and one who has them prides himself on it. One in Xyi was boasting in front of me about his many children, but to my question as to how many he had, he could only answer: tammla, tammia, that is, many, many. Mixed in with this joy, however,
[592] there is also an egoistical, utilitarian viewpoint, for in his growing sons he will soon have helpers in his lucrative hunting, fishing, and trading business, and the daughters promise, /641/ apart from the help that they give in the household, a fine bride price.

Seeland--27 E-5 (no date) 1882 Gilyak

2 takes trips on various business matters, and so forth; he also takes care of fishing. The woman spins, makes nets and clothing, cooks, takes care of the children and the dogs.
6 Weaving is entirely unknown to the Gilyak, artificial ma-
6 terials, such as twine and needles are bought; the latter,
3 moreover, they formerly fashioned in a very primitive manner. In general it can be said that every Gilyak man and woman knows how to do all the work necessary for their existence, although not in the same degree. For instance, with respect to metal work: everyone knows how to make a knife, not everyone can make a hatchet, and only a few, finally, concern themselves with the making of a jew's harp (to be described below) and the more intricate weapons, as for example lances with silver decorations.

This is the place for us to say something of fire-making. The Gilyak customarily wears a pouch on his belt, containing flint, steel and tinder. The birch fungus is used as tinder, flint is found in abundance on the banks of the Amur. If they should lack fire tools they make fire, just as other primitive peoples do, by friction. A dry stick, on both ends of which is tied a bit of fungus, is put into a groove on a block of wood; one person holds the stick upright, another winds a string around it, takes the ends of the string in his hands and makes a sawing motion back and forth. Usually fire is produced after a half hour.

IX. Weapons

The Gilyak customarily carries no other weapon except his knife which is seldom used for defense. The knife consists of a pointed blade and a wooden handle. The blade and half the handle are carried in a leather sheath which is worn on the belt. To the actual weapons belong lances, bows and arrows and at present also the gun which many of them have obtained.

The bow is made of wood but has an underlayer of whale bone which is glued to the wood with fish glue. They like best to use ash wood (frax. mandshurica). On the inner, i.e., the whale bone side not far from the ends there are two [125] small grooved strips for the bow string. The unstretched bow is bent so that the whale bone faces outward, but in use it is on the inside, otherwise it might be damaged. The string consists of intertwined sinews of rope. It requires some effort to stretch the bow, and the shot is powerful. The arrow has three small feathers at one end, the other end is somewhat thicker and has an iron point which is barbed, but

13; Seeland--28 E-5 (no date) 1882 Gilyak

● 411 instead of this point some arrows have a crescent-shaped piece of pointed iron. This latter device is used for duck
325 shooting, if there is no powder to be had. On the hunt the
411 arrows are usually kept in a quiver, which usually does not
439 hold more than three. It consists of a flat and hollowed-out
531 small board and is usually decorated on the outside with various designs or figures of animals. It is fastened to the belt.

The lance consists of a shaft about one and three-quarters meters long with a flat iron tip. Some lances made by Gilyak are artfully decorated with silver and gold figures. Moreover, all weapons except firearms are made by the Gilyak themselves. Forging is done simply at the domestic hearth, but the fire is kindled with a bellows. Iron is bought from the Chinese or Russians. Occasionally fragments of Chinese pots are made over into knives, etc.

178 Finally, I must mention the shield of which few examples
411 are still to be found among the Gilyak. These shields are
422 very heavy, probably close to 35-40 pounds, very crudely
439 fashioned, and consist of iron rings. They come from China and at present have no practical value because no one thinks of carrying them. Nevertheless they are regarded as something very valuable and are estimated at 200 rubles. It has happened that the owner of such a shield has pawned it to a Russian merchant, but as soon as he got some money, bought it back.

X. Marriage and the Rearing of Children

58 Men who have reached middle age are seldom unmarried, and it is even rarer to find married men with four or five wives, for this requires a certain amount of means; besides, there are too few women. The beginning of a [126] marriage requires the payment of a ransom (kalym). This does not consist of money, but of certain necessary items-weapons, dog sleds, etc. An average kalym amounts to 200-300 rubles. There are no special marriage ceremonies, but the wedding celebrations which must also be paid for by the bridegroom last a rather long time, a week or more. Besides millet, fish and tea, a great deal of alcohol is consumed.

A curious, although not altogether unique custom are marriages between four and five year old children. As soon as the parents reach an agreement, a boy and girl are pronounced man and wife. The father of the boy pays the kalym and takes the girl with him, in order to bring her up with her "husband"; sometimes, however, she remains a few more

13; Seeland--38 E-5 (no date) 1882 Gilyak

623 usually concern abductions of women or major transgres-
681 sions and crimes. Women do not take part in them. The opinions of the older generation usually are decisive. In cases of particular importance the Gilyaks of surrounding villages are drawn in. The penalties for crimes consist of fines in money for the plaintiffs, in banishment of the guilty one from the village, or in a sort of ostracism which results in a cessation of all intercourse with him. Occasionally, though rarely, the death penalty is pronounced, but this is of course kept a secret from the Russian administration. As for corporal punishment, the Gilyak are no adherents of the idea. It is sometimes applied, but there is evidence that formerly it was never used.

578 Quarrels between men sometimes lead to a duel. It is
● 411 conducted in the presence of witnesses. The weapon used is the kaur, but in this case they fight with the end which does not have the iron point. The challenger deals the first blow, the blows are parried as much as possible with the stick. The fight usually continues until blood is drawn or one of the fighters is stunned and reels. This fight seldom ends in death. Sometimes when two Gilyak get very angry-which, however, seldom happens- they reach for their knives and begin stabbing each other in disregard of any kind of rules. [228]

563 A sad spectacle are the man-hunts, i.e., persecution of
177 fleeing Russian criminals, which the Gilyak also sometimes carry on. Such refugees or so-called brodyagi (i.e., loafers) are a common sight on all large highways in Siberia and the direction they take is always the same, that is, from east to west. Most of them are convicts who have escaped from forced labor. Since the island of Sakhalin was chosen as the chief deportation center for non-political criminals, these brodyagi also pass through the Amur region. Very few of them escape in order to go back to their homes, i.e., European Russia. Even though the thought of home, of their native villages and families may arouse warm, tender emotions in even the most hardened criminals, nevertheless, these refugees know too well the possibility of arrest to entertain great hopes. The usual practical goal which they hold up to themselves is-not to be recognized in case of arrest and thus to be put in the general class of brodyagi in which they would also be condemned to hard labor, but only for a few years, after which they could become Siberian citizens. Others, finally, escape without any particular

19;Genest--4 U-2 (1884-85) 1887 Gilyak

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.
171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials;
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
● 411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.
171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

20; Bush--102-103 T-2 (1865) 1871 Gilyak

116, 177, 342, 411

"Formerly bows and spears were their only weapons, but of late these, the bow especially, have been discarded for [103] small-bored flint-lock guns, which they procure in trade from the Russians. Their habitations differ somewhat in their construction. Many of them are erected on posts several feet above the ground, and are surrounded by a platform, upon which they stow away their sleds, nets, weapons, etc. These platforms are reached by rude steps cut in a log."

2: Schrenck--733 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/473 cont./

481 The small ski of the Gilyak consist of two thin boards without a fur covering. They are about four and a half feet long and five to six inches wide, and are completely flat and level except for the more or less sharply tapering front end gently curving upward. Depending on the degree of this tapering at the front end, several forms of the small ski may be distinguished among the Gilyak in certain regions. Thus, the form with a gradual tapering of the tip, illustrated on Plate XXXV /see p.1015/, Figs. 1 and 2 prevails along the Amur River as far down as Wair. Below Wair, at the mouth of the Amur, along the Liman, and along the opposite coast of Sakhalin, the ski have the form shown in Fig. 3, with a more abrupt tapering, and, finally, on Sakhalin there is a third form with an even more abrupt tapering of the front end, but unfortunately, I had no opportunity to get an illustration of it. These small ski are an absolutely indispensable /474/ item for the Gilyak, and in winter it is almost only inside the yurt that he is seen without them. Not only does he need them for even the shortest walk, but he also keeps them on his feet when traveling sitting astride his sled, both so that he can get off and take a few steps in the snow if necessary, say, for example, to adjust the harness of the dogs, and also in order to facilitate the movement of the sled, to which I shall come back later. Once he has reached the spot where he plans to spend the
81 night in the open, the ski, with its rear and level end, serves him
88 as a shovel for readying the campsite as required (1) and for filling
412

501

Gilyak Boat Construction

396 For this purpose several sticks are driven into the ground opposite one another on either side to serve as supports for the boards; around the upper end of each pair of the sticks standing opposite each other a strap or cord is looped (see the accompanying woodcut), and by a stronger or weaker tightening of it the side boards can be brought precisely into position so that their lower edges coincide with those of the bottom board. Once the boat has been tied together in this manner, its final strengthening can
[192] /502/ begin. First several crosspieces (Gilyak tschylch) are put between the side boards, connecting them with each other. One such connecting stick is found in the rear end of the boat, another in the middle, and a third just before the prow. The fastening
● [412] of the side boards to the bottom board, and likewise all the other
[192] boards to one another, is done by means of wooden pegs, which, with the help of a little iron rod (Gilyak ottauwz, Pl. XXXII /see p.1017/, Fig. 7), are driven into holes made beforehand with the large drill (Gilyak lung, ibid., Fig. 6) along the edges of the boards concerned.

412 In passing it should be mentioned that these implements,
531 not used merely in making boats, but also on other occasions, for example, for attaching the above-mentioned sole-mountings on the sleds, are always neatly made in Gilyak fashion and likewise provided with many decorations, the little iron rod with fine strips of inlaid copper and silver, the wooden handle of the
412 drill with many graceful carvings. Two persons are required to

2: Schrenck--781 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

412 /502 cont./ Two persons are required to
[392] work with this drill, in that, by means of a piece of wood, one person presses it from above, where a little iron peg set into the handle is found, against the place where the hole is to be, and the other one sets it in rotating motion by quickly pulling a strap looped several times around the handle -- a procedure which I also observed in connection with the Gilyak method of making fire by friction to be discussed later and in another connection. For this reason, I am inclined to regard the lung,
[192] as well as a second, quite similar and also similarly operated,
[194] but somewhat thinner drill, which the Gilyak call pisk, as ancient instruments perhaps invented by them themselves, whereas the small drill for finer work and similar to our tools of this type (ibid., Fig. 8), whose Gilyak designation is still unknown to me and which is wholly of iron, may be later and foreign in origin. (1). This is undoubtedly also the case for another

1. The Olcha-Tungusic designation for this small drill, according to Maximowicz, is selgefó and sseldschefó.

[192] instrument, the saw. I myself never encountered this among the Gilyak, but in the village of Tylm Maximowicz saw a specimen of it which looked exactly like our ordinary carpenter's saw and was called puf by the Gilyak, pófo by the Olcha -- a correspondence in designation which likewise indicates a common borrowing of the object concerned by both peoples from a foreign source.

396 But after this digression let us return to the construction of the boat. The rear end of it is closed off with a vertical
[192] stern-board, and above it and between /503/ the two side-boards a horizontal board (Gilyak ont(o)mis), projecting somewhat toward the rear, is put in to serve as a seat for the steersman. The boat is closed off in front by two obliquely placed boards (Gilyak alin, the left one always riding a little higher than the right one, which gives the prow a pointed shape. All the seams, and especially the two longest ones, between the bottom and the two side-boards of the boat, are calked, but this must be done

2: Schrenck--782 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/503 cont./

396 very delicately and carefully so that the boards, held together
[324] only by wooden pegs, are not driven apart. Therefore, only
412 with the help of a knife, some moss is stuffed from the inside into the seams wherever they permit it, and then a narrow wooden strip is fastened over them, again with small wooden pegs. In addition, however, stronger and wider strips, obtained by splitting thick willow switches, are put over the two long seams from the outside, so that on land the boat rests, so to speak, on two soles, convex on the outside, which, in addition to protecting the seams, also have the utility of reducing the rubbing of the bottom board on the sand and gravel of the shore in pulling the boat into or out of the water
[192] and thus protect it against damage. The analogy between these exterior mountings on the boat and the soles, or even more the sole-mountings, on the sleds is so obvious that even the Gilyak, despite the absence of generalization in their language, designate them with the same term as the latter (motasi), whereas they have a special term (twy) for the strips
[192] put over the seams inside the boat. Finally, two, or in the case of larger boats even three, pairs of oar-pins /Ruderpinnen/ (Gilyak misyr), that is, small boards, each equipped with a vertical prong, are put in the front part of the boat on the edges of the sides. They are likewise fastened to the side boards with wooden pegs, so that not a single nail or piece of iron of any kind is used on the entire boat of the Gilyak, or on their sled. Needless to say, the Gilyak do not fail to adorn their boats, too,
[532] with a few decorations. For example, the tip of the bottom board projecting below the prow usually runs out into a crudely carved head of a snake, bird, or other animal, the two prow-board always bear several carved arabesques on their inner surface, and, as a rule, a carved, black or colorfully painted figure, a square, star, or the like, is likewise found on the back of the stern-board. Finally, before the boat is put in the water, it is slightly charred from the outside on the bottom and the lower part of the side-board, for protection against rot.

Gilyak implements: 1, 2 -- iron pipe-cleaner; 3 -- the same made of bone; 4 -- tinder box of sturgeon skin; 5 -- the same made of seal leather; 6 -- tobacco-oil pouch.

Means of transportation and hunting:
1—river boat made of boards; 2—old dogsled; 3—club for killing seal; 4—brake poles used in steering sled; 5—old dog-harness; 6—fishing with seines.

Food was prepared with fish-oil or seal-fat. A favorite delicacy was mos', prepared with fishskins, seal-fat, berries, rice, and sometimes crumbled yukola. Another favorite dish was talkk—a salad of raw fish, garnished with wild garlic. The Nivkhi became acquainted with rice, millet and tea from the time when they traded

121 In 1931 I was sent to the Amur Gilyaks for the purpose of studying their dialect and of collecting materials for an ABC book. I was able to devote some of my time to the study of problems in the field of ethnography, such as: the history of the Gilyak clans, land property of the clans, interclan relations, the fishing industry, etc. In the following survey I put before the reader the material gathered in the course of this work and pertaining to the fishing industry of the Gilyaks in the village of Kul.

225 At the first signs of spring, beginning with the month of
782 qar-lo (crow month') (1), the Gilyaks of Kul go seal-hunting.

1. Corresponds approximately to the end of February-beginning of March.

They get out hooks and replace the old strings on them with new ones. Then they perform a religious-magical ceremony which consists in exposing the hooks to the smoke of spruce and of a plant locally known as (ḱskr) bogulnik and set out on sleighs pulled by dogs to the tremendous ice fields of the sea of Okhotsk. On arrival, the Gilyak hunter lets a kuti-ŋən-gan
225 (a dog seeking holes') search for seal air-holes. The Gilyak
411 lowers his hooks into each of the holes found by the dog. The hooks are fastened to a stick put across the air-hole. When the seal wants to breathe, it sticks out its head. The hooks in the air-hole hinder the seal, and when the seal wants to submerge, one or two hooks are thrust into its body. The hooks of the tackle kita (2) which go into the implements for hunting

2. Tackle for seal-hunting in the summer. The main part of this tackle is a large number of sharp hooks.

seals in air-holes are so sharp that they pierce the body at the slightest resistance. On the following day the Gilyak returns to the same place. He looks to see if a seal caught
225 on his hooks. The Gilyak first pulls the captured seal through
411 the air-hole and then kills it by hitting it over the head with a
531 striker specially made for the killing of seals. This striker called tonr-tas (from tonr 'head', za-d 'hit', a suffix pertaining to the implement used in the action), is made of a bough of some strong tree. The bough is cut off together with a piece of stem at its base which is then rounded. At the lower end of the handle of this peculiar hammer is a carving which represents the snout of a seal.

225 throws them into the sea. Each of the hunters has with him
823 similar gifts which the pilay throws into the sea together
766 with his own gifts. If the hunters go past Ui,-krə̂, then they
782 throw their offerings into the sea from the first floe at which they stop. The Gilyaks believe that on every cape (krə̂) there lives a ɣik- an old woman. These old women must also be given something at the time of the sea voyage. It is believed that tvax-ɣik, 'the old woman of the mouth of the river,' who lives in the mouth of the river Kul helps during the hunt.

225 [83] In the past the Gilyaks would go as far as T'uurf (Bay of Tugursk) during a seal hunt. They would sometimes spend the winter there and engage in fox hunting. The Gilyaks told me that their ancestors apparently did not go to kəvr-mif (Shantar Islands) (1) At present they do not go beyond

1. According to the account of Schrenk, the Gilyaks did not hunt on the Shanter Islands (On the natives of the Amur region), v. II, p. 288.

Lo ri. In former times the Gilyaks would put out to sea when the ice began to break. They would hunt at sea until the end of the summer and then they would return to the village to fish salmon. When the ice was gone and, consequently, seal hunting on floes ceased, they would hunt seals by means of tola-k'e, 'a heavy drag net.'

At present the Gilyaks put out to sea for short periods not exceeding one or two months. Thus, for instance, Norp put out to sea with the hunters on July 8 and returned from the hunt on August 2. In 1930 two boats of hunters hunted seals off cape Litke and stayed there for two months.

411 The Gilyaks of today also hunt by means of a drag-net,
225 tola-k'e. (2) Tola-k'e is made of heavy rope called locally
283

2. Of the very old seal-hunting implements in the village Kul, a very large floating harpoon tla is completely out of use. It was made out of a few long sticks turned of the trunk of a larch. I got acquainted with its structure and I observed how it is being used in the village Chayvo. This harpoon is sometimes 18 ruchnykh sagenes long.

matauza. The rope is 45 ruchnykh (makhovykh) sagenes long. Each of the meshes is large enough for the head of a sivuch. Tola-k'e is set not far from the shore. The upper cord of the tola-k'e is called ɣski 'back.' The shore-end of the net is

411 called əmlɣus and the sea-end is called əz-baχ-puks
225 'master's stone tie.' To this end, which is lowered into the
283 sea, is tied əz-bax 'master's stone' or 'master stone,' which, according to the Gilyaks, weighs two poods. This stone, the Gilyaks explained to me, forms the anchor of the seine. In place of plummets, stones are attached to the bottom of the seine. They are called tstr-pəχ. Large wooden floats (vaχ) are fastened to the upper cord of the seine. When the head of a sivuch gets caught in the net, the sivuch starts to flounder; at times so violently that it throws the lower edge of the seine together with the plummets over the upper cord and finds itself literally in a sack. Sometimes dolphins fall into the seine. The seals pəγi are shrewd and are seldom caught in the net.

In the past as well as at the present time the Gilyaks of the village Kul set the tola-k'e at Ḱivf-ŋalu, Ḱe-ŋalu, Vilk, Lo ri, and ət.

614 According to old man Virp, some clans in the village Kul
225 owned seal hunting places in the past.
423 Thus clan Qavjuŋ owned: 1. Lulvəχ-pər, 2. ŋəγqej,
524 3. ət.
471 Lulvəχ-pər and ŋəγreqej are names of rocks sticking out of the water. Seals crawl out of the water onto these rocks. ət is a small island close to which there is another such rock.β)

3. In a fog the hunters come alongside of the shore or of the small island ət. Then the young hunters amuse themselves and play. There are onət two laqr-pəγ stones for a game: "who can lift it and who cannot." Close to the rocks there is a flat place where the Gilyaks compete. The competition consists in jumping on one foot (teŋot ferd).

Clan Ṭnaunuŋ owned: 1. Maṭ-loŋri, 2. Tŋəri-γrə, 3. Zomi-vər.

The first two places form parts of the shore and are resting places for seals. The third is a rock.

Clan Kezoŋ owned the shore off Vilk, a resting place for seals and Hapzə-vər - a stone.

225 [84] Once at sea, the hunters take a number of measures
552 to ensure a successful hunt. Thus, in conversation, they
198 substitute prearranged names for the usual names of certain
825 objects. This prearranged language is an echo of a distant
789 past when hunters used it to keep their plans from animals

/324 cont./
342 coast of Sakhalin. Four Tymy Gilyak and one from the village
[122] of Tyk, who were traveling along the same route, camped next to me. With a moderate northerly wind, there was a very heavy
[237] snowfall. The Gilyak shoveled out a pit a few feet deep in the snow, lined the bottom and the walls with fir branches, spread a cover of fish skins over it on the north side, over sticks stuck obliquely in the snow, and in the center built a small fire, over which hung the kettle. The wind increased during the night, and in the morning the storm was so severe that further travel was inconceivable. The Gilyak immediately set to work to make a camp better protected from the storm and snow. First they dug a circular cavity in the snow, stuck sticks around it, coming together conically at a midpoint, and spread several fish-skin covers over them in such a way that only an opening at the top of the tent was left for a smoke vent; a tip of the cover that could be folded back served as a door. Then the walls of the pit and the
[237] ground around it were covered with fir branches, and over that were
[513] spread the bear skins used for a bed, which the Gilyak always take with them on their winter journeys. Next came the setting up of a
342 hearth in the little dwelling. The important thing was to create
354 a solid base for the fire, because otherwise, made directly over the snow, it would soon sink deeply into it and could no longer warm those sitting around it. For this purpose several very flat pieces of wood were placed as exactly and as close to one another as possible, framed on all four sides by others, thicker and set on edge, and these latter were fastened in position by wooden pegs. In this manner a longish-rectangular cavity was obtained for the hearth. At the bottom of it the Gilyak now spread pieces of larch-tree bark, then brought lumps of frozen sand from the high embankment along the seacoast, cut them up with their axes, which they always carry with them on such journeys in order to procure the necessary firewood for the nightly campfire, and with this
412 filled the cavity made for the hearth up to the rim. In passing I
177 must mention that the axes customarily used for housebuilding and the like by the Gilyak and their neighbors at the time of my stay among them were either, on Sakhalin, of Japanese shape and

/324 cont./
412 origin, or, on the mainland, Chinese, with a rather long, straight
177 handle and a thick blade almost equally broad to the end, as is shown on Plate XXX in the hand of a Goldi boy. At that time there were practically no Russian axes, with a short, somewhat sloping handle and a blade broadening greatly toward the end.
342 Thus, in the shortest time, there arose a lodging which offered the Gilyak sufficient protection against the weather and in form and construction reminded one strongly of their earth yurts. Like the former in the snow, the latter are sunk into the ground to insure protection against wind and weather. Perhaps /325/ this was how the idea of erecting earth yurts such as we find among the Gilyak arose. In any case their complete similarity with these emergency tents in form, ground plan, and construction speaks for their quite primitive character.

342 As simple and primitive as the Gilyak earth-yurt is, it never-
354 theless offers many advantages, especially when its dimensions
521 are somewhat larger. The location of part of it in the ground, the carefully built, tightly closed roof provided with a thick layer of snow on the outside, and the absence of any window openings give the cold outer air, with even the strongest wind, no lateral entry into the inner part of the yurt, provided that the door is closed, and the fire maintained continually on the hearth warms and venti-
[352] lates the small room and makes a sojourn in it cozy. At the same time the hearth located in the center of the yurt gives it a unified character: the entire company is gathered around the blazing fire which is equidistant from all three benches; all face one another, all receive warmth and light from the same source. This inevitably
[276] leads to greater communicativeness, to a mutual exchange of adventures, views, and experiences, and I have often seen the Gilyak sitting this way in general conversation around the fire far into the night and the tobacco pipe passing from hand to hand, often partici-
342 pating in their conversation myself insofar as possible. But aside
354 from these advantages the earth yurt has many drawbacks. The most unpleasant of these is the frequent, severe, and rapid change of temperature to which it is exposed. Whenever the door is opened, a cold stream of air comes into the yurt and moves along the floor. To be sure, it is lessened by the roofed-over passageway

2. According to Maximowicz /Maksimovich/ ("Primitiae florae amurensis," in Mém. prés. à l'Acad. des sc. de St. Pétersb., Vol. IX, 1859, p. 500), probably a Cyperaceae. According to R. Brown, the Eskimo of northwestern America and Greenland use Hierochloë alpina and similar types of grass for this purpose.

ginseng and the sable, as one of the three treasures of Ninguta (3).

[113]

3. U-tschen, in the translation by Wassiljef /Vasil'ev/: "Zapiski o Ningutie /Notes on Ningutie/" (Zap. Russk. Geogr. Obshch., Pt. XII, 1857, p. 95). The translator adds in a note that boots whose soles are stuffed with this type of grass are also sold in Peking.

291 I am unable to state whether the Gilyak use the same type or
824 any specific type of grass for the purpose mentioned, but this much seems to me to be beyond doubt, that they do not act in this without making some sort of selection, for when, in the winter of 1855, I asked the owner of the yurt of Poghobi on Sakhalin to give me some of this grass, he refused my request with the remark that he himself had very little of it.

293 Finally, an important piece of Gilyak clothing is the belt,
412 in particular as a holder for some of the implements always
[291] accompanying the Gilyak. First and foremost among them is a large knife, the so-called ngawla-dshakko, which is used both in eating and, if necessary, as a defensive or offensive weapon. Like almost all of the iron implements, it is always
[531] of Gilyak workmanship and usually simple, with a large blade and a short, wooden handle diagonally striped as a rule (Pl. XXXI, Fig. 1) (4), or sometimes wholly of iron with inlaid silver

[104]

4. The caption concerned, "ngawta-dshakko," should be corrected to ngawla-dshakko.

[513] spread the bear skins used for a bed, which the Gilyak always take with them on their winter journeys. Next came the setting up of a
342 hearth in the little dwelling. The important thing was to create
354 a solid base for the fire, because otherwise, made directly over the snow, it would soon sink deeply into it and could no longer warm those sitting around it. For this purpose several very flat pieces of wood were placed as exactly and as close to one another as possible, framed on all four sides by others, thicker and set on edge, and these latter were fastened in position by wooden pegs. In this manner a longish-rectangular cavity was obtained for the hearth. At the bottom of it the Gilyak now spread pieces of larch-tree bark, then brought lumps of frozen sand from the high embankment along the seacoast, cut them up with their axes, which they always carry with them on such journeys in order to procure the necessary firewood for the nightly campfire, and with this
412 filled the cavity made for the hearth up to the rim. In passing I
177 must mention that the axes customarily used for housebuilding and the like by the Gilyak and their neighbors at the time of my stay among them were either, on Sakhalin, of Japanese shape and

/324 cont./

412 origin, or, on the mainland, Chinese, with a rather long, straight
177 handle and a thick blade almost equally broad to the end, as is shown on Plate XXX[2] in the hand of a Goldi boy. At that time there were practically no Russian axes, with a short, somewhat sloping handle and a blade broadening greatly toward the end.

342 Thus, in the shortest time, there arose a lodging which offered the Gilyak sufficient protection against the weather and in form and construction reminded one strongly of their earth yurts. Like the former in the snow, the latter are sunk into the ground to insure protection against wind and weather. Perhaps /325/ this was how the idea of erecting earth yurts such as we find among the Gilyak arose. In any case their complete similarity with these emergency tents in form, ground plan, and construction speaks for their quite primitive character.

342 As simple and primitive as the Gilyak earth-yurt is, it never-
354 theless offers many advantages, especially when its dimensions
521 are somewhat larger. The location of part of it in the ground, the carefully built, tightly closed roof provided with a thick layer of snow on the outside, and the absence of any window openings give the cold outer air, with even the strongest wind, no lateral entry into the inner part of the yurt, provided that the door is closed, and the fire maintained continually on the hearth warms and venti-
[352] lates the small room and makes a sojourn in it cozy. At the same time the hearth located in the center of the yurt gives it a unified character: the entire company is gathered around the blazing fire which is equidistant from all three benches; all face one another, all receive warmth and light from the same source. This inevitably
[276] leads to greater communicativeness, to a mutual exchange of adventures, views, and experiences, and I have often seen the Gilyak sitting this way in general conversation around the fire far into the night and the tobacco pipe passing from hand to hand, often partici-
342 pating in their conversation myself insofar as possible. But aside
354 from these advantages the earth yurt has many drawbacks. The most unpleasant of these is the frequent, severe, and rapid change of temperature to which it is exposed. Whenever the door is opened, a cold stream of air comes into the yurt and moves along the floor. To be sure, it is lessened by the roofed-over passageway

2. According to Maximowicz /Maksimovich/ ("Primitiae florae amurensis," in Mém. prés. a l'Acad. des sc. de St. Pétersb., Vol. IX, 1859, p. 500), probably a Cyperaceae. According to R. Brown, the Eskimo of northwestern America and Greenland use Hierochloë alpina and similar types of grass for this purpose.

ginseng and the sable, as one of the three treasures of Ninguta (3).

[113]

3. U-tschen, in the translation by Wassiljef /Vasil'ev/: "Zapiski o Ningutie /Notes on Ningutie/" (Zap. Russk. Geogr. Obshch., Pt. XII, 1857, p. 95). The translator adds in a note that boots whose soles are stuffed with this type of grass are also sold in Peking.

291 I am unable to state whether the Gilyak use the same type or
824 any specific type of grass for the purpose mentioned, but this much seems to me to be beyond doubt, that they do not act in this without making some sort of selection, for when, in the winter of 1855, I asked the owner of the yurt of Poghobi on Sakhalin to give me some of this grass, he refused my request with the remark that he himself had very little of it.

293 Finally, an important piece of Gilyak clothing is the belt,
412 in particular as a holder for some of the implements always
[291] accompanying the Gilyak. First and foremost among them is a large knife, the so-called ngawla-dshakko, which is used both in eating and, if necessary, as a defensive or offensive weapon. Like almost all of the iron implements, it is always
[531] of Gilyak workmanship and usually simple, with a large blade and a short, wooden handle diagonally striped as a rule (Pl. XXXI,[2] Fig. 1) (4), or sometimes wholly of iron with inlaid silver

[104]

4. The caption concerned, "ngawta-dshakko," should be corrected to ngawla-dshakko.

the belt: the yi-dshakko (Pl. XXXI, Fig. 4),[3] quite indispensabl to the Gilyak, with a small, pointed blade on a strong wooden handle, which, for greater firmness, is equipped with a bone ri at the lower end. It is always inserted in a firm sheath made o
[239] sturgeon skin, with a wooden or bone tip (ibid., Fig. 5). The yi-dshakko is used for cutting wood and making all kinds of cru as well as delicate articles out of it. It should be noted that th Gilyak always cuts toward himself, not away from himself, as Mamia Rinso points out about the Ainu, too, in contrast to the
415 /396/ Japanese (1). Just as rarely lacking in a Gilyak's belt as
372

serve to give the harpoon a firmer
a blow on the head."

411 instead of this point some arrows have a crescent-shaped
piece of pointed iron. This latter device is used for duck
325 shooting, if there is no powder to be had. On the hunt the
411 arrows are usually kept in a quiver, which usually does not
439 hold more than three. It consists of a flat and hollowed-out
531 small board and is usually decorated on the outside with
various designs or figures of animals. It is fastened to the
belt.

The lance consists of a shaft about one and three-quarters meters long with a flat iron tip. Some lances made by Gilyak are artfully decorated with silver and gold figures. Moreover, all weapons except firearms are made by the Gilyak themselves. Forging is done simply at the domestic hearth, but the fire is kindled with a bellows. Iron is bought from the Chinese or Russians. Occasionally fragments of Chinese pots are made over into knives, etc.

178 Finally, I must mention the shield of which few examples
411 are still to be found among the Gilyak. These shields are
422 very heavy, probably close to 35-40 pounds, very crudely
439 fashioned, and consist of iron rings. They come from China
and at present have no practical value because no one thinks
of carrying them. Nevertheless they are regarded as something very valuable and are estimated at 200 rubles. It has happened that the owner of such a shield has pawned it to a Russian merchant, but as soon as he got some money, bought it back.

X. Marriage and the Rearing of Children

58 Men who have reached middle age are seldom unmarried,
and it is even rarer to find married men with four or five
wives, for this requires a certain amount of means; besides,
there are too few women. The beginning of a [126] marriage
requires the payment of a ransom (kalym). This does not
consist of money, but of certain necessary items-weapons,
dog sleds, etc. An average kalym amounts to 200-300
rubles. There are no special marriage ceremonies, but the
wedding celebrations which must also be paid for by the
bridegroom last a rather long time, -a week or more. Besides millet, fish and tea, a great deal of alcohol is consumed.

A curious, although not altogether unique custom are marriages between four and five year old children. As soon as the parents reach an agreement, a boy and girl are pronounced man and wife. The father of the boy pays the kalym and takes the girl with him, in order to bring her up with her "husband"; sometimes, however, she remains a few more

fingers of the little children.
171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons
customary among the Goldi women (see above, number XI, p. 173)
[see Goldi source 18: Genest--Analyst] do not exist among Gilyak
women; the latter generally seem to be interested less in grace-
fulness than durability in their clothing. The curious belt worn
not only by the Goldi but also by the transitional people mentioned
repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are
already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon
often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use
larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will
find a large number of dogs in the Gilyak settlements just as in
the Goldi villages. These dogs are highly vicious and on occasion
even dangerous for the stranger.
171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The
Gilyak are no less superstitious than their neighbors. The
amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

I was just in time [252] to take a snapshot of a fami
n afternoon call, in other words, to borrow some s

on from the shaft, to which, however, he is

takes trips on various business matters, and so forth; he also takes care of fishing. The woman spins, makes nets and clothing, cooks, takes care of the children and the dogs. Weaving is entirely unknown to the Gilyak, artificial materials, such as twine and needles are bought; the latter, moreover, they formerly fashioned in a very primitive manner. In general it can be said that every Gilyak man and woman knows how to do all the work necessary for their existence, although not in the same degree. For instance, with respect to metal work: everyone knows how to make a knife, not everyone can make a hatchet, and only a few, finally, concern themselves with the making of a jew's harp (to be described below) and the more intricate weapons, as for example lances with silver decorations.

This is the place for us to say something of fire-making. The Gilyak customarily wears a pouch on his belt, containing flint, steel and tinder. The birch fungus is used as tinder, flint is found in abundance on the banks of the Amur. If they should lack fire tools they make fire, just as other primitive peoples do, by friction. A dry stick, on both ends of which is tied a bit of fungus, is put into a groove on a block of wood; one person holds the stick upright, another winds a string around it, takes the ends of the string in his hands and makes a sawing motion back and forth. Usually fire is produced after a half hour.

IX. Weapons

The Gilyak customarily carries no other weapon except his knife which is seldom used for defense. The knife consists of a pointed blade and a wooden handle. The blade and half the handle are carried in a leather sheath which is worn on the belt. To the actual weapons belong lances, bows and arrows and at present also the gun which many of them have obtained.

The bow is made of wood but has an underlayer of whale bone which is glued to the wood with fish glue. They like best to use ash wood (frax. mandshurica). On the inner, i. e., the whale bone side not far from the ends there are two [125] small grooved strips for the bow string. The unstretched bow is bent so that the whale bone faces outward, but in use it is on the inside, otherwise it might be damaged. The string consists of intertwined sinews of rope. It requires some effort to stretch the bow, and the shot is powerful. The arrow has three small feathers at one end, the other end is somewhat thicker and has an iron point which is barbed, but

without any kind of bait on it is lowered into a crack or a hole drilled into the ice and is as a rule immediately pulled up with one or more fish attached to it. [119]

Sturgeon are caught with hooks. Large iron hooks are fastened to pieces of either wood or cork by means of a rope which in turn is held in place by heavy stones deep in the water, that is, not much above the bottom. The sturgeon which goes down deep is, curiously enough, attracted by the moving pieces of wood, he "plays" with them, as the natives say, and thus gets caught by one or another hook. In winter this fish is also caught in strong nets, for at this time it is supposed to be weaker.

The greatest activity occurs at the time of the salmon run. The results of it influences the lives of these people for the rest of the year, therefore whole swarms of Gilyak are to be found on the Amur. The fish are caught by means of enclosures (1): near the shore a row of posts are driven into the

1. Called sayesdka by the Russian fishermen.

river bed; in general the enclosure has this shape ⊓, the open side of it is turned toward the mouth of the river from which the fish comes. The fish bumps against the wall, turns sideways, and is caught in the bag which is lowered from the boat on the inner sides of the enclosure. At the height of the salmon run there are such masses of fish that the bags are filled almost as soon as they are lowered. The fish weighs 8 to 12 or even 20 pounds and costs three to five Kopeck.

The women also take part in this catch. There is no particular organization in the matter of assigning the fishing places but care is taken that every head of a family fishes where his father and grandfather did before him; this place in the river is then practically his property.

Dolphins are harpooned, but this is considered a difficult hunt. The animal is cautious and does not let the hunter come very near; and should this happen, the wounded animal can easily upset the boat. The harpoon consists of a long hook which has points and barbs at one end and at the other, a rope about 15 fathoms long with a blown-up bladder fastened to it. As is the case in whale fishing, the bladder must show the place where the wounded dolphin went under. When the animal reappears, he is given the finishing blow with harpoons or lances. [120]

1. On the Amur it is found only way down at the mouth.

Sakhalin a lance about two to two and one-half fathoms long which is thicker at its lower end is laid into a wooden trough; on the thick end of the lance a 20-30 fathom long strap is fastened. In spring when the ice breaks up, the seal climbs onto land and the Gilyak pursues it, often at the risk of his life, on a boat or over floating ice fields. As soon as he is near enough to it he places the trough which somewhat represents the barrel of a gun, with the lance inside it on the ground, aims and throws the lance while holding the end of the strap with his left hand, so that the animal cannot get too far away.

5 Another method which is practiced, for instance, in the village of Charbakh, below Nikolayevsk-na-Amure is done in the following way: near a place where there are big stones lying on the shore, two stakes are driven into the bottom of the river and between these is spread a sort of sail, behind which the hunter conceals himself. The seal, all unsuspecting, climbs on a stone in order to sun himself and is hit by the lance which is attached to the boat by a long strap.

Finally the seal, when he is sunning himself on a rock, is sometimes killed by means of an endlessly long lance, the lower end of which lies on the shore.

The sea lion frequently is found on the coast of Sakhalin and it is the simplest thing in the world to kill it. The animal is stupid and at the same time inquisitive and lets the hunter come so near that he can beat it to death with a club.

4 The otter is frequently seen on the rivers of the country
5 and its pelt is very much prized. It is shot, sometimes even killed with sticks. Cross-bows are also sometimes set up for it, as for the sable.

Of land mammals the bear, the elk, the reindeer, the fox, the musk deer and particularly the sable are hunted.

The bravest men conduct a hand-to-hand fight with the bear and thrust their lance into his breast when he stands up on his hind legs. The scars which a man carries away from such a battle bring him great honor and songs of praise. Most of the men do not attempt this single combat and go after the animal in pairs, and [121] armed with rifles; sometimes the bow and arrow are also used; in any case, it is a dangerous hunt.

/396 cont./

Fig. 4) that is very peculiar with regard to the material as well as the form and arrangement. It is made out of the skin of a sturgeon that is softened beforehand for the purpose and later hardening like wood: on the Amur out of the skin of the tukki-tscho of the Gilyak (Acipenser Schrenckii Brandt), on Sakhalin out of that of an allegedly similar kind occurring in the northern part of the Sea of Japan and called okras by the Gilyak. The mlo consists of two quite similar pieces that may be inverted over each other and at their upper or lower edge are bent into a spiral and attached to a leather strap in such a way that, after pushing away a bone tube running on the latter, the upper piece can be lifted off the lower one. Like the tinder box, the steel, too, often hangs down from the belt on a long chain (Gilyak: kessj-kessj) equipped with various appendages (Pl. XXVIII, Fig. 1,* and Pl. XXIX, Fig. 1)* Sometimes there is also found on this a bent, little iron rod pointed at the bottom (Pl. XXVIII, Figs. 1 and 2), which is also carried separately and serves for all kinds of purposes, at one time for making a hole in a strap, at another time for loosening a knot or cleaning the pipe, etc. This instrument (Gil. kedak) is not infrequently also made of horn or bone, and as insignificant and unessential as it is in itself, nevertheless it is usually decorated with all sorts of carved figures (Pl. XXVIII, Fig. 3). Finally, various other odds and ends usually hang in the belt of the Gilyak as he happens to find them, for instance, a boar's tusk or tooth, a piece of antelope horn or deer antler, etc.

In winter, the Gilyak women also wear coats of dog fur, which are made like those of the men; nevertheless they are sometimes seen, though rarely, in coats of more precious furs. In the winter of 1856, for instance, in Tangi on Sakhalin, I saw one of the wives of the Gilyak Kombrein wrapped in a coat of fox skins with the fur turned to the outside, under which two under-coats of blue and of patterned Chinese material trimmed with otter and sable furs were visible. On neatly dressed girls, children of well-to-do parents, one sometimes sees on the dog-fur coat a narrow fox-fur collar, the so-called mungrusk in Gilyak,

*, * [See Category 116, pp. 1008 and 1009 respectively--Analyst]

/401 cont./

the Chinese, and reach their climax among the people farthest from the latter, the Gilyak. I think that the reason for this is not, say, in the natural disposition of the peoples concerned, but in political conditions. The Gilyak were able to keep themselves independent of Manchu-Chinese domination and to prevent direct visits and settlements of the latter in their territory (1).

1. See p. 144 above.

Since in this manner they escaped continuous exploitation by the Manchu officials and the Chinese merchants, they could attain greater affluence than the Tungusic Amur peoples subject to the Manchu-Chinese, and, secure in their possessions, they must have found greater joy in them and along with this felt a desire and an incentive to concern themselves, beyond acquiring the mere necessities, with decorating and beautifying their clothing and other equipment, in which they were furthermore lent a helping hand by the trade with the Chinese, conducted on their part with innate cunning and circumspection.

Returning specifically to the clothing of the Gilyak, I must mention a few tools customarily used among them for making it. For sewing and embroidering the Gilyak of today use only steel needles, which, on the mainland, they obtain from the Chinese, or, more recently, from the Russians, and on Sakhalin from the Japanese (2). The container for storing the needles(Gil. nugsis,

2. Steller's statement that the Kamchadal obtained steel needles from the Japanese and the erroneous explanation of their designation for them linked with it are discussed above (pp. 407 ff.) in detail.

from nug, "the needle"; see Pl. XXIX, Fig. 2)* worn by the women at the belt, is peculiar. It consists of a bone tube through which a strap provided with two stoppers runs and into which the needles are stuck: whereas the lower stopper is tied fast to the strap, the upper one can be moved along it; if one lifts the

* [See Category 116, p. 1009--Analyst]

/401 cont./

latter and pushes it upward, the strap with the needles sticking in it can be pulled out of the tube at the lower stopper. This ingenious construction of the needle box is also /402/ found among the Eskimo: Dall saw it among the Innuit on Norton Sound (1).

1. Dall, Alaska and its resources, Boston, 1870, p. 142, with woodcut.

And all the Tungusic neighbors of the Gilyak have borrowed it from them, the Orok (2), the Olcha (3), and the Negda.

2. Through Mr. Poljakof, our museum obtained several Orok specimens of this kind, which completely correspond to the Gilyak specimens.

3. Maak", Putesh. na Amur" /Journey to the Amur/. Atl., Pl. 4, Fig. 9.

Middendorff saw it among the latter, and the illustration provided by him (4) shows exactly the same decorations on the bone

4. Reise in den äuss. Norden und Osten Sibiriens /A Journey in the Extreme Northern and Eastern Parts of Siberia/, Vol. IV, p. 1529.

tube as our Gilyak specimens bear. But I cannot agree with his opinion that these figures approximate those prevailing on the South Sea islands and are to be regarded as an offshoot of the death's-head form popular there, which is associated with cannibalism and the trophies of human skulls. Similar, quite crude and primitive representations of a human face by means of a couple of circles with a dot in the center, a vertical line in between, and a horizontal line under them, as eyes, nose, and mouth, are not infrequently found on the implements of the Gilyak and owe their origin, I believe, to the notion that by putting them

/402 cont./

on an object the influence of any evil spirit involved will be removed and the use of the tool will be accompanied by success -- a belief that I shall discuss in another place.

The thread with which garments are sewed varies according to the variety of material in them. Fish-skin robes, for example, and birch-bark hats are sewed with fish-skin yarn, that is, fine thread cut out of fish skin, which the Gilyak call mydisk and distinguish, according to the type of fish from which it was taken, as pilengat-mydisk, mimk-myd., kych-myd., etc. (5), fur coats and similar articles of clothing with the thread

5. Pilengat is Cyprinus Carpio L.; mimk -- Hypophtalmichthys Dybowskii Herz.; I do not know what type of fish the name kych refers to.

(Gil. kuba) that the Gilyak know how to make from the ordinary stinging nettle, and which is also used for making cord and fishing nets (6). The garments made out of cotton or cloth are sewed

6. As is also known for the Siberian peoples, the ancient Kamchadal (Steller, op. cit., p. 83; Krascheninnikof, op. cit., Vol. I, p. 332), and others. The Gilyak method of making thread and cord from nettle fibers will be discussed in this work in a later section dealing with fishing.

with Chinese cotton thread, and for the various quiltings and embroideries the Gilyak use either the latter or the silk thread likewise obtained from the Chinese, depending on the delicacy of the work and the elegance aimed for. I have never seen a Gilyak woman use scissors during her sewing and embroidering, although they know of them, thanks to the Chinese and have a special term (chasa) for them; instead they only use a knife. For smoothing the fabric they use a smoothed piece of wood (pans), which is

/402 cont./

beveled at one end and, needless to say, is provided with some decoration on the upper side and on the handle, as well as at the tip (Pl. XXIX, Fig. 3).*

/403/ At first glance it seems very surprising that the Gilyak who are so skilled in all kinds of handicrafts and achievements and despite the fact that they know how to make thread out of the fibers of a native plant and to make string and fishing nets out of it, do not know how to use this material to make a fabric for clothing, in other words, that the art of weaving seems to be so completely unknown to them. This is all the more strange as their nearest Paleo-Asiatic neighbors, the Ainu on Jesso /Yesso/, Sakhalin, and the Kuriles, are dressed in materials that in part they weave themselves out of the fibers of the nettle and the bast of trees (1), and one comes across this art, and, to be sure,

*262 While the men land enormous quantities of these salmon, espe-
251 cially the latter species, in nets and boats, the women occupy
252 themselves with skinning them and cutting them up: a longitudi-
[462] nal cut is made from the head to the tail near the spine on either
• 412 side and on the belly side with the tschomauwa, a knife with a
[226] long and narrow blade (Pl. XXXI, Fig. 6, and Pl. XXXII, Fig. 1),[2]
and then a transverse cut from top to bottom just behind the head;
then the skin is pulled off from the side with one jerk each, the
meat is removed from each of them in one piece, and each of them
is cut into two long strips, each of which has a cut made in its upper
end, whereupon the strips of flesh are strung on a cord and hung on
[192] the above-mentioned drying racks near the summer yurts. This is
the jukola (2), chiefly intended for the people and only in small

2. As is well known, jukola is the term, probably originally stemming from Kamchatka, customary among the Russians throughout Siberia for cut-up and dried fish.

part for the dogs, the ma of the Gilyak, the makoré of the Olcha and Goldi. The head with the backbone and the flesh remaining on it, which is provided with transverse cuts along the latter for drying it more readily, furnishes the jukola used exclusively as food for the dogs, the chark of the Gilyak, the dalong of the Olcha and
[258] Goldi. Oil is boiled out of the especially fatty belly pieces, which provides a most important foodstuff and is stored in seal bladders and stomachs. The entrails and the milt, rejected with horror by the Gilyak on principle, are given to the dogs, but the roe is eaten and is used with various foods, though it is not especially
*262 prized. Apart from the two kinds of salmon mentioned, jukola
252 is also made out of other fish, for example, Salmo lycaodon Pall.
825 (Gilyak well), which comes up the Amur somewhat before the
[222] keta salmon), Salmo callaris Pall. (Gilyak longri sch]), Salmo leucomaenis Pall. (Gilyak ssawong), etc. The jukola made out

[2] [See Category 116, pp. 1011-1012 respectively--Analyst]

/426 cont./

*262 of these and on occasion many other fish is so inferior both quali-
252 tatively and especially quantitatively to that obtained from the
825 two first-named kinds of salmon that it is not very important next to that one, and therefore by "ma" the Gilyak simply refer as a rule only to the former one and differentiate it, according to the kind of fish from which it comes, as lyghi-ma and tengi-ma,
*262 always giving preference to the former over the latter. Ma, then, is the chief food of the Gilyak, their bread, so to speak (3) --

[113] 3. Steller (Beschr. von dem Lande Kamtschatka /Description of the Country of Kamchatka/, p. 157) designated the jukola, and likewise chiefly the one obtained from Salmo lagocephalus, as the "true Kamchadal bread."

the basis /427/ of their households and the red thread running
574 through their entire dietary system. When a newly arrived Gilyak
264 enters a yurt and has taken a seat on one of the sleeping benches,
*262 a small tray (Gilyak chach-tschitsch, Pl. XXXIV, Fig. 4),[1] with
• 412 several strips of ma and a bowl of fish oil (Gilyak tom), as well as a small wooden spoon (Pl. XXXIV, Fig. 7), is immediately given to him by one of the women. With the small tray on his lap, he cuts up the jukola on it with his belt-knife and eats it in such a way that he first dips each piece into the oil, or alternatively spoons up the latter, or he dips the end of the strip of jukola in the oil, seizes it with his teeth and cuts the bite off from below upward, immediately in front of the mouth, with his knife close to the lips and passing by the tip of the nose, as has been observed among so many other primitive peoples (1). When a Gilyak

264 1. Thus, for example, among the Eskimo
191 (Cranz, Hist. von Grönland /History of
113 Greenland/, Vol. I, 192; Parry, Sec. Voyage, etc., p. 506; Seemann, Reise um die Welt /Voyage around the World/, Vol. II, p. 66; Klutschak, Als Eskimo

/446 cont./

415 the two hearths to the right and left of the entrance, but in the
177 earth yurt and in the summer yurt is placed on the platform of the hearth on top of three stones. It is always of Chinese origin and is used for the preparation of the fish broth for the dogs and some of the dishes for the people. In addition, however, the Gilyak also have smaller kettles which they use, depending on the circumstances, in the earth yurt or summer yurt in the hunting tent or, when camping, in the open, and which are in part likewise of Chinese, in part of Japanese origin, like those illustrated on Plate XXXIII, Figs. 4 and 3: matsch-wunj (i.e., small kettle) and kughi-wunj (i.e., Ainu kettle). To stir and ladle the broth
• [412] made in the large kettle large wooden spoons (Pl. XXXIV, Figs. 5 and 6,[1] Gilyak myich and mityr) are used, and for smaller kettles, smaller ladles of iron (Pl. XXXIII, Fig. 5, Gilyak komb).
415 To prepare and serve mush-like dishes, such as the above-mentioned groats and the like, the Gilyak, according to need, use larger or smaller wooden troughs (Gilyak odong and orong), which are quite similar in form to those out of which the dogs
[53] are fed and are sometimes used for this. A specimen of this kind from the village of Tebach, decorated at the ends with carved arabesques, is illustrated on Plate XXXIV, Fig. 1. I saw other
824 foodstuffs and dishes, such as the above-mentioned flour-cakes,
[53] beans, various berries, etc., served in low, roughly square bowls made of birch bark, whose bottoms and rims were decorated with various arabesques; they are the so-called tottangr in Gilyak (Pl. XXXIII, Fig. 8). Like these vessels, which, in accordance with their use, one might designate as the bowls of the Gilyak service, so also do the vessels intended for the use of individuals as cups and plates differ in accordance with the nature of the dish to be
264 served. If it is only a matter of a few strips of jukola, it is suf-
415 ficient, as was already mentioned (1), to have a small wooden tray

1. See p. 647 above.

(chachtschitsch), on which they are cut up in order to be dipped in fish oil and consumed. Liquid foods, like the above-mentioned

[1] [See category 116, p. 1014 -- Analyst]

264 /446 cont./
415 broths, are eaten from wooden bowls, Gilyak mumk-ngir (2) (Pl.

2. Ngir means bowl in general.

XXXIII, Fig. 6), and, to be sure, more often noisily drunk than eaten with a spoon. For the enjoyment of solid food, fish, meat, blubber, and the like, rectangular shallow bowls, Gilyak es-ngir (3)

[104] 3. The s is soft in this word and is to be pronounced like the French z.

415 (ibid., Fig. 7), are used. Also used for the same purpose are wooden, circular, rather shallow bowls or plates (Pl. XXXIV, Figs. 2 and 3), about a foot in diameter, which among the Gilyak bear the name aam-ngir, ring bowls or thumb-ring bowls, obviously on account of their round form similar to the above-mentioned thumb-
[439] ring (aam) (4). The Gilyak, however, do not make them them-

[192] 4. Among the Olcha they are called kota.

selves, but obtain them from the Goldi, who occupy themselves
415 with turning them. At the bear festivals they are used in great
531 numbers by the Gilyak, as well as by the Olcha, in particular for
996 eating the above-mentioned kinds of groats, though they are not by any means /447/ implements used exclusively in connection with these festivities, as might be concluded from their exotic origin and the complete lack of any ornamentation and carving. I myself saw the Gilyak use them often enough in their everyday life. In contrast to these mass-produced, undecorated bowls turned by the Goldi, all the other above-mentioned vessels made freehandedly by the Gilyak themselves always stand out because of all sorts of decorations put on them, which, however, remain far behind the artistic carvings which we shall discover on the implements used exclusively
322 at the bear festivals. For the manufacture of all the vessels pre-
• 412 sented above, bowls, spoons, etc., for the execution of the carvings on them and on other utensils, the Gilyak use, in addition to the

/447 cont./

322 yi-dshakko already mentioned, several knives of special shape.
• 412 Thus, to hollow out wood, a knife with a fluted, bent blade of various sizes, the us(i)r-wossj of the Gilyak (Pl. XXXII, Fig. 4),[1] is used; for finer carving, the kydr-dshakko, a knife with a very
412 narrow and pointed blade (ibid., Fig. 3), etc. Finally, among
177 the table utensils of the Gilyak the chopsticks (Gilyak tschawkr) (1)

[192] 1. Presumably borrowed from the Manchurian tschabcha. Among the Olcha: alako.

copied from the Chinese must be mentioned, a specimen of which, from the village of Wassj, is shown on Plate XXXIII, Fig. 6. These owe their origin among the Gilyak more to the imita instinct, which readily makes itself felt in particular with regard to anything Chinese, than to a real need, because they are practically never found in use among them.

415 As one sees from the above, all the household and table
323 equipment made by the Gilyak themselves is exclusively of wood
439 or birch bark. Earthenware is not found among them at all; they
[322] neither make any themselves nor is there used among them, in spite of their contacts with the Chinese and Japanese, the porcelain made by these peoples, for at most a single piece of it, usually one or several of the small porcelain bowls used by the Chinese for drinking brandy, is kept here and there by a well-to-do Gilyak as an article of value or as an oddity. The fact that pottery, even
323 in its beginnings, is completely foreign to the Gilyak, despite
114 their being exceedingly skilled in other things, for example, in woodworking and, as we shall see later, at the smith's trade, certainly merits full consideration, and I am therefore permitting myself a few remarks about it. In order first to put the fact itself still further beyond doubt, I must expressly emphasize that despite my long and various stays among them I never saw a piece of pottery of any kind in their households nor did I even hear of any from others. Hence, some entirely different statements in Mamia Rinsô's report on his travels on Sakhalin (Krafto) and in the Amur region were all the more striking to me. He found that the earthen
[171] ware and porcelain of the Gilyak (Smerenkur) on Sakhalin was

/716 cont./

hanging in front of the bears so that they taste them first. Besides the elders, only a dog remained in the house, and, to be sure, so it appears, only to lick clean the implements used in the cooking and the transfer to the trough.

Early in the morning on the following day (January 28) the old men started their work of cutting up and cooking the meat, which was interrupted only by the usual feeding of the dogs in the house and a race beforehand with specially decorated animals dragging behind them only the tail of a fox or dog, as was mentioned above. Next, a number of articles were brought in from the storehouses, /717/ all of which were hung or otherwise attached to the bear rack in colorful confusion pieces of fur and the skins of paws of previously killed bears, the chains on which they were led while alive, dried bear-penes wrapped in birch bark, knives which at the point of attachment of the blade have a bundle of hair from the bear's penis region around them, the so-called uing-dshakko of the Gilyak, with which it is uïtsch to cut anything other than bear meat and fat (see Plate LI /p. 1251/, Fig. 3), and a number of nicely carved spoons and peculiarly shaped bowls. The latter were put to use immediately, being filled with the broth obtained from the bear meat, which was sipped either directly or with the help of the spoons. This service, used by the Gilyak only when consuming bears, is very interesting and deserves a more detailed discussion.

The bowls called nichyry-ngir or nichyry-ngith, i.e., bear-spoon bowls, by the Gilyak after the bear spoons (nichyr), are always carved out of a single, often quite long piece of wood, which about in the middle or near the one or the other end has either a rather deep or only a shallow oval hollow (Plate L /p. 1250/, Figs. 1 and 2). The former are specifically intended for eating the bear-meat broth, the latter (the same place, Fig. 3) for the bear meat or fat. What makes these bowls especially interesting, however, is that sometimes the one, sometimes the other end of the piece of wood, and sometimes both the front and the handle ends, are provided with various carvings referring to the bears and the bear festival. The latter are also found in profusion on the handles and sometimes

322 /717 cont./

*796 even on the lower end of the spoons which are used by the Gilyak
● 412 at the bear-festival feasts. I succeeded in bringing back to our
415 museum quite a number of bear-festival bowls and spoons which
532 had belonged to the distinguished Gilyak, Ssogin in Kuik, and
[126] came into my hands only through a lucky accident. At the time of my visit the Gilyak refused any offer, however high, for a utensil used in connection with their bear festival, with the assertion that such a transaction would be too greatly uïtsch. If one examines these carvings more closely, one discovers that they attempt to depict the bear in all the various situations and positions in which it is put during the bear festival: on Plate L /p. 1250/, Fig. 1, for instance, it is shown with the neck and body band; on Plate L, Fig. 3, and Plate LII /p. 1252/, Figs. 3 and 5, attention is called to the revolving ring on the upper side of its body band; Plate LII, Fig. 4, shows it eating from the bear spoon; Plate LI /p. 1251/, Fig. 6, shows how, led on a chain, it defends itself against its attackers, and the same figure, as well as Fig. 5 on Plate LII, shows the bear's head in the läsng and later looking down from the rack in the house. The most interesting, however, is the spoon illustrated on Plate LI, Fig. 6, not only because it can be regarded as a masterpiece of Gilyak wood-carving, but also because it alone shows almost all those situations of the bear at the festival held in connection with it and, in addition, by linking the bear's head looking down from the rack in the house with the toad depicted in the bowl of the spoon, it shows the latter as the spiritual initiator of the whale bear festival. These bowls and spoons are always made only during the bear festival, and here in /718/ Tebach two Gilyak sat on the floor in front of the bears busily occupied with the carving of such implements.

*796 In the afternoon of the same day new quantities of bear
252 meat were brought from the storage chambers and placed on the
253 floor covered with fir branches in front of the bears. As before,
784 the kettle was filled with snow, and the cooking now proceeded more energetically -- but always without any salt, the use of which is strictly forbidden, not only in the preparation of bear meat and broth, but also for all other foods during the bear festival,

/729 cont./

G *796 119 262 G1 796 114 262 After this insertion on the bear festival of the Olcha, which seemed to me necessary for a comparison with the same festive act among the Gilyak, let us again take up the thread of our description of the bear festival of the Gilyak. We still lack any knowledge of its final act: what happens to the skull and bones of the animal after the fat, meat, and internal organs of the bear have been eaten? Unfortunately I was not an eyewitness here, and I can only report what I heard from the Gilyak and what must follow from other facts. Ditmar left Tebach before this final act. He concludes his notes from there with the remark that his further presence there would apparently offend Judin and other Gilyak, and that the repeated assertions by the former that he could not wait for the end of the festival because it would drag out for a long time yet showed only too clearly the desire that he speed up his departure. On the day before, when the first bear-meat was eaten, the bear heads were still untouched and bore their snout and head bands. When I arrived among the Olcha in Uda, I did not see these bands; if they are used at all by the Olcha, they had already been removed; the skull and the lower jaw had been removed from the skin and were, as was said, set before the guests for the consumption of the meaty parts. The former was not split, and I saw nothing of the brain parts. It is not likely, however, that they would forgo these especially tasty morsels. But in order to get at them, they must split the skull. From this one may surely conclude that the teachers of the Olcha, the Gilyak, do likewise and, after the other parts of the bear have been eaten, finally skin the head and split the skull. But this final blow directed against the bear, the splitting of its skull, may be one of the acts that are preferably done in secret, or at least not in the presence of strangers, and therefore Ditmar's departure from Tebach was especially desired. Just like the removal of the bear head from the skin, so most probably is the splitting of the skull done in the house, where immediately or soon afterward its meat and the brain parts are eaten. Arguing in favor of this is the circumstance that the instrument with which the skull of the bear is split is brought into the house at the very beginning of the second act of the festival. /730/ It is a pickax (Gilyak

*796 262 G1 796 262 *796 262 *796 ● 412

Goldi RX3

/730 cont./

mytsching), which is illustrated on Plate LI /p. 1251/, Fig. 5, from a specimen that lay on the bear rack in Judin's house during the festive period. Judging by its general shape, but especially by its handle and the way the blade is attached to it, this pickax is unmistakably a specimen from ancient times and certainly in former times had a stone blade, which was later replaced with an iron one (1). Finally, when the brain of the bear has been eaten,

1. To this day the club pictured on the same plate, Fig. 4, and used to kill sturgeon and hausen has a stone end-piece (see above, p. 806). The caption on Plate LI should be corrected accordingly.

the skull and the rest of the gnawed and assembled bones of the bear, together with the skin, are carried out of the house to a place not far from it in the forest -- an act which, according to the Gilyak, is likewise carried out with a certain solemnity by the oldest people of the village. All the bones, with the exception of the skull, are buried in the ground there or simply covered with earth. The skull of the bear, however, is treated differently, in a manner about which I had no accurate knowledge until after I had had some experiences with the neighboring peoples. The above-mentioned pickax, apparently from the Stone Age, is also used for a similar purpose by the Goldi, to judge from traces of blows. They do not, however, split the skull of the bear, but content themselves, forgoing eating the brain, with beating a hole through the crown and hang it by one of the zygomatic arches on a specially selected tree. Near Buri, in the vicinity of the mouth of the Ussuri, I saw such a tree with numerous bear skulls hanging on it. When I climbed it in order to bring down the best preserved specimens (2), I noticed that each of them had a large hole piercing

2. Among them was the largest (450 mm. long) of all the skulls of Ursus arctos known up to now, which has been discussed in detail in the first volume of this work (pp. 8-16).

Gilyak funeral.

252 cutting in half the skin on the snout of the sivuch, she peeled
237 it off. The skin peeled off the snout is hung over the door where it stays until, as the Gilyaks say, it is "lost". After taking out the eyes, the old woman cut them and poured their content into the cup containing the whiskers. Then she turned the eyes inside out and cut out first the lens and then the pupil Afterwards, she cut off the noz-ŋǝk and put it in a separate cup since it is eaten in raw form.

This done, she cut the meat covering the skull. If the skull was broken by the striker, she picked the bone splinters, sucked them one by one and put them in a separate vessel. Subsequently, the splinters together with the heads are thrown into the sea.

262 [94] If the skull was whole the old woman broke it with a
784 stone. I asked the old woman why she would use a stone rather
412 than an axe to break the skull; to which she replied that it is
252 a sin to use an axe just as it is a sin to cook the brain, for it has to be eaten raw. Brains are not the only items consumed by the Gilyaks in raw form, others are: the back, the heart, the intestines, the kidneys, the wind pipe and the noz-ŋǝk.

411 To watch the old woman break the heads of the sivuch with
177 a stone, sink her fingers in each bloody brain and draw it into
252 her mouth with a sob-like sound, I felt returned for a second to the stone-age by time machine. In fact, if we disregard guns recently acquired by the Gilyaks, and iron which they also recently learned to work into the knives using Japanese kettles as the starting material, spear tips, arrows and harpoons, we are back to the stone tip on the harpoon shaft and on the arrow, the stone axe, which is still remembered in their language (1) and we find no Japanese iron kettle. It

1. Cf. our paper - "Gilîatskîe chîslîtel'nyîe" ("Gilyak Numerals"), Published by Nauchno-issledovatel'skuî Assotsiatsii Instituta Narodov Severa TSIK SSSR, p. 10, 1932.

then becomes clear to us why the old woman uses a stone in breaking the head to get at the brains and why the Gilyaks eat the brains as well as the meat taken from the animal's back, the heart, the intestines, the kidneys, the wind pipe and other parts of the animal - raw. It is then that we see all of the Gilyak mode of life in an entirely different light.

252 Having taken out the brain and having put it in a separate trough, the old woman separated the lower jaw, tied the plant piskǝr around its middle and put it in the kettle to cook.

winter-houses (tuchadhi), which are erected jointly by the villagers and are usually occupied by several families. I cannot affirm it from my own experience. During my stay in the Nikolayev post several deaths occurred in the nearby village of Kuik, without any of the houses being abandoned, much less torn down, but the person concerned may have died outside. On the other hand, I once saw a corpse lying in a house, which will be discussed later in connection with the mode of burial of the Gilyak, but it, too, could have been brought back in after death had occurred outside the house. If the association of ideas suspected by Dr. Sternberg is to be found among the Gilyak, this would prove that at every birth they are primarily thinking of the probable death of either the mother or the child, which, of course fully justifies their anxiety for the treatment of the women in childbirth. Along with this, however, they resort to all sorts of other superstitious treatments to insure an easy and successful birth. Thus, well before the birth, a figure referring to the act of birth is carved out of wood (see Pl. LIV, Fig. 6 /see p. 1256 /) and provided with small offerings of food, tobacco, and the like in order to pacify and make favorably disposed toward them the evil spirits that might have an influence on the birth.

No one else is permitted to enter the tent where the woman is in confinement, with the exception of the midwife and other women giving assistance. The umbilical cord is cut with a special knife (Gilyak kuurak- or kopo-dhakhu, Pl. XXXII, Fig. 5 /see p. 1201/), the handle of which is provided with especially rich carving and which may not be used for any other purpose (3). Evidently, the

2. I obtained the specimen illustrated, which belongs to our museum, from the same village of Kuik.

Gilyak attribute especially great significance to this act. At the place where the child was born it is washed and cared for by the women and is kept there, if it has not died in the meantime, until it moves into the house with the mother, where the alone takes care of it.

/298 cont./

A bear festival is held also for other reasons, /299/ for instance, for reconciliation with one's son-in-law /299/, khlal or alien. If a person offends his son-in-law, for example, in making a purchase, he keeps silent, and the khlal keeps silent, but they will continue to talk until a bear festival is held by the offender for reconciliation (uzla lymyde).

A bowl, hyl, for the head is necessary for each new bear festival. The head of the bear is always placed in a new bowl, while the old one is used for meat and the like. Anyone can prepare a dish for the bear festival. The bowl for the meat is bound with the penis of the bear. A bowl from which the bear is fed for the last time in the yurt, and always on the side opposite the door, is called pukuvo-u'p.

Where a mother gives her son litter a bear as a gift, he himself is not permitted to bring it; he must come after it with pomp. The bear is greeted with nade-chade music. When the master feeds his bear for the last time, he says to it: "U'ne hunyzki! Wingan fur hunyzk!--live well! When you go, live well."

The gift giver does not shoot the bear and departs as soon as the festival is over, without even tasting (a morsel), while he must bring with him mon' and all kinds of dishes.

When a bear falls sick, then they hold pylng-tysyk and prepare mal mon'. From all sorts of delicacies and all sorts of berries. Tabi -- a dog which has been born specially for the sig.

When a dog is sacrificed, its skin, head and bones are laid in a wooden frame near the pening where the bones of the bear are placed. Some clans hang bear heads on them. This place is called k-ok ngangot.

V.

Slaves

The son of a slave remains free to the neck (i.e., his head is free), his grandson -- to the belt, his great grandson -- to the feet, in the fourth generation -- the descendants are "pure." Then he is a khlal, i.e., a kinsman of the master, and if anyone

/250 cont./

themselves give a reason other than the scarcity of iron for this. As recently as a generation ago a steel was a valuable thing, /251/ and sometimes an entire clan possessed a single communal steel. Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in burning the dead. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

Even at the present time, the basic food of the Gilyak is the ready products of nature -- fish, fowl, berries, roots; he is as yet incapable of helping nature along and accelerating her creation of foodstuffs. He does not plant or sow, or raise domestic animals. Still is the fundamental feature of his "savage" state. Moreover, Gilyak traditions of times when water was boiled in troughs by means of hot stones and their memories of wooden dishes coated with clay, and the absence of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

/322 cont./

half feet high and five to six feet wide and is interrupted only at the two rear corners of the yurt. These corners (f, j) are usually rounded off, like those in front, and are used for storing various utensils, chests, and boxes, sleds, and the like. This creates a partition, each though only a very incomplete one, between the two side-benches and the rear bench, which is regarded as the best and most distinguished place in the yurt. Opposite the inner edge of the benches, somewhat above the height of a man, there are crossposts running between the supporting posts, which serve for hanging up clothing and the like. In the middle of the yurt, between the three plank-beds and only about three feet from each one, in the hearth (g), a platform about four feet wide, twice that in length, and the same height as the benches. It is very simple in nature, in that it consists of only a wooden frame tent together with boards, /323/ which is filled with stamped earth. Over the hearth, somewhat above the height of a man, there are several crossposts, two across the front part and one across the rear, which are borne by the above-mentioned crossposts that between the supporting posts. Sticks are fastened to these crossposts over the hearth and at their lower end terminate in hooks on which the kettles are hung over the fire made in the hearth. In the front part of the hearth there stones (h) are the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

/327 cont./--they are fed through square

openings (f) on their front take and on log have /328/ a round hole (g) for the large kettle, in which the fish broth for the dogs and under certain circumstances even food for human beings are prepared. Directly adjacent to the hearth are the sitting and sleeping benches or plank beds (b, Gilyak: tikhy) which bend in very little and are somewhat low, about one and a half feet high and one fathom deep, and run all around the walls. Their chief characteristic is that they are warmed from below by means of wooden pipes (j) lined with clay, which come out from both hearths, run under the benches, and join in the corner of the house diagonally across from the entrance. From here the single pipe serving the two hearths and at the same time as an outlet for the smoke runs out of the house underground and opens not far away into an identically-shaped, vertical, high chimney (k, Gilyak: hlz) usually higher than the house. The benches are covered with mats usually plaited by the Gilyak themselves out of a kind of reed, with only the edge of the bench left uncovered, and not infrequently the walls, too, are covered with such mats in certain places. In the center of the house, between the two posts supporting the ridge, there is a large, heavy table (l), about two fathoms long and half as wide, on which the dogs are fed, and which I shall therefore simply call the dogs' table (Gilyak: hylt). The top of it, which along its longitudinal edges usually projects out in cruder carved, pyramidal, cone or hook-shaped continuations, rests upon four posts (m) firmly rammed into the ground, and, if necessary, when more space is needed in the house, during the bear festival, for instance, can be lifted off of them. Above the two ends of the dogs' table two crown-sticks hang down from the central longitudinal beam of the house, with a long pole can be stuck between them, by which the dogs are tied during the feeding. Our Plate XIX[illegible] which shows the feeding of the dogs, to be discussed later, also gives some insight into the nature of the interior of a Gilyak winter-house. I must mention, however, that the dogs' table on it is drawn a little too small and, on the other hand, the space between it and the plank bed is too wide. Subsequent pictures which are to illustrate the bear festival and the mourning ceremonies among the Gilyak give more accurate

/395 cont./

and copper arabesques and various engravings (ibid., Fig. 3). The sheath is always of thick seal leather (ibid., Fig. 2) and adorned with various kinds of embossed arabesques, and it is very uniform in shape, widest in the middle, tapering toward the bottom, and not closed at the tip, but only provided with a bundle of leather lappets to protect the point of the blade (ibid., Fig. 3, and Pl. XIX[illegible]). Usually a second knife is also worn at

5. On Pl. XVIII[illegible] the never absent, large belt-knife was omitted by mistake.

the belt: the yi-dhakhu (Pl. XXXI, Fig. 4) quite indispensable to the Gilyak, with a small, pointed blade in a strong wooden handle, which, for greater firmness, is provided with a bone ring at the lower end. It is always inserted in a firm sheath made of kangaroo skin, with a wooden or bone tip (ibid., Fig. 5). The yi-dhakhu is used for cutting wood and making all kinds of crude as well as delicate articles out of it. It should be noted that the Gilyak always cuts toward himself, not away from himself, as Mamia Rinso points out about the Ainu, too, in contrast to the

/396/ Japanese (1). Just as rarely lacking in a Gilyak's belt as

1. Cf. Mamia Rinsô, "Tô-zaki ki ko," in Siebold's Nippon, VII, p. 188, besides the latter's note, p. 202.

the above-mentioned knife is the fire apparatus: a container for tinder and flint, and a steel. The latter is either a small bag of scaliskin leather (Gilyak tsolondzh, Pl. XXVIII, Fig. 9), usually similarly decorated with embossed arabesques or with small fur shuttles sewed on it (2), or a bow (Gilyak nilgo; ibid.,

2. In the village of Tyk on Sakhalin I saw specimens of this kind that was made entirely with small pieces of the fur of Ovaria urina, the first from this animal that I had encountered in the Amur region (see Vol. I, p. 189, of the present work).

[illegible] (See category 116, Pp 999, 998, 1011 & 1008 respectively - Analyst)

[233] /Ski cont./

(Fig. 5) that is very popular with regard to the material as well as the form and arrangement. It is made use of the skin of a Mongolian fallow-deer (Cervus Sika Temminck), an Eastern Siberian [234] tribe, the Ulchi, which lives in the Amur valley, and which, in the Tungusic language of the Ulchi (Ai-ni-ren Schmidt), means "the people of the Amur." The Ulchi are a fishing people, and they live on the Amur and on the banks of the tributaries of the Amur (Ai-ni-ren Schmidt). Ethnologically speaking, they belong to the Tungusic group of people, and they are closely related to the Gilyak. The Ulchi are also known as the people living on the Amur River, and they are known as the people who live on the Amur River, and they are known as the people who live on the Amur River, and they are known as the people who live

/469 cont./

1. (cont.) de St. Pétersb., VIIth series, Vol. XII, No. 2, p. 99).

276 Among the Gilyak, the tobacco, chopped fine on a special
415 board (Pl. XXXIV, Fig. 8) and, when dry, disintegrating almost
(171) to powder, is kept in a pouch, which, adopted everywhere in the Amur region, seems to be of one and the same Manchu-Chinese form: long and narrow and provided with a lateral slit close to the upper end, by means of which the pipe is stuck in, in order to be filled with tobacco inside the pouch. It is always carried in this position, together with the pouch, which as a rule is fastened to one of the top buttons of the fur coat or the shirt and hangs down from there over the chest. Usually it is ordinarily
[237] made of fish skin, leather, or a piece of fur, bordered with
[531] Chinese cotton or silk along the edges, decorated at the top with some embroidered or painted arabesques, and occasionally made out of one of these fabrics.

276 The Gilyak likes to share the pleasure of smoking tobacco
574 with others. This is never done, however, by passing the pipe around among all the persons sitting around the hearth or a fire burning outdoors. This is prohibited simply by the small size of the pipe, as well as by the social or moral differences usually existing between those present. As a rule, however, one sees the pipe go back and forth between two persons sitting side by side. In particular, if a newcomer appears in the yurt, the host, after he has taken a seat beside him, hands him his newly lighted pipe, which the latter, after he takes a puff from it, returns again to the former, receives it from him again, and so forth, until the pipe is finished, whereupon the guest pays him back in the same way. This is always a sign of friendly welcome and of good understanding, or of a certain esteem and equal footing.
[439] I often saw the Chinese merchants on the Amur do this with the natives who entered the yurt and approached them, which undoubtedly was for the purpose of winning them over by such advances, very flattering to them, and putting them in a more favorable mood for the business dealings.
[See category 116, P. 1014 — Analyst]

G /469 cont./
276 If the Gilyak run out of tobacco, they seize upon various
824 substitutes for it. The most common of these makeshifts is fine dry wood shavings from any kind of wood, but always from a soft type, presumably willow by preference. Such shavings are even mixed with the tobacco when it is beginning to get low. When it is all gone, the wood shavings mixed with tobacco oil are smoked
G 276 in place of it. For this purpose the tobacco oil is scraped out of
415 the pipes from time to time and stored in a special small pouch (Gilyak niryghsis), which /470/ is made of a few scraps of leather fastened between two pieces of sealskin (Pl. XXVIII, Fig. 6), on which the tobacco oil is smeared and, when required, is scraped
G off, mixed with the wood shavings, and again returned to the
276 824 pipe (1). Moreover, the Gilyak use some of their native herbs as
G [171]

1. The very same tobacco substitutes is also used by the Chukchee, who, however, obtain it by putting the wood shavings in the tube, much wider on their pipes, above the pipe bowl, where it is gradually saturated with nicotine from the smoke passing through it (Bush, Reindeer, dogs and snowshoes, London, 1872, p. 429; Dall,

tobacco substitutes, for example, an herb that they named for me in Allof on the Amur as tschomr, in Tyk on Sakhalin as wurpi, and which, judging by the dried fragments that I saw, seemed to be a
Gi fern. Among the Goldi in Kōurmi on the Amur I likewise saw
276 hanging bundles of an herb which they called toina and used as a
824 substitute for tobacco. For the present the taxonomic names of these plants must remain unknown.

SS The taking of snuff and tobacco-chewing are not found at
276 all among the Amur peoples, at least in the lower Amur region (2).

SS [171]

2. Among the Aleut, who became acquainted with tobacco through the Russians, it is mostly chewed, taken as snuff very little, and not

Implements used at the bear festival of the Gilyak: 1-5, bowls for eating bear fat; 6, wooden hooks for lifting the kettle from the fire.

Implements used at the bear festival of the Gilyak: 1--bowl for collecting bear fat (reduced in size); 2--long spoon for feeding the bears; 3--knife for cutting bear fat and meat; 4, 5--ax for splitting the bear's skull; 6--spoon.

/322 cont./
alf feet high and five to six feet wide and is interrupted only at
he two rear corners of the yurt. These corners (f, f) are usually
ounded off, like those in front, and are used for putting away
arious utensils, chests, and boxes, sleds, and the like. This
reates a partition, even though only a very incomplete one, be-
ween the two side-benches and the rear bench, which is regarded
s the best and most distinguished place in the yurt. Opposite the
nner edge of the benches, somewhat above the height of a man,
here are crosspoles running between the supporting posts, which
erve for hanging up clothing and the like. In the middle of the
urt, between the three plank-beds and only about three feet
rom each one, is the hearth (g), a platform about four feet wide,
wice that in length, and the same height as the benches. It is
ery simple in nature, in that it consists of only a wooden frame
ut together with boards, /323/ which is filled with stamped
arth. Over the hearth, somewhat above the height of a man, there
re several crosspoles, two across the front part and one across the
ear, which are borne by the above-mentioned crosspoles put be-
ween the supporting posts. Sticks are fastened to these crosspoles
ver the hearth and at their lower end terminate in hooks on which
he kettles are hung over the fire made in the hearth. In the
ont part of the hearth three stones (h) are set upright in a tri-
ngle and firmly embedded in the earth, on which stands the
rge kettle used for cooking the soup for the dogs. In large yurts
here are sometimes two such large kettles, also serving for
uman use, incidentally, as was the case, for example, in the
rge yurt at Tyk, in which I stayed repeatedly and for several
ays, and where I sketched the plan presented here. The fire is
ade in the rear part of the hearth, that is, somewhat more in
e center between the three plank-beds, serving for heat and for
luminating the yurt at night. In front of the hearth stands one or
ore large receptable, usually tubs (i) made of birch bark, with
inking water, and along the front wall (k), right and left of
e entrance, or in one of the front corners (l, l) of the yurt,
supply of dry firewood is always piled up. Finally, at the top,
xactly above the fireplace, there is the smoke vent in the form
a longish rectangle that is placed either with its lengthwise

/355 cont./
342 as far as the humidity of the air is concerned, it is even greater
184 there due to the nearness of the sea and the exceedingly frequent fogs and rain. Thus, if the Gilyak on Sakhalin build their summer houses on level ground in places, they must know that they are safe there against the first menace and in addition have other important reasons for building such dwellings. I think that one of these reasons is that these dwellings, less exposed to the wind, are warmer than those resting on piles and therefore can be moved into earlier in the year and can be occupied longer in the autumn. The first circumstance, /356/ however, is of importance in particular for the southern part of the Gilyak area of Sakhalin, where the Gilyak are driven from their earth yurts earlier in the year by the melting snow. It was in this southern part that I encountered the summer house built on level ground. In Tangi I found it occupied as early as February 8/20, and in Arkai on February 28 (March 11), when it was still fully winter. In Duĭ, however, it was still uninhabited on
[122] February 27 (March 10), although I stayed in it because the two winter-yurts of the village were overcrowded as a result of a great confluence of Gilyak. This latter summer house, in contrast to several others built close to the shore, was farther from the sea, beside the winter yurts, and its owner planned to use it even in late autumn and not leave it until winter set in /Illustration appears here./

342 On Plate XIII[2] a summer dwelling of the Amur Gilyak is shown, and, to be sure, a yurt in Mão, the summer residence of the Gilyak living in Kufk in the winter. It is a structure resting on piles, about three fathoms wide and four to five fathoms long, and looks rather clumsy. The walls are made of thin beams which, as in the case of the winter houses, are not joined at the ends, but are somewhat pointed and are stuck into the grooves of the upright piles. The rather flat roof consists of crudely hewn boards, which are held together by poles fastened crosswise. On a notched
[417] beam slanting against the front of the house one climbs onto a level narrow sill which runs along the whole front of the house, is partly covered by the somewhat projecting roof, and which
[See category 116, P. 993 -- Analyst]

342 /357/ This is exactly like the interior of the earth yurts,
[352] in that low and wide plank-beds or sleeping benches (f) run along
[354] three of its walls, on both sides and in the rear, opposite the entrance door (c), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as a smoke vent and actually consists of two holes put in the two halves of the roof and joining at the ridge pole.
[417] Under this, several longitudinal and transverse poles are put over the hearth and a wooden hook is hung on them to hold the kettle
[353] over the fire. Some similar longitudinal and transverse poles run over the sleeping benches and are used for hanging up clothing. In the corners between the side benches and the front wall, to the right and left of the door, there are shelves with all sorts of utensils, a large container with drinking water, a small supply
342 of firewood for the hearth, and the like. Since the room as a
354 whole is not high and the roof is rather flat, the large smoke vent is not very high above one's head, which, together with the many crevices in the walls and the floor, actually makes the house very airy. If, in addition, the doors to the front space and from there to the outside are open, a strong draft is created. Therefore, as a rule, the summer dwelling is completely free of smoke and also quite free of gnats, which is very important. The front space (d) can also be specially ventilated, if the supplies stored there require it, for its walls in part consist only of vertically placed boards which can easily be removed in any number desired, as had been done in the case of the yurt at Mão at the time it was drawn. Finally, another feature, a simple one, to
342 be sure, but a very important one in its consequences for the
825 Gilyak, must be mentioned in connection with the construction of their summer dwellings. In order to make them inaccessible
[251] to the great number of rats in the winter yurts, a vital necessity because of the fish supplies assembled in them, a piece of birch bark is placed over the upper end of each of the piles supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing
342 up the piles to get into the yurt. The sleds are hung under the

/357 cont./
342 yurt, between the piles, for protection against the rain, and the dogs, too, find a suitable abode under the same protective roof.

342 The above description also applies, apart from the specific references to the pile-construction, to the summer dwell-
231 ings of the Gilyak put on level ground at certain places on Sakhalin and, as has already been mentioned, of very similar nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is on level ground, the flat sill, space a, projecting along its front side is likewise on the ground. As long as it is still winter, this space is used for the erection of a shelter before the entrance to the yurt, even though only a crude one. For this purpose, on both sides and in front, where the dotted line is on the plan a few poles and boards are set up vertically and, with the exception of a passage, are bound together with plaited switches, and the spaces between them /358/ are filled with grass and brushwood, so that a sort of antehouse is produced. This is assigned to the dogs for their abode, where, posted at both sides of the entrance to the house, they make good sentinels for it.

25 Since the main occupation of the Gilyak during the
[22] summer is fishing and preparing the supplies of fish for the winter,
[226] one always sees beside the summer dwellings several contrivances for this purpose. Thus, more or less numerous, open racks for
[417] hanging and drying the fish in the sun are never lacking, and not infrequently one finds a roof supported by piles, quite similar to the one on the summer yurts but much cruder, with crosspoles under it, on which the fish, hung up in rows and protected against rain and sun, are dried in the continual air current (see Pl. XIII) (1). For the storing of the supplies prepared in summer,

1. A more detailed description of the treatment of the fish before they are dried, as well as of the use of the individual parts and the like, will be given later at the appropriate place.

/559 cont./

which also bears fine silver decorations on the specimen illustrated. Sometimes used for this purpose are thin plates from Chinese buffalo horn, which for this reason the Gilyak call puntsch-ngynif, i.e., bow bones, or from the nose-piece of the Rhinoceros tichorhinus, which presumably reaches the Amur region by way of the Tungus and Yakut. The bowstring (Gilyak kich) is twisted out of fine strips of the skin or gut of the white whale. A case made out of fur or fish skin (Gilyak puntsch-chal) is used to protect the bow, especially on trips. The arrows (ku) have wooden shafts with vanes from the tail feathers of the fishing eagle (Haliaëtos albicilla) set in the lower part of two opposite sides (Pl. XLV /see p.1025/, Fig. 4) (4) and points of various forms,

4. By this characteristic alone they are essentially different from the simple shafts of the arrows used on the self-firer and, accordingly, have a special designation in that they are called uch, but the latter winngyr. The eagle feathers on the arrow shaft are called kyla-ngar in Gilyak; the notch at the lower end of the shaft, used for setting the arrow on the bowstring, is called korm.

depending on the animals for which they are intended. In my time among the Gilyak iron arrow points (Gilyak luch) were almost the only ones used, but there were also some of bone (Gilyak krangch), which were supposedly made of the leg bones of the musk deer in particular. Some of these iron arrow points intended for larger animals, elk, reindeer, and the like, and equipped on either side with a more or less sizable barb and in most cases also with a series of smaller barbs and notches, are illustrated on Pl. XLV /see p.1025/, Figs. 1-3. The two-pronged point (kor) used on the arrows for both the bows and the self-firer for killing smaller animals, sable, otter, fox, etc., has already been discussed above. An arrow with a very special shape, called

/560 cont./

5. Putesh. na Amur /A Journey to the Amur/, p. 75.

Manegir smear their arrows with a putrid fat acting as a poison, but I am not familiar with anything of this kind among the Tungusic tribes of the lower Amur region.

The quiver (Gilyak pi) used for stowing away the arrows among the Gilyak is as a rule made of wood, decorated with carved arabesques or other figures, and is provided at the top with a fur edging or a fur flap for the protection of the arrow points (Pl. XLV /see p.1025/, Figs. 6 and 7). Characteristically it is relatively heavy and clumsy, and therefore is not very suitable for being carried on the hunter's back, which probably happens only rarely and to a very limited extent. If, on the other hand, one holds the exceedingly light and portable quiver of the Orochi from Kaiserhafen, made solely out of animal skins (ibid., Fig. 8)(6),

6. It is made out of pieces of reindeer and elk leg-fur; the crossband in the middle is made of otter fur.

this in itself would show that hunting among the Gilyak, in comparison with their Tungusic neighbors, falls far behind.

I doubt very much that the Gilyak are skilled archers, though I do not have sufficient experience to be able to say anything more definite about it. The one time I saw them shooting was under conditions which would not permit drawing any conclusion as to their skill. It was at the bear festival in Tebach, when the three bears, held by chains and led about, were finally shot. The marksman in each case approached the erect animal from the right side to within about five paces. The first two bears went down with loud roars after the first shot, struck in the right lung; in one of them the arrow had penetrated to the middle of the shaft. The third marksman had struck his victim too low, in the abdomen, and therefore had to send a second arrow, which cut down the animal and caused it to die slowly.

7: Kreinovich--2 E-5 (1931) 1934 Gilyak

225 For some time after the seal-hunt at the air-holes, when
782 the broken ice recedes from the shore, the Gilyaks get out in
252 boats and "feed the sea" out of muurs ('scoops for scooping water of the boat'), pieces of jelly called [79] mos, (1) porridge

1. Jelly is prepared by grinding a mixture of boiled skins of Siberian salmon, seal fat and water. As soon as the grinding is done, a lot of berries are added to the jelly and it is then left on the outside to cool.

and a dried plant ays, called puchka by the local Russians. Sometimes the feeding is followed by a seal-hunt on nearby floes.

After the first "feeding", pilgur tol-fənd (major feeding of the sea,' literally, 'major throwing into the water') is arranged. Only after this "feeding" do the hunters put out to sea on a hunt.

225 For the "major feeding" women prepare two kinds of jelly-
782 mos and muvi --cook rice or millet porridge, prepare dried
776 sarana, peas, berries, tobacco, and dried stalks of puchka
825 (aj s). The Gilyaks believe that if the food for the dogs is not cooked--and they must be fed before daybreak-- the dogs will eat the sea offering and the latter will not reach its place of destination. To prevent this from happening, the Gilyaks specially feed the dogs of the sea spirits (according to the beliefs of the Gilyaks, spirits are human beings like themselves and have their own dogs.) For this purpose they wind puchka on fish-tail bones (mamγe) which they then throw into the sea before offering to the spirits. The Gilyaks believe that the dogs of the spirits will eat the fish bones and, having had their fill, will not touch the refreshments meant for their masters.

782 When all gifts are ready, a hunter carries them to the sea.
225 Women are not present at sea offerings. On reaching the shore the Gilyak sticks two small twigs in one place, at the very edge of the water; one twig is a keyla-qəks twig and the other is a qosk qəks ('rowen twig'). A small distance away from these he sticks another pair of small twigs at the edge of the water. These peculiar gates are called tayr. The offering is
782 thrown into the sea through the tayr. First to be emptied are

XLIX

Bear festival. Displaying the bear's head along with the skin in the house and the festive meal (Gilyak).

Gilyak implements: 1, 2 -- iron pipe-cleaner; 3 -- the same made of bone; 4 -- tinder box of sturgeon skin; 5 -- the same made of seal leather; 6 -- tobacco-oil pouch.

Gilyak implements: 1 -- fire steel; 2 -- needlecase; 3 -- stick for smoothing cloth; 4, 5 -- shirt button; 6 -- large earring; 7 -- small earring; 8, 9 -- bangles.

Gilyak household equipment: 1 -- bucket of birch bark, and 2 -- shoulder yoke, 3 -- iron kettle of Japanese workmanship; 4 -- ditto, of Manchurian workmanship; 5 -- iron ladle and scoop, 6, 7 -- wooden food bowls and chopsticks; 8 -- bowl of birch bark for serving food.

Gilyak household equipment: 1 -- wooden trough for serving food; 2 -- large wooden bowl; 3 -- the same from below; 4 -- portable tables; 5, 6 -- wooden ladle and scoop, 7 -- ordinary eating spoon; 8 -- board for cutting up tobacco; 9 -- board to put under a child's cradle.

/716 cont./

*796 252 hanging in front of the bears so that they taste them first. Besides the elders, only a dog remained in the house, and, to be sure, so it appears, only to lick clean the implements used in the cooking and the transfer to the trough.

Early in the morning of the following day (January 28) the

*796 412 252 [889] old men started their work of cutting up and cooking the meat, which was interrupted only by the usual feeding of the dogs in the house and a race beforehand with specially decorated animals dragging behind them only the tail of a fox or dog, as was mentioned above. Next, a number of articles were brought in from the storehouses, /717/ all of which were hung or otherwise attached to the bear rack in colorful confusion: pieces of fur and the skins of paws of previously killed bears, the chains on which they were led while alive, dried bear-penes wrapped in birch bark, knives which at the point of attachment of the blade have a bundle of hair from the bear's penis region around them, the so-called uing-dshakko of the Gilyak, with which it is uitsch to cut anything other than bear meat and fat (see Plate LI /p. 1251/, Fig. 3), and a

• [415 264] number of nicely carved spoons and peculiarly shaped bowls. The latter were put to use immediately, being filled with the broth obtained from the bear meat, which was sipped either directly or with the help of the spoons. This service, used by the Gilyak only when consuming bears, is very interesting and deserves a more detailed discussion.

*796 412 415 532 322 The bowls called nichyry-ngir or nichyry-ngith, i.e., bear-spoon bowls, by the Gilyak after the bear spoons (nichyr), are always carved out of a single, often quite long piece of wood, which about in the middle or near the one or the other end has either a rather deep or only a shallow oval hollow (Plate L /p. 1250/, Figs. 1 and 2). The former are specifically intended for eating the bear-meat broth, the latter (the same place, Fig. 3) for the bear meat or fat. What makes these bowls especially interesting, however, is that sometimes the one, sometimes the other end of the piece of wood, and sometimes both the front and the handle ends, are provided with various carvings referring to the bears and the bear-festival. The latter are also found in profusion on the handles and sometimes

322 /717 cont./
796 even on the lower end of the spoons which are used by the Gilyak
412 at the bear-festival feasts. I succeeded in bringing back to our
415 museum quite a number of bear-festival bowls and spoons which
532 had belonged to the distinguished Gilyak, Ssogin in Kuik, and
came into my hands only through a lucky accident. At the time
[126] of my visit the Gilyak refused any offer, however high, for a
utensil used in connection with their bear festival, with the asser-
tion that such a transaction would be too greatly uitsch. If one
examines these carvings more closely, one discovers that they
attempt to depict the bear in all the various situations and positions
in which it is put during the bear festival: on Plate L /p.1250 /,
Fig. 1, for instance, it is shown with the neck and body band; on
Plate L, Fig. 3, and Plate LII /p. 1252 /, Figs. 3 and 5, attention
is called to the revolving ring on the upper side of its body band;
Plate LII, Fig. 4, shows it eating from the bear spoon; Plate LI
/p. 1251 /, Fig. 6, shows how, led on a chain, it defends itself
against its attackers, and the same figure, as well as Fig. 5 on
Plate LII, shows the bear's head in the läsng and later looking down
from the rack in the house. The most interesting, however, is the
spoon illustrated on Plate LI, Fig. 6, not only because it can be
regarded as a masterpiece of Gilyak wood-carving, but also be-
cause it alone shows almost all those situations of the bear at the
festival held in connection with it and, in addition, by linking the
bear's head looking down from the rack in the house with the toad
depicted in the bowl of the spoon, it shows the latter as the
spiritual initiator of the whale bear festival. These bowls and
spoons are always made only during the bear festival, and here in
/718/ Tebach two Gilyak sat on the floor in front of the bears
busily occupied with the carving of such implements.

796 In the afternoon of the same day new quantities of bear
252 meat were brought from the storage chambers and placed on the
263 floor covered with fir branches in front of the bears. As before,
784 the kettle was filled with snow, and the cooking now proceeded
more energetically -- but always without any salt, the use of
which is strictly forbidden, not only in the preparation of bear
meat and broth, but also for all other foods during the bear festival,

825

Bears' head-bands with figure of toad and agate balls.

*796 conceivable that they are trying to imitate this Buddhist forehead
199 swelling likewise on the head of the bear venerated by them in
194 superstitious fear and likewise regarded to some extent as divine,
825 and that they do this with the agate balls which are furnished
796 them for this purpose by the Chinese themselves. Thus, accord-
ing to Gilyak ideas, the bear is to some extent moved up among
the divinities and therefore a formal bear-cult is practiced.

*796 With the putting on of the snout and head bands, or the
574 toad and agate-ball bands, all the honors imaginable have been
415 shown to the bear and now, in the awareness of their complete
576 innocence, the Gilyak may, with a clear conscience, give them-
selves up to the pleasures of the table. A great number of wooden
bowls were immediately brought into the house on a sled and
arranged on the floor around the bears, while the participants
in the feast took their places, sitting cross-legged, on the bench
[262] of honor. First, a ski, which probably was one of the sacred
utensils since it /721/ had been propped up against the étagère
the whole time, was used to present pieces of frozen sturgeon
to the guests. While they were still eating it, simple circular

/721 cont./

*796 wooden bowls, or, more correctly, large plates (Gilyak aam-
574 ngir) (1), were filled with a dish which consisted of cooked beans,
262
415
576

1. See p. 683 above.

a kind of groats, fish oil or seal oil, and chopped leeks, and the
serving of which was done with the greatest formality. At each
+796 side of the étagère a man was busy lifting one plate after another
574 from the floor and bringing it to the server of the food, who sat
576 on a sled in the front part of the yurt. The latter, with a large
hemispherical iron ladle (Plate XXXIII /p. 1013 /, Fig. 5), scooped
the aforementioned mush from a trough and served it on the plates
which were then immediately taken back again to their places.
This was repeated three times with each plate, whereupon the server
got up, stepped up to each plate, and added some mush and a
piece of frozen sturgeon to the already huge portions. From each
side two men now stepped forward to the row of plates, placed
a decoratively carved spoon in each of them, and handed them
to the guests, one plate to each one, beginning with the two
sitting in the middle of the bench and going from there to the
ends. What was left over from the superhuman portions was poured
[562] back into a trough. The women were totally excluded from the
feast, indeed, none of them was even present during it. Everyone
then rose from his seat, the plates were taken to the other house
where the medium-sized bear was displayed, and an identical
meal took place there. In both cases, however, this was only a
[242] meal in advance of the actual feast, for no bear meat or fat had
yet been consumed, and this would not take place until the follow-
ing day.

This day (January 31) began in much the same way as the
796 previous ones, with the cutting up of the bear meat and fat in the
574 presence of the bears' heads. Numerous guests had already ap-
262 peared early in the forenoon. They were put on the bench of
576 honor behind the bear rack without further ado and, strangely
enough, were fed without all the ceremony that had been observed
so strictly the day before: each guest was given a fir branch and

576 /721 cont./
*796 on it raw and cooked bear-meat and several strips of bear fat, as
574 well as a small heap of fine wood-shavings (zach). This was the
262 first bear meat that was eaten. The portions were very ample, and
gradually everybody present in the house or newly arrived partici-
[562] pated in the meal, indeed, even the women and children re-
[855] ceived their share of it, in that a few young people walked among
[415] the diners with bowls of a special shape (Pl. L /p. 1250 /, Fig. 5,
and Pl. LI /p. 1251 /, Fig. 1 -- called äns-tymyk (2) in Gilyak)

[104] 2. The s in this word is to be pronounced soft,
like the French z. The bowl is called äns-tymyk
because of its similarity to a hand (tymyk).

and collected contributions to be divided among the women and
children. The quantity of bear meat and fat consumed that day was
therefore very great. What was left over of the portions /722/
that the guests had, they wrapped up in the fine wood-shavings and
fir branches and took home -- a package that the Gilyak are said
to call möps (1).

[114] 1. A designation which I myself did not hear.

The gnawed bones, on the other hand, were put back into
the kettle from which the cooked meat had been distributed. As
the meal came to a close, an old man with a fir branch in his
hand stationed himself at the door of the house and, gently striking
each one, drove out everyone passing through it who had eaten
bear meat and fat -- an act which was supposed to be a sort of
[869] punishment for the misdeed committed against the bear. Once
[533] outside, however, those who came out were less gently treated,
for here they were greeted with a cross fire of snowballs with
which the boys pelted them, while the women drummed vigor-
[184] ously on the suspended beams. An identical meal with a similar
aftermath also took place in the house where the owner of the
third bear lived. Here, too, just as before, quantities of small
individual heaps of food -- sturgeon, mossj, etc. -- were put out

798 /750 cont./
532 figure was made in case of backaches, in order to rid oneself of
825 the ailment (Plate LIX /p. 1259 /, Fig. 9). (2 S.R. I, p. 15.)
[755] 21. Gilyak. In the village of Kalm I was able to buy
[126] many idols, all different and some of them very interesting,
for example, one idol of human shape with a bear's head (Plate
LVII /p. 1257 /, Fig. 3). It was named for me as ogink, a desig-
nation that other idols in purely human shape also had. Another
had the head of an owl (ki) on a human body (Plate LVII /p. 1257 /,
Fig. 5); in the case of a third one the owl sat on the head of the
human being (Plate LVI /p. 1256 /, Fig. 4), several human figures
had cavaties in the body to hold food.

One idol consisted of a block of wood with a human face and
a row of prongs on top of the head, each of which was provided
with a human face.

[126] I also bought here the bowl in which food served to the
idols is put and which is called toll-ngir or kägn-ngir.

Then there were idols of the white whale (pömi-tscho)
with a human being on it (Plate LVI /p. 1256 /, Fig. 5), as well
as of the wolf, amulets with two heads, that is, of the bear and
raven, etc., here.

In the village of Tschelmok many idols with zach wound
around them and several clothed in bearskin stood on a shelf in
[126] the corner of a yurt. I acquired a small tiger-idol with a human
figure on top of it (Plate LVII /p. 1257 /, Fig. 1), and furthermore
an amulet with three idols, one of which represented a human be-
ing, the second a wolf, and the third another animal that could
not be named for me. Next to the idols there were a great many
798 idol bowls, all of about the same shape with representations of
415 various kinds, sometimes with a human face, sometimes with a
532 toad, a lizard, and the like on them. These were all toll-ngir.
Only one idol-bowl was completely different and consisted of two
cups made out of a piece of birch bark and placed side by side
in the form of an 8 (Plate LXI /p. 1261 /, Fig. 1). This vessel
[126] was called tschobrä and was used for the same purpose. No amount
[784] of persuasion, however, helped in getting the woman who owned
them to sell one or the other of these idol-bowls. She said that
it was uitsch and would cause her death.

Kreinovich--26 E-5 (1931) 1934 Gilyak

52 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.

53 When the heads were cooked, Xitkun, his son and other
57 hunters started to eat. They were served meat on flat
58 wooden dishes. At the same time they were given a small
4 bottle with salt and a tiny cup containing finely cut cheremsha
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeta Antropologii i Etnografii a wooden plate of the an-
5 cient Gilyaks, black with age. This plate, which was sold
53 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.

52 On the following day, after the meat was taken off the
82 heads, the Gilyaks prepared them for throwing in the sea.
25 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of gosk-pəks 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemanγ. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pəs. In a row with the skulls lay jugular
vertebrae (ma^t) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

9: Hawes--270 T-3 (1901) 1903 Gilyak
116, 415, 422, 585

"The cauldron plays an important part, not only in the everyday domestic economy, but at the very threshold of the new joint life—at the marriage ceremony itself. At least, this is so among some of the clans on Sakhalin. No religious function, as we understand it, graces the occasion; only a simple custom, which appears as a traditional sanction to this important departure in the Gilyak's family life.

The payment hav ing been made without formality to the bride's father, a feast is prepared in his hut, to which the bridegroom comes with his friends, bringing a new Japanese cauldron. The marriage feast is then cooked in this new vessel, and eaten with rejoicing, for the eating together is part of the necessary function. This ended, the two cauldrons, the new one and that pertaining to the hut, are both cleaned and placed by the bridegroom's kindred in front of the bride, who, with her partner, is standing with her back turned to the fire, and face to the door of the hut. She then places her left foot in the new vessel and her right in the paternal, or rather maternal, cauldron, the two being placed one step apart. The bridegroom then moves them one by one, a step at a time, until the bride reaches the door. Here the couple take up their own and go to their new hut, amid the acclamations of their kindred."

262 Of farinaceous food, they eat only buda (millet). It is
439 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

272 Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly, because they often do not have the money or the opportunity to buy it. If they also have sugar for their tea, these people are utterly happy.

263 As a condiment and spice they use practically only the leek
827 of the cherenesha. On the island of Sakhalin, according to Schrenk, the senecia pseudoarnica is also put into the soup. Salt is now regularly used. Some Gilyak maintain that since they have been eating salt, their sense of smell is no longer so acute, and that formerly they could tell what animals had passed through the bush (?).

273 Like all savages, they love spirits above all; it is also the
439 bait by which all kinds of itinerant merchants entice them. Liquor which is smuggled in from China (suli or chanshina) is very high in raw alcohol and the drunken state which it induces [112] often has elements of near-insanity. The Gilyak do not know any other intoxicating beverages.

276 Tobacco is the best-loved indulgence of young and old of
439 both sexes. It comes from neighboring Manchuria and is not very strong. Children of six to eight years already smoke, although not all adults permit this.

They do not smoke opium, probably because it is very expensive. After this general account of the various articles of nourishment and in[illegible]cation, I should like to add something about the methods of preparation of the food.

252 During the day the food is mostly eaten cold; cooking is done
264 toward evening. The cold food is at the same time usually raw.
415 Roasting is almost unknown, and the number of cooked dishes is small. They consist mostly of millet porridge and soup. One kind of soup is worth describing because of its odd manner of preparation. The assembled company put dried fish into

252 their mouths and chew it. Each person spits out what he has
264 chewed into an individual small basket made of birch bark.
415 The contents of all the little baskets are then gathered and put into a pot; to this are added fresh, unsalted fish, berries, cedar nuts, flour and seal blubber, and the whole is then cooked. The soup is not eaten with spoons but drunk out of wooden mugs; from these they also eat their porridge. They eat with their fingers; instead of plates and bowls for dry food they use small wooden boards with legs. Both sexes eat together; they sit crosslegged on benches on which also the bowls and little trays stand about.

VI. Dwellings

343 Gilyak villages lie along the river banks in low places
361 which, however, are usually not reached by flood waters.
417 The houses stand in a row, usually three in number, seldom 12 or more. The front of the village is usually more or less hidden by the high scaffolding on which the fish are dried. The only out-buildings are small storage houses. Neither stalls nor places to house their idols, neither kitchen gardens nor cultivated fields are to be seen around such a village. (1) The scaffolds consist of high perpendicular poles

> 1. As an exception we may mention the fact that one Gilyak in the last few years had some potato patches.

on which are cross bars. Below and around [113] these the dogs are usually assembled. Some Gilyak villages have separate bear houses, a small square made of beams where a bear is kept and fattened!

333 Their house (2) somewhat resembles a common farm house,
342
354

> 2. In conversations with Russians the Gilyak also commonly refer to their houses as yurts, but this is not a Gilyak word.

but it is shabbier and gloomier; it is broader and lower, has no glass at the windows, and no smoke vent in the roof. It consists of only one room. The walls are made of thin fir beams. The cracks are stuffed with moss and smeared over with clay. The floor consists of pressed clay, the roof of birch bark or coarse dried grass (calamagrostis purpurae) on which earth is sprinkled; the roof is also sometimes weighted with stones, to offer resistance to the wind. The few

171 among the Goldi, are in use throughout the Gilyak people
751 and are essentially the same as those discussed earlier
301 (Number XIII, p. 207) [see Goldi source 18: Genest--Analyst]. The Gilyak on Sakhalin Island whose houses
372 Jakobsen entered were likewise highly indignant whenever
462 he left the house with a lighted pipe or when his companions
776 extinguished the fire burning in a hut by pouring water on it. For in their opinion such things tended to conjure up destruction not only over the inhabitants of the one hut but over the whole tribe. The inhabitants of one house in the village of Varki below Nikolayevsk predicted the same result when Jakobsen was about to light a fire for making the tea, and they forced him to wait till the house-wife saw to this task, since, in their opinion, this was a job only to be performed by her. Plainly this conduct has its basis in the sacred position of fire. [380] Though this no longer leads to a personification of a fire god among the Goldi and the Gilyak, it no doubt existed among them at one time as it still does today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious conceptions of the Goldi; the most important difference seems to me the one that was touched upon earlier (XIV, p. 223), [see Goldi source 18: Genest--Analyst] the fact that the Goldi pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are fed plentifully for an extended time by means of large wooden spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually held late in autumn and in winter and they are affairs of the greatest importance to their celebrators. I will now give the description of the festival that Jakobsen had the opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a festival was to take place on that day. From several other villages, some of which were considerable distances away large numbers of guests had come in already, and the whole place was astir in anticipation of the festival at hand. The opening of the bear festival is in the hands of the village

These buildings were the receptacles of dried fish for the winter use of dogs and their owners. The elevation of the floor serves to protect the contents from dogs and wild animals. I was told that no locks were used and that theft was a crime unknown.

The dwellings were generally divided into two apartments; one a sort of ante room and receptacle of house-keeping goods, and the other the place of residence. Pots, kettles, knives, and wooden pans were the principal articles of household use I discovered. At the storehouses there were several fish-baskets of birch or willow twigs. A Gilyak gentleman does not permit fire carried into or out of his house, not even in a pipe. This is not owing to his fear of conflagrations, but to a superstition that such an occurrence may bring him ill luck in hunting or fishing.

It was in the season of curing fish, and the stench that greeted my nostrils was by no means delightful. Visits to dwellings or magazines would have been much easier had I possessed a sponge saturated with cologne water. Fish were in various stages of preparation, some just hung upon poles, while others were nearly ready for the magazine. The manner of preparation is much the same as in Kamchatka, save that the largest fish are skinned before being cut into strips. The poorest qualities go to the dogs, and the best are reserved for bipeds.

Though the natives do the most of the fishing on the Amoor, they do not have a monopoly of it, as some of the Russians indulge in the sport. One old fellow that I saw had a boat so full of salmon that there was no room for more. Now and then a fish went overboard, causing an expression on the boatman's face as if he were suffering from a dose of astonishment and toothache drops in equal proportions.

There were dogs everywhere, some lying around loose, and others tied to posts under the storehouses. Some walked about and manifested an unpleasant desire to taste the calves of my legs. All barked, growled, and whined in a chorus

225 For some time after the seal-hunt at the air-holes, when
782 the broken ice recedes from the shore, the Gilyaks get out in
252 boats and "feed the sea" out of muurs ('scoops for scooping water of the boat'), pieces of jelly called [79] mos, (1) porridge

1. Jelly is prepared by grinding a mixture of boiled skins of Siberian salmon, seal fat and water. As soon as the grinding is done, a lot of berries are added to the jelly and it is then left on the outside to cool.

and a dried plant aγs, called puchka by the local Russians. Sometimes the feeding is followed by a seal-hunt on nearby floes.

After the first "feeding", pilgur tol-fənd ('major feeding of the sea,' literally, 'major throwing into the water') is arranged. Only after this "feeding" do the hunters put out to sea on a hunt.

225 For the "major feeding" women prepare two kinds of jelly-
782 mos and muvi --cook rice or millet porridge, prepare dried
776 sarana, peas, berries, tobacco, and dried stalks of puchka
825 (aγs). The Gilyaks believe that if the food for the dogs is not cooked--and they must be fed before daybreak-- the dogs will eat the sea offering and the latter will not reach its place of destination. To prevent this from happening, the Gilyaks specially feed the dogs of the sea spirits (according to the beliefs of the Gilyaks, spirits are human beings like themselves and have their own dogs.) For this purpose they wind puchka on fish-tail bones (mamγe) which they then throw into the sea before offering to the spirits. The Gilyaks believe that the dogs of the spirits will eat the fish bones and, having had their fill, will not touch the refreshments meant for their masters.

782 When all gifts are ready, a hunter carries them to the sea.
225 Women are not present at sea offerings. On reaching the shore the Gilyak sticks two small twigs in one place, at the very edge of the water; one twig is a keγla-ʒəks twig and the other is a qosk nəks ('rowen twig'). A small distance away from these he sticks another pair of small twigs at the edge of the water. These peculiar gates are called taγr. The offering is
782 thrown into the sea through the taγr. First to be emptied are
225 the uiγ-ŋir, (2) that is, troughs from which drowned men are
766
415

2. Uiγ-ŋir is made in memory of a man drowned in the sea. The first uiγ-ŋir "should be lost" quickly as the Gilyaks put it. Then they make a second one which

they keep for a long time. When some one is drowned the Gilyaks arrange a boat race, fight, and run. In this connection I wish to note that in the valleys Chayvo, on the Okhotsk shore of the Sakhalin peninsula, where I studied the cult of drowned men in great detail, no felicitations are allowed when a man is drowned.

ed. (Mos for these troughs is prepared by men). Next, mos s emptied out of the tol-ir ('sea troughs') for which it is prepared, as in all other cases, by women. The offering completed, the troughs are turned around so that their "eyes" are directed to the houses instead of to the sea. (3) Next,

3. The troughs are in the form of animals. As I observed in the village of Chayvo, drops of mos meant to be "eyes" are put on one end of a tol-ir, which apparently no longer has animal form.

ebbles, picked up from the shore are put into the troughs. t home these pebbles are thrown into the fireplace.

The Gilyaks regale their kinsmen with whatever is left ver from the offering and also eat themselves. Mos from the l-ir is eaten only by old people. Women, children, and oung hunters must not taste this mos.

It is imperative that the "feeding of the sea" be completed efore the departure of the hunters. Once the hunters put out sea, "feeding of the sea" is not allowed. At present this ustom is not strictly observed, and if someone happens to e late, he "feeds the sea" late in the evening when it is easonable to assume that the hunters at sea have gone ashore; lthough they sometimes spend the night on floes.

After the offering the Gilyaks begin preparations for putting ut to sea on a hunt.

The essential prerequisite for seal-hunting at sea is a large pacious, many-oared boat. Not every Gilyak is the owner of 30] such a boat, suitable for long voyages. In the village Kul here are no more than ten such boats. (1) In the seal-hunting

1. Unfortunately, it did not occur to me to count the number of these boats during my stay in the village Kul.

eason the hunters unite in a collective which centers around

281 (the work of stretching the hides on frames and of cutting
462 straps is performed by men). Finally, the heads have to be cooked and prepared for throwing out into the sea.

281 I watched the two wives of Xitkun work after he returned from the hunt. The younger of the two was busy peeling suet from hides. In this she was helped by a woman, the wife of one of Xitkun's kinsmen. The job of peeling suet from hides is very hard. Most of the time the woman has to work in a bent position. I saw Xitkun's wife lift a hide in the process of cleaning it of suet by seizing a part of the cleaned hide with her mouth. At the same time she held the peeled suet with her left hand and continued the peeling process using a large narrow and somewhat curved knife which she held with her right hand.

237 The Gilyaks prepare thin seal fat in the following manner.
415 They cut the suet (ŋɔ̂ʔ) into pieces. They put the pieces into
251 a barrel (in the past they used to put them into a large, deep trough) which they then place in a warm spot. There the suet begins to decompose and to melt (I am not in a position to give a more detailed account of the process which takes place in the suet). This yellow fat (tóm) flows out of the suet. Depending on the age and variety of the seal the fat is either light or dark and turbid. The Gilyaks pour the melted fat into dried seal stomachs. They give the leavings of the melted suet (taʔ) to the dogs. Stomachs of seals are used by the Gilyaks for storing seal fat. Having killed a seal the Gilyaks empty out its stomach, blow air into it and hang it up to dry. The fat can be stored for a long time in such a bladder. Once the bladder is filled with fat, it is hung in the barn.

888 While one of Xitkun's wives was busy peeling suet from
252 hide, the other wife, Hemanχ, 'old woman,' was preparing the heads for cooking. It was certainly no accident that it was Hemanχ, Xitkun's older wife, who was preparing the heads for cooking. Preparing of the heads requires a certain knowledge of religious ceremonies the guardians of which are the old people.

193 [93] À propos the interpretation of the words hemanχ
197 old woman' and hemar 'old man'. Both words have in common the sound combination hem and differ in their respective endings ar and anχ. Ar means in the Gilyak language male and anχ - female. What then is hem? In the village Chayvo where a certain form of the Sakhalin dialect is spoken, they call an old man hajmŋar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient forms. The etymology of the word hajmŋar can be easily

The few

796 elder who also determines how many and which bears are
622 to be killed by the consent of their owners, for it is not the
574 village as such but individuals in it who are the owners of the captured animals. Once an agreement has been reached
796 on this point the animals intended for slaughter are led from
777 house to house several weeks before the fixed date and must spend a night in each, in order to bring its inhabitants luck
796 by their stay. During this time the animals get only a little food, but at the end of it they are indemnified for their involuntary fast by being taken throughout the night from house to house and fed the choicest tidbits, namely, fresh and dried fish, berries and a thick gruel prepared from millet.

796 While making the rounds through the village, the bears are
563 irritated by being pricked, and they are enraged by a mock hunt staged on them with lances. The bears are ones that have been captured young in the woods or bought full-grown from the Chinese or Manchu who are also quite numerous in the
796 Gilyak territory. During the mock-hunt the Gilyak naturally take the precaution of tying the animals in such a way that they cannot easily get at their tormentors. Close behind the front legs they tie a strap around their body to which are attached rings through which are run iron chains. To these chains, in turn, they fasten thick belts of seal hide and of considerable length, in such a way that some go forwards and others backward. A number of Gilyak take hold of these belts and in this way they are able to force the bear to stand completely still by alternately tightening the belts depending on whether the bear is turned frontwards or backwards when it wants to attack its tormentors.

796 Outside the village there is a kind of fence made of sturdy
417 willow sticks, which has an opening for an avenue that is also fenced in on both sides with similar willow sticks. Inside this enclosure the bear, after it has finished its tour through
796 the village, is tied between two tree trunks. There it is left
541 to itself for a while, while the inhabitants of the village amuse
231 themselves with the dog race almost always held at these
437 celebrations. In the village visited by Jakobsen they also had a track especially constructed for this purpose, which, however, was not very long. After the dogs had been led to the track by their owners and placed next to each other, they were let loose at intervals of a few seconds, but they all arrived at the finish about the same time. There is, by the way, no idea of winning prizes at this race, since such do not even exist. Rather, it might be called a purchasing race since the race serves to place the good qualities of the dogs in the right light and thus to arouse a desire for buying. The

426 that the Gilyak expression for "to be indebted" or "to have debts" -- a concept which must be very familiar to the Gilyak in view of the conditions prevailing among their neighbors, the Goldi and the Ainu -- escaped both Glehn and me, in spite of our otherwise quite copious word lists.

735 Be that as it may, the help given to a poor Gilyak in distress by his richer fellow-villager, business friends, or other acquaintances does not consist of their getting this or that on credit, but of being given free (Gilyak pai) what is needed to maintain life. And, to be sure, this is done as a consequence
181 of the national-communistic spirit, which, more or less peculiar to all primitive peoples, is in no slight degree inherent in the Gilyak. More, however, than among other peoples, the
[186] Tungusic tribes, for instance, the communism of the Gilyak is strictly national, that is, active only within the tribal boundaries, which is conditioned and nourished by their sharp linguistic differentiation from all the neighboring tribes and their intense
• 421 national consciousness. Furthermore, the mind of the Gilyak, so much oriented toward trade, gain, and the increase of property, sets certain limitations on it, for it by no means puts all goods at its service without distinction, but rather only those which Nature herself provides in sufficient quantity and in a condition practically ready for use, and therefore labels, so to speak, as common property. The Gilyak regard as such primarily the products which the sea and the rivers furnish them in quantity, fish, seal, and the like, as well as, next, the dog, fed almost exclusively on these products and indispensable even to the poorest because of its fur, and, finally, what the local forest furnishes them in nourishing or refreshing roots, berries,
735 and other vegetables. It is taken for granted, therefore, that in
421 case of need the rich Gilyak will give to his poor fellow-villagers and other fellow-tribesman who approach him for help as much of his supplies of the products mentioned (fish, seal, etc., and dog furs) as is required to satisfy their most urgent needs in food and clothing. And as long as his supplies of these are not exhausted, no one will perish from hunger or cold. It is quite

/667 cont./

735 different, however, when it is a matter of goods which Nature
• 421 furnishes mankind only sparingly and which must be wrested from her, so to speak, with toil and effort, as, for example, sable and other precious animal pelts as well as everything which is obtained by trade by means of the latter from the Chinese, Japanese, and Russians. It would never occur to a Gilyak, be he rich or poor, to consider them likewise as common property and, accordingly, to sacrifice them in cases of need to the common good or to demand that this be done. In addition, these goods, in contrast to the first ones, and not exempting the cereals, tobacco, and the simplest Chinese or Russian clothing materials, are merely luxury goods without which he can still
[182] very probably maintain life if need be. Thus, the extremely active instinct of the Gilyak for trade and acquisition and their endeavor to preserve /668/ and add to their property form an effective counterweight against the communism and prevent the lazy, and therefore poor, from living at the expense of the industrious and wealthy, even though without denying him, in case of need, what is absolutely required to sustain life.

342 The Gilyak also take account of the communistic principle
421 in the matter of shelter or the dwelling, which, in a region with
423 long and severe winters like their homeland, is of no less importance than food and clothing for the maintenance of life. How and to what extent this is done can be seen from the following. It has already been mentioned above that the Gilyak, in an apparently quite irrational fashion, do not evaluate a structure as large and, in some respects, complicated as their winter-house, built according to the Chinese pattern, half as high as a simple, always much smaller storehouse (1). This can be explained by

1. See pp. 937-943 above.

the fact that the former, in spite of its size, yields a considerably smaller direct income than the latter, and this, in turn, rests on the fact that the dwelling is in part of communistic origin and

/668 cont./

342 and thus in its utilization is to a certain extent subject to the
• 421 communistic principle, which is not at all the case with regard
423 to the storehouse. On account of its size and complicated con-
[476] struction, the former cannot be built by a single person, as can the latter, putting it up requires the joint labor of many persons whom the person undertaking the enterprise, if he cannot find them among his relatives, engages from the circle of his fellow-
[574] villagers or neighbors for a small payment. Though later on it belongs to the person or persons who undertook the construction
[429] and were able to persuade the others to help, it is never forgotten that it owes its origin to joint labor and, accordingly, it is always regarded to some extent as common property: shelter and protection in it may not be denied to any villager or other fellow-tribesman, and it would be absolutely contrary to the views and the practice of a Gilyak house-owner if he tried to collect a high rent from a person permanently domiciled with him, and, to be sure, in any form other than through the obligation for assistance for the household. Hence the direct profit from a winter house, and similarly from a summer house, is very little.

The situation is different with regard to a storehouse, which
342 is built by the owner himself. It belongs to him exclusively, and
423 the richer Gilyak only have an interest in one insofar as they have
[429] provisions and other things and have no shelter for them. It is arranged in practice so that only a single wall, and, if this is not enough, a second and a third can be rented for storage, until the means to construct an entire storehouse are obtained (1).

1. Cf. the arrangement of a storehouse (p. 529) with its 11 wall pieces (f-q) and two spaces (c and d) in the middle.

Since more can be asked from a well-to-do Gilyak, a section of a wall, even reckoned at only one ja, will yield about 10 ja in direct income.

/669/

423 Finally, they also embrace the communistic principle in
224 that they have no limitations or restrictions on fishing and hunt-
226 ing, except for the places on the river where they have their
619 salmon weirs and those spots in the forest where their traps and
self-shooters are set up. Thus they tolerate it, wholly without
limitation, when the Liman Gilyak go to the Amur River to fish,
and the Tschomi Gilyak go far downstream on the Tymy River
for salmon fishing, and the latter, in turn, move to the sea-
coast to catch kangi. It is true, the Tschomi and the Tymy
Gilyak have ties of hospitality with each other. Also, in the
[648] vast forest the Gilyak permit even Olcha and Samagir to pene-
trate into their territory without molesting them.

Like the communism, the inviolability of property is also
685 based upon the national principle. I have seen even old and
●[421] dignified Gilyak men who could not resist a small theft, for ex-
[123] ample, a piece of butter or the like, quite apart from the young
people, who go so far as to cut open and pillage travel bags,
etc., as happened to me in the village of My in the Amur-
[186] Liman. I was repeatedly warned by the Amur Gilyak about the
inhabitants of the village of Langr, located at the entrance to
685 the latter. The opposite, however, that the Russians steal from
648 the Gilyak, happens much more frequently, and the temptation
to remove a makeshift door or a fish net hanging in front in order
to enter a storehouse and to pillage it is indeed much greater.
Even the small burial houses were not safe for their contents,
though they did not contain anything but a few articles of sym-
bolic significance. Thus it came about that I became acquainted
[192] with the principal international relationship between the two
peoples from the Gilyakized Russian term for "to steal" (ukradntsch,
Russ. ukrast)), and the Gilyak word (enngarsitsch) did not become
known to me until much later. But it hardly ever happens that
685 one Gilyak will steal anything from another. Indeed, I met
123 persons, such as Judin in Tebach, Mradamn in Ssabach, etc.,
whom I could fully trust even from an international standpoint.
The former, for instance, after a few days, returned to me a
cigar case which I had left in his yurt, and there was not one

23 /697 cont./ From now on
796 it belongs, so to speak, to the whole village, for all its members
●[421] have to attend to its care and feeding and, accordingly, are en-
titled to participate in the forthcoming festival in its honor,
ultimately ending in its death and the consumption of it. The
[182] bear festival, then, in a very eminent sense is a communistic
festival which unites all the individual members of one village
community and therefore understandably represents the climax
of the social and co-operative life of the Gilyak. The original
owner of the bear, the man who bought it or who arranged for
its capture, has only the right to determine the time when the
festival is to take place and to direct it, always, of course,
within the limits of traditional practice. Similarly, as the host,
[574] he may make the feast a more or less opulent one by adding
culinary delicacies other than the ones furnished by the bear and,
accordingly, to invite to it relatives, friends, and acquaintances,
even of a foreign tongue, living beyond his village. Finally,
after the festival is over, the skin of the bear goes to him.

231 The feeding of the captive bear by all the inhabitants of
the village takes place in accordance with a previously estab-
lished order. The food given to it, through the little window in
the prison consists exclusively of fish in a raw or dried state
(jukola), mossj, i.e., a mush made of ground fish-skins or cut-up
jukola, fish or seal /698/ oil, and red bilberries or crowberries (1),

1. Concerning its preparation, see p. 671 above.

and water, which in summer may be given to it in liquid form,
but in winter only as ice or snow. The long spoon (Gilyak nichyr)
illustrated on Plate LI /p.125V, Fig. 2, is used for presenting the
food, in particular the mossj and the water. From time to time,
but only rarely and chiefly, no doubt, for the purpose of cleaning
the cage, the bear is taken out of it. For this procedure, however,
which I witnessed in the village of Tschomi on the Amur-Liman,
it must be partly bound again. This is done by carefully pushing
apart a couple of the boards on top of the cage, throwing a noose
round the neck of the bear still in the cage, and shackling its

352 roller-like pillows stuffed with hair or feathers. The favorite posi-
[516] tion of the Gilyak is either to sit in Turkish fashion or to lie
●[422] sprawled out on his plank bed. In the depths of the plank bed
are placed boxes with valuables, Chinese silks, robes, expensive
spears, furs, and other things that play a role on the solemn oc-
casions of one's life: when a beloved person who has died is sent
off on the long road to the settlement of the dead; when a
daughter is provided with a dowry and sent off to her husband's
house; when it is necessary to pay ransom in affairs of vengeance,
or to pay the bride money for a bride bought for a son or brother,
and on similar occasions.

342 The summer dwelling is a hut placed directly on the
ground, or a pile structure made of spars and poles.

411 The weapons of the Gilyak consist of a bow, already be-
ginning, by the way, to go out of use, a spear with a long tip
and frequently adorned with skillfully made silver inlays, and of
late a gun, with which he has already become familiar. In
addition one can mention crossbows of various types and a harpoon
for hunting sea animals, which is attached to a very long, sectional
shaft, several meters in length.

493 As the means of transportation, sleds serve in winter, boats
[501] in summer. The Gilyak dog-sled is in its way beyond perfecting.
Being about two meters in length and about 30 centimeters in
height and width, put together from slender birch bars with /29/
a light binding in the seat, they are so light that a person can lift
them with one hand without any difficulty, and at the same time
they are so sturdy that they can carry a weight of a quarter of a
ton; in elasticity and sturdiness only the ancient Kamchadal dog-
sled can compare with them.

Overturned, runners up, they have the shape of a flattened
segment which touches the ground with the smallest part of its
surface. Because of the small area of friction, they are very
light when in motion, are easily carried over difficult places,
and on a smooth road, and especially on ice, they glide like the
492 best English skates. The manner of steering them is very original.
493 Because of their very small width, they are very unstable and
lose their balance at the least unevenness. Therefore, the

/91 cont./

476 to do is to move to the yurt of a well-off clansman, or e
* 614 simply visit him two or three times a day, and they will
[261] share with him without a murmur their last yukola, their
last handful of tobacco.

/92/ With respect to luxury articles, such as valua
spears, sabers, fabrics, fur coats, etc., there is more in
dividualism, introduced by more recent conditions of ex
change, but in cases of real necessity, such as the purcha
of a wife, the payment of blood money, funerals, and so
on, everyone considers it his direct obligation to sacrific
his individual wealth for the objectives of the whole clan

* 614 This same principle of the communality of the ma
428 terial goods of the clansmen is the basis of the right of in
heritance, the basic rule of which is -- the property of th
clansman must not go out of the clan. In this respect, th
well-known thesis of the Twelve Tables is literally in ef
among the Gilyak: Si suos heredes non habet, gentiles
familiam habento.[2] In the absence of members of the fam
in which the "workers" are also classed, the property pas
to the agnate clansmen, no matter how distant, excludi
even the closest cognates. The latter, according to the
will, can obtain only the so-called shagund (1), and only

●[422] 1. "Treasures" -- a property sui
[556] generis, consisting of unused objects,
designated only for exceptional
cases: bride price, dowry, ransom,
funerals. It is divided into 1) the
iron "shagund" -- large cast-iron
kettles, spears decorated with silver
inlays, valuable Japanese sabers,
coats of mail, and so forth, used
chiefly for the bride price; 2) the
fur, consisting chiefly of expensive
fur coats, used principally for
dowry; 3) the silk -- Chinese silk
materials and garments, which are

/322 cont./

alf feet high and five to six feet wide and is interrupted only at he two rear corners of the yurt. These corners (f, f) are usually ounded off, like those in front, and are used for putting away arious utensils, chests, and boxes, sleds, and the like. This reates a partition, even though only a very incomplete one, be- ween the two side-benches and the rear bench, which is regarded s the best and most distinguished place in the yurt. Opposite the nner edge of the benches, somewhat above the height of a man, here are crosspoles running between the supporting posts, which erve for hanging up clothing and the like. In the middle of the urt, between the three plank-beds and only about three feet rom each one, is the hearth (g), a platform about four feet wide, wice that in length, and the same height as the benches. It is ery simple in nature, in that it consists of only a wooden frame ut together with boards, /323/ which is filled with stamped arth. Over the hearth, somewhat above the height of a man, there re several crosspoles, two across the front part and one across the ear, which are borne by the above-mentioned crosspoles put be- ween the supporting posts. Sticks are fastened to these crosspoles ver the hearth and at their lower end terminate in hooks on which he kettles are hung over the fire made in the hearth. In the ront part of the hearth three stones (h) are set upright in a tri- ngle and firmly embedded in the earth, on which stands the arge kettle used for cooking the soup for the dogs. In large yurts here are sometimes two such large kettles, also serving for uman use, incidentally, as was the case, for example, in the arge yurt at Tyk, in which I stayed repeatedly and for several ays, and where I sketched the plan presented here. The fire is ade in the rear part of the hearth, that is, somewhat more in e center between the three plank-beds, serving for heat and for luminating the yurt at night. In front of the hearth stands one or ore large receptable, usually tubs (i) made of birch bark, with rinking water, and along the front wall (k), right and left of e entrance, or in one of the front corners (l, l) of the yurt, supply of dry firewood is always piled up. Finally, at the top, xactly above the fireplace, there is the smoke vent in the form f a longish rectangle that is placed either with its lengthwise

/355 cont./

342 184 as far as the humidity of the air is concerned, it is even greater there due to the nearness of the sea and the exceedingly frequent fogs and rain. Thus, if the Gilyak on Sakhalin build their summer houses on level ground in places, they must know that they are safe there against the first menace and in addition have other important reasons for building such dwellings. I think that one of these reasons is that these dwellings, less exposed to the wind, are warmer than those resting on piles and therefore can be moved into earlier in the year and can be occupied longer in the autumn. The first circumstance, /356/ however, is of importance in particular for the southern part of the Gilyak area of Sakhalin, where the Gilyak are driven from their earth yurts earlier in the year by the melting snow. It was in this southern part that I encountered the summer house built on level ground. In Tangi I found it occupied as early as February 8/20, and in Arkai on February 28 (March 11), when it was still fully winter. In Dul', however, it was still uninhabited on [122] February 27 (March 10), although I stayed in it because the two winter-yurts of the village were overcrowded as a result of a great confluence of Gilyak. This latter summer house, in contrast to several others built close to the shore, was farther from the sea, beside the winter yurts, and its owner planned to use it even in late autumn and not leave it until winter set in /Illustration appears here./

342 On Plate XIII[3] a summer dwelling of the Amur Gilyak is shown, and, to be sure, a yurt in Mão, the summer residence of the Gilyak living in Kulk in the winter. It is a structure resting on piles, about three fathoms wide and four to five fathoms long, and looks rather clumsy. The walls are made of thin beams which, as in the case of the winter houses, are not joined at the ends, but are somewhat pointed and are stuck into the grooves of the upright piles. The rather flat roof consists of crudely hewn which are held together by poles fastened crosswise. On a notched [417] beam slanting against the front of the house one climbs onto a level narrow sill which runs along the whole front of the house, is partly covered by the somewhat projecting roof, and which

[See category 116, P. 993--Analyst]

342 /357/ This is exactly like the interior of the earth yurts,
[352 in that low and wide plank-beds or sleeping benches (f) run along
354] three of its walls, on both sides and in the rear, opposite the entrance door (c), and in the middle, between them, there rises a hearth, shaped as they are there, over which an opening in the roof serves as a smoke vent and actually consists of two holes put in the two halves of the roof and joining at the ridge pole.
• [417] Under this, several longitudinal and transverse poles are put over the hearth and a wooden hook is hung on them to hold the kettle
[353] over the fire. Some similar longitudinal and transverse poles run over the sleeping benches and are used for hanging up clothing. In the corners between the side benches and the front wall, to the right and left of the door, there are shelves with all sorts of utensils, a large container with drinking water, a small supply
342 of firewood for the hearth, and the like. Since the room as a
354 whole is not high and the roof is rather flat, the large smoke vent is not very high above one's head, which, together with the many crevices in the walls and the floor, actually makes the house very airy. If, in addition, the doors to the front space and from there to the outside are open, a strong draft is created. Therefore, as a rule, the summer dwelling is completely free of smoke and also quite free of gnats, which is very important. The front space (d) can also be specially ventilated, if the supplies stored there require it, for its walls in part consist only of vertically placed boards which can easily be removed in any number desired, as had been done in the case of the yurt at Mão at the
342 time it was drawn. Finally, another feature, a simple one, to
825 be sure, but a very important one in its consequences for the Gilyak, must be mentioned in connection with the construction of their summer dwellings. In order to make them inaccessible
[251] to the great number of rats in the winter yurts, a vital necessity because of the fish supplies assembled in them, a piece of birch bark is placed over the upper end of each of the piles supporting the yurt, extending around it on all sides, which, as experience has shown, is perfectly adequate to prevent the rats from climbing
342 up the piles to get into the yurt. The sleds are hung under the

/357 cont./
342 yurt, between the piles, for protection against the rain, and the dogs, too, find a suitable abode under the same protective roof.

The above description also applies, apart from the
342 specific references to the pile-construction, to the summer dwell-
231 ings of the Gilyak put on level ground at certain places on Sakhalin and, as has already been mentioned, of very similar nature, and it will therefore suffice to add to it only the following remarks referring specifically to the latter. If the yurt is on level ground, the flat sill, space a, projecting along its front side is likewise on the ground. As long as it is still winter, this space is used for the erection of a shelter before the entrance to the yurt, even though only a crude one. For this purpose, on both sides and in front, where the dotted line is on the plan a few poles and boards are set up vertically and, with the exception of a passage, are bound together with plaited switches, and the spaces between them /358/ are filled with grass and brushwood, so that a sort of antehouse is produced. This is assigned to the dogs for their abode, where, posted at both sides of the entrance to the house, they make good sentinels for it.

251 Since the main occupation of the Gilyak during the
[22] summer is fishing and preparing the supplies of fish for the winter,
[226] one always sees beside the summer dwellings several contrivances for this purpose. Thus, more or less numerous, open racks for
• [417] hanging and drying the fish in the sun are never lacking, and not infrequently one finds a roof supported by piles, quite similar to the one on the summer yurts but much cruder, with crosspoles under it, on which the fish, hung up in rows and protected against rain and sun, are dried in the continual air current (see
000 Pl. XIII) (1). For the storing of the supplies prepared in summer,

1. A more detailed description of the treatment of the fish before they are dried, as well as of the use of the individual parts and the like, will be given later at the appropriate place.

/90 cont./
worn on ceremonial occasions and
in which the dead are garbed.

such as will inevitably find its way back to the clan of the tentator, so that to the ymgi clan, i.e., the clan that takes its wives from the clan of the tentator and consequently pays it bride price, can only be willed the so-called iron shagund, which in any case will return to the clan in the form of bride price, while the chainbinn the clan, the clan of father-in-law, only for shagund can be willed, since it will return to the clan in the form of the bride's dowry.

4. One bear: the common obligation of the clansmen to share in the fattening of the bear and in the bear festivals, both on the occasion of the slaying of a domestic bear and the hunting of the forest bear: "Khal-go, ur-gin, nashh mysel": "Clansmen, men, be guests!" -- with this summon the youths go around to the yurts, summoning the clansmen to the eating of the sacred meal of the bear inside the forest and the viands jointly prepared for the occasion by the whole clan.

The importance of common rights and obligations with respect to the bear festival, as the exclusive privilege of the clan, proceeds directly from what we said regarding this in the section on /293/ religion and the clan gods. As we saw, the bear festival is characterized by two basic features: first, by the honoring of the very person of the bear as a possible clansman of a "mountain" man and, consequently, a possible clansman of their own or his descendant, who had passed into the clan of the mountain masters; and, second, by the transmittal through him of various gifts to the mountain masters and his clan and, consequently, to the god-clansman, their sustainer. Thus the bear festival has an incomparably greater significance for the welfare of the clan than other clan sacrifices and festivals, because the sacrifices go to the highest master of the mountains, to the chief disposer of

1; Shternberg--173 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/113 cont./
labors, he is not only a skillful shot, fisherman, oarsman, etc., but he is already in fact a worker, like all the others. Moreover, to a considerable degree he has already mastered the whole sum of spiritual learning. He already knows from practice all the clan customs, all the religious rites, he remembers all the kinship appellations, he knows the legends, tales, and songs of his tribe, and, to top it all off, he has that knowledge of men and life that constant presence in the society of adults provides: on journeys, hunting, fishing, festivals, etc. Hence, also, his feeling of his own worth and weightiness of speech, and his ability to conduct himself in society.

All these qualities, however, would have no significance if the patriarchal principles existed. The youths of other peoples of low culture also attain self-reliance at an early age, but a special, almost religious veneration of their elders, who purposely train them in submission, is demanded of them. Among the Gilyak there is nothing of the sort. All the more absent is the despotism of the head of the family with respect to its adult members. The sons are completely free to separate from their father, obtaining from him their allotment in the form of implements, sleighs, and such, and when they assist him with a part of their catch, they do this quite freely, with absolutely no compulsion. One encounters large families living in a communal economy, at the head of which stands the elder in the family, the grandfather, father, or one of the brothers, but this is a completely free association, from which one may depart at will. And even though he is a participant in such an economic union, every member can have his own individual economy in the form of sleds and dogs, arms, enjoying the right to individual earnings by means of his personal merits; and what each member shares with his one -- and there is extensive sharing, especially in food supplies, both natural and purchased -- is shared without any compulsion. They bring flour, rice, kumiss, and so on from the city, and all this is cooked in the common kettle for all. Communism and individualism are combined without any friction.

1; Shternberg--403 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/277 cont./
of safety from evil magical influences) and social, as a symbol of friendship, analogous to the exchange of gifts upon the conclusion of ceremonial brotherhood. We see from the rites which are observed when the bride moves to the home of the groom that the Gilyak place a sociio-religious significance to such symbolism of new relations.

And it is also possible that into the concept of bride price there was introduced an element not only magical, but also purely religious. Giving a man with whom he is not orthodoxly prescribed was taboo, and every violation of a taboo, according to the logic of primitive man, should be atoned for in some way -- if not by blood, then by valuables. Bride price from this point of view appears to be tribute for appeasing the souls of the ancestors offended by the violation of the clan taboo. By this alone can one explain why the Gilyak react just as strongly to the prepayment of the bride price for a woman as they do to the slaying of a clansman. The obligation to receive satisfaction in this case, as in the case of a killing, extends to the third generation in the whole clan.

For the sake of obtaining this, persons are ready to take the same risk and deprivation as in carrying out an act of blood revenge. The heroic exploits of such persons who have undertaken long and dangerous treks into the most remote places are one of the most common subjects in the epic works.

The objects used for bride price and the conditions of payment. An object that is part of the bride price is usually a particular kind of valuable, an object sui generis, the so-called shagund (E.D.), shygund (W.D.). These are valuables which are predominantly obtained from the Chinese and Japanese by trade. Among these objects are: Chinese silk garments and pieces of material, Chinese fur-coats, several articles of nephrite, Manchurian spears inlaid with silver, Japanese sabers, and also big, cast-iron kettles. Besides this, objects of this class include fox and sable fur-coats and feminine articles of adornment. In ancient times, evidently, asses, too, /279/ at first stone, later

1; Shternberg--404 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/278 cont./
iron, served as objects in the shagund (1).

1. The following splendid legend gives evidence concerning this. In the central section of Sakhalin there is a mountain, Kryn' pal, and along side of it another, somewhat smaller mountain, the "wife" of the latter, who has run away from him and hidden her shagund. Three riverside rocks represent the different objects of the shagund. One bears the designation Wa-ul-rif, meaning "place where the Japanese sabre is buried," another Wyn-ul-af -- "place where the kettle is buried," and the third, Kyfokhty -- the butt of the ax.

These are objects which are unalienable, extra commercium. Only in exceptional cases of extreme poverty or the absence of a clansman in the alienation of objects of the shagund category allowed, and even then only a part of them. A poor widow in the settlement of Pilavo, who had sold her only daughter, answered my question as to what she was going to do with the shagund in this way: "Part of it I shall sell, and of my remainder will go with me to Mlyvo -- to the world beyond the grave." They are preserved for only exceptional cases in the life of the owner -- for the payment of blood money on account of a slaying, or when one must marry off one's son and pay a bride price or give a dowry to one's daughters, and, after the death of the owner -- to accompany him to the world beyond the grave. Only such objects figure in the bride price of rich persons. But among persons of lesser means, the bride price is made up of valuable utilitarian objects -- boats, guns, dogs, and so forth.

Rich people, seeking a large bride price, are guided mainly by ambition; for obtaining a rich bride price is the best evidence of one's own wealth. For a poor man the bride price is his only

1; Shternberg--407 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/280 cont./
it is a remnant of maternality when the mother's brother played a privileged role: the contemporary institution of unilateral cousin marriage among the Gilyak appeared to replace the more ancient bilateral one when every maiden was obliged to marry the son of her mother's brother, and thus the custom which we are observing is a remnant of a more ancient norm of marriage.

I turn now to the other principal obligation, the companion to the institution of marriage -- to the dowry.

For the dowry the Gilyak have the term jokh shond, signifying literally -- "the thing which is brought by the bride, the woman." The dowry consists mainly of various types of clothing and ornaments. The dowry of a rich bride consists of an assortment of valuable fur-coats -- fox and sable -- and silver bracelets, expensive earrings, Chinese pipes, and also rich, carved, and decorated dishes, including an assortment of artistically decorated birch spoons. The mother usually gives her ornaments to her daughter, and sometimes also a bed, but for some reason one must not give away pillows. They begin to prepare the dowry in the very earliest years and continue up until the marriage of the maiden. This is called jokh wakh -- "to get the bride ready." They lay away the dowry in good time in sacred chests with the family valuables, among which, in a well-to-do family, the bride usually sits solemnly. The size of the dowry usually should be proportional to the size of the bride price. When the gossiping women talk about one or another wedding, they refer to a "rich" and a "poor" dowry. It is considered a matter of the greatest pride to provide the daughter with a male or female slave besides her things. In the clan of a Gilyak of my acquaintance, Yukhin, they gave to a maiden as part of her dowry a female slave (nihi), whom they provided with a Japanese tutor for cleaning the soles of her mistress' boots. Especially ambitious rich people set aside a separate house for their daughter-bride, and a slave, who is later given to her as dowry, as part in it to serve her.

The dowry, although it is compensation for the bride price, since it frees the husband from great expenditures for the wife, is nevertheless exclusively a gift to the bride, her private property /281/ to which the husband has no rights whatsever.

1; Shternberg--408 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/281 cont./
She may sell it or give it to her daughters in their dowries. After her death it goes to her daughters, and, if there are none, the may will it, or else it goes to her brothers.

After the agreement on the bride price. The negotiations over the bride price amount to two questions -- the question of the quantity and the question of the term. It may happen that the bride price is paid immediately after the negotiation, and then the marriage is at once considered concluded. The bride and the groom are summoned, ordered to eat and smoke a little together, a small feast with alcohol is spread, and in the evening the mother of the bride orders the groom to lie down on the bed of his wife, and after spending the night in the nuptial bed the newly wedded husband carried off his wife, with a certain ceremony of which we shall speak below, to his home. But such cases are rare. It does happen, when both the groom and the bride belong to families of little means and the bride price is therefore small, that it is brought at once, and the dowry of the bride amounts to the most necessary things of her toilette, and no preparations whatsoever are demanded. Among rich families, the immediate removal of the bride occurs only when the groom lives very far away, when the given marriage is especially valued, either as a result of the high social standing of the parents of the bride or as a consequence of the particular renown enjoyed by the bride ("a maiden famed throughout the entire land"), and then it will and, and of any part of the agreement's being broken if a richer competitor appears. In such cases they come at once in several boats with the whole bride price and in the company of their noblest clansmen, and after the bride price, a feast, and several short ceremonies, they carry the bride away along with her dowry. But, I repeat, such cases are rare. Usually in such cases the wedding is delayed. The delivery of the bride price is arranged in installments. At first only one object is left, usually a kettle; the remaining part is brought either directly before the removal of the bride, or, if the bride price is very large, part of it is even brought within a certain agreed-upon length of time after the removal of the bride.

1;Shternberg--534 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/377 cont./
permission, the emigrant builds a yurt, fishes, kills seals, hunts fowl, etc.; only the streams are prohibited to him for the setting of snares for sable.

/378/ Only in exceptional cases does the Gilyak live alone with his family in the yurt. Customarily he lives with his brothers and clansmen, sometimes with his father-in-law, more rarely with members of other clans. The winter yurts of northern Sakhalin are frequently enormous, holding as many as 50 people, frequently all clansmen. The economic advantage of such communal dwellings consists in the fact that heating, which consumes the meat goes for general use, but he gets the skin. If he sells his fox and sable, he will purchase various articles for the family, but he will certainly obtain something especially for himself. The same is true of his wages. But never will the son reserve for himself a special share of his catch of fish, where ordinarily the skill of one individual plays no role. These same economic relations of private between father-in-law and son-in-law who maintain a joint household (furs and wages constitute individual acquisitions). There is a category of articles sui generis which constitute the exclusive individual property of the Gilyak. This is his wealth.* Among the Sakhalin Gilyak, at least, does not increase and does not store up money. On the other hand, he stores up valuable fur coats, fox and sable, pieces of costly Chinese silk, spears with silver fretwork, silk gowns, Japanese sabers, etc. These richer pass from generation to generation, from father to son, and only at extremely important moments of life are they taken out of the storehouse. When it is necessary to purchase a wife for his son, when the need arises to provide presents for his daughter, departing for the clan of her husband, when the clan through its common efforts concludes a peace with the clan of the avenger, when he himself dies, or some other person who is dear to him and whom he wishes to see upon the funeral pyre in all the splendor of sable fur coats and Chinese silks -- then the treasured objects are brought out of the storehouse. The attitude of the Gilyak toward rich men is interesting. The Gilyak regards his wealthy brother

/378 cont./
clansmen, even in those cases where the families eat separately. And, conversely, it happens that in large families, keeping house together and eating together, individual members, such as, for example, the unseparated sons, are independent owners of dogs, boats, and other movable property. Thus, the sons who live with their father obtain in good time property for their future independence or for the purchase of a wife with their own means. Such independent property of unseparated sons is either obtained as a present /379/ from the father, augmented by the fruits of success in hunting through the efforts of the children or as the result of employment in towns. If an unseparated son kills a bear, the meat goes for general use, but he gets the skin. If he sells his fox and sable, he will purchase various articles for the family, but he will certainly obtain something especially for himself. The same is true of his wages. But never will the son reserve for himself a special share of his catch of fish, where ordinarily the skill of one individual plays no role. These same economic relations of private between father-in-law and son-in-law who maintain a joint household (furs and wages constitute individual acquisitions). There is a category of articles sui generis which constitute the exclusive individual property of the Gilyak. This is his wealth.* Among the Sakhalin Gilyak, at least, does not increase and does not store up money. On the other hand, he stores up valuable fur coats, fox and sable, pieces of costly Chinese silk, spears with silver fretwork, silk gowns, Japanese sabers, etc. These richer pass from generation to generation, from father to son, and only at extremely important moments of life are they taken out of the storehouse. /382 cont./

428 inheritance immediately. If the widow is old and there is even
[108] one young or grown-up son among her children, the family con-
tinues to live as it did during the father's lifetime. The grown-
up son will be the sustainer and worker of the family. A ques-
tion of the division of the inheritance only arises when the chil-
dren, coming of age, subsequently desire to separate. If a
Gilyak dies without leaving children, or only leaving children
of the female sex, the property passes to that brother of the de-
ceased who marries the widow; if the inheritance is a large one,
the other brothers and daughters of the deceased, even the
married ones, share in the inheritance. A childless and aged
[108] widow passes into the care of the brothers of the deceased, who
divide the inheritance among themselves. It is necessary to note
that a Gilyak without children or sons takes measures in good
time to make sure that he will have an heir of the male sex, which
always coincides with the necessity of having an assistant-worker
in the maintenance of the household and a sustainer in his old age.
With this aim the Gilyak adopts the son of one of his men or a poor
[108] relation-tym, who works together with him and is his heir. It
428 is noteworthy that even when there are children, a person who
has worked in the family for a long time receives a share of the
[108] inheritance. Sons-in-law who work with their father-in-law until
his death are without a question his heirs, according to the wish
of the testator. Heirs of the male sex receive equal shares of the
inheritance. Only in a case where a younger son has lived with
his father up to the very time of his death, while the other
brothers have separated, does he obtain a little more than the
other brothers.

[107] Juridical Morals. Among the Sakhalin Gilyak one hardly ever
[107] encounters crimes of a mercenary character. The Gilyak keeps
his treasures in the storehouse, which is never theft. The Gilyak
calmly leaves valuable objects in the taiga, on the road, in an
uninhabited summer dwelling, without fearing for their safety.
In my presence a Gilyak left in the taiga, two steps from the
road, a piece of silk material and a valuable spear. "No one
[102] will take it" he said calmly. /383/ If a Gilyak is sometimes
tempted by the possession of another, it is always in the field of

1:Shternberg--540 E-5 (1890-1897, 1910)1933 RX2 Gilyak RX2

/383 cont./

● 472 delicacies and edibles, and the Gilyak, like almost all barbarians,
473 regard such transgressions indulgently. During my journeying to
the north of Sakhalin, I had the opportunity to observe this char-
acteristic of the Gilyaks. They took without permission, or asked
me for, dried crusts, sugar, or tobacco, but never once did they
472 try to take objects of much greater value. Theft is a sin among
[112] the Gilyak, and he who commits it covers himself with disgrace.
And disgrace and shame are a great punishment to the Gilyak.
The Gilyak who is convicted of doing something shameful goes
out into the taiga and lays hands on himself (hangs himself).
Never does a Gilyak commit suicide out of fear of poverty, which,
in view of the custom of mutual assistance, is a cause of fear to
no one. Nor will any physical sufferings impel him to such an
act, but he will yield to the feeling of shame or strong personal
grief and take his life.

Murders among the Gilyak are very rare and never have
a mercenary motivation. Murders are committed principally in
the heat of passion and frequently under the most inconsequential
[112] circumstances. For example, the Gilyak have a habit of wrestling,
and sometimes during the fighting the opponent grows so heated
that they take to their knives. In general the Gilyak reaches for
his knife at the first feeling of irritation, but he is by far not as
prone to resort to weapons as the southerner. Fear of Russian
justice has had a beneficient influence on him in this respect. The
Gilyak youths, fearing being borne away by passion, have begun
to throw down their knives before beginning to wrestle. But
Russian vodka has caused frequent slayings among Amur Gilyak in
an intoxicated condition. I shall not discuss the murders com-
mitted deliberately to satisfy the demands of clan vengeance or
conjugal honor. Such murders are regarded by the Gilyak as
lawful, although with the settlement of the Russians they have be-
gun to disappear.

Insults by word or deed are also an infrequent phenomenon
among the Gilyak and end in either a reconciliation or a duel. In
the first case, the offending party, recognizing his guilt, atones
for it, voluntarily presenting the injured party with dogs, a robe,

[The Western Coast]

/385 cont./

124 many of his children had died between
126 the beginning of his marriage and the
165 date of the census. In this way, we ob-
tained an exact number of the children
in a given family, living and dead.
Hence, it was easy to calculate the rate
of mortality.

162 fertility rate -- 2.7%, although this figure is below the actual one,
592 for in the number of married people were included, on the one
hand, children for whom their parents had bought child wives,
and, on the other hand, adults who were married to child wives.
There is an age of 15 people living in each yurt, although
there are a number of yurts with several dozens of inhabitants;
for example, one yurt in the settlement of Nyaniyo accommo-
dated 42 persons of the same clan.

102 As to the size of the winter settlements, the largest of
[102] these are following: Tamlyvo and Lirkyvo (144 persons each),
Vizkvo (116); Nyuv (103), Arkyvo (87), Tal'vottgrvo and Tengi
(64 each), Klimdvo and Pomr (59 each), Nyanivo (58); the
[102] least settlement are Yanny (4 persons), Vaaz (8), Nobzy (9).
In the summer the most densely populated settlement is Tamlyvo.

Seals killed in all the settlements during the last season,
1,026; sables killed in the settlements nearest to the Aleksandrovsk
post, 258 (9). /386/ There are 143 guns, 201 boats (one boat
[192] 5. The number of fur animals and so forth
killed during the last season was obtained
from reports of the Gilyak themselves.
These figures are most probably somewhat
below the actual one. The starosta in the
village of Kimidvo, for instance, deliber-
ately tried to persuade his people not to tell
the truth to the Russians, who, according to
him, would come and take away the bounty . . .

● 411 /386/ There are 143 guns, 201 boats (one boat
412 for every five persons), and 2,100 dogs. To make some money,
[192] 231

[The Western Coast and the Tym' Basin]

/387 cont./

114 settlements the settlement of Mos'tvo
34 on the banks of the Tym' River, seven
103 versts from the settlement of Rykovskoye.
361 In connection with this settlement of
221 Mos'tvo, the author makes the follow-
ing comment: "It is inhabited only in
autumn and winter. In spring and sum-
mer the inhabitants pass on to the west-
ern coast, mainly to the village of
Arkyvo, where in the early spring they
hunt seals and during the summer catch
fish which are not to be found in the
Tym' at this time of the year. . . . At the
beginning of August, before the Siberian
salmon run, the population returns to
their winter dwellings." Editors of the
journal, Etnogr. Obozr."

070 with 109 yurts. The total population here is 703 persons (197
[116] on the Tym' River, 506 on the Okhotsk coast), of whom 416
are male and 287, female; there are 169 families and 133
households, 483 adults, 175 married persons, 9 male polygas-
mists, average fertility -- 3; 332 children survived birth; 169
● 402 died. Guns -- 64 (of these 30 are on the Okhotsk coast and
[192] 257 post, 258 (9). /388/ There are 143 guns, 201 boats (one boat
[192] During the last season 688 seals killed, 586 sables, 134 foxes,
433 43 otters, and 63 bears.

From this one can draw the following conclusions: here
there are, on the average, six persons per yurt, an average
family has /388/ four to five members; there are 11 married
males for one bachelor (1), one bigamist in 19 married men.

[589] 1. The word bachelor is applied only
to older, so to speak, inveterate
bachelors.

1:Shternberg--548 E-5 (1890-1897, 1910)1933 RX2 Gilyak RX2
[The Eastern Coast and the Tym' Basin]

/388 cont./

162 The ratio of the number of males to that of females (416:287) is
such that there are 694 females per 1,000 males. In Russia there
are 1,023 females per 1,000 males, and in Asia as a whole 960
165 females per 1,000 males. The infant mortality rate is 33.7%.
023 Every Gilyak, on the average, has two dogs and each adult Gilyak,
411 three dogs. There is very little hunting equipment, especially
guns, on the whole.

614 The Tymovskie and the Okhotsk Gilyak belong to 18 clans (2),
[126] 1. The property of each person has been
registered to this or that clan, the figures
on the number of clans, etc.

772 Peoples of Northern Siberia and the Far East

428 with the Chinese. After the appearance of the Russians in the Amur region,
[108] the Nivkhi began to use small quantities of bread, sugar and salt.
[108] They use tobacco, and until recently the only, domestic animal of the
[108] Nivkhi was the dog. It served as a draught animal and provided for her
[108] clothing and meat for food; it was widely used as a medium of exchange
[108] and played an important part in religious ideas and rituals. The number
[108] of dogs in a household was an index of wealth. As a rule, every household
[192] kept 30-40 dogs, which demanded considerable care. They were fed chiefly
[192] fish and so-called feed bear or bitch bear (bitches in heat), when dogs
were used most as draught animals.

The old sled of the Nivkhi, which was still found in use by shrewd in
the middle of the last century, was so narrow that the driver sat outside
[173] it, resting his feet on small runners. The runners were extended beyond the
[173] runner crosspieces to the side. The runners of this sled were curved both in the back
[482] and in front. The dogs were harnessed to the long strap, which was attached only on
[482] either side, rather than in pairs. The harness was a simple collar, so that
the dog pulled with the neck.

Until quite recently, dog races were still a part of the bear festival; in
[482] the past, the Nivkhi used the old sled and the old type of harness. The harness
[482] and the sled which appeared among the Nivkhi in the beginning of the 20th
[482] century were considerably different from the old type. They were of the
[482] so-called Eastern Siberian type; the sled was of greater capacity and
[482] equipped with a curved front rail and pointed runners. The harness was in
[482] strips, which the dogs pulled with the chest.

The development of the dog trade brought with it a new type of sled.
[173] Its greater size and stability permitted the transportation of up to 200 kg
[173] of cargo. It was usually drawn by 8 to 11 dogs. The last sled used
[173] valuable dog was the leader. The driver—kayur—usually called out his
[173] directions to the dog. The dogs were stopped with a shouted order and a
[173] broke note. Dogs were sometimes also harnessed to a boat on a longer
[173] tow strap.

[482] The horse as a draught animal appeared among the Nivkhi relatively
[482] recently.

In addition to dog transportation, winter travel on land was done by
[281] skis—kaur ski, without fur lining, or skis lined with sealfur. The former
were used for short trips; the latter, for distant expeditions during the fur-
hunting season. The Nivkhi skis were distinguished by the wide cargo
[281] guide over the toe.

Travel along the seacoast was quite simple in summer in light hollowed
[50] out boats made of poplar. These dugouts were so light that they were carried
[50] by hand across barrier beaches, shallows and sandspits. They were paddled
[191] with oars or poles (usually employed for upstream travel). For long-
[191] distance travel, the Nivkhi had two large dugouts similar to that of the Ulchi,
[191] Nanaya and Orochi. It was made of three wide cedar boards, of which
[194] the bottom one was hewn upward in front, projecting like a spade. It was
[194] rowed with 2 to 4 pairs of oars, by lifting alternately the right and the
left oars.

361 The Nivkhi villages were usually situated near the mouths of spawn-
ing-rivers, and seldom exceeded 20 dwellings. Until recently, the dwell-
[342] ings of kinsmen were set side by side. Some 40 to 50 years ago, the
[175] Sakhalin Nivkhi still widely used the dugout house. It was made by dig-
[175] ging a pit some 1.25 meters deep, over which a wooden framework was
[175] built of thin logs, and covered on the outside with earth. The smoke was
[175] served in a window as well; the hearth was built in the center, and
[392] plank beds were set around the walls. At the end of the 19th century,

7: Kreinovich--3 E-5 (1931) 1934 Gilyak

782 they keep for a long time. When some one is
725 drowned the Gilyaks arrange a boat race, fight, and
725 so forth. In this connection I wish to note that in the
415 valleys Chayvo, on the Okhotsk shore of the
Sakhalin peninsula, where I studied the cult of
drowned men in detail, no felicitations are
allowed when a man is drowned.

fed. (Mos for these troughs is prepared by men). Next, mos
is emptied out of the tol-ir ("sea troughs") for which it is
prepared, by women. After the feeding of the fish is
completed, the troughs are turned around so that their "eyes"
are directed to the houses instead of to the sea. (3) Next,

3. The troughs are in the form of animals. As I
observed in the village of Chayvo, drops of mos
meant to be "eyes" are put on one end of a tol-
ir, which apparently no longer has animal form.

pebbles, picked up from the shore are put into the troughs.
At home these pebbles are thrown into the fireplace.
782 The Gilyaks regale their kinsmen with whatever is left
302 over from the offering and also eat themselves. Mos from the
325 ki-r is eaten only by old people. Women, children, and
381 young hunters must not taste this mos.
223 It is imperative that the "feeding of the sea" be completed
782 before the departure of the hunters. Once the hunters put out
to sea, "feeding of the sea" is not allowed. At present this
custom is not strictly observed, and if someone happens to
be late, he "feeds the sea" late in the evening when it is
reasonable to assume that the hunters at sea have gone ashore;
although they sometimes spend the night on floes.

After offering the Gilyaks begin preparations for putting
out to sea on a hunt.
225 The essential prerequisite for seal-hunting at sea is a large
● 225 spacious, many-oared boat. Not every Gilyak is the owner of
776 [83] such a boat, suitable for long voyages. In the village Kul
● 222 there are no more than ten such boats. (1) In the seal-hunting
495

1. Unfortunately, it did not occur to me to count
the number of these boats during my stay in the
village Kul.

season the hunters unite in a collective which centers around

7: Kreinovich--4 E-5 (1931) 1934 Gilyak

225 the boat; just as in the Siberian salmon fishing season they
701 unite in a collective which centers around the seine or the
222 net-fence.
● 222 When the hunting season opens, the owner of such a boat
starts collecting his companions. If the owner happens to have
225 a son-in-law (ere) in the village, he asks him to join him in
the hunt. In general, however, the owner of the boat selects
476 hunters regardless of clan membership.
Thus, for instance, the boat owner, Gilyak Norp of the clan
585 Tf nu , was accompanied by hunters from the following clans:
Tag, Gnarr (Gnar), Ulch, Ulch, Nen, Nen, Nen, Nen, Nen, Nen,
clan a ramia . Onkan from clan Lez-ran and Tesk from
clan Tf-nu .
A similar situation existed in collectives of hunters who
went hunting in 1931.
The hunter collective centering around a boat is some-
times named after the owner of the boat. For instance,
l tun-munim ("one boat of Gylakhtyun") Xitkun-mu-nim (one
boat of Xitxun).
225 The owner of the boat is the organizer and leader of the
276 collective of hunters grouped around him. Those who travel
475 on his boat are his permanent companions. The leader of such a collective
476 of hunters is called pila ('bolshak') (2) (from pila-ed-- "to

be big. - suffix used in forming verbal nouns.)
225 The duties of pila are many. A pila is supposed
476 to look over the boat, the rowlocks and, if need be,
302 to effect repairs.
2. To prepare and to take along a strap, harpoon tips
(tamra), harpoons shafts (ve l), his gun and the guns of his
fellow-hunters, a kettle and a Tes-pot (the hunters are obliged
to take only cups with them), a tesh, a seal, a tripod for the
tea-pot and the kettle, and a compass. (3) Most of these items

3. Earlier they used to take to sea afu-ve. ("friend-
stone" or "friendly stone"). See the remark in the sup-
plement to "Seal Hunting."

are the property of the pila;
225 5. To perform a number of religious-magical ceremonies
476 before setting out for the hunt as well as during the hunt. In
371 this capacity the pila exposes the boat to smoke, performs
476 mu-zi -c and l aij ceremonies to be described in detail below.

"How important a part sewing must have played in the domestic economy can be imagined, when clothing consisted of salmon-skins, a material which could not be ordered over the counter by the yard, but had to be diligently stiched together to form an adequate covering. In early times bone needles were used, but when, by accident or by barter, a big ship's canvas-needle came into their hands, it was a priceless treasure. How eagerly [221] such was sought after and seldom obtained. The happy possessor handed it down as a family heirloom. In those days they tell us a needle was of such value that a wife could be bought with it; whereas to-day a helpmeet may cost as much as a narta (sledge) and team of thirteen dogs. To keep the needle safe, bone cases (nookh-tses), curiously carved, were made; and it is interesting to note that the principle on which they work is exactly the same as that of the little silk ones made to-day in Korea.

The following shows the value they used to put upon the needle. A Russian came upon a Gilyak family crying and howling.

'Why are you crying?' he asked. 'Is somebody dead?'

'No! What is death? It would have been better had somebody died. The needle is lost!' "

9: Hawes--300-301 T-3 (1901) 1903 Gilyak
116, 423, 578, 627, 721

"Of the possession of land in our sense of the word the Gilyaks have no conception. The nearest approach to it was a prescriptive right, sanctioned by immemorial custom, to place snares along certain creeks. The right of all to roam over the land in hunting was freely recognized; but they would have resented the placing of snares in chosen creeks and backwaters by the Tungus and Orochons, although, rather than provoke hostilities, they would have simply gone elsewhere. As among themselves, the division of the creeks and tracks for snaring had been made in olden [301] times; and the customary boundaries sanctioned by time are seldom transgressed. The abundance of game, coupled with the prowess of the pioneers, yielded little cause for quarrel, and spots were simply annexed according to the number of snares which the owner of the hut possessed. Here and there a dispute arose, and was settled by reference to the klenu, the elders in council, or by duels. In the latter case the disputants fought with a weapon like a hedge-bill, with a straight blade; but as they were always surrounded by a goodly concourse, the combatants were parted when either became exhausted, and the duel was not allowed to have a fatal ending."

462 and seals. They distribute the quarry. They play the leading
614 part in the economic, social and religious life of the clan
and in no one of these areas do they permit women to play
614 a part equal to their own. Women play a subordinate part in
562 the productive activity of the clan; they collect plants, roots
and berries. Woman cannot play any part in the social life of
the clan for they do not belong to the clan from the very time
they are born, and when they grow up they are given away,
in fact sold, by the hunters to some other clan. The clan that
takes the woman, i.e. the clan of the son-in-law (ore) become
dependent upon the clan of the father-in-law (apak). Also,
women play no part in the religious life of the clan.

527 Women are not permitted to be present during more im-
562 portant moments of the "bear holiday", for the bear hunt is
784 a matter for men-hunters and not for women. Not once in their
life are women permitted to eat the better cuts of bear meat.
They are only allowed to eat some meat of the poorer cuts.
Women must not be present at offerings to the spirits of the
woods and of the sea which help the hunters, for hunting is a
man's job. As mentioned above, a pregnant woman must not
come to the sea shore while the men are hunting seals, other-
wise the ice would disappear and the hunters would return
home empty handed, etc., etc.

784 The taboos mentioned above are a religious-magical super-
462 structure on the labor distribution according to sex. One
626 should look for explanations of these taboos in the relations
183 among different groups of people in primitive society rather
than in religion.

In legitimatizing this distribution of labor, the taboos turn the female part of the clan into slaves of the male part - the men-hunters.

Without further dwelling on these problems we merely indicate that there is no mystical element behind the taboos. The mystical content is often added in order to befuddle and to enslave people and to keep from them the essence of germinating exploitative relations among men. This is illustrated by the example of the tnaj where the pilan attempt to assert his title to a sivuch is made covertly rather than openly, under the guise of a magical-religious ceremony.

However, we now revert to our topic.

225 Having killed a sufficient number of seals, the hunters,
422 loaded with their quarry, return to the village. On arrival
476 the pilan distributes the quarry. At this point it becomes
apparent that the sivuch, which is the pilan's legal property
and whose blood he used in feeding the tnaj, is included in

225 the division of the quarry. Why this ceremony should have
422 stopped at the pilaŋ appropriating the first sivuch rather
476 than asserting his full title to it on top of his share of the quarry is hard to tell. It seems to us that this can be explained by the essential preservation of the primitive Communist method of distribution of the quarry among the Gilyaks of the village Kul which do not permit a single individual to assert his title to an entire extra sivuch.

225 [89] I gave here a few examples which I have recorded
476 of the distribution of the quarry among the Gilyak hunters on their return home to the village Kul on August 2, 1931. These examples demonstrate clearly the primitive Communist character of the distribution.

The quarry of ʼəlʼtun's collective consisted of 18 sivuchs 9 pəγi, 11 qoma and 1 alχ. They sold 3 sivuchs, 5 qoma and the fat of two seals on Cape Litke at the branch of the Rybaksoyuz [A, B Fisherman's Union]. They distributed the money obtained and the remainder of the quarry into equal shares. (1)

1. Unfortunately I did not write down how they distributed the money.

-1 tun..... received 2 sivuchs 2 pəγi

instead of this point some arrows have a crescent-shaped piece of pointed iron. This latter device is used for duck shooting, if there is no powder to be had. On the hunt the arrows are usually kept in a quiver, which usually does not hold more than three. It consists of a flat and hollowed-out small board and is usually decorated on the outside with various designs or figures of animals. It is fastened to the belt.

The lance consists of a shaft about one and three-quarters meters long with a flat iron tip. Some lances made by Gilyak are artfully decorated with silver and gold figures. Moreover, all weapons except firearms are made by the Gilyak themselves. Forging is done simply at the domestic hearth, but the fire is kindled with a bellows. Iron is bought from the Chinese or Russians. Occasionally fragments of Chinese pots are made over into knives, etc.

Finally, I must mention the shield of which few examples are still to be found among the Gilyak. These shields are very heavy, probably close to 35-40 pounds, very crudely fashioned, and consist of iron rings. They come from China and at present have no practical value because no one thinks of carrying them. Nevertheless they are regarded as something very valuable and are estimated at 200 rubles. It has happened that the owner of such a shield has pawned it to a Russian merchant, but as soon as he got some money, bought it back.

X. Marriage and the Rearing of Children

Men who have reached middle age are seldom unmarried, and it is even rarer to find married men with four or five wives, for this requires a certain amount of means; besides, there are too few women. The beginning of a [126] marriage requires the payment of a ransom (kalym). This does not consist of money, but of certain necessary items-weapons, dog sleds, etc. An average kalym amounts to 200-300 rubles. There are no special marriage ceremonies, but the wedding celebrations which must also be paid for by the bridegroom last a rather long time, a week or more. Besides millet, fish and tea, a great deal of alcohol is consumed.

A curious, although not altogether unique custom are marriages between four and five year old children. As soon as the parents reach an agreement, a boy and girl are pronounced man and wife. The father of the boy pays the kalym and takes the girl with him, in order to bring her up with her "husband"; sometimes, however, she remains a few more

423

423 REAL PROPERTY--conception of the subject matter of real property (e.g., as that which produces food, as things that are fixed or immovable); culturally defined categories (e.g., land, trees, growing crops, buildings, water); types of land subject and not subject to property (e.g., sites with monopoly value, waste land); recognized types of title or estate (e.g., eminent domain, fee simple, life, leasehold, sufferance); rights, privileges, and powers involved in each (e.g., usufruct, reversionary claims, privileges of gift and sale, power of expropriation); recognized types of ownership (e.g., individual, collective, public); legal and statistical distribution of types of ownership according to categories of immovables, types of title or tenure, and classes of persons (e.g., exclusion of minors, of women, of slaves); general characteristics of the system of real property (e.g., private property, feudal tenure, collective property with periodic reallotments, communism); land reform; records of ownership (e.g., boundary marks, deeds); registration of titles; etc. See also:

/109 cont./

And this is just what is striking in the Gilyak system of life. Despite all the complexity of the social fabric, embracing all aspects of life, all those external-formal signs of organization which the European involuntarily seeks everywhere are either completely absent or assume forms which are too fluctuating.

* 614 /110/ Let us begin with territory. It is completely
361 natural that the members of one clan should prefer to live
● 423 together in immediate unity and community with each other. There are actually some settlements, such as Tangi, Nyanivo, Viskivo, and others, where the whole population belongs to one clan. In the large winter yurts of such settlements one can sometimes count 20 or 30 clansmen and not a single alien. Even where several clans live in one settlement, as in Kol', the yurts of each clan are arranged in a row, as if in accord with a strictly observed tradition. Each clan has its own clan streams for hunting, divided among the different families, among whom they pass by inheritance from father to son, although the right to property is limited by actual use, upon the suspension of which the stream becomes res nullius and can be utilized by anyone, even an alien.

Nevertheless, despite the natural tendency of clansmen to remain near each other, the principle of territoriality does not in fact exist. In the great majority of Gilyak villages the composition of the population is mixed. In the above-
[121] mentioned settlement of Kol' I counted representatives of eight clans, in smaller villages, from two to three clans, and but very few villages in which there were absolutely no members of other clans. There are clans whose branches are to be met in the most different and remote points of Gilyak territory. This dispersion, of course, is a fact that seems to be at variance with the principles of clan, but it is inevitable under the given economic and social conditions. A settlement
[166] located in a particularly favorable place from the fisherman's point of view will naturally attract newcomers from other clans, and, conversely, if the clan has grown so large

* 614 /110 cont./
36
● 423 in its original site that the indigenous village can no longer feed
166 everybody, emigrants by degrees depart from it to other places,
[167] selecting the nearest possible sites in order that the ties between the clansmen will not be severed. Immigration to very distant points involves an actual division of the "fire" and branching out of the clan. A no less important cause of the mixture of population is the custom, in some instances, of sons-in-law /zyat'ya/ moving to the clans of their fathers-in-law, about which we shall speak in detail in its place. Territory is in any case an indefinite sign of the clan.

423 The Gilyak do not even possess a consciousness of the right to
604 property, not only with respect to themselves, but also with respect to /111/ strangers. When wandering Tungus appeared on Sakhalin 50 years ago and began to hunt in the primordial territories of the Gilyak, it did not occur to anyone to protest against this, although the Tungus came in small groups and could hardly have withstood the numerous aborigines with force.

* 614 Clan names are just as indefinite a sign. In the mass of primitive, so-called "totemistic" tribes, the clan name is one of the very sharpest external signs of the unity of a clan. A totemistic name is a real object of nature, animal or plant, which is represented on the body, clothing, buildings, etc.

Among the Gilyak there is nothing of this sort. In some clans there are totemistic legends. Thus, for example, a clan living in the settlement of Tangakh considers itself kindred with the bear on the grounds that a woman of that clan had given birth to a monstrosity with features resembling those of a bear. Similar legends exist in other clans. Nevertheless, not only typical totemistic, but even ordinary clan names in the proper sense are absent. There are only territorial names. If a Gilyak wants to name the people of such and such a clan, he says "the dwellers of such and such a settlement," which sometimes corresponds with the actual place of habitation of the clan, but most frequently only indicates the village which was once the primordial abode of one or another clan.

/377/

● 423 Property. Among the Gilyak the notion of real property exists, although not in such a strictly individualistic sense as among civilized peoples. The territory of a settlement consists of the customary fishing sites, as well as the streams, and their banks, along which they hunt sables. But the Gilyak never make any claims to nearby territory which they themselves do not use. Use is the absolute element of property. While they recognize
[185] their rights to the streams and the nearby taiga where they set
[648] their traps, the Gilyak have freely permitted Tungus from the mainland to hunt the sable and reindeer some tens of versts from their settlements, although it could be easily foreseen that this would lead to the complete disappearance of the sable from those Gilyak territories. But on the other hand they are extremely strict in their rights to those streams along which they set snares
423 and traps. All the streams of the territory of the settlement are
428 divided in perpetuity among the families of that clan which first settled near these streams and used them, and these streams, their tributaries, and separate extensions pass by inheritance and are divided among the sons on the same strict principles as any real property among us. Moreover, if a stream is bequeathed to be shared among several brothers, the co-inheritors take turns using it through the year. It is worthy of note that although the streams thus divided among the brothers and clansmen greatly vary in value with relation to the advantages of hunting, they are never re-alloted, but remain at the continual disposal of the same people. It is possible that the reason for this phenomenon is the fact that younger brothers in certain cases enjoy advantages in
423 the matter of inheritance. On the other hand, fishing sites are not held in such absolute possession. Where the god has been lavish, the Gilyak does not consider himself justified in fencing off this bounty exclusively for himself. The Gilyak is not in the habit of lying in the hay or of eating and not giving to others.

166 Very often the Gilyak move from one settlement to another or
423 journey at given seasons for fishing or sealing, and the indigenous inhabitants of the settlements do not even dream of considering this a violation of any of their rights. Without asking anyone's

/377 cont./

166 permission, the emigrant builds a yurt, fishes, kills seals, hunts
● 423 fowl, etc.; only the streams are prohibited to him for the setting of snares for sable.

342 /378/ Only in exceptional cases does the Gilyak live
592 alone with his family in the yurt. Customarily he lives with his
423 brothers and clansmen, sometimes with his father-in-law, more rarely with members of other clans. The winter yurts of northern Sakhalin are frequently enormous, holding as many as 50 people, frequently all clansmen. The economic advantage of such communal dwellings consists in the fact that heating, which consumes a great deal of wood among the Gilyak by reason of the unsatisfactory construction of the stoves, is not so costly for each individual taken separately. Moreover, these dwellings guarantee security from abduction for the women. The summer yurts are built smaller and ordinarily house from one to three families. The winter yurts are built through the joint efforts of several brothers or clansmen, the summer ones -- frequently by one person. But all those who live in the yurt, temporary or permanent inhabitants, clansmen or members of other clans who had no part in building it, all live in the yurt without any compensation to the builders, and it is doubtful whether the latter enjoy any special privileges in obtaining firewood. If the yurt becomes congested, there will always be found a pair of persons who on their own initiative will undertake the construction of a new yurt, into which the builders themselves move and gladly welcome co-dwellers. Thus, the dwelling of the Gilyak is, it is true, the common property of several families who participated in its construction, but at the same time it is an object of gratuitous utilization by clansmen
[174] and, in general, by anyone who desires it. This is a vestige of the time when the dwelling was built by the joint efforts of the clan and was an object of collective property.

422 The views of the Gilyak concerning movable property are perfectly clear and strictly defined. The ordinary articles of movable property among them are boats, nets, kettles, arms, dogs, sleds, supplies of dried fish, etc. It often happens that a boat, a net, or dogs are the common property of two or three

/667 cont./

735 different, however, when it is a matter of goods which Nature
421 furnishes mankind only sparingly and which must be wrested from her, so to speak, with toil and effort, as, for example, sable and other precious animal pelts as well as everything which is obtained by trade by means of the latter from the Chinese, Japanese, and Russians. It would never occur to a Gilyak, be he rich or poor, to consider them likewise as common property and, accordingly, to sacrifice them in cases of need to the common good or to demand that this be done. In addition, these goods, in contrast to the first ones, and not exempting the cereals, tobacco, and the simplest Chinese or Russian clothing materials, are merely luxury goods without which he can still very probably maintain life if need be. Thus, the extremely
[182] active instinct of the Gilyak for trade and acquisition and their endeavor to preserve /668/ and add to their property form an effective counterweight against the communism and prevent the lazy, and therefore poor, from living at the expense of the industrious and wealthy, even though without denying him, in case of need, what is absolutely required to sustain life.

342 The Gilyak also take account of the communistic principle
421 in the matter of shelter or the dwelling, which, in a region with long and severe winters like their homeland, is of no less im-
● 423 portance than food and clothing for the maintenance of life. How and to what extent this is done can be seen from the following. It has already been mentioned above that the Gilyak, in an apparently quite irrational fashion, do not evaluate a structure as large and, in some respects, complicated as their winter-house, built according to the Chinese pattern, half as high as a simple, always much smaller storehouse (1). This can be explained by

1. See pp. 937-943 above.

the fact that the former, in spite of its size, yields a considerably smaller direct income than the latter, and this, in turn, rests on the fact that the dwelling is in part of communistic origin and

/668 cont./

342 and thus in its utilization is to a certain extent subject to the
421 communistic principle, which is not at all the case with regard
● 423 to the storehouse. On account of its size and complicated con-
[476] struction, the former cannot be built by a single person, as can the latter; putting it up requires the joint labor of many persons, whom the person undertaking the enterprise, if he cannot find them among his relatives, engages from the circle of his fellow-
[574] villagers or neighbors for a small payment. Though later on it belongs to the person or persons who undertook the construction
[427] and were able to persuade the others to help, it is never forgotten that it owes its origin to joint labor and, accordingly, it is always regarded to some extent as common property: shelter and protection in it may not be denied to any villager or other fellow-tribesman, and it would be absolutely contrary to the views and the practice of a Gilyak house-owner if he tried to collect a high rent from a person permanently domiciled with him, and, to be sure, in any form other than through the obligation for assistance for the household. Hence the direct profit from a winter house, and similarly from a summer house, is very little.

343 The situation is different with regard to a storehouse, which
423 is built by the owner himself. It belongs to him exclusively, and the richer Gilyak only have an interest in one insofar as they have provisions and other things and have no shelter for them. It is
[427] arranged in practice so that only a single wall, and, if this is not enough, a second and a third can be rented for storage, until the means to construct an entire storehouse are obtained (1).

1. Cf. the arrangement of a storehouse (p. 529) with its 11 wall pieces (f-q) and two spaces (c and d) in the middle.

Since more can be asked from a well-to-do Gilyak, a section of a wall, even reckoned at only one ja, will yield about 10 ja in direct income.

/669/

● 423 Finally, they also embrace the communistic principle in
224 that they have no limitations or restrictions on fishing and hunt-
226 ing, except for the places on the river where they have their
619 salmon weirs and those spots in the forest where their traps and self-shooters are set up. Thus they tolerate it, wholly without limitation, when the Liman Gilyak go to the Amur River to fish, and the Tschomi Gilyak go far downstream on the Tymy River for salmon fishing, and the latter, in turn, move to the sea-coast to catch kangi. It is true, the Tschomi and the Tymy Gilyak have ties of hospitality with each other. Also, in the
[648] vast forest the Gilyak permit even Olcha and Samagir to penetrate into their territory without molesting them.

685 Like the communism, the inviolability of property is also
421 based upon the national principle. I have seen even old and
[123] dignified Gilyak men who could not resist a small theft, for example, a piece of butter or the like, quite apart from the young people, who go so far as to cut open and pillage travel bags, etc., as happened to me in the village of My in the Amur-
[186] Liman. I was repeatedly warned by the Amur Gilyak about the inhabitants of the village of Langr, located at the entrance to
685 the latter. The opposite, however, that the Russians steal from
648 the Gilyak, happens much more frequently, and the temptation to remove a makeshift door or a fish net hanging in front in order to enter a storehouse and to pillage it is indeed much greater. Even the small burial houses were not safe for their contents, though they did not contain anything but a few articles of symbolic significance. Thus it came about that I became acquainted
[192] with the principal international relationship between the two peoples from the Gilyakized Russian term for "to steal" (ukradntsch, Russ. ukrastj), and the Gilyak word (enngarsitsch) did not become known to me until much later. But it hardly ever happens that one Gilyak will steal anything from another. Indeed, I met
685 persons, such as Judin in Tebach, Mradamn in Ssabach, etc.,
123 whom I could fully trust even from an international standpoint. The former, for instance, after a few days, returned to me a cigar case which I had left in his yurt, and there was not one

226 without any kind of bait on it is lowered into a crack or a hole drilled into the ice and is as a rule immediately pulled up with one or more fish attached to it. [119]

Sturgeon are caught with hooks. Large iron hooks are fastened to pieces of either wood or cork by means of a rope which in turn is held in place by heavy stones deep in the water, that is, not much above the bottom. The sturgeon which goes down deep is, curiously enough, attracted by the moving pieces of wood, he "plays" with them, as the natives say, and thus gets caught by one or another hook. In winter this fish is also caught in strong nets, for at this time it is supposed to be weaker.

The greatest activity occurs at the time of the salmon run. The results of it influences the lives of these people for the rest of the year, therefore whole swarms of Gilyak are to be found on the Amur. The fish are caught by means of enclosures (1): near the shore a row of posts are driven into the

1. Called sayesdka by the Russian fishermen.

river bed; in general the enclosure has this shape ⊓, the open side of it is turned toward the mouth of the river from which the fish comes. The fish bumps against the wall, turns sideways, and is caught in the bag which is lowered from the boat on the inner sides of the enclosure. At the height of the salmon run there are such masses of fish that the bags are filled almost as soon as they are lowered. The fish weighs 8 to 12 or even 20 pounds and costs three to five Kopeck.

226 The women also take part in this catch. There is no partic
23 ular organization in the matter of assigning the fishing places but care is taken that every head of a family fishes where his father and grandfather did before him; this place in the river is then practically his property.

225 Dolphins are harpooned, but this is considered a difficult
21 hunt. The animal is cautious and does not let the hunter com very near; and should this happen, the wounded animal can easily upset the boat. The harpoon consists of a long hook which has points and barbs at one end and at the other, a rop about 15 fathoms long with a blown-up bladder fastened to it. As is the case in whale fishing, the bladder must show the place where the wounded dolphin went under. When the anim reappears, he is given the finishing blow with harpoons or lances. [120]

25 'master's stone tie.' To this end, which is lowered into the
83 sea, is tied əz-bax 'master's stone' or 'master stone,'
which, according to the Gilyaks, weighs two poods. This
stone, the Gilyaks explained to me, forms the anchor of the
seine. In place of plummets, stones are attached to the bottom
of the seine. They are called tətr-paγ . Large wooden floats
(vaŋ) are fastened to the upper cord of the seine. When the
head of a sivuch gets caught in the net, the sivuch starts to
flounder; at times so violently that it throws the lower edge of
the seine together with the plummets over the upper cord and
finds itself literally in a sack. Sometimes dolphins fall into
the seine. The seals pəγi are shrewd and are seldom caught
in the net.

In the past as well as at the present time the Gilyaks of
the village Kul set the tola-k'e at Kivf-ŋalu, Ké-ŋalu, Vilk,
Loŋri, and ət.

4 According to old man Virp, some clans in the village Kul
25 owned seal hunting places in the past.

23 Thus clan Qavjuŋ owned: 1. Lulvəχ-pər, 2. ŋaγqej,
24 3. ət.

71 Lulvəχ-pər and ŋaγreqej are names of rocks sticking out
of the water. Seals crawl out of the water onto these rocks.
ət is a small island close to which there is another such rock.

> 3. In a fog the hunters come alongside of the shore or of the small island ət. Then the young hunters amuse themselves and play. There are onət two laqr-paγ stones for a game: "who can lift it and who cannot." Close to the rocks there is a flat place where the Gilyaks compete. The competition consists in jumping on one foot (teŋot ɬerd).

Clan Ṭnaunuŋ owned: 1. Maṭ-loŋri, 2. Tŋəri-γrə, 3. Zomi
vər.

The first two places form parts of the shore and are
resting places for seals. The third is a rock.

Clan Kezoŋ owned the shore off Vilk, a resting place for
seals and Hapzə-vər - a stone.

5 [84] Once at sea, the hunters take a number of measures
2 to ensure a successful hunt. Thus, in conversation, they
3 substitute prearranged names for the usual names of certain
5 objects. This prearranged language is an echo of a distant
9 past when hunters used it to keep their plans from animals

424

INCORPOREAL PROPERTY--extent to which property is recognized in intangible things (e.g., names, titles, songs, dances, visions, recipes, rituals, inventions); culturally defined categories of intangibles; recognized types of title; rights, privileges, and powers involved in titles to each type of incorporeal property; recognized types of ownership (e.g., individual, collective, corporate); distribution of types of ownership according to categories of intangibles, types of title, and classes of persons; records of ownership (e.g., registration of patents and copyrights); patent and copyright law; etc. See also:

dried and preserved until there is an argument about a theft. They seek a man who understands the oath -- chkhyz´u n´ivukh, and this gift is passed on by inheritance (now the best clan is the Chkhyzyl clan; Il'ya Tobonka from Chil'bi belongs to it). If outsiders try, then it is a great sin.

A thief frightened by the threat of the oath arrives in the village of the plaintiff with his khal'gu -- clansmen; they make a large fire on the bank.

The plaintiff and his people also come out to the campfire; he shouts: "Pryja´, mygja´, n´i heg:at pkhalgun polagun prydz:rá chigry´ tuur pugutá enan´ivukh, jugut prydókh kaukrá, par:k prydz:rá. Ni sidzymral´ó, sidz:jejmraló cherakh jot´in (prydz:rá) helá eg:ur pkhog:e jakhgujá," i.e., "Come, come down, I and my kinsmen are frightened, I came here with my children; a fire is lighted on your bank; no strangers came with me, we came alone (I do not know anything). I came to you to ask what is the matter (what is the guilt). Well, hurry up and tell me what is on your mind." That one sends an envoy -- khimu n´ivukh'a (a leader during war) with a spear, on which he leans instead of a crutch, and he begins to speak. The thief sends a khimu-n´ivukh'a. Nothing results, and it is necessary to take an oath. The visitors and the local people then arrange themselves on both sides of the fire. The "juror" is also present at this point. They argue: "Ni valchg:aj n´erakh elvg:az´ó -- if I lie, let it go badly for me."

The juror slowly begins to warm the tendon in the fire, the thief begins to twitch, and then he confesses (pyimdz). "Yrk pyimdz: vurará. Navat taktó jakhojló. Ching vark kymlyvé" -- "I confess, /304/ for what else can I do. Think about it yourselves." If it is a false accusation, then the real, absent thief would begin to twitch.

The victim is paid whatever he demands, and, if the thief is poor, the victim is given a woman. The juror is provided for at their discretion. The juror, when they take out the tendon, says to the crow and cat: "I do not know whether it is true or not, do not harm me, for you, too, do not know. If this

425

425 ACQUISITION AND RELINQUISHMENT OF PROPERTY--recognized means by which property rights may be acquired (e.g., appropriation, forceful seizure, gift, purchase); creation of new property rights (e.g., by physical appropriation, by priority of claim, by expenditure of labor in manufacture); rituals and symbols of appropriation; recognized means by which property rights may be extinguished (e.g., destruction, abandonment, confiscation, gift, sale); rights, privileges, and powers of the finders and losers of objects of property; etc. See also:

225 After they have killed a sivuch, they wash its head and its
782 snout with water. During the washing they use a special scoop
r a-ain-du-muurs, literally, 'the animal face washing scoop,
i.e. the scoop used in washing the face of the animal.

The heads with piskar stuck in them are taken home.

225 After the first sivuch has been killed the pilar performs
782 the ceremony of feeding the figurines t:ıaj. (Regardless of the
425 number of killed seals belonging to other varieties, this
778 ceremony is performed only after the killing of the first sivuch.) The pilar cuts the breast of the sivuch and smears the mouth of the figurines with blood taken from the heart of the sivuch. [87] The Gilyaks say that if one were to smear all of the face of a figurine, the latter could not "see." After the completion of this ceremony the sivuch is regarded as belonging to the pilar. However, as far as the distribution of the quarry is concerned, this sivuch is regarded as being not different from the other sivuchs. This will become apparent from the facts given below. True - as I was informed by a Gilyak - this holds only if few sivuchs have been killed. Without drawing final conclusions as to the possibility of the pilar asserting his title to an extra sivuch on top of his share of the quarry - for this we do not have sufficient data - we wish to emphasize at this junction two incontestable circumstances. First - the pilar appropriates the first sivuch killed during the hunt; second - this appropriation is effected under the guise of a religious ceremony.

784 This latter circumstance clarified for me the essence of a
225 number of taboos among the Gilyaks.

183 Thus, for instance, young hunters (as well as women) are
626 supposed to observe a number of taboos in connection with the
262 meat of a bear. At the same time old hunters need not observe those taboos. This is not the place for the enumeration of the tabooed parts of the animal which the young hunters (as well as women) are not supposed to eat. We shall only point to the explanations given by the Gilyaks concerning some of the interdictions. Thus, for instance, the young hunter must not eat the heart of a bear, otherwise he will sustain a heart affliction as soon as he comes on a track of a bear. And one cannot go hunting bears with a heart so afflicted. The young hunter must not eat the tongue of a bear, otherwise the bear will beat him to death during an encounter. "Therefore tongue old men only can eat." These instances illustrate the manner in which the Gilyaks rationalize their taboos.

It would be ridiculous to look for special meaning in all these taboos and their explanations. The meaning of these taboos and their interpretation is simple--the taboos serve to keep

426

426 BORROWING AND LENDING--bailment; rights, privileges, and powers of bailor and bailee; loans and debts; pawning rights, privileges, and powers of debtor and creditor; formalities in the arrangement and repayment of loans (e.g., witnesses, surety, sponsors); security; interest; notes and mortgages; specialization (e.g., pawn shops); bankruptcy (e.g., law, administration); etc.

/359 cont./

614 597 family in the capacity of a son or brother and is so considered in the clan. In one settlement on northern Sakhalin, I met a flourishing and numerous family, which many years ago had been adopted by the principal clan of the settlement. It had appeared from the shores of Okhotsk, poor and hungry, and asked to be taken into a clan of the settlement, which meant that it must be fed and supported until better times. At the present /360/ time this family is the pride of the clan which adopted it. But, in general, instances of adoption are rare, especially by families, for the number of women whom it is permissible to marry is thereby restricted for the clan (marriage within the clan is prohibited, as has been said above).

614 426 8. The clan constitutes a juridical unit with regard to the debts of the clansmen. In the event of the insolvency of a clansman and his closest kinsmen, the clan is obliged to assume the debt of the insolvent person.

614 428 9. As a general rule, property must not leave the clan of a deceased person. Concerning inheritance in particular we shall speak elsewhere. For the present we shall say only that in this regard among the Gilyak the well-known rule of the Twelve Tables finds literal application: "Si suos heredes non habet, gentiles familiam habento" (in the absence of close kinsmen, the clan is the heir).

614 736 768 10. The khal' regulates the affairs of the community. We have already seen its role in affairs of clan vengeance. When a Gilyak dies, the khal'-nivukhi decide to which of the deceased man's "ruvn" his widow and children should go. Before the gather- [963] ing of his clansmen, the dying Gilyak makes known his last wishes.

614 627 In general, no extraordinary event takes place without the participation of the clan. Quarrels between clansmen are settled, not by all the clansmen, but by those who are generally recognized in the clan as respected, eloquent, and wise persons (khlay-nivukh). In the event of a quarrel between individuals of different clans, a mixed gathering of khlay-nivukhi settles the [685] affair. In this way, for instance, cases of theft are settled

/379 cont./

556 with a feeling that is strange for people with a primitive mode of life. There is fear and respect and even reverence in this feeling. That a rich man should inspire fear and respect is a thing easy to understand, but the feeling of some sort of reverence has its own peculiar source, not completely alien, however, to our understanding. In primitive society the rich man ordinarily had his personal talents to thank for his material success -- hence the respect for him. But since all human success is at the same time a gift from the gods, the rich man also stands out as their favorite, 556 their chosen one. The degree to which the Gilyak are inclined 538 to attribute supernatural origin to wealth can be seen from a widely 171 diffused legend among them concerning a certain Tungus, still living today, who amassed his wealth by unscrupulous exploitation and robbery, a legend which affirmed that this virtuous man /380/ had secured his wealth thanks to a golden rain which showered down upon him when he was hunting in the taiga. And this golden rain was, of course, a favor from the god to his favorite.

675 432 437 427 426 Since the Gilyak have notions of property, there naturally exist among them contracts of purchase and sale, barter, loans, etc., but most frequently of all, of course, these contracts have the character of barter.

Two words about debt obligations. The Sakhalin Gilyak 426 does not borrow money; his debts arise principally from the nonfulfillment of one side of the property obligations of a contract. No interest is charged for waiting for repayment. Interest is known [184] only to the Amur Gilyak, who borrowed it from the Manchu, but [197] even among the Amur Gilyak interest is extorted only for the loan of money or sable skins, but never for loans of any other nature. The [614] popularity of debt obligations among the Sakhalin Gilyak con- [672] sists, first, in the fact that there is no period of expiration with regard to debts (complaints about the payment of debts incurred 30-40 years before arose not infrequently), and secondly that in the event of the insolvency of a debtor and his closest relatives or after the death of these persons, the clan, in the person of the clansmen, answers for the debts. The fund from which debts are made good, in the event of nonfulfillment of the conditions of a

/380 cont./

426 contract, are those sacred treasures which customarily lie untouched in the storehouse of their possessor. The creditor lays hands on these objects in those rare cases when he is compelled to recover his debt by force. The public or secret unharnessing of the dogs from the sled of the debtor is also one of the methods of collecting a debt. But what is most curious, what speaks in favor of the uprightness of the Gilyak and is most important at the trials of their lawsuits, is the fact that not a single debtor will ever repudiate his debt, no matter how ancient and unpleasant it may be to him. The Gilyak is greatly astonished when you ask him whether he has any evidence for the debt. "Ask him (the debtor)!" replies the puzzled creditor.

433 46 Speaking of their economic and juridical relations, one cannot fail to mention the role of ~~labor~~ in these relations. Capita as the basis for reward, hardly plays any role among them as yet. [225] In their communal hunting, for example, in the hunting of seals and dolphins, when the Gilyak gather for this purpose, several men to a boat, the catch is divided equally among the participants. The master of the boat gets the same share as the youth who sits /381/ at the oars. Even the craft of the metalworker who makes the spear or the arrow does not constitute a basis for special reward. Moreover, on distant expeditions, for example, from the Amur to south Sakhalin, the one who obtains more than an equal share of the catch is not the master of the boat, but the one who performed the troublesome chores on the way, such as 226 the preparation of the food and the collection of firewood. In 465 joint fishing the master of the boat and the net obtains the same 433 share as his have-not companion ("navkh"). True, I have seen an instance where the master of the boat and net obtained 2/3 of the catch, while his have-not comrade -- only 1/3, but to my question as to the reason for this inequality I received the reply: "And why should he have more? He is a bachelor, alone; 554 he does not need any more." I encountered a status resembling 476 to any degree that of a workman only two or three times, but 466 even in these rare cases the status of the worker does not remind one of our practices. The master will help his worker purchase a wife and will make him a sharer in the inheritance after his death.

/666 cont./

56 named for me as mykstschr-kolla. The latter in particular was especially esteemed and popular among his countrymen, aside from other reasons, on account of his lavish and much visited bear-festivals, in one of which I, too, took part. They related that he was held in such esteem that even the Chinese in Ssansin and the Japanese on Sakhalin referred to him as Gilyak dshangin and treated him accordingly, which prompted some of them, too, to refer to him occasionally in this way, and yet, they said, he is no dshangin, of whom there are none among them, but only a mykstschr-kolla nibach. Thus do they cling, even with the great differences in means and, accordingly, also in social position, to their complete equality legally.

When I previously said that the poor Gilyak, in case of 56/5 necessity, count on the help of their richer countrymen and may expect to receive from them some things on credit, but others for nothing, this needs an explanation. One might accordingly think that the latter treat the former in about the same way as 89 the Chinese traders, who, in an emergency, give the Goldi, Orochi, and other natives of the region among whom they reside the things required, calculated at a very high price, on credit, in order that afterwards, by means of repeated and unchecked promissory notes, they will never be out of debt to them for the rest of their lives; in fact, the debts are even inherited by their children. This never happens among the Gilyak. As much as I was in contact with the rich and the poor among them, I never heard of anything that would permit one to conclude that there is any considerable debt relationship between the one and the other. Both are also probably too cautious and practical, too subtly and cleverly calculating, to enter into such relationships, disadvantageous for both, for the one injurious to his respect and popularity, for the other to his existence. Not that they do not have any debts among one another -- but these always seem to be only small advances within their means to one person or another, the casual repayment of which is taken for granted, but often, and probably usually in cases of unequal means, /667/ is not even claimed, 56 and not much is said about it. Perhaps related to this is the fact

/667 cont./

● 426 that the Gilyak expression for "to be indebted" or "to have debts" -- a concept which must be very familiar to the Gilyak in view of the conditions prevailing among their neighbors, the Goldi and the Ainu -- escaped both Glehn and me, in spite of our otherwise quite copious word lists.

735 Be that as it may, the help given to a poor Gilyak in distress by his richer fellow-villager, business friends, or other acquaintances does not consist of their getting this or that on credit, but of being given free (Gilyak pai) what is needed to maintain life. And, to be sure, this is done as a consequence 181 of the national-communistic spirit, which, more or less peculiar to all primitive peoples, is in no slight degree inherent in the Gilyak. More, however, than among other peoples, the [186] Tungusic tribes, for instance, the communism of the Gilyak is strictly national, that is, active only within the tribal boundaries, which is conditioned and nourished by their sharp linguistic differentiation from all the neighboring tribes and their intense 421 national consciousness. Furthermore, the mind of the Gilyak, so much oriented toward trade, gain, and the increase of property, sets certain limitations on it, for it by no means puts all goods at its service without distinction, but rather only those which Nature herself provides in sufficient quantity and in a condition practically ready for use, and therefore labels, so to speak, as common property. The Gilyak regard as such primarily the products which the sea and the rivers furnish them in quantity, fish, seal, and the like, as well as, next, the dog, fed almost exclusively on these products and indispensable even to the poorest because of its fur, and, finally, what the local forest furnishes them in nourishing or refreshing roots, berries, 735/421 and other vegetables. It is taken for granted, therefore, that in case of need the rich Gilyak will give to his poor fellow-villagers and other fellow-tribesman who approach him for help as much of his supplies of the products mentioned (fish, seal, etc., and dog furs) as is required to satisfy their most urgent needs in food and clothing. And as long as his supplies of these are not exhausted, no one will perish from hunger or cold. It is quite

577 As far as deceit is concerned, it is very rare among them-
● 426 selves but is practiced against Russians. The cheating
609 usually consists in a Gilyak asking for a loan of money from
186 a Russian, promising him fish, sable, etc., in return and then not reappearing. However, one is not justified in assuming from this that the Gilyak have two different moral standards, which would contradict our previous statements. The discrepancy may be much more simply explained. To sell something at too high a price to a Russian or to take his money and not return it, - such things many Gilyak take the liberty of doing because they think Russians in general are mightier and wealthier than themselves and they feel that for this reason they would be forgiven. But more frequently they are motivated by the feeling that civilized persons would be the first to cheat them. Russian and Chinese merchants often played nasty tricks on them, in fact it has happened that a Gilyak lost all patience and control and hurled himself on his shameless creditor in order to make an end to the latter's
577 ever-increasing demands. It is actually surprising that,
609 having been taught by such masters, the majority of Gilyak
177 nevertheless refrain from cheating, and this fact is highly appreciated by decent Russians. Often I heard peasants of neighboring villages say: "The Gilyak are in general more honest than our sort, especially those who live in distant villages [225], for they do not even permit themselves to cheat strangers." (1) However, one must

1. I myself had the following experience. I bought some ear-rings from a Gilyak woman and gave her a ruble in paper money because I had no change. The woman took the money with some astonishment. Somewhat later when the little steamer with which I had arrived weighed anchor, the woman suddenly appeared rowing toward me in a boat and called out to me that the ear-rings were "not silver, just ordinary ones". Obviously she did not want to be taken for a swindler.

not believe that the peasants are generally dishonest; on the contrary, they are an upright people, which

461 Under ordinary circumstances it takes little effort on the
563 part of the Gilyak to nourish himself and his family. It is
512 only during the salmon run that the Gilyak works hard, during the rest of the time only the women are industrious. The men often sleep at home during the day, and they get up after sunrise. In the evening, however, they often sit up a long time and chat. Well-to-do mainland Gilyak sometimes even hire Russian workmen. The men who work for gold-seekers are discharged in the autumn and could live quite well throughout the winter on their pay, but it never occurs to them to save; in a few weeks everything is spent and then they do not know what to do. Such hungry chaps often wander as far as the Gilyak villages and pledge themselves to cut wood and do odd jobs in exchange for board.
464 Gilyak hate monotonous work. In the vicinity of Nikolayevsk-
● 426 na-Amure [231] they sometimes turn to haying in order to
567 earn something; but as for digging, wood cutting, sawing and similar work, they do not let themselves be enticed into it even for good wages. This, moreover, shows that they are ordinarily not in great straits. The Gilyak almost never trade on a commission basis.

Among themselves they are very punctual about paying. If a debtor dies or becomes incapable of working, his relatives endeavor to pay off his debts. They know nothing whatever of going into bondage or slavery because of debt.
428 The law of inheritance is very simple. The father's
587 property goes to the children if they no longer have a mother. If the children are under age, their uncle or some other close relative is their guardian and later returns their property if it has not been entirely used up. If a widow is left with children, the property remains intact in the family, and the mother is called "the elder" in possession. If the widow is childless she keeps a small part, about an eighth of the fortune, the rest belongs to the relatives of the deceased. If she wishes to enter a new marriage, the brother or some other close relative of the husband becomes, as we said, her second spouse, but if she already has children, they keep the estate of their father. If she is poor and does not wish to re-marry, she must be helped, and this help
428 she usually pays off in work as best she can. If a father
583 whose wife died earlier leaves a son or daughter, the estate is usually divided upon the daughter's marriage. In this case, the relatives of the bride look over the bridegroom. If they regard him as irreproachable, the bride gets half, but if he is not of the best sort, she gets less, probably in

427

427 RENTING AND LEASING--extent to which real, movable, and incorporeal property may be leased or rented; leases and rents (e.g., negotiations, terms, formalities); modes of payment (e.g., money rent, share cropping); rights, privileges, and powers of lessor and lessee; eviction; prevalence of tenancy and of home and farm ownership; factors determining rental rates; regulation (e.g., rent controls); etc. See also:

556 with a feeling that is strange for people with a primitive mode of life. There is fear and respect and even reverence in this feeling. That a rich man should inspire fear and respect is a thing easy to understand, but the feeling of some sort of reverence has its own peculiar source, not completely alien, however, to our understanding. In primitive society the rich man ordinarily had his personal talents to thank for his material success -- hence the respect for him. But since all human success is at the same time a gift from the gods, the rich man also stands out as their favorite,
556 their chosen one. The degree to which the Gilyak are inclined
538 to attribute supernatural origin to wealth can be seen from a widely
171 diffused legend among them concerning a certain Tungus, still living today, who amassed his wealth by unscrupulous exploitation and robbery, a legend which affirmed that this virtuous man /380/ had secured his wealth thanks to a golden rain which showered down upon him when he was hunting in the taiga. And this golden rain was, of course, a favor from the god to his favorite.

675 Since the Gilyak have notions of property, there naturally
432 exist among them contracts of purchase and sale, barter, loans,
437 etc., but most frequently of all, of course, these contracts have
427 the character of barter.
426

Two words about debt obligations. The Sakhalin Gilyak
426 does not borrow money; his debts arise principally from the non-fulfillment of one side of the property obligations of a contract. No interest is charged for waiting for repayment. Interest is known
[184] only to the Amur Gilyak, who borrowed it from the Manchu, but
[197] even among the Amur Gilyak interest is extorted only for the loan of money or sable skins, but never for loans of any other nature. The
[614] popularity of debt obligations among the Sakhalin Gilyak con-
[672] sists, first, in the fact that there is no period of expiration with regard to debts (complaints about the payment of debts incurred 30-40 years before arose not infrequently), and secondly that in the event of the insolvency of a debtor and his closest relatives or after the death of these persons, the clan, in the person of the clansmen, answers for the debts. The fund from which debts are made good, in the event of nonfulfillment of the conditions of a

/668 cont./

342 and thus in its utilization is to a certain extent subject to the
421 communistic principle, which is not at all the case with regard
423 to the storehouse. On account of its size and complicated con-
[476] struction, the former cannot be built by a single person, as can the latter; putting it up requires the joint labor of many persons, whom the person undertaking the enterprise, if he cannot find them among his relatives, engages from the circle of his fellow-
[574] villagers or neighbors for a small payment. Though later on
[427] it belongs to the person or persons who undertook the construction and were able to persuade the others to help, it is never forgotten that it owes its origin to joint labor and, accordingly, it is always regarded to some extent as common property: shelter and protection in it may not be denied to any villager or other fellow-tribesman, and it would be absolutely contrary to the views and the practice of a Gilyak house-owner if he tried to collect a high rent from a person permanently domiciled with him, and, to be sure, in any form other than through the obligation for assistance for the household. Hence the direct profit from a winter house, and similarly from a summer house, is very little.

343 The situation is different with regard to a storehouse, which
423 is built by the owner himself. It belongs to him exclusively, and the richer Gilyak only have an interest in one insofar as they have
[427] provisions and other things and have no shelter for them. It is arranged in practice so that only a single wall, and, if this is not enough, a second and a third can be rented for storage, until the means to construct an entire storehouse are obtained (1).

1. Cf. the arrangement of a storehouse (p. 529) with its 11 wall pieces (f-q) and two spaces (c and d) in the middle.

Since more can be asked from a well-to-do Gilyak, a section of a wall, even reckoned at only one ja, will yield about 10 ja in direct income.

476 were forced to take the boat from him for not one of them had
225 a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry
427 we saw that the share of the owner of the boat who also
476 happened to the pilar was precisely the same as that of the
225 other hunters and that he was not specially rewarded for supplying the boat and for his work in connection with organizing and leading the collective.

The last quoted example illustrates the exploitation that arises out of ownership of the tools of labor. The Exploitation is effected under the guise of the particular form of leasing tools. Here the owner of the boat does not participate in the hunt. He rents the boat to others and still gets a share of the quarry which he would get had he participated in the hunt.

471 Going from Kul - which is at the present time the northern-
225 most Gilyak village on the continent - in the direction of the
476 town of Nikolayevsk -na -Amur, until recently the center of
427 capitalist influence on the Gilyaks, we note an interesting
178 phenomenon. In the villages located in the proximity of the town of Nikolayevsk-na-Amur and, consequently, exposed most pronouncedly to its influence, the owner of the boat until recently claimed two shares: one - as a participant in the hunt and the other - as owner of the boat. This represents another forward step in the development [91] of the exploitative relations whose rise we noted in the fishing industry of the Gilyaks of the village Kul. On top of that, the owner of the boat claims shares for his wife and children who take no part whatever in the hunt.

226 The tendency to claim for oneself extra shares of the quarry
439 can be explained by the fact that some time after the founding
177 of the town of Nikolayevsk-na-Amur the commercial value of
427 fish increased. The lower reaches of Amur, one of the world's
476 richest Siberian salmon areas, attracted many people from the fishing industry as well as merchants, who brought up Siberian salmon from the Gilyaks. The Gilyaks of the lower reaches of the Amur, who formerly traded with the Chinese and Japanese began selling Siberian salmon to the Russians; an item of no importance in their trade with the Chinese and Japanese. Owners of zayezdki and seins turned into entrepreneurs supplying whole-sale fish-dealers, Luri, Viderman and others. They began to increase zayezdki and to hire labor from among Russians, Koreans and, especially, Gilyaks who come to them from Sakhalin and from the villages located North of Nikolayevsk-na-Amur. "With a zayezdok as a source of income, the Gilyak turned into a rentier who was always idle and drunk throughout the summer, "says the ardent colonizer

226 and proponent of a policy of oppression of "foreigners,"
439 N. V. Slyunin. (1) It is of interest to note that the new
177
127 1 N. V. Slʼunīn, Sovremennoĉ polozhenīe nashevo
476 Dalʼnevo Vostoika [The present conditions in our Far East], p. 96, 1908, SPb.

471 exploitative relations evolved among the Gilyaks on the basis
427 of ownership of the tools of labor did not produce new forms
475 of distribution. Distribution persisted, as of old, in the form
226 of the hunter's ancient way of dividing the quarry into shares.
177 It was only new claimants of shares who appeared. A new content was given to the old form. The owner of the tools of labor, striving to receive a greater part of the quarry, began to claim shares for members of his family who did not participate at all in the process of production such as wives and children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

of the tools of labor such as the boat and the seine and even for the use of the bench in the boat (mləṭ) and of the stick over the door of the house (mʏmr-ṭis).

We give here illustrations of the above.

225 According to the Gilyak ;argun (?) now living in the village
471 Cvarva (Charbakh), back in 1917 or 1918 he and three other
427 Gilyaks from the village Kalʼma as well as fourth one from the village Ṭəlmə went to the lower reaches of the Amur and worked there during the run of Siberian salmon on the island Langer for the Gilyak Armən who was an inhabitant of the island. I often saw Armən in 1931. Armən's brother worked with him. In all there were seven men working. When the fishing season was over, Armən divided the quarry. He and his brother got six shares, while the remaining Gilyaks received five shares, one share per man. The six shares obtained by Armən were accounted for as follows: one share for Armən, one share for his brother, one share for the use of the boat, one share for the use of the seine, and finally, one share each for his wife and his old mother, neither of whom took part in the fishing.. The Gilyak workers got no shares

for their families.

I observed analogous facts on the very same island in 1927 and in 1931.

In the village Vaz-vo (cape Vasin) from which the Gilyaks were driven out in 1914 or 1915, the system of exploitation on the basis of ownership of the instruments of labor was, it seems, even more cruel. According to the expert on Gilyak life, the inquisitive Gilyak Ə/isk, an owner of a zayesdok claimed one share for himself, one share for the boat, one share for the plank-bench in the boat (mlət) and one share for the n/əmr-tis - the shelf over the door in the entrance-hall. I failed to find the reason for the claim to an extra share in connection with the n/əmr-tis. I am inclined to think that no such reason exists and that n/əmr-tis is used by the owner of the tools of labor [92] solely as a pretext for getting an extra share for himself.

The Gilyak Miskin, inhabitant of the village Puir, told me of an incident that sounds like an anecdote. The incident took place in that village in 1931. An old Gilyak, called for one reason or another Tetkin, asked the young Gilyaks Pnadainu, Lakhtaku and Kondinu (?) to come with him to hunt (AB: fish?) kaluga. On return Tetkin took for himself four shares: one for himself, one, for some other obscure reasons, for some Russian acquaintance of his in the village Makarevka, one for a daughter in the village Langer and one for a daughter in the village Charbakh. As for his companions, he gave a single share to each. I later talked about this incident the Pnadainu. Pnadainu confirmed Miskin's story and further clarified it. Unfortunately, I wrote down Pnadainu's information on a separate piece of paper and, it seems, lost it.

My lengthy discussion is meant as a very general introduction to this problem. It is meant to show how, among the Gilyaks, the owner of the tools of work, as still found in the village Kul, could under the influence of Russian capitalism turn into a kulak-exploiter. This discussion is also meant to show how he utilized the old forms of the distribution of the quarry into shares for the purposes of exploitation. This interesting process deserves careful study.

After the distribution of the quarry the hunters and their wives at once start to work. There is a lot of work to do. The suet has to be separated from the hides. The hides have to be stretched on special frames used in drying seal hides. Some hides have to be cut into straps and those have to be stretched to dry, for one cannot make dry hides into straps

428

428 INHERITANCE--forms of property and types of title subject and not subject to inheritance; disposition of noninherited property (e.g., destruction, abandonment, distribution by gift, reversion to a prior owner or his heirs); nondistribution (e.g., maintenance of estates intact within an extended family); preferred or natural heirs and relatives excluded from inheritance (e.g., children, siblings, spouses, parents); sex and age preferences (e.g., exclusion of females, primogeniture, ultimogeniture); persons who inherit in default of preferred heirs; types of ownership acquired by heirs; variant rules for different possessions and type of title; characterization of inheritance systems (e.g., as matrilineal, patrilineal, testamentary); dower (e.g., special provision for widow or widower); testamentary disposition (e.g., wills, bequests, legacies); formalities (e.g., probate procedure); probate law; etc. See also:

476 to do is to move to the yurt of a well-off clansman, or even
*614 simply visit him two or three times a day, and they will
[261] share with him without a murmur their last yukola, their last handful of tobacco.

/92/ With respect to luxury articles, such as valuable spears, sabers, fabrics, fur coats, etc., there is more individualism, introduced by more recent conditions of exchange, but in cases of real necessity, such as the purchase of a wife, the payment of blood money, funerals, and so on, everyone considers it his direct obligation to sacrifice his individual wealth for the objectives of the whole clan.

*614 This same principle of the communality of the ma-
● 428 terial goods of the clansmen is the basis of the right of inheritance, the basic rule of which is -- the property of the clansman must not go out of the clan. In this respect, the well-known thesis of the Twelve Tables is literally in effect among the Gilyak: Si suos heredes non habet, gentiles familiam habento.[2] In the absence of members of the family, in which the "workers" are also classed, the property passes to the agnate clansmen, no matter how distant, excluding even the closest cognates. The latter, according to the will, can obtain only the so-called shagund (1), and only

[422]
[556]

1. "Treasures" -- a property sui generis, consisting of unused objects, designated only for exceptional cases: bride price, dowry, ransom, funerals. It is divided into 1) the iron "shagund" -- large cast-iron kettles, spears decorated with silver inlays, valuable Japanese sabers, coats of mail, and so forth, used chiefly for the bride price: 2) the fur, consisting chiefly of expensive fur coats, used principally for dowry; 3) the silk -- Chinese silk materials and garments, which are

[2] [i.e., "in the absence of close kinsmen, the clan is the heir", cf. translation on p. 512. – Analyst]

*614 /92 cont./
● 428 worn on ceremonial occasions and
[422] in which the dead are garbed.
[556]

such as will inevitably find its way back to the clan of the testator, so that to the ymgi clan, i.e., the clan that takes its wives from the clan of the testator and c sequently pays it bride price, can only be willed the so called iron shagund, which in any case will return to t clan in the form of bride price, while to the akhmal'k clan, the clan of fathers-in-law, only fur shagund can willed, since it will return to the clan in the form of t bride's dowry.

*614 4. One bear: the common obligation of the clan
796 men to share in the fattening of the bear and in the be festivals, both on the occasion of the slaying of a dom bear and the hunting of the forest beast. "Khal'-gu, u narkh muve!": "Clansmen, men, be guests!" -- with summons the youths go around to the yurts, summoning clansmen to the eating of the sacred meal of the bear in the forest and the viands jointly prepared for the oc by the whole clan.

The importance of common rights and obligatio with respect to the bear festival, as the exclusive privi of the clan, proceeds directly from what we said regar
*614 this in the section on /93/ religion and the clan gods.
796 we saw, the bear festival is characterized by two basic
782 features: first, by the honoring of the very person of t
[775] bear as a possible clansman of a "mountain" man and, consequently, a possible clansman of their own or his descendant, who had passed into the clan of the mount masters; and, second, by the transmittal through him of various gifts to the mountain master and his clan an consequently, to the god-clansman, their sustainer. Thus the bear festival has an incomparably greater sig nificance for the welfare of the clan than other clan sacrifices and festivals, because the sacrifices go to th highest master of the mountains, to the chief disposer

/124 cont./

it is true, very young, unmarried, and it is difficult to say what happened to their feelings later on, but the mere possibility of such examples illustrates boldly the relations between members of matrimonial clans.

The principle of mutual aid between members of matrimonial clans is reflected in the right of inheritance, to which, despite the strict agnatic basis, there is only one exception, namely, with regard to the pandf'y; by a will, as we already know, the ymgi can obtain the iron "shagund" (i.e., going for the bride price), while the akhmal'k can obtain the fur "shagund" (going toward the bride's dowry). This rule, which reduces the bride price to the simple formality of taking it from one pocket and putting it in another, serves, incidentally, as an important indication of the fact that originally among the Gilyak the bride price did not bear the character of payment for the bride, but rather was a form of religious ransom. But for what?

The fact is that under the Gilyak norms of marriage the bride price is in general a strange anomaly. Actually, once marriage /125/ from the clan of the mother is a religious obligation, and even preferable between the children of brother and sister, how can there be any talk of payment or ransom for the bride? Obviously the rise of this institution must have been due to some recent change in the marriage norms. This change we know: it consisted in the fact that in some instances when marriage from the clan of the mother was impossible, it became necessary to take wives from a strange clan, but this clan, in its turn, was obligated to keep its women for its own lawful ymgi and therefore could only accede to giving away its women by masking it with some act of pious deception of the gods, which would at the same time be profitable for the father-in-law. By analogy with the religious ransom in cases of revenge (see above), there thus arose the institution of the bride price, satisfying both the interests of the father-in-law and the dictates of religion. In its turn, the ymgi clan, which

/281 cont./

She may sell it or give it to her daughters in their dowries. After her death it goes to her daughters, and, if there are none, she may will it, or else it goes to her brothers.

After the agreement on the bride price. The negotiations over the bride price amount to two questions -- the question of the quantity and the question of the term. It may happen that the bride price is paid immediately after the negotiations, and then the marriage is at once considered concluded. The bride and the groom are summoned, ordered to eat and smoke a little together, a small feast with drinks is spread, and in the evening the mother of the bride orders the groom to lie down on the bed of his wife, and after spending the night in the nuptial bed the newly wedded husband carried off his wife, with a certain ceremony of which we shall speak below, to his home. But such cases are rare. It does happen, when both the groom and the bride belong to families of little means and the bride price is therefore small, that it is brought at once, and the dowry of the bride amounts to the most necessary things of her toilette, and no preparations whatsoever are demanded. Among rich families, the immediate removal of the bride occurs only when the groom lives very far away, when the given marriage is especially valued, either as a result of the high social standing of the parents of the bride or as a consequence of the particular renown enjoyed by the bride ("a maiden famed throughout the entire land"), and they are afraid of any delay for fear of the agreement's being broken if a richer competitor appears. In such cases they come at once in several boats with the whole bride price and in the company of their noblest clansmen, and after the bringing in of the bride price, a feast, and several short ceremonies, they carry the bride away along with her dowry. But, I repeat, such cases are rare. Usually in such cases the wedding is delayed. The delivery of the bride price is arranged in installments. At first only one object is left, usually a kettle; the remaining part is brought either directly before the removal of the bride, or, if the bride price is very large, part of it is even brought within a certain agreed-upon length of time after the removal of the bride.

/359 cont./

family in the capacity of a son or brother and is so considere the clan. In one settlement on northern Sakhalin, I met a flourishing and numerous family, which many years ago had adopted by the principal clan of the settlement. It had appe from the shores of Okhotsk, poor and hungry, and asked to b taken into a clan of the settlement, which meant that it mu fed and supported until better times. At the present /360/ t this family is the pride of the clan which adopted it. But, i general, instances of adoption are rare, especially by famili for the number of women whom it is permissible to marry is thereby restricted for the clan (marriage within the clan is prohibited, as has been said above).

8. The clan constitutes a juridical unit with regard to debts of the clansmen. In the event of the insolvency of a clansman and his closest kinsmen, the clan is obliged to assu the debt of the insolvent person.

9. As a general rule, property must not leave the clan a deceased person. Concerning inheritance in particular we shall speak elsewhere. For the present we shall say only that this regard among the Gilyak the well-known rule of the Twe Tables finds literal application: "Si suos heredes non habet, gentiles familiam habento" (in the absence of close kinsmen, clan is the heir).

10. The khal' regulates the affairs of the community. have already seen its role in affairs of clan vengeance. Whe Gilyak dies, the khal'-nivukhi decide to which of the deceas man's "ruvn" his widow and children should go. Before the g ing of his clansmen, the dying Gilyak makes known his last wishes.

In general, no extraordinary event takes place without participation of the clan. Quarrels between clansmen are se not by all the clansmen, but by those who are generally reco nized in the clan as respected, eloquent, and wise persons (khlay-nivukh). In the event of a quarrel between individual different clans, a mixed gathering of khlay-nivukhi settles th affair. In this way, for instance, cases of theft are settled

831 code of civilization. In their actions the Gilyak are no less frivolous, from our point of view. Despite the vengeful jealousy of husbands, the sins of love do not evoke any censure or scorn on the part of public opinion, and still less is it considered abnormal to cohabit (true, not openly) with individuals of those categories of which I spoke above. But within the clan, as I have already stated, adultery is not to be met with, even as an exception. I shall add that the Gilyak youth has certain chivalrous-romantic propensities which not only impel young people to make long journeys for a rendezvous with their beloved, but frequently drive them into unreasonable enterprises, such as the abduction of a woman by force of arms.

596 The structure of the Gilyak family. One often encounters large complex families in which the aged father lives in a common household with all his children and their children. The master's brothers who are either incapacitated for work or do not possess equipment of their own frequently enter into the composition of the family. Not infrequently the family accepts the orphans of their clansmen, especially orphans left without a mother at an early age. It sometimes happens that the mother-in-law lives with her son-in-law and sons-in-law with their mothers-in-law, espe-
594 cially when the latter have no sons. We shall note other peculiarities in the make-up of the family farther on; for the present we shall say that the normal composition of the family, its framework, is the parents, the sons and the unmarried daughters (married
593 ones pass into the clan of the husband). In the relations of the
594 members of the family among themselves there is nothing resembling the patriarchal relations of, for example, the old Roman family; /376/ the sons show respect for the father, but the latter does not wield over them that power which is known under the appellation of patria potestas. Adult sons can freely depart from the family of the father and live in separate households. Living with the father, the son can acquire for himself his own property.
/ • [428] The elder son does not enjoy any advantages over his brothers, and, on the contrary, the youngest sons, as those who live with the father until his death, enjoy special advantages in the matter of inheritance.

423 Property. Among the Gilyak the notion of real property exists, although not in such a strictly individualistic sense as among civilized peoples. The territory of a settlement consists of the customary fishing sites, as well as the streams, and their banks, along which they hunt sables. But the Gilyak never make any claims to nearby territory which they themselves do not use. Use is the absolute element of property. While they recognize
[185] their rights to the streams and the nearby taiga where they set
[648] their traps, the Gilyak have freely permitted Tungus from the mainland to hunt the sable and reindeer some tens of versts from their settlements, although it could be easily foreseen that this would lead to the complete disappearance of the sable from those Gilyak territories. But on the other hand they are extremely strict in their rights to those streams along which they set snares
423 and traps. All the streams of the territory of the settlement are
• 428 divided in perpetuity among the families of that clan which first settled near these streams and used them, and these streams, their tributaries, and separate extensions pass by inheritance and are divided among the sons on the same strict principles as any real property among us. Moreover, if a stream is bequeathed to be shared among several brothers, the co-inheritors take turns using it through the year. It is worthy of note that although the streams thus divided among the brothers and clansmen greatly vary in value with relation to the advantages of hunting, they are never re-alloted, but remain at the continual disposal of the same people. It is possible that the reason for this phenomenon is the fact that younger brothers in certain cases enjoy advantages in
423 the matter of inheritance. On the other hand, fishing sites are not held in such absolute possession. Where the god has been lavish, the Gilyak does not consider himself justified in fencing off this bounty exclusively for himself. The Gilyak is not in the habit of lying in the hay or of eating and not giving to others.
166 Very often the Gilyak move from one settlement to another or
423 journey at given seasons for fishing or sealing, and the indigenous inhabitants of the settlements do not even dream of considering this a violation of any of their rights. Without asking anyone's

/381 cont./

428 Inheritance. The structure of the contemporary family of the Gilyak naturally arouses in the father a desire to hand down his property to his children. On the other hand, the clan organization requires that in any case the property should not leave the confines of the clan. Out of the reciprocal action of these principles it develops that the children inherit from the father, and only in their absence -- the brothers of the deceased and his more distant clansmen, but at the same time, women, not only in the customary and ascending lines of kinship, but in the descending lines of kinship, but in the descending lines as well, are excluded from the rights of inheritance, as persons who are destined to leave the clan of their father and pass into the clan of their husbands. Such is the principle. In practice, it is true, it is relaxed; thus, for example, daughters obtain their dowry out of the hereditary property, and sometimes married daughters, especially when there are no heirs of the male sex or when the husbands purchased them for a big price, also share in the inheritance; but such instances are relaxations of the principle which are not generally accepted, and customarily they are effected by way of a will. Before his death the Gilyak summons his clansmen and makes known his wishes. These deathbed dispositions make it possible for the Gilyak to make not only daughters his heirs, but even persons of another clan, for example, his sons-in-law or workmen. If he should die without such a deathbed bequest, then, of course, the above-mentioned principle of inheritance goes into effect. But the details best serve to explain the essence of this principle.

If a Gilyak dies leaving neither wife nor children, /382/ his brothers are his heirs; in their absence -- his clansmen-ruvn in
[768] the order of their closeness of kinship. If he leaves a young widow
429 and children, the widow, according to the decision of the clan,
587 goes to one of the brothers or ruvn of the deceased, who has the rights and obligations of a father with regard to the children and is the guardian of their inherited property until they reach their majority. The young girls obtain a dowry, while the adult sons who have separated or wish to separate obtain their share of the

/382 cont./

● 428 inheritance immediately. If the widow is old and there is even
[768] one young or grown-up son among her children, the family continues to live as it did during the father's lifetime. The grown-up son will be the sustainer and worker of the family. A question of the division of the inheritance only arises when the children, coming of age, subsequently desire to separate. If a Gilyak dies without leaving children, or only leaving children of the female sex, the property passes to that brother of the deceased who marries the widow; if the inheritance is a large one, the other brothers and daughters of the deceased, even the married ones, share in the inheritance. A childless and aged
[768] widow passes into the care of the brothers of the deceased, who divide the inheritance among themselves. It is necessary to note
428 that a Gilyak without children or sons takes measures in good
597 time to make sure that he will have an heir of the male sex, which always coincides with the necessity of having an assistant-worker in the maintenance of the household and a sustainer in his old age. With this aim the Gilyak adopts the son of one of his ruvn or a poor clansman-ruvn, who works together with him and is his heir. It
428 is noteworthy that even when there are children, a person who has worked in the family for a long time receives a share of the
[606] inheritance. Sons-in-law who work with their father-in-law until his death are without a question his heirs, according to the wish of the testator. Heirs of the male sex receive equal shares of the inheritance. Only in a case where a younger son has lived with his father up to the very time of his death, while the other brothers have separated, does he obtain a little more than the other brothers.

673 Juridical Morals. Among the Sakhalin Gilyak one hardly ever
[674] encounters crimes of a mercenary character. The Gilyak keeps his treasures in the storehouse, which is never shut. The Gilyak calmly leaves valuable objects in the taiga, on the road, in an uninhabited summer dwelling, without fearing for their safety. In my presence a Gilyak left in the taiga, two steps from the road, a piece of silk material and a valuable spear. "No one
[422] will take it" he said calmly. /383/ If a Gilyak is sometimes tempted by the possessions of another, it is always in the field of

/652 cont./

567 Thus, an attitude toward the slaves similar to that among the
171 Gilyak seems to exist among the Chukchee, and in this attitude, as in the motives for it, the more intense national consciousness and sense of freedom, there is a parallel between these two peoples similar to the one discussed above (p. 961) in their enterprising genius for trade and their extensive trade activity.

● 428 The law of inheritance existing among them gives us
562 further insight into the family relations of the Gilyak. After what has been said above about marriage, it is almost self-evident that it is concerned solely with the male members of the family, while the female members are not only left empty-handed, but even treated as objects of the estate. The first and,
[601] if there are any, only heirs of a Gilyak are his sons, and, to be sure, the property of the father is inherited by them in equal shares, regardless of the order of seniority -- a custom which is all the more remarkable since the Gilyak language has a special term (ykkyn) for the oldest brother in contrast to the younger one (atschek). The wife and the daughters, whether married or unmarried, have no share in the inheritance. The former, if, be-
[768] cause of her age, there is no chance of her remarrying, is taken
[583] care of by her sons; the married daughters have entered other family circles, after they have increased their brother's inheritance by the bride price paid to their father for them, and the unmarried daughters become the property of their brothers and, if a suitor is found, must be purchased from them, and the bride price is shared equally among them. If one of the brothers dies unmarried, the other, surviving brothers inherit from him, again in equal shares. The same thing happens when from among several sons of a Gilyak, who have become independent, one dies unmarried while his father is still alive; the latter receives nothing, because under no circumstances may a father inherit from his son.

428 The law of inheritance is different if one of several brothers
587 dies and he was married and leaves behind a wife or perhaps wife and child, especially minor daughters and sons. If only a widow survives, she, along with all that she and her husband had, goes to the next brother of her deceased husband, and, to be sure, as a wife, regardless of whether the latter is still unmarried or already

/652 cont./

● 428 has one or several wives. This shows most clearly that the Gilyak
587 have no aversion to polygamy in principle and only live in monogamy for the most part for practical and economic reasons. The same happens when a widow with minor daughters or only the latter survive: the latter are regarded as part of their parents' estate, as it were, and they are inherited by the second husband of their mother, and, when they have reached marriageable age and suitors arrive, they can be purchased only by payments to him. On the other hand, if minor sons survive with the widow, her brother-in-law inherits her and the daughters, but the property of her deceased husband goes to /653/ him only temporarily for the use of the profit from it and must be handed over to her sons as their property as soon as they have grown up.

587 The marriage of the widow to her brother-in-law is not absolutely obligatory: if there is a man who wants to marry her, he can have her with the consent of her brother-in-law and for the payment of a sum designated by him, and, as happens as a rule among the Gilyak, can take her children as well. But once they are grown up and are claimed by their paternal relatives, he cannot keep them, but is obliged to let them go without any compensation or consideration.

587 If, however, the deceased was the youngest of the brothers,
428 his older brothers inherit his property, to be sure, but the widow does not go to any of them, but may marry any eventual suitor, as she wishes, and the latter does not have to pay her brothers-in-law anything for her. With regard to her children from the first marriage, however, the above-mentioned rules apply.

In the last-mentioned cases, where widow and child form at least part of the objects of the estate and therefore the principle of equal shares for all the brothers cannot be observed, the Gilyak law of inheritance favors, not the older brother, but the younger one. In spite of the fact that the oldest brother is distinguished from the younger ones by a special designation, the latter are actually favored by the inheritance law.

428 Finally, if a Gilyak dies and there are neither sons nor brothers to take possession of the inheritance, it goes to the

/653 cont./

428 nearest male relatives of the deceased, that is to say, brother's and father's brother's sons, or nephews and cousins of the first and second degrees, but always only on the father's side. The
428 Gilyak say that in such a case the inheritance belongs to the kall
614 of the deceased. To explain this, I must point out that they
601 make a definite distinction between the relatives on the father's side and those on the mother's side: the former are called ngafk and they alone are regarded as related by blood; the latter, on the other hand, are merely called ámal or ármal, which means roughly "friends." The vocative amalá, Friend, is the customary term of address which the Gilyak use among themselves as well as to a stranger, and which one uses them, whereas the much more meaningful naifká is only rarely heard and then only when they are speaking to one another. The totality of the ngafk, the paternal relatives of a Gilyak, constitutes his kall. This word, however, does not mean merely tribe /Stamm/, kin group /Geschlecht/, kindred /Sippe/, but also name. A kall, then, is exactly the same as a kin group bearing the same paternal or family name among us. It is the Goldi hala, which originally designated only a family relationship, but later, used by the Manchu government for administrative purposes, it was given a meaning going far beyond the family, which will be discussed in detail in the next section. The Gilyak, however, who were always outside Manchu rule, have been hardly affected by this /654/ and cling to their original conception of the kall, which is restricted to the family in the manner indicated above.

614 In view of all this, it might be expected that they also have special names for their various kin groups, and, indeed, I do not doubt but that they do have them. I never heard them use one, however. This may perhaps be explained by the fact that, as a rule, only the closest members of a kall have personal relations with one another, and they are aware of their membership in the same kin group without the common kin-group name. Moreover, the practical significance of this membership is considerably reduced for the Gilyak, in that it plays no part whatsoever in one of the most important family occasions, the conclusion of marriage, for among them, as has already been

/654 cont./

614 mentioned (1), and differently than among a number of other

1. See p. 1035, above.

peoples, members of one and the same kall may marry each other.
562 From the description of the Gilyak law of inheritance it became
428 evident how greatly the male sex is favored over the female sex among them and given preference over it. According to this description the woman not only has no right to an inheritance, but is herself inherited, first, as a girl, from the father to the brothers, and then, as a widow, to the next brother of her deceased husband, so that she can never make arrangements for
[592] herself. The only thing left for her is to establish for herself, as a wife and mother and through the means and talents given her by nature, an influential and recognized position in the house, and among the Gilyak she succeeds in this to a not inconsiderable degree.

171 A law of inheritance very similar to the one among the
428 Gilyak is found in the case of another Paleo-Asiatic people, the nomadic Koryak, whose chief possessions consist of their reindeer herds. According to Ditmar (2), among them, too, only the sons

2. Bull. de la cl. hist.-phil. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIII, p. 125; Mél. russes tirés du Bull., Vol. III, p. 33.

inherit the property of the father, and, to be sure, in equal shares, but the daughters receive only those reindeer which have come from the animals presented to them when they were born. Furthermore, among them, too, upon the death of an unmarried brother,
171 the surviving brothers share equally what he left. But if the de-
587 ceased was married and leaves a widow, she goes to his youngest
428 brother as a wife, if he is unmarried or a widower, and, if this is not the case, to the second youngest, the third youngest, and so forth, always under the same conditions. On the other hand, she may never become the wife of an older or already married brother of her deceased husband. Hence, if among her

428 /654 cont./
587 brothers-in-law none fulfills these two conditions, she becomes
171 free and may marry an outsider if she so desires (3). /655/ In

[113]

3. The custom that the widow of the older brother goes to the younger brother, but the widow of the younger brother becomes free is also found among the Samoyed of the Turukhansk region (Krivoshapkin", "Eniseisk. okr. /The Yenisei District/," Zap. Imp. Russk. Geogr. Obshch., 1863, I, Res. and Mat., p. 178. Tret'iakov", "Turukhansk. krai /The Turukhansk Region/," Zap. Russk. Geogr. Obshch. Po obshch. Geogr., Vol. 1, 1869, p. 403), among the Yakut (Sauer, Kap. Billing's Geogr. astronom. Reise nach den nördl. Geg. Russlands, p. 164), and other Siberian peoples.

428 In principal, therefore, the Gilyak law of inheritance is very similar
171 to that of the Koryak, though still a few degrees more unfavorable for the female sex.

While we saw above that among the Gilyak the paternal
614 relatives enjoy rights that are not available to the maternal rela-
607 tives, on the other hand, they also have obligations which the
628 latter do not have and which more than ever characterize them as blood relatives. This obligation appears with the practice of blood revenge prevailing among the Gilyak. Like all primitive peoples, the Gilyak, too, adhere to the principle that every act of bloodshed committed against a human being requires retaliation in likewise bloody fashion, either by himself or by his relatives. And they believe no less firmly that if this requirement is not met, the person or persons guilty of the omission are bound to be punished by misfortune, all kinds of hardship, or even death. This notion, generally widespread among them, exerts a powerful, decisive, and enduring influence upon the behavior of both parties, the active as well as the passive one, in committing acts of bloodshed. It is in the interest of the attacker to commit his act from ambush in as unexpected and startling a manner as possible,

13: Seeland--41 E-5 (no date) 1882 Gilyak

461 Under ordinary circumstances it takes little effort on the
563 part of the Gilyak to nourish himself and his family. It is
512 only during the salmon run that the Gilyak works hard, during the rest of the time only the women are industrious. The men often sleep at home during the day, and they get up after sunrise. In the evening, however, they often sit up a long time and chat. Well-to-do mainland Gilyak sometimes even hire Russian workmen. The men who work for gold-seekers are discharged in the autumn and could live quite well throughout the winter on their pay, but it never occurs to them to save; in a few weeks everything is spent and then they do not know what to do. Such hungry chaps often wander as far as the Gilyak villages and pledge themselves to cut wood and do odd jobs in exchange for board.
464 Gilyak hate monotonous work. In the vicinity of Nikolayevsk-
426 na-Amure [231] they sometimes turn to haying in order to
567 earn something; but as for digging, wood cutting, sawing and similar work, they do not let themselves be enticed into it even for good wages. This, moreover, shows that they are ordinarily not in great straits. The Gilyak almost never trade on a commission basis.

Among themselves they are very punctual about paying. If a debtor dies or becomes incapable of working, his relatives endeavor to pay off his debts. They know nothing whatever of going into bondage or slavery because of debt.

428 The law of inheritance is very simple. The father's
587 property goes to the children if they no longer have a mother. If the children are under age, their uncle or some other close relative is their guardian and later returns their property if it has not been entirely used up. If a widow is left with children, the property remains intact in the family, and the mother is called "the elder" in possession. If the widow is childless she keeps a small part, about an eighth of the fortune, the rest belongs to the relatives of the deceased. If she wishes to enter a new marriage, the brother or some other close relative of the husband becomes, as we said, her second spouse, but if she already has children, they keep the estate of their father. If she is poor and does not wish to re-marry, she must be helped, and this help
428 she usually pays off in work as best she can. If a father
583 whose wife died earlier leaves a son or daughter, the estate is usually divided upon the daughter's marriage. In this case, the relatives of the bride look over the bridegroom. If they regard him as irreproachable, the bride gets half, but if he is not of the best sort, she gets less, probably in

428 order that he may not squander the property. On Sakhalin,
583 only the sons inherit the parents, and the daughters are
married off. If after the death of the parents only one
daughter is left behind, she usually gets part of the estate
upon her marriage, the rest is kept by the relatives who
took care of her. In any case, if the bride has a dowry,
the man has no right to it; he can get hold of it only by
going against the wishes of his wife.

428 In the matter of succession, it is true, the procedure is
not everywhere and always [232] the same, but in general
one can draw the following conclusions from what has been
said: a) the children take precedence over other relatives;
b) the brothers take precedence over their sisters, pro-
vided the latter marry and thus share the fortune of their
husband; c) the joint usufruct of the estate on the part of the
nearest relatives is very common; d) women may inherit
and have their own property, but in general they are not
left as much; however, they have the right to be supported;
e) widows can demand their own share, but usually they be-
come joint owners of the estate along with their children.

565 The Gilyak are all of one class. There are no privileged
551 classes or families. There are families, now and then, who
177 are held in great esteem because of wealth, courage, or
because their ancestor was founder of the village, but they
have no real privileges of any kind. Such families also
have family names (which are handed down by the males);
many Gilyak, however, have only one single name to which
is added the name of their village, to distinguish them from
outsiders. Some of them, whether they are baptized or not,
are given this or that Russian name besides their Gilyak one,
and by this name they are known even among their fellow-
tribesmen. These "Petkas," "Mikitas", etc., are usually
intelligent lads and understand Russian.

567 In like manner, there are no slaves, nor have there ever
554 been any among these people. Only personal qualities,
576 either bravery, wealth, age, or intelligence, give the individ-
ual a certain significance. Wealth may be regarded with a
certain esteem, since it is usually acquired as a result of
real superiority, - either courage, industry or judgment.
Toward aristocrats of wealth a certain external ceremony is
occasionally observed. If such a person comes for a visit,
both he and the host bow after a fashion, whereupon he holds
up his cheek to be kissed; he himself does not kiss the other.

1. (cont.) found with respect to the Chinese merchants during my time in the Amur region were Spanish (Mexican) piasters, so-called colonnados, and even these were always first carefully tested as to their weight with the help of hand scales.

G
436 Through their association with the Russians
199
439

however, the Gilyak very soon also became familiar with the use of their coins (2).

2. Indeed, now they are said to accept even Russian notes as payment. As proof of their great shrewdness in monetary and trade matters the following incident, which occurred during my stay, might be mentioned. The frequently mentioned Poswein, a Gilyak from Kulj, who had been close to the Russians ever since their first appearance in the region, made a voyage from Nikolayevsk to Sakhalin for the sole purpose of exchanging with his countrymen there various small items for all kinds of valuables and especially gold and silver coins, which they had stolen from a stranded American whaler after killing part of the crew, and then to make a profit out of them with the Russians.

G
Gi
43
199

/595/ By means of the unit of value borrowed from the Chinese and common to all the peoples of the lower Amur region, the barter trade which they carry on among themselves and with the Chinese is, by and large, given a fixed standard in that the in part very heterogeneous wares involved in it appear equal in value to the extent that, with respect to quantity, size, quality, etc., they represent or contain an equal number of units of value and can be exchanged without any disadvantage for

G
Gi
43
199

/595 cont./

either the buyer or seller. The price or the value of the trade commodities depends, on the one hand, on the greater or lesser demand which they enjoy among the Chinese and, on the other hand, the more or less strong need for them found among the Gilyak, Olcha, and Goldi, and which is itself determined in turn in large part by their use in the trade carried on by them among one another and with the Japanese. Great changes in the prices of certain commodities inevitably arose when the Gilyak, and after them the other peoples of the lower Amur region, also came in contact with the Russians, besides the Chinese and Japanese, with whom they had ancient trade connections, and the Russian commodities began in part to compete very successfully with those of the Chinese and Japanese.

G
Gi
[128]

More than elsewhere, therefore, it must be kept in mind in connection with the trade relations of the Amur peoples that my descriptions refer to a period when this contact had first been made and had not yet had the consequences that it has today. Finally, concerning the value of objects not involved

G
435

in trade among the Gilyak, but associated with their households and the rest of their life and activities, the decisive factors are to be sought in their customs, conceptions, and views, evidence of which will be given in the following.

G
435
439

By means of many and repeated inquiries among the Gilyak and my own trade and other relations with them, I was able to learn the values, given in the following table, of both the most important commodities in their trade with the Chinese, Japanese, and in part also with the Russians, and the foremost articles in their life and households, discussed and in part illustrated in the above descriptions. Thus, among them:

A sable pelt, depending on its quality, ... equals 1-3 ja
A pelt from the red fox (pas(1)-nga) . . " 2 "

G
[104]

1. The s is pronounced soft, like the French z.

A pelt from the black-gray fox (pladf) . . equals 3 ja

Similar fraternal relations between akhmal'k'i and ymg
are manifested in sea hunting and land undertakings.
The most important of these require the participation o
several persons: hunting bear in summer and winter (takin

/166 cont./

by their touching tenderness, their devotion and selflessness. Toward an ymgi, though only potential, the "father-in-law" sometimes behave better than toward their own children.

"One must feed a son-in-law," runs the religious formula of relations between "father-in-law" and "son-in-law." In this dry formulation is hidden a rich content. Not only in times of poverty does a "son-in-law," sometimes with his huge family, move in to live with his father-in-law, getting a living from him without any payment for a period of months and even several years, but even in normal times the "son-in-law" (although such merely by designation) is the favorite guest in the house of his father-in-law.

For months at a time the Gilyak youth loudly and happily pass their time in the settlements of their "father-in-law," bringing in every year the most hearty welcome and the greatest delicacies, and when the hunting begins, the "son-in-law" is invariably a participant in the undertakings of his "father-in-law," and when he returns to his own home, he carries with him, in addition to /167/ the usual gifts, also his share of the catch. At solemn moments of life, for example, at the bear festival, the "son-in-law" are in the foreground among those who have been invited, and it is to them that the honor of killing the bear is presented. In an arduous moment in warfare, the "father-in-law" and the "son-in-law" are obliged to come to each other's aid in case of necessity.

In order to evaluate fully the religious background of these peculiar relations between "father-in-law" and "son-in-law," it is necessary to keep in mind the wide meaning that the Gilyak, with a purely primitive passion for the broadening of their original taboos, have given to the term "father-in-law."

From the kinship terminology we show that the last of the "fathers-in-law" is considered to be not only that clan from whose a man's kinsmen usually take wives, but also all the other clans from which ever one kinsman has changed to take his wife. Thus, each man can have several clans

/264 cont./

This formula has preserved its vital significance even today. One is supposed to send relatives with his son-in-law gifts of edibles and a share of every catch. Moreover, the young men of the category ymgat during the course of several months out of the year are unfailing guests in the settlement of their fathers-in-law and "son-in-law." In this dry formulation is hidden a rich content. Not only in times of poverty does a "son-in-law," sometimes with his huge family, move in to live with his father-in-law, getting a living from him without any payment for a period of months and even several years, but even in normal times the "son-in-law" (although such merely by designation) is the favorite guest in the house of his father-in-law.

For months at a time the Gilyak youth loudly and happily pass their time in the settlements of their "father-in-law," bringing in every year the most hearty welcome and the greatest delicacies, and when the hunting begins, the "son-in-law" is invariably a participant in the undertakings of his "father-in-law," and when he returns to his own home, he carries with him, in addition to /167/ the usual gifts, also his share of the catch. /275 cont./

"to pay." It is curious that this very word /276/ ŭrkind -- "to pay" is derived from the word ŭrkind, which in the middle voice is a synonym of ŭhkind -- to fight, to war (ŭrkind is merely the active voice of this same verb). In other words -- ŭrkind was originally an institution of revenge, later replaced by ransom -- peacemaking for a payment of damages. This evolution can still be traced even now in the epos. In one poem written down by me, where the hero has gone to take revenge for his murdered father, they ask him: on his return, "Pyrk ŭrkind joylo? -- "Did you fulfill ŭrkind for your father (literally ŭrkind -- "fulfill"), did you take vengeance?" He answers: "ulk khukiat" -- "I killed them all." Here the term ŭrkind is used in the sense of the act of blood revenge. But in another poem the same term is used in the sense of ransom. "Tyn narkh ŭrkim -- "For their (slain companions), they paid damages, ransom."

From all this it is clear that the bride price in its original sense was not at all a payment for the bride, but a gift, although obligatory. But this becomes obvious from the fact that this gift was by no means one-sided. For the father of the bride it was just as obligatory to give, in addition to the dowry, a post-wedding gift to the groom, and these gifts of clothing continue in various values for several years, and they were very often no less than the bride price (1). It is considered a disgrace not to

1. Here is an illustration of the institution of the bride price as an institution of mutual gift-giving, one of many examples which I wrote down. An elder in the settlement of Pomr, a man who was not well-to-do, gave as bride price for his daughter /ŭcf/ two Chinese kettles, one Japanese /kettle/, and five dogs. In exchange, the father-in-law sent his son-in-law two Chinese robes and for two or three

/276 cont./

years regularly sent him rice, tobacco, and tea, and divided with him all that he obtained in the way of objects of consumption. Besides this, he also bought a large dowry of clothing, furs, and ornaments.

return a gift of equal value to the bridegroom. A Gilyak who breaks this custom becomes a general laughingstock. Besides the gifts to the groom, it is also the father's obligation to provide his daughter with a dowry equal in value to the bride price, and the dowry is the same as much a gift to the daughter as it is to her husband, who is freed from the great expense of expenditures on his wife.

Thus, it is clear that, at least among the Gilyak (among other peoples, too, there is much reason to think) (2), bride

2. Incidentally, among the Turkic people and the Samoyed Indians, where marriage actually has the character of buying-selling, giving presents to the groom is just as obligatory as it is among the Gilyak.

price is not at all a replacement for marriage by abduction, as has been asserted up to now by many and considered to be axiomatic until very recently. In the legal consciousness of the Gilyak, marriage accompanied by bride price is not an act of buying and selling, either; evidence for /277/ this is the fact that it is positively not allowed to buy wives from one another.

It remains for us to answer the question, why is there no bride price in the orthodox marriage? The fact is that in this last case marriages are concluded between persons who are bound by common blood both on the side of the father and on the side of the mother; the marriage is sanctioned both socially and religiously. But when marriages are concluded between alien clans, the exchange of gifts plays a role both magical (a mutual guarantee

/298 cont./

A bear festival is held also for other reasons, /299/ for instance, for reconciliation with one's son-in-law /ŭyat/, ŭkhlak /ŭ/ or alien. If a person offends his son-in-law, for example, by making a purchase, he keeps silent, and the kikhal keeps silent, but they will continue to sulk until a bear festival is held by the offender for reconciliation (ŭla lymŭk).

A bowl, hyl, for the head is necessary for each new bear festival. The head of the bear is always placed in a new bowl, while the old one is used for meat and the like. Anyone can prepare a bowl for the bear festival. The bowl for the head is bound with the penis of the bear. A bowl from which the bear is fed for the last time in the yurt, and always on the side opposite the door, is called pukrow-v'ŭr.

When a brother gives his sister a bear as a gift, he himself is not permitted to bring it; he must come after it with pomp. The bear is greeted with zadi-chade music. When the master feeds his bear for the last time, he says to it: "Ŭ'ŭr hunyŭ! Wingan ŭrur hunyŭ!--live well! When you go, live well."

The gift giver does not shoot the bear and departs as soon as the festival is over, without even tasting (a morsel), while he must bring with him mor' and all kinds of dishes.

When a bear falls sick, then they hold pying-tryvk and prepare uig, mor', from all sorts of delicacies and all sorts of berries.

Luk: -- a dog which has been born specially for the uig.

When a dog is killed, the head and bones are laid in a wooden frame near the leaing where the bones of the bear are placed. Some clans hang bear heads on trees. This place is called kork ngangof.

V.

Slaves

The son of a slave remains free to the neck (i.e., his head is free), his grandson -- to the belt, his great grandson -- to the feet, in the fourth generation -- the descendants are "pure."

kikhal, i.e., a kinsman of the master, and if anyone

/302 cont./

Quarrels and methods of reconciliation. If a son-in-law /ŭyat/ has beaten his brother-in-law /ŭburin, wife's brother/, he must (present) a pair of racing dogs (there do five; they are sold only in pairs) -- kylyn-kan. The first dog is ŭyly-k.an, the second -- k.ukh, the third -- ŭrkhpe-k.ukh, the fourth -- tyly-k.ukh. If the first is sold separately, all of them will be useless. They are placed at a certain distance (10-15 paces) from one another and in reverse order, namely, the first -- ŭyly-k.an -- last, farthest away, and the most catch up with all of them and the object is that all should come together at the same time, and, if the ŭyly-k.an proves first, then it is not suitable. The cost of a pack is up to 100 rubles. The son-in-law /ŭyat/, in case of a fight with a brother-in-law /ŭburin/, gives him such a pack of dogs as a present, and, furthermore, he brings them himself or, if he is ashamed, through another, and they cannot be returned, except if the dogs are ransom. On the other hand, if a brother-in-law /ŭburin/ offends a son-in-law /ŭyat/, he gives for reconciliation a silk robe (35-60 rubles) or bear as a present.

/303/ Quarrels within the clan. N left his wife, received back his bride price, and began to carry on with Russians and so forth. The old men assembled and decided to take the woman back, but the father-in-law did not agree: "A woman is not a dog, to try and throw away." Nevertheless, she was purchased for a certain young man. Then N, in Khez', began to storm and threaten because they took his abandoned wife. But they replied to him: "You did not buy her; you paid her with your own money" (clan money). The matter ended by giving a racing dog, and two bottles of vodka.

The oath: Uath -- ŭmbi chakhri lambe -- in Goldi, chikhye'u hyde.rd -- in Gilyak.

One must kill a wolf (tygyz') and saw, in order, the tendons on both hind legs from the heel to the knee, and ask: "where is the tendon for the thief? (ennŭhŭnorge'? ennŭh -- heel, tongz -- tendon), where is the stolen tendon? -- jengaz' tongz' shamdrŭra?" The tendon that twitches is taken out secretly and

/378 cont./

clansmen, even in those cases where the families eat separately. And, conversely, it happens that in large families, keeping house together and eating together, individual members, such as, for example, the unseparated sons, are independent owners of dogs, boats, and other movable property. Thus, the sons who live with their father obtain as good time property for their future independence or for the purchase of a wife with their own means. Such independent property of unseparated sons is either obtained as a present /379/ from the father, augmented by the fruits of success in hunting through the efforts of the children or as the result of employment in towns. If an unseparated son kills a bear, the meat goes for general use, but he gets the skin. If he sells his dogs and sables, he will purchase various articles for the family, but he will certainly obtain something especially for himself. The same is true of his wages. But never will the son reserve for himself a special share of his catch of fish, where obviously the skill of one individual plays no role. There same economic relations prevail between the father-in-law and son-in-law who maintain a joint household furs and wages constitute individual acquisitions. There is a category of articles and generally which constitute the exclusive individual property of the Gilyak. This is his "wealth." The Sakhalin Gilyak, at least, does not treasure and does not store up money. On the other hand, he stores up valuable furs, coats and sables, a set of costly Chinese silk, spears with silver fretwork, silk gowns, Japanese sabers, etc. These riches pass from generation to generation, from father to son, and only at extremely important moments of life are they taken out of the storehouse. When it is necessary to purchase a wife for his son, when the need arises to provide presents for his daughter, departing for the clan of her husband, when the clan through its committee offers conclusion a peace with the clan of the avenger, when he himself dies, or some other person who is dear to him and whom he wishes to see upon the funeral pyre in all the splendor of sable fur coats and Chinese silks -- then the treasured objects are brought out of the storehouse. The attitude of the Gilyak toward rich men is interesting. The Gilyak regards his wealthy brother

/872 cont./ with regard to me, however, neither the one nor the other would apply, and yet I, too, never received thanks from the Gilyak. I am not thinking now of the gifts given in response to begging, which in Gilyak houses can become very annoying to the traveler and for which mainly children are guilty. They may never have learned to say thanks or may have forgotten it in their inquisitive amazement at the traveler. But I have often enough shown the Gilyak greater services. For instance, they always found a hospitable reception at my house, where the safety of their possessions, their dogs, and all the rest of their outfit were attended to so that they could calmly go about their business in the village. Among other things, I once saw to it, thanks to the strict sense of justice of the then governor, Rear Admiral Sawoiso, that an investigation was made about the theft of a whole vehicle laden with all kinds of wares, which had happened to the Gilyak Judin; the culprit was convicted, and Judin was paid a sizable sum in compensation. Even in this case I was not thanked, though I was dealing with the best and most respected Gilyak.

On the other hand, it is customary for the Gilyak to exchange mutual gifts as a sign that they wish to enter into closer, perhaps even business relations with each other. When I received such a gift for the first time, I asked the price of it, but was told that the word pai, that is, gratis or free, went with it and that I was informed by the Gilyak Jutschin, whom I already knew, that, in accordance with their custom, I would now have to give a gift in return, while repeating the same word /873/ pai. If the latter were not done, the gifted in return would be rejected, and the word pai would be stressed once more. Sometimes I was even told in what form the return gift should be, for example, that it might consist of several tobacco leaves, some bread, several buttons, or the like. Custom requires, however, that, upon acceptance of the return gift, the number of items is not to be closely examined, and in praise of the Gilyak I must admit they never deviated from this custom and that they were always satisfied with the return present, whatever it turned out to be. But this did not by any means prevent them in accordance with their greedy nature, from demanding very high prices in trading later. This

custom may have arisen in consequence of the long trade relation of the Gilyak with the Manchu Chinese and Japanese, who in Sakhalin, as well as in Saïrunai, have their officials and trade agents who demand such capitain benevolentsie in their own interest and to the detriment of the government or the trading houses concerned.

Moreover, the Gilyak conclude no transaction without expressing the wish or the request that something over the price agreed upon be given as a free gift, *pai*. And this is precisely what Julin did when, in the transaction with the Russian-American Company for the sizable sum that he received for compensation, he wanted to be given various costly fabrics and other luxury items.

It must say for the Gilyak, however, that as a rule one can trust their word and their honesty in business dealings with them, for example, the delivery of wares or other articles paid for in advance. As guides, too, they are generally trustworthy; in fact, some of them so identified themselves with my interests that they personally even warned me against the thieves in certain places of the population of this or that village which in their eyes was notoriously bad. For the most part, especially in remote areas, it is very difficult to get guides for a trip, for as a rule the Gilyak are too suspicious and fearful to give up their freedom and cast their lot in with that of the traveler. Since then once I failed completely, but when I did get some I usually had reason to be satisfied with their determination, their faithfulness, their knowledge of the locality, and, in the evening beside the blazing fire, with their communicativeness and clairvoyance. Among the many guides whom I had on my journeys, there were only two who deserted me. And that happened under circumstances which in part make their faithlessness understandable. On one occasion, when I was traveling along the coast of the Sea of Okhotsk, I was surprised by a bad snowstorm. The brave-spirited human and stubbornly stuck to the sea now, and the dogs were already so tired that they constantly collapsed and could not be started up again by being beaten. There was nothing for us to do but drag the dogs and the sled up the moderate height of the bank, which, covered with small dwarf birch trees, did not even offer the prospect of a cheerful campfire. No wonder that under such circumstances my guide, who on account of the earlier

with a feeling that is strange for people with a primitive mode of life. There is fear and respect when one encounters a rich Gilyak. That a rich man should ignoble fear and respect is a thing easy to understand, but the feeling of some sort of reverence for his exceptional source, not completely alien, however, to our understanding. In primitive society the rich man ordinarily had his personal talents to thank for his material success -- hence their respect for him. But since all human success is at the same time a gift sent from the gods, the rich man also stands out as their favorite, their chosen one. The degree to which the Gilyak are inclined to attribute supernatural origin to wealth can be seen from a widely diffused legend according them relationship to magic, and living today, who attained his wealth by unscrupulous exploitation and, in general, who is inclined to attribute their success to a gift received his wealth thanks to a golden rain which showered down upon him when he was hunting in the taiga. And this golden rain was, of course, a favor from the god to his favorite.

Since the Gilyak have notions of property, there naturally exist among them contracts of purchase and sale, barter, loans, etc., but most frequently of all, of course, these contracts have the character of barter.

Two words about debt obligations. The Sakhalin Gilyak does not borrow money, his debts arise principally from the non-fulfillment of the obligations of the other side of the property obligations of a sender. No interest is charged for waiting for repayment. Debts are transferred to the Amur Gilyak, who borrowed it from Manchu, but even among the Amur Gilyak interest is extorted only for the loan of money or table skins, but never for loans of any other nature. The popularity of debt obligations among the Sakhalin Gilyak constitutes, first, in the fact that there is no period of expiration with regard to debts (complaints about the payment of debts incurred 30-40 years before arose not infrequently), and secondly that in the event of the insolvency of a debtor and his citizen relatives or after the death of these persons, the claim, in the person of the claimmen, answers for the debts. The fund from which debts are made good, in the event of nonfulfillment of the conditions of a

/31 cont./

very great ill; one might die." It is a sin not to be hospitable, not to share edibles. And the reason is clear: the gods, as we have seen, are the ones that "feed" man, and principally the clan gods, who provide for not one man, but the whole clan, which brings human sacrifices and which is bound to them by clan ties; to eat, therefore, without sharing with a clansman who is present and, in general, not to feed him, is a "sin" and a direct risk of losing the benevolence of the gods-sustainers. It is not by chance that in all this the "hearth" plays a great role. In the fare of the hearth lies the "master and mistress of the fire," a clansman or even an ancestor, who does not miss a single thing that takes place in the hearth, who, if we have seen, are the intermediaries between the clan and its clan gods, and there is nothing more natural than that the gods of the hearth should above all be the guardians of the principle of hospitality.

But the clan of the clansmen, living by the favors of their gods-clansmen, are not delimited by reciprocal "engaging" alone, but by the real, most extensive principle of the community of earthly benefits. If this does not find expression in a purely communistic form, it is only because there is no necessity, and, in the first place, in some of the conditions of acquiring food are so simple, the gifts of nature lie so widely and freely before each person, that there is no need for the community principle to be realized. Indeed, the principle is in full force. In the communal hunting for sea animals, for example, in one boat, it is the owner of the boat who is generally also the most skillful hunter, but he receives no more than the last adolescent rower, and, in addition, a part of the catch is distributed to those families whose members for one reason or another could not participate in the hunting. Dried fish, the principal food of the Gilyak, is regarded almost as communal property, and anyone whose supplies have run out can come home from his neighbor without any objections. At any rate, no one goes hungry in the taiga if any clansman has provisions. All the hungry individual has

/114 cont./

Let us look more closely at these conditions, and fare of all at the economic ones.

The predominant form of labor is individual labor or the simplest co-operation. The principal source of food is fishing. The sea and rivers are so rich in the product that with the good manage equipment under normal conditions everyone can secure his existence through his own efforts. In hunting sea animals, it is true, the co-operation of several men is necessary, but the whole business is so simple that there can be no talk here of masters and workmen, nor of any special organization; everyone performs for that which he is /115/ most qualified. Moreover, the area is generally composed of kinsmen, and it never occurs to anyone to divide the catch in any way other than according to the number of workers. A share is also assigned to those who have not participated in the hunting, for the catch belongs not only to some and not all the members of the clan? The same is true of hunting for forest beasts. If a hunter belongs to a group, he is ordinarily the hunter, like the fisherman, can get along perfectly well in his pursuits without the help of others. And, in fact, during the fishing season the Gilyak population disperses in all directions; each master begins to his favorite site. During the hunting season everyone sets off for his hunting ranges and fixes these keeps watch over his traps, sometimes not seeing a stranger for weeks.

Thus, the predominant form of labor is individual. Everyone must be able to do everything, master all the knowledge of his tribe, be an individual equal with all, comprehensively developed and prepared for life.

And since the gifts of nature are plentiful, free, and accessible to the efforts of all, the well-being of a man depends exclusively, in consequence, on his abilities and diligence. Inequality, which under more complex conditions is a source of dissension and social differences, does not show its theme here. A wealthy man owes everything exclusively to his own personal abilities and virtues; his accumulations cannot enslave or humiliate anyone. Moreover, the personal accomplishments of a man are a gift of the gods,

/158 cont./

In reality, joint cohabitation and regular intercourse are connected, not with the sexual feature of the marital union, but with the economic aspect. Wherever economic conditions demand the separation of the family into single group of persons and allow living together, group marriage there can turn into a regular, continual marriage. But such conditions are rarely found in primitive society. They are possible -- but even then not often -- in a narrow circle of brothers; in this case group marriage is really accompanied by the elements of joint cohabitation and the regular exercise of marital rights familiar to us. We meanwhile know of such a clan among the Gilyak, among several Tungus tribes, in Africa, in India, and in other places. But types of this kind of cohabitation are also rare.

In spite of the old opinion, which was accustomed to regard the life of primitive people as a continuous orgy, in reality the economy of primitive man, at least the methods of obtaining the means of subsistence, is at the present time mainly individual, and the form of general collaboration that crop up only at certain times disappear as quickly as they arose with the passing of the necessity for them. We may see a typical specimen of individual economy among the wandering Tungus reindeer-herders, who *rarely* assemble once or twice a year for only a short time and then in small related groups. In contrast with these live apart, widely separated from one another, each family living by itself his own territory for pasture and hunting.

Among peoples who are not herdsmen, who live closer together, the forms of economy are all more or less individual. Under such circumstances it is quite natural that every man, conducting his own particular economy, should strive to have with him a woman who, in conformity with the natural division of labor between the sexes, might perform with him his economic duties. Thus, joint and regular cohabitation between a man and one or several women arises by itself. In societies where group norms of sexual intercourse exist, such individual alliances change nothing. An

/237 cont./

We proceed to the Tungus nationalities who are predominant on the Amur and spread out to the north up to the shores of the Bering Strait. The marriage norms of these nationalities are characterized by the principle of having the most isolated tribe, namely, among the northern Orochis, there is no marriage to compare and supplement this information with the data collected among other peoples of the Amur region.

In spite of the fact that in their original mode of life as nomadic hunters and reindeer-breeders these nationalities of marital rights familiar to us. We meanwhile know of such a clan among the Gilyak, among several Tungus tribes, in Africa, in India, and in other places. But types of this kind of cohabitation are also rare.

Among the Tlingit (the Kolosh) the institution is described in more definite terms by Veniaminov, who plainly says that "the second husband must always be either a brother or a very close kinsman" (1). Similar phenomena have been observed

1. Veniamin Innokentia /The Works of Innokentii/, Kiev 3, p. 419.

served among the Central Eskimo by Rink. We shall not, however, deal with America, a country having the Ganowanian system, which is close to the Turanian system. Our aim was to fill the hiatus which separates the native land of the Turanian system from the Ganowanian. After the survey we have made, we have the right to say that this hiatus has been filled.

XI.

Sexual Life

The norms of group marriage, presenting the Gilyak with the social basis for a sexual intercourse, are in themselves a propitious factor for the inordinate development of sexual sensualism. The ordinary mode of life of the Gilyak, in turn, could only aid in the extraordinary development of this factor. The principal Gilyak occupation -- fishing -- leaves him too much leisure. On the other hand, the only pursuit which could provide a significant outlet for the emotional vital energy, namely, hunting, plays a comparatively insignificant role in the life of the Gilyak. The Gilyak does not undertake distant hunting expeditions. The seasonal hunting for sables, squirrels, foxes, and deer, and even the sporadic excursions after the local, rather *fixty* timid bear, do not present any social dangers; the sport of hunting, therefore, is very weakly developed.

584 my children and your children also be akhmalk'i. If you do
582 not give your daughter to my son, you will completely break the old law, that will be bad. Let us do everything according to law ('live pure')."

[583] After such a reminder, rarely does anyone refuse his duty, even though this obligation entails the loss of property, for in such cases they either do not give a bride price, or they give a very small one, if the akhmalk is not an ancient one.

Unorthodox forms of concluding marriage. The most varied
177 circumstances led to the destruction of orthodox marriages
178 in the clans of akhmalk'i. One of the causes was the depopu-
614 lation of the clans from which they took wives, which com-
● 433 pelled them to marry women of alien clans. Another cause,
556 perhaps the most important, was an economic one, brought
[582] about by their contact with the cultured peoples of the Far East, a contact which gave impetus to the development of hunting pursuits for commercial exchange. Objects which formerly had no value, such as the skins of the sable and fox, became objects for which one might obtain not only objects of luxury, such as expensive cloth, valuable weapons, and ornaments, but also food and spices, such as rice, groats, and, finally, alcohol and tobacco. Even nowadays the Gilyak clearly remember the time when sables and foxes used to run around fearlessly in great numbers near the Gilyak dwellings, and no one /270/ killed them, since they preferred to dress themselves in dog hides. And all of a sudden in exchange for these beasts it became possible to obtain
177 the most desirable objects. A tremendous change inevitably
178 took place in the psychics of the Gilyak and in the relation-
556 ships of the people among themselves. If formerly a man's
582 dream did not go beyond attaining the reputation of a good
584 person, urdla n'ivukh, i.e., an outstanding hunter who shared
[584] his catch with his tribesmen, now urdla n'ivukh became a synonym for "rich man," whose dream was to amass a quantity of luxury objects. Self-interest and boasting appeared upon the scene, as well as the desire to excel others

/380 cont./

426 contract, are those sacred treasures which customarily lie untouched in the storehouse of their possessor. The creditor lays hands on these objects in those rare cases when he is compelled to recover his debt by force. The public or secret unharnessing of the dogs from the sled of the debtor is also one of the methods of collecting a debt. But what is most curious, what speaks in favor of the uprightness of the Gilyak and is most important at the trials of their lawsuits, is the fact that not a single debtor will ever repudiate his debt, no matter how ancient and unpleasant it may be to him. The Gilyak is greatly astonished when you ask him whether he has any evidence for the debt. "Ask him (the debtor)!" replies the puzzled creditor.

● 433 Speaking of their economic and juridical relations, one
46 cannot fail to mention the role of labor in these relations. Capital, as the basis for reward, hardly plays any role among them as yet.
[225] In their communal hunting, for example, in the hunting of seals and dolphins, when the Gilyak gather for this purpose, several men to a boat, the catch is divided equally among the participants. The master of the boat gets the same share as the youth who sits /381/ at the oars. Even the craft of the metalworker who makes the spear or the arrow does not constitute a basis for special reward. Moreover, on distant expeditions, for example, from the Amur to south Sakhalin, the one who obtains more than an equal share of the catch is not the master of the boat, but the one who performed the troublesome chores on the way, such as
226 the preparation of the food and the collection of firewood. In
465 joint fishing the master of the boat and the net obtains the same
433 share as his have-not companion ("navkh"). True, I have seen an instance where the master of the boat and net obtained 2/3 of the catch, while his have-not comrade -- only 1/3, but to my question as to the reason for this inequality I received the reply: "And why should he have more? He is a bachelor, alone;
554 he does not need any more." I encountered a status resembling
476 to any degree that of a workman only two or three times, but
466 even in these rare cases the status of the worker does not remind one of our practices. The master will help his worker purchase a wife and will make him a sharer in the inheritance after his death.

/385 cont./

124 163 165 many of his children had died between the beginning of his marriage and the date of the census. In this way, we obtained an exact number of the children in a given family, living and dead. Hence, it was easy to calculate the rate of mortality.

163 165 fertility rate -- 2.7%, although this figure is below the actual one, for in the number of married people were included, on the one hand, children for whom their parents had bought child wives, and, on the other hand, adults who were married to child wives. 162 592 There is an average of 12 people living in each yurt, although there are a number of yurts with several dozens of inhabitants; for example, one yurt in the settlement of Nyanivo accommodated 42 persons of the same clan.

103 162 As to the size of the winter settlements, the largest of these are the following: Tamlyvo and Lirkryvo (144 persons each), Viskvo (116); Nyur (103), Arkyyvo (87), Tal'votigrvo and Tengi (64 each), Kitnidvo and Pomr (59 each), Nyanivo (58); the smallest settlements are Yamy (4 persons), Vaaz (8), Noksy (9). In the summer the most densely populated settlement is Tamlyvo.

224 225 433 000 Seals killed in all the settlements during the last season, 1,026; sables killed in the settlements nearest to the Aleksandrovsk post, 258 (5). /386/ There are 143 guns, 201 boats (one boat

[126] 5. The number of fur animals and so forth killed during the last season was obtained from reports of the Gilyak themselves. These figures are most probably somewhat below the actual ones. The starosta in the village of Kitnidvo, for instance, deliberately tried to persuade his people not to tell the truth to the Russians, who, according to him, would come and take away the bounty . . .

411 422 501 231 000 /386/ there are 143 guns, 201 boats (one boat to every five persons), and 2,100 dogs. To make some money,

166 464 /386 cont./ To make some money, 115 individuals, i.e., one-sixth of the adult population, make 103 433 the trip to Nikolayevsk. The settlements richest in seals and dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is [244] also richer in sables than the others. Potatoes are raised by the [162] Gilyak in Khoe and Tangi. In the settlement of Tyki, the [177] Gilyak have made a request concerning the settlement among [244] them of at least one Russian with whose help they could raise 224 433 178 648 potatoes. The settlement of Tyki should be mentioned for several other reasons. In the first place, starting from this point the Gilyak are ceasing to hunt sables because of the overwhelming competition from the Tungus who have killed off the sables in the vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, beginning at this settlement one notices a progressive improvement 342 178 354 [237] in the construction of the winter yurts. In Tyki the dugout rises a little above the ground, it has windows made of fish skin, and in one yurt even of glass; in the middle of the yurt, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and stretch along the wall under the plank beds serve mainly to heat these latter; the smoke goes through a subterranean passage into a high vertical pipe which is made of a hollow tree trunk especially [184] adapted for this purpose. A similar system of heating is used by [171] the Amur Gilyak and in the fanza /houses/ of the Manchu, from [177] whom it may have been borrowed.

133 [137] [491] As to the character of the region, the maritime sections of the western coast are mostly tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the taiga, and occasionally over the mountain ridges. Near the settlement of Pomr the coast becomes more elevated, and, beginning at the summer settlement of Muz'vo, it strikingly

/387 cont./

114 36 103 361 221 settlements the settlement of Mos'bvo on the banks of the Tym' River, seven versts from the settlement of Rykovskoye. In connection with this settlement of Mos'bvo, the author makes the following comment: "It is inhabited only in autumn and winter. In spring and summer the inhabitants pass on to the western coast, mainly to the village of Arkyvo, where in the early spring they hunt seals and during the summer catch fish which are not to be found in the Tym' at this time of the year. At the beginning of August, before the Siberian salmon run, the population returns to their winter dwellings." Editors of the journal, Etnogr. Obozr."

000 16 with 109 yurts. The total population here is 703 persons (197 on the Tym' River, 506 on the Okhotsk coast), of whom 416 are male and 287, female; there are 169 families and 133 households, 483 adults, 175 married persons, 9 male polygamists, average fertility -- 3; 332 children survived birth; 169 422 231 501 411 433 died. Guns -- 64 (of these 30 are on the Okhotsk coast and the remainder on the Tym'), 121 nets, 122 boats, 1,480 dogs. During the last season 688 seals killed, 586 sables, 134 foxes, 43 otters, and 63 bears.

162 592 From this one can draw the following conclusions: here there are, on the average, six persons per yurt, an average family has /388/ four to five members; there are 11 married males for one bachelor (1), one bigamist in 19 married men.

[589] 1. The word bachelor is applied only to older, so to speak, inveterate bachelors.

G /383 cont./
342 dwellings of the successive peoples in this direction. One need
171 only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

G In these housing conditions of the indigenous Amur peoples
361 it is evident that there is a feature fundamentally different be-
342 tween the anciently sedentary, Paleo-Asiatic Gilyak and the
22 Tungusic peoples surrounding them, who wandered in later, indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way of life and subsistence of the peoples mentioned. The Gilyak are
G 361 predominantly fishermen and, along the seacoast, also seal
433 hunters; correspondingly, they are almost exclusively ichthyo-
226 phagous, as is their only domestic animal, the dog. Now, in
231 order to support themselves and their many dogs, required both
260 for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

G /384 cont./
361 most surely and best obtained by stable, permanent residence in a
432 place known to be favorable by experience, be it on a river rich
227 in fish, like the Amur, or on the seacoast. Hunting comes into
224 consideration among the Gilyak only insofar as it provides them
439 with the precious pelts so necessary for trade with the Chinese and Japanese, and in exchange for which fabrics needed for clothing, tobacco, liquor, and other luxury items are obtained.

G The situation is different among the Tungusic tribes sur-
224 rounding the Gilyak. Among them hunting is a necessary, indeed
226 essential means of subsistence and existence, and the more so the
231 farther upstream and the deeper inland one goes. Moreover, in
432 view of the more limited talents for trading of these peoples in
361 comparison with the Gilyak and their less frequent and less extensive winter trips and journeys, the number of dogs to be fed, and consequently the need for large supplies of fish, is reduced. Also, with the distance from the main river to the mountains that skirt its tributaries, fishing becomes less rewarding, whereas the abundance of game, increasing in the same proportions, makes hunting /385/ all the more tempting. The more that fishing recedes into the background and hunting, requiring a frequent change of locality, comes to the fore, however, the life of the people becomes more unsettled. It has been repeatedly pointed out above that the Orochi living in the forest and mountain wildernesses along the left tributaries of the Amur and Ussuri are already more hunters than fishermen. And this is far more the case for the peoples of the upper Amur region, the nomadic Birar, Manegir, and Orochon. Among them, completely in contrast to the Gilyak, hunting is the first and foremost source of subsistence, whereas fishing comes into consideration only to a subordinate degree, in that they leave their hunting grounds only temporarily in summer and move to the Amur, the Dseja, or the Bureja to fish. Also, they do not need any supply of fish for their domestic animals, since they use the dog at most for hunting, and not as a draft animal, as is possible only among sedentary peoples. Their domestic animals,
G 231 in particular riding and draft animals, the horse and the reindeer,
361

/404 cont./
000 made and nevertheless cruder and poorer, weaving.

G All the other peoples of the lower Amur region in general
291 have the same clothing as the Gilyak. Nevertheless, to the ex-
171 tent that the natural conditions of the regions, the means of subsistence, and the principal occupations of the people differ, more or less conspicuous differences and peculiarities show up among them, in that other clothing materials gradually gain the upper hand, many an article of clothing no longer corresponding to the changed requirements will be modified or disappear, and, on the other hand, many a new one appear, etc.

The greatest, and in fact virtually complete, correspondence
G with the Gilyak in their clothing is shown by their nearest neigh-
291 bors on the Amur River, the Olcha, who live under the same physical
171 conditions and in the same manner as they do, chiefly by fishing
101 and, in de Castries Bay, also by seal hunting, and, like the
433 Gilyak, keep many dogs, as their sole domestic animal, for
231 winter trade and intercourse with the neighboring peoples. During the long period of living beside and in part among the Gilyak, the Olcha adopted, among other things, the clothing of the
G 199 latter completely, and every one of the garments described above, not excepting even the lynx cap so peculiarly Gilyak, as well as the implements customarily used for making them, is found identically among the Olcha and has an Olcha-Tungusic designation. Nevertheless, among the Olcha, especially in the upper part of their area of distribution, closer to the Samagir and Goldi borders, one sometimes comes across an article of clothing that came from the last-named peoples and is foreign to the Gilyak, such as a deer-leather or elk-leather robe, a boa made of musk-deer skins instead of squirrel tails, etc.

The situation is the same with regard to the clothing of the
G 291 Negda on the Amgunj /Amgun/. When Middendorff, coming
171 from the Tugur Tungus, visited them, everything gave him the
G 291 impression, despite their language, differing only dialectally
199 from the Siberian Tungus, "that he had come upon a new people": the shape and cut of the individual articles of clothing, the

000 Fishing, and in particular Sturgeon, Hausen, and Salmon. Fishing. Fishing Equipment. Marine-animal Fishing: Seal, White Whale.

226 In the preceding chapters it has been repeatedly stressed
171 that fishing plays a more or less important role among all the
433 peoples of the Amur region, and that in particular its importance increases all the more the farther one goes downstream, until finally, in the region of the mouth of the Amur River, it becomes among the Gilyak the conditio sine qua non for their entire existence. The intermeshing of the various conditions and aspects of life made it necessary for us in the above descriptions of the housing, clothing, and locomotion of the Amur peoples to make many references to fishing itself or to the consequences of it. For example, one must consider the influence that fishing
361 exerts upon the lesser or greater sedentariness of the various
221 peoples in the Amur region, in that, to be sure, in contrast to hunting, it gives them in general a more sedentary life, but even so requires a change of locality and dwelling twice a year, and commonly during the summer repeated moves along the water. Furthermore, the more or less predominant part that fishing has in the procurement of their food, clothing, and other necessities of life was discussed. In this connection the kinds of fish most important to the Amur peoples were named, and both the way they are eaten and the preparation of provisions out of them for the use of people and dogs were described in detail.
121 And so, after all of that, there only remains for us to learn the way, how and by what means, fishing for at least the most important fish is carried on by the Amur peoples, as well as the times when it is done and some of the details connected with it.

/517/ As usual, we shall again start with the Gilyak, and, to be sure, with the Amur Gilyak, who are in every respect superior to their countrymen. To be sure, fishing in the Amur is also done in winter, but then it is relatively not very profitable and ceases completely toward spring when the ice becomes so

G /534 cont./
227 consideration, repaired at the slightest damage, and dried in
286 the sun after every fishing expedition. For this purpose they
784 are spread out over special racks taller than a man, and superintition requires that if the drying nets are in a person's way he must always go around them, never underneath them. And, finally, not until the nets are completely dry may they be used again. Treated in this fashion a net lasts for several years among the Gilyak and rewards many times over the care and labor used in making it.

G /535/ What has been said in the preceding about Gilyak
226 fishing may in general be applied to the Tungusic peoples of the
433 lower Amur region more or less neighboring them, although with a few qualifications and modifications, which are determined in part by the way of life and the character of these peoples and in part by the distribution of those species of fish principally caught.
G 361 First of all it must be emphasized that, with regard to fishing,
262 all the Tungusic peoples of the lower Amur region differ from the Gilyak, not so much by practicing it by means of any new methods unknown to them as by the essential, crucial fact that none of them is ichthyophagous to the extent that the Gilyak are or is dependent on fishing for its entire economy like the Gilyak, and therefore none of them practices fishing to the extent and with as much constancy, care, and energy as the latter. Among
G 361 all these peoples, and not excepting the Olcha, who are closest
224 to the Gilyak in all their external behavior and way of life, hunting, as a means of directly and immediately satisfying the urgent needs for food and clothing, plays a far more important role than among the Gilyak, and, to be sure, this is more and more generally the case the farther one goes upstream and into the side valleys of the Amur River. Consequently, it must take up more time and labor, or rather must take this away from fishing. In particular it cuts heavily into winter fish-
G 226 ing. In no season of the year does the basic difference in
226 character between the Gilyak and the Tungusic peoples of the
221 lower Amur region appear more clearly than in winter, in that the former remain the same sedentary fishermen, despite various

/543 cont./
225 Just as in the case of fishing, so also in these two branches
184 of work the Gilyak stand first among all the peoples of the Amur region. One can see well enough from the above descriptions how great and manifold the direct use of the seal is among them for food and clothing, for feeding their dogs, in preparing the means of locomotion, and for other needs of daily life. Next
433 to fishing, hunting seals is therefore their chief occupation, which, thanks to the geographic location of their habitation area, they can pursue everywhere: along the coast of the Sea of Okhotsk, on the mainland as well as on the island of Sakhalin, along the Amur-Liman, and on the Amur River, in which, as was already pointed out, the seals migrate as far as the Olcha territory. In fact, among the coastal Gilyak, along the Sea of Okhotsk and on the Liman, seal-hunting often even comes before fishing. It can be seen merely from the clothing of these Gilyak, consisting to a great extent, indeed, often wholly, of sealskin, that among them seal-hunting plays
225 a far more important role than among the Amur Gilyak. It
361 should also be noted in this connection that on the Amur-Liman
103 there are two places that bear the names of "Langr-wo," or "Langr" for short, and "Langri," that is, seal village, perhaps because they are especially favorably located for seal-hunting or perhaps because their inhabitants practice it with special and traditional skill and success. I cannot say anything further about one of these places, Langri, located on the west coast of Sakhalin, which, according to Gleha (1), is merely the

1. See p. 467 above.

summer village of the Gilyak of Tulu[illegible]. /542/ The other one, however, Langr, located on a small island at the entrance to the Amur-Liman from the Sea of Okhotsk, which I have visited myself, seems fully to justify its name and its conjectures
438 associated with it. It is one of the largest villages of the Amur
Liman, and its inhabitants carry on a lively trade with the Amur Gilyak, using in particular the products of their seal-hunting, such as sealskins and furs and seal oil as articles for bartering with them.

Trade. Value of the Principal Items Occurring in Trade, the Household, and the Rest of Life.

Trade Relations of the Amur Peoples With One Another and with the Manchu-Chinese, Japanese, and Russians. A Look at the Recent History of Trade and the Role of the Manchu-Chinese in the Lower Amur Region.

As essential as fishing and hunting may be for the existence of the Amur peoples, they cannot directly satisfy all of their needs; they cannot procure some of their requirements in food and clothing, as well as the luxury items that have become no less essential to them, except by selling part of their hunting and fishing products to the neighboring civilized peoples, that is, by trading. Thus, in this latter, a third source of subsistence is opened to them, by means of which the first two are essentially supplemented and brought to their full significance.

It is clear that even more than in the earlier sections the observations on the trade of the Amur peoples should begin with the Gilyak. None of the indigenous peoples of the lower Amur region has as much interest in and talent for trade and such extensive trade relations as the Gilyak. It is typical for them that in the first decades after the Russians received about them -- I mean the above-mentioned account that the Cossack leader Perfiljef heard from the Witim /Vitim/ Tungus in the years 1639 and 1640 (1) -- they were already designated as a people living

1. See p. 203 above.

at the mouth of the Amur (Schilka) and having trade connections with the Chinese. In fact, they do more trading with the Chinese and Japanese than all the other peoples of the lower Amur region, although they /591/ live farthest from them, and often act as middlemen in the trade of the latter with the former as well as in that of the two civilized peoples with each other.

Economy and Everyday Life

The Nivkhi's basic occupations were fishing and sea hunting. The most important fishing activities involved runs of the salmon species—Siberian salmon and humpback salmon. These were caught in "ayyeshki," sets and seines. A "ayyeshki" was an L-shaped barrier of thick stakes and twigs, set at right angles to the shore with the transverse bar along the current. On this bar, the Nivkhi set up a drawnet, near which they kept watch in a boat. The fish, going in a solid mass along the shore, hit the wall of the trap and turned and swam into the net. Medium-sized, new-type nets, made of the finest ropes, the fishermen lifted the net and emptied it into the boat. For this purpose they several times used "drawnet" fishing produced 4000-5000 fish, which quite filled the boat. Some of the fishermen use "carpenter's" unusually built boats for this purpose.

The seines, fairly small in size, were formerly made of cattle fiber. They were pulled by two or three fishermen, one of whom waited along the shore, while the others rowed the seine in a boat. Later, the Nivkhi followed the Russians to sew together large seines. Beluga and sturgeon were caught with harpoons and hook-tackle—the hooks at the end of short cords, attached to a long rope stretched in the water.

Very important in the Nivkhi was fishing for (single-net fish), carried on throughout the year. These were caught with fishing rods, fixed nets (winter and summer), floating nets (summer) and seines (during the spring and autumn seasons).

The Nivkhi living in Sakhalin and in the estuary did a good deal of sea hunting. They hunted sea lions and seal. The former were caught in large metal nets. Sea lions were hunted in early spring, at the time of the breaking up. They were killed with harpoons and clubs as they climbed up to warm themselves on the ice floes. The seals were driven onto the ice floes and hunted in open waters, they were hunted with a floating harpoon (lyki). This consisted

The Nivkhi widely employed silver and copper inlay on spear-tips. The latter were very sharp, with barbs and notches, built stout and made for dog-harness.

Men's work on hand fishing, hunting, making the tools required in these occupations, including tackle and means of transportation, the preparation and many fine women. The Nivkhi knew how to prepare the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and embroidered, made birchbark containers, gathered plant products, did the housework and took care of the dogs.

The Nivkhi had a complex and stable, community relations were quite strongly developed among the continental Nivkhi. The old forms of collective production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked boats, nets and other means of production, a new form of exploitation appeared, in the institution of "half-shares." Nivkhi who lacked the implements of production fell into the position of "half-sharers." The catch was divided according to the number of participants, but those who used the implements of others had to yield half of their share to the owner.

Before the Revolution, the Nivkhi were officially considered Orthodox Christians, but their views remained animistic. They thought of the island of Sakhalin as an anthropomorphic person. Spirits were held sacred. Fishing was also highly important among the Sakhalin Nivkhi; but in their thinking an yr'—a "master" of other animals. Almost every island, mountain and hill its yr'. The chief of these were Pul-yr'—the "master" of the mountains and the taiga, and Tayrandr, or Tol'yr'—the "master" of

Sewing together a seine.

of a small board equipped with harpoon-tip, attached to a stick from 10 to 20 meters long. The harpoon was lowered into the water; the hunter lay down nearly in his boat or on the shore. When he caught sight of his quarry, the harpoon was quickly thrown at the animal, and he was finally drove it to the shore.

As compared with its role among other Amur peoples, hunting played a smaller part among the Nivkhi. The hunting season began in autumn, after the end of the fish-runs. At this time bears come down to rivers to treat the Tungusic-Manchurian system, the specific term of kinship among them applied always to persons of one, rather than different generations. As therefore, opposed to the classificatory system of the Nivkhi reflected even in his time the existing marriage norms. The Nivkhi retained until the end of the 19th century the remnants of group marriage. These relations were possible only for persons of the same generation, and were categorically forbidden among persons of different generations.

All the members of a clan were divided into four age groups: 1) grandfathers and great-grandfather (atak); 2) fathers (ytyk), their brothers and sisters; 3) husbands of the mother's sisters and the brothers of the husbands of the mother's sisters; 3) brothers and sisters (tavng); and 4) children (ytyng).

Trade ties with China and the transformation of fur-hunting, and later of fishing, had economic activities directed to commercial ends and stimulated the disintegration of the clan order among the Nivkhi, which occurred first among the Sakhalin Nivkhi. The latter had early begun to trade with the Manchus. Nivkhi merchants sailed up the Sungari to San-hsing, and brought furs and beluga isinglass for tea, tobacco, fabrics and metal articles. They also bartered with the Ainu, the Japanese and with other neighbors—the Oroch, the Udegei, the Nanai, etc. Trade was also carried on between the Sakhalin Nivkhi and the Ainu. Thus, long before Russian colonization, the Nivkhi began to be involved with the world market. The rich could have several wives and 3-5 slaves. The rich man's wife price always included large quantities of imported exhibition. But commodity relations were still very slow, since exchange was only in the medium of furs and, to a lesser extent, fish. The mass of the Nivkhi continued in a subsistence economy.

Slaves did only housework. They could set up their own households and marry free women. The slave was a member of his master's household and could be sold, but could not be killed. The women prepared the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and embroidered, made birchbark containers, gathered plant products, did the housework and took care of the dogs.

At the end of the 17th and in the 18th centuries, the Manchus established tribute-bearer relations with the Nivkhi, as well as the Nanays, the peoples of Sakhalin—the Ainu, and gasyanal—village elders.

After the middle of the last century, the disintegration of the Nivkhi subsistence economy proceeded more rapidly. After the Nivkhi had finally lacked a part of their former means of production, a new form of exploitation appeared, in the institution of "half-shares." Nivkhi who lacked the implements of production fell into the position of "half-sharers." The catch was divided according to the number of participants, but those who used the implements of others had to yield half of their share to the owner.

Before the Revolution, the Nivkhi were officially considered Orthodox Christians, but their views remained animistic. They thought of the island of Sakhalin as an anthropomorphic person. Spirits were held sacred. Fishing was also highly important among the Sakhalin Nivkhi; but in their thinking an yr'—a "master" of other animals. Almost every island, mountain and hill its yr'. The chief of these were Pul-yr'—the "master" of the mountains and the taiga, and Tayrandr, or Tol'yr'—the "master" of

In 1931, the Nivkhi collective "Chir-Usvd" collected 200 centners of potatoes and collected 200 centners of fish, and in the years from 1948 to 1952, the collected area increased by 30%.

Along with agriculture, the "Chir-Usvd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered over large distances. The enlargement of old villages and the construction of new populated centers had made rapid strides since the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well planned, and well-ordered. Great attention is paid to selecting convenient and wholesome sites. After the Revolution, most of the Nivkhi lived in dugouts, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese huts.

The most widespread of the new dwellings is the warm Russian log house. Near the houses of the collective farmers, barns, sheds, etc. Every collective-farm village has a number of public buildings; a school, a reading room, a club, an obstetrical station, baths devoted to economic uses (a collective-farm garage, a smithy, a vegetable storehouse—pits, a fish-drying shed, a collective-farm store, a bathhouse—something the Nivkhi never used in the past), many public-collective-farm dwellings have built their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are quite similar to those of Russian homes. Some collective-farm villages have electricity and radio. In the Nivkhi homes, especially on the continent, one often sees plastered and whitewashed walls, or walls covered with wallpaper, and a variety of Russian furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, pictures and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. The Nivkhi are unknown, which was entirely unknown in the past. But the continental Nivkhi wear city-type coats, felt boots, high overshoes, and sable-fur caps of old-style cut. The Sakhalin Nivkhi prefer clothing made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and homdrees remains of the traditional hat and moccasins. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. There and there, one encounters the ancient national costume. On holidays, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of radically improved sanitary conditions and the spread of medical institutions. Already during the early years of the Soviet regime, hospitals and medical and midwifery centers were opened for the Nivkhi, but with educational work was needed to accustom the Nivkhi to use these institutions for medical aid. Soviet medicine rapidly won the confidence of the Nivkhi.

Gilyak, in the local and

is as impossible to estimate with any certainty the number
Gilyak, as it is the number of Goldi. Rittich estimates
eir number to be about 3000. On the Amur Jakobsen found
ite a large number of villages; on Sakhalin Island, on the
her hand, there were far fewer villages.
Like their neighbors, the Gilyak are fishermen and hunters;
nly now and then do they engage in trading. For instance, in
se there is among them a scarcity of food--something which
appens quite often--they import from the mainland fish and ani-
our for the inhabitants of Sakhalin. In accordance with their
rimary occupations they spend their summers on the river
anks while in winter they move into the mountains and roam
rough the woods. I am unable to say with certainty whether
ey have summer and winter dwellings like the Goldi, but I
ink such may be assumed from the indications Jakobsen
ives. On his return from Sakhalin in January 1885, Jakobsen
ound Gilyak villages near the mouth of the Amur River that
onsisted of houses quite similar to those I described as the
inter houses of the Goldi. The typical, enormous clay-
rick ovens and the benches, warmed by the pipes, along the
alls are also to be found in these houses. On the other hand,
e travellers found in September 1884 above Nikolayevsk a
hole number of Gilyak villages that were at a considerable
istance from the river bank, while the summer settlements
f the Goldi by their nature as fishing villages used to be
situated right by the river. One might conclude from this,
erhaps, that these Gilyak villages were not simply fishing
illages for the summer, but served as dwellings for the
hole year; unless one wanted to assume that the Gilyak were
orced to withdraw from the immediate neighborhood of the
iver in summer because of the partically marshy and there-
ore unhealthy river bank. In Sakhalin, moreover, there was
ot a trace of the larger houses of the Gilyak such as those
entioned above; rather, the huts were only small and half
nder-ground, so that they had a certain similarity to the
wellings of the Eskimos in Labrador and in Alaska. They
fer a very unenviable abode for the European traveller,
ut with their confined space one can hardly avoid close con-
ct with the inhabitants and the dangers connected with that.
n short, being tormented by a multitude of vermin, in addition
he atmosphere created by the crowd of people present, by
he presence of the dogs, by the manifold provisions hung up
r drying or smoking, and by the smoke which can only
scape with difficulty, is hardly bearable. The large houses
n the main land are in better condition, but they, too, have

/113 cont./

561 labors, he is not only a skillful shot, fisherman, oarsman, etc.,
855 but he is already in fact a worker, like all the others. Moreover,
86 to a considerable degree he has already mastered the whole sum
of spiritual learning. He already knows from practice all the clan
customs, all the religious rites, he remembers all the kinship
appellations, he knows the legends, tales, and songs of his tribe,
and, to top it all off, he has that knowledge of men and life that
constant presence in the society of adults provides: on journeys,
hunting, fishing, festivals, etc. Hence, also, his feeling of his
own worth and weightiness of speech, and his ability to conduct
himself in society.

561 All these qualities, however, would have no significance if
579 the patriarchal principles existed. The youths of other peoples
855 of low culture also attain self-reliance at an early age, but a
special, almost religious veneration of their elders, who purposely
train them in submission, is demanded of them. Among the
Gilyak there is nothing of the sort. All the more absent is the
despotism of the head of the family with respect to the adult mem-
bers. The sons are completely free to separate from their father,
obtaining from him their allotment in the form of implements,
sleighs, and such, and when they assist him with a part of their
catch, they do this quite freely, with absolutely no compulsion.
596 One encounters large families living in a communal economy, at
the head of which stands the elder in the family, the grandfather,
father, or one of the brothers, but this is a completely free associa-
tion, from which one may depart at will. And even though he is a
1492 participant in such an economic union, every member can have
1434 his own individual property in the form of sleds and dogs, arms,
enjoying the right to individual earnings by means of his personal
merits; and what each member shares with his own -- and there is
extensive sharing, especially in food supplies, both natural and
purchased -- is shared without any compulsion. They bring flour,
rice, kumiss, and so on from the city, and all this is cooked in
the common kettle for all. Communism and individualism are
combined without any friction.

/29 cont./

493 person steering the sled sits astride it and keeps his feet, not on
492 the runners, but on ski which glide by the side of the sled. By
moving his ski apart or by bringing them closer together, the
Gilyak changes his center of gravity as required and thus gives
stability to the sled. In places which are more or less steep so
that the sled has to move obliquely, he holds it back by means
of sticks with iron tips which are driven between the runners and
the upper crosspiece. In rapid movement these same sticks serve
as brakes. The dogs are led by their lead dog, usually a small,
uncomely creature who obeys his own extraordinary senses as much
as the commands of the driver. At a time of danger, in the
middle of a raging snow storm, or in late spring in the midst of
broken ice-floes on top of which water is already coming out, the
driver can only depend on the remarkable instinct of his loyal
435 friend and slave. A good lead dog costs from 30 to 50 rubles.
556 ordinary draft dogs from three to eight rubles. Twelve to thirteen
dogs are harnessed to the sled of a rich man; poor men are satis-
fied with three to five.

501 The native dugout of the Gilyak, a boat of poplar, is also
built on the model of the sled. It is so light that a little boy of
ten or twelve drags it by himself without difficulty a hundred
steps or more to the bank. Its bottom has the same spherical and
flattened surface as the dog sled, so that it does not sit deep and
passes over the shallowest places. On encountering an obstacle
in the form of a shoal or isthmus between the lagoons, the
Gilyak easily carries it on his back and then lowers it into the
water.

221 Means of transportation play an immense role in the life
of our native. The Gilyak is generally a semisedentary person.
In summer he usually lives near a river or sea, while for the
winter /30/ he migrates farther away to more protected places,
to his warm, winter dwellings.

Even in summer, following the fish, he changes his place
of residence along the course of the river two or three times. In
addition to these regular changes of residence, the Gilyak has to
resettle for a number of other reasons. At the end of winter, when
his food runs out, he travels to distant places on his dog sled to

/300 cont./

567 part of their dowry. In buying wives, the price corresponded to
582 the additional slaves. In 1896 a former slave, about whom we
have the following information, lived there. A Narni bought
from Kizi a Kugi (Ainu) maiden, and an illegitimate child was
born. Khuzin's father bought the son of this Kugi (krygryy) in
435 Kizi. He was 25 years old; he was paid for with nine pieces
of silk material (21 meters) at 75 rubles a piece.

This worker served him for five years. Eighteen years ago
he ran away to Kizi, and then to Arvo (near Nizhnetarbovskiy).
The name of this krygryy was Kutr. His former master from
Khez' summoned him to conduct shaman ceremonies, and he
used this opportunity to run away. Now he is an old man and
blind. One absolutely must take him back, though blind, feed
him, and bury him with their own hands, and then his soul will
follow him to Mlyvo (his father, dying, requested this of him).

Chinese girls were bought in a similar fashion. It was
necessary to take along 100 sables, 100 foxes, 100 otters, 100
squirrels, 100 polecats, between 10 and 100 black-brown foxes,
100 seals, and 100 bears. The travelers to Sanin were met by
a merchant who would take away all their merchandise and,
without counting it, would transport it to his warehouse. The
visitors would be feted for two days and /301/ questioned in Goldi
or through an interpreter. The newcomers would tell their hosts
about their wish to get married, then they would record how much
each had brought, and they would be taken to the governor. He
would provide carriages and food, and they would be transported
to the major city (Peking). They would be introduced and ac-
commodated in the palace, assigned servants, fed and looked
after by them. Then they would be given a remuneration by
an interpreter. Finally whole rows of women with covers over their
faces would be lined up in front of them; behind each woman
would stand a castrated slave. The old Gilyak would recommend:
"a young male slave -- an old woman -- a risk." They would
choose right there; they would each be led to a room. A slave
would sweep and spread out the bedding, and that very night
he would learn his fate. They were painted. He sticks his
tongue in the mouth; there are no teeth.

/302 cont./

578 Quarrels and methods of reconciliation. If a son-in-law /zyat/
627 has beaten his brother-in-law /shurin/, wife's brother/, he must
(present) a pack of racing dogs (three to five; they are sold only
in packs) -- kylyn k:an. The first dog is kyly-k:an, the second
-- k:akh, the third -- jerkhpe-k:akh, the fourth -- tyly-k:akh.
If the first is sold separately, all of them will be useless. They
are placed at a certain distance (10-15 paces) from one another
and in reverse order, namely, the first -- kyly-k:an -- last,
farthest away, and the must catch up with all of them and the
object is that all should come together at the same time, and,
435 if the kyly-k:an arrives first, then it is not suitable. The cost
of a pack is up to 100 rubles. The son-in-law /zyat/, in case of
431 a fight with a brother-in-law /shurin/, gives him such a pack of
dogs as a present, and, furthermore, he brings them himself or,
if he is ashamed, through another, and they cannot be returned,
435 except if the dogs are poor. On the other hand, if a brother-in-
law /shurin/ offends a son-in-law /zyat/, he gives for recon-
ciliation a silk robe (35-60 rubles) or a bear as a present.

578 /303/ Quarrels within the clan. N left his wife, received back
611 his bride price, and began to carry on with Russians and so forth.
627 The old men assembled and decided to take the woman back,
but the father-in-law did not agree: "A woman is not a dog, to
try and throw away." Nevertheless, she was purchased for a cer-
tain young man. Then N, in Khez', began to storm and threaten
because they took his abandoned wife. But they replied to him:
"You did not buy her yourself but with your father's money" (clan
money). The quarrel was ended by their giving a racing dog, fur, and
two kettles of vodka.

595 The oath. Oath -- simbi chakhci lambe -- in Goldi, chkhyz'u
635 nyydz:rd -- in Gilyak.
825 One must kill a wolf (tygyz') and saw, in order, the tendons
on both hind legs from the heel to the knee, and ask: "Where
is the tendon for the thief? (emnikhrongz'? emnikh -- heel, tongz --
tendon), where is the stolen tendon? -- jemg:az' tongz'
shamdzhna?" The tendon that twitches is taken out secretly and

/349 cont./

Northern Sakhalin was especially favorable for resettling (it is interesting that only the northern part of the island is called Sakhalin by the Gilyak, which is additional evidence as to whence and in what direction the settling of Sakhalin proceeded). In the first place, there were the places closest to the mainland: half a day's a day's trip between the shores of the strait. Moreover, in addition to an abundance of sables in northern Sakhalin, the Gilyak from the continental coast found other living conditions completely identical with those on the continent: the same abundance and rich variety of fish (Siberian salmon, kalugu /Huso dauricus/, sig /a species of salmon/, carp, etc.), an abundance of seals and dolphins. The Amur Gilyak were the only ones who found it disadvantageous to leave the banks of their irreplaceable Amur. They cannot bring themselves to do it, even now, crowded into their hunting and fishing reservations by the Russian settlers and forced to bear the entire burden of free official transportation along the Amur. There were, of course, still other reasons which induced the continental Gilyak to move to Sakhalin, for instance, density of population, conflicts between clans, and so forth. One of these reasons may have been the Manchu reign with its mandatory annual tribute of 40 sables per person (we must remember that in the past sable was three or four times more expensive than it is now, while the Amur sable is still very expensive; one variety, for example, the Amgun, costs 25-30 rubles). The legends of the Gilyak themselves about their former relations with the Manchu are of interest: "We were settled," the Amur Gilyak said to me, "on the banks of the Amur by the Manchu, as free men, with the title of 'hunters,' and we were obliged to pay them one sable per person every year." Moreover, every time a Gilyak went to the Chinese town of Sungari (Saising), he was forced to pay one sable and the /550/ ransom of the settlement three sables each. The Orochon were also in the same position. Manchu officials made a census of the population, and every year in the summer they would come to collect the sable tribute. The Sakhalin Gilyak were free from this tribute, but eventually the

/300 cont./

possession. I believe that the reason that a lynx skin, and all the more those made of six skins of this kind, has so high a conventional value must be sought in the influence of Chinese conceptions. In any case the lynx skin also has considerable real worth for the Gilyak, since in trade with the Chinese it is regarded as the equivalent of two otter skins or 10 sable skins (1), but

1. Merely two leg-pieces from a lynx skin and the tail are worth as much as two sables.

there are even more expensive furs, such as black fox, for example, which in trade is equal to 15 to 20 sables, and yet it is not used by the Gilyak like lynx skins for fur coats of imaginary value. As a table to be presented below on the values given by the Gilyak to various objects will show, there are also a number of things in the household which they value even more than a lynx coat and which nevertheless do not impart to their possessor such an aura of wealth and distinction as the latter does. Conceptions of another kind must therefore come into play here. In view of the active, centuries old trade relations of the Gilyak with the Chinese, they could not fail to know in what high honor the skin of the tiger, as the mightiest, most ferocious, and most dangerous of all animals, as well as that of its related species, the panther, stands in China, up to the throne: for example, the seats of high Chinese officials, governors, mandarins, generals, are draped with tiger and panther skins for solemn occasions or processions, and the chair cushions carried behind them have just such fur coverings (2); the hunting tents of the emperor are

2. Yubarats Ides, Dreijaarige Reize naar China /A Three-year Trip to China/, Amsterdam, 1704, p. 96. De Halde, Description de l'Emp. de la Chine et de la Tartarie Chinoise, Paris, 1735, Vol. IV, p. 29.

/514 cont./

boat on the Sungari as well as on the Amur, began to build their vessels on the same principle and in the same form in that they borrowed from the Manchu boat only the basic and fundamental parts satisfying their needs and gave them the small dimensions appropriate to their means and power. Indeed, this situation is all the more probable inasmuch as the Sungari Chinese, always intent on exploiting the labor power of the natives for their own advantage, had probably long since arrived at the idea of not building their boats themselves, but of having them built by the latter according to a given pattern and in return for small pay, as is done to this day. In particular the lower Goldi and the Olcha living next to them (for instance, those of Adi), in whose regions the wood required, tall cedars, is found in abundance, provide the most and the most highly skilled builders of both the Manchu-Chinese boats and those for their own people and the people of the lower Amur region. Maximowicz saw a Manchu-Chinese boat made to order by the lower Goldi, with an inner-sill length of eight fathoms and at its greatest width an opening of one and a quarter fathoms, for which the Chinese merchant had paid a jug of liquor two feet tall and a foot wide, three fathoms of cotton cloth, and four sacks of millet groats. Only in one point, as is seen from the above, is there an important difference between the Goldi-Gilyak boat and the Manchu-Chinese one, though in part it is due to the difference in size. It is in the mode of arranging the oars, since the former has bored oars stuck on prongs, while the latter has ordinary oars resting in appropriate indentations on the sides. I am not aware that the first mode occurs among the Chinese or any of the neighboring Siberian peoples; on the other hand, it recurs generally among the Ainu of Sakhalin and Jesso (1) and

1. Siebold, Nippon, VII, Plate XVIII.

therefore may perhaps be an Ainu-Gilyak or general Paleo-Asiatic invention or peculiarity, which was imparted by the Gilyak to their Tungusic neighbors along the Amur, the Olcha and Goldi, and, on account of its usefulness, was also

/568 cont./

Gilyak (1).

1. See p. 590 above and Plate XXVIII /see p.1009, Fig. 1.

For this type of work among the Gilyak, in addition to iron (Gilyak wytch), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass (Gilyak tusy), and silver (Gilyak tonta) (2). The price of the

the arrow, but possibly not fatally and only wounded, will not escape, the arrow is fastened by a loosely hanging cord (Gilyak tughr-pulsy) to the pole on which the self-firer rests.

The high value of sable, fox, and other fur bearers makes the use of the self-firer in the form described very general among the Gilyak, and in the forests surrounding their dwellings one can easily run into an apparatus of this kind set up, which makes caution necessary when roaming in them. It is interesting that on the above-described target-stick the worthless hare has been given consideration along with the three most highly prized furbearing animals. This perhaps may be explained by the fact that it is very common in the entire lower Amur region and on Sakhalin and, in the absence of other animal trails, often provides booty for the self-firers, whereby a good piece of meat and a fur for his own needs always fall to the hunter.

/568/ On the other hand, I have never heard it said that the Gilyak use the self-firer for killing other, more or less valuable, but larger animals, such as the lynx, wolf, alpine wolf, musk deer, reindeer, and elk. There may be various reasons for this. In general, the Gilyak are not hunters enough and are not enough interested in hunting animals other than those with precious furs to undertake long and strenuous hunting trips over great distances, to fell tree barricades, and to set up self-firers with arrows aimed horizontally in their passageways, as is customary, for example, among the Tungusic peoples and is discussed at length by

/592 cont./

country and, in the conviction that I did not understand them, I express the surprise that they were now only exploring the country, just as I was doing, in order to take possession of it later and to push out of it and destroy all the Gilyak. At some places, as in Tyk, Dul, and the uppermost Tymy villages, they sometimes even directly opposed me insubordinately and hotbloodedly in that they did not want to permit me to stay in their yurts or to make a fire on their hearth for the preparation of my meal, and refused to sell me the necessary food for my dogs from their supplies. This situation was so painful and even worse than two first ones, because it could not be overcome by threats with pistol in hand, as they could. Thanks to their passion for trade, however, I was always able to put an end to them: one or another of them certainly could not resist the trade articles which I put forward with me and produced apparently without design, and, if just one yielded to temptation and made a small trade, the ice was broken and offers rained down from all sides, so that I soon had more than enough of what was offered. With the beginning of trade, however, agreement was always also reached on all other matters. The Gilyak show much practical sense, cleverness, tenacity, and skill in trading. Only articles of known practical value, such as tobacco, tobacco pipes, and the other hand, anything new and unusual, no matter how striking, is, to be sure, gazed at and admired (with the frequently repeated exclamation of "na-na-ŋ," accompanied by striking the head with the palm of the hand), but not accepted as a present, but never bought. Of their own accord they also value very much the other articles, in the order of the suffix ra means the "is" — tachalhara" (2), that is, it costs one, two, three, etc.,

2. Similarly, just as kaik means "not," kaikra means "is not"; or ŋgakhoschch, "bad," ŋgakhoera, "is bad."

Despite the fact that all trade in the Amur region, and hence also that in the Gilyak, is carried on only barter and no money is used among them, nevertheless a not merely relative but absolute, numerically definable value for all the articles playing a role in

/593 cont./

values or current prices of all the articles playing a more or less important part in the life and household of the Gilyak long before I knew the unit to which the numbers referred. Not until I was among the Olcha and thanks to my finding there a guide who besides his mother tongue, also had a command of the Gilyak language did I get on the right track, and my stay among the Goldi helped to give me complete certainty with regard to the questionable unit of value also generally current among the Gilyak. Chosiambo, as my guide was called (3),

3. He came from the Olcha village of Uda and owed his knowledge of Gilyak chiefly to the fact that he had a Gilyak woman from Tebach as a wife.

designated the value of various articles in exactly the same manner as the Gilyak do, in that he put only the pertinent number in front of the verb "saŋlê" (to cost, Gilyak tschalhatsch); sometimes, however, instead of "omu (one) saŋlê," he said "omu jan saŋlê," etc. After the removal of the ja, obviously for phonetic grounds, it was clear that the unit in question, the value of the object was based among the Olcha and Gilyak is the ja -- as was to be expected, a magnitude of value of Chinese origin. The further, confirming and illuminating information coming I was obtained without difficulty from the Goldi. The term "ja" for the unit of value in appraising trade items and other articles is quite familiar to them; they were also able to say that the Chinese divide the ja into 10 parts called dicha among them (the Goldi), each of which is worth 100 Chinese brass coins (Goldi zirikta dicha), so that 1,000 pieces of the latter equal one ja. This is therefore the Chinese silver ounce (liang or tael), almost equal to two Russian rubles in /592/ value. The fact that the Chinese unit of value also serves the peoples of the lower Amur region as the general basis for the evaluation of trade products and other property indicates better than anything else the dominant, in fact, and

either the buyer or teller. The price or the value of the trade commodities depends, on the one hand, on the greater or lesser demand which they represent, on the other, on the ability, hand, the more or less strong need for them found among the Gilyak, Orcha, and Goldi, and which is itself determined in turn in large part by their use in the trade carried on by them among one another and with the Japanese. Great changes in the prices of certain commodities inevitably arose when the Gilyak, and after them the other peoples of the lower Amur region, also came in contact with the Russians, besides the Chinese and Japanese, with whom they had ancient trade connections. The Russian commodities began in part to compete very successfully with those of the Chinese and Japanese. More than elsewhere, therefore, it must be kept at mind in connection the following incident, which, if the people that my description refer to a period when this contact had first begun, and had not yet had the consequence that it has today. Finally, concerning the value of objects not involved in trade among the Gilyak, but associated with their household and the care of their life and livelihood, the decisive factor, as to be sought in their customs, conceptions, and views, evidence of which will be given in the following sections.

By means of many and repeated inquiries among the Gilyak and my own trade and other relations with them, I was able to learn the values of their household items. The most important commodities in their trade with the Chinese, Japanese, and to part also with the Russian, and the foremost articles in their life and household, discussed and in part illustrated in the above descriptions. Thus, among them:

A cable and pot, depending on its quality, ... equals 1-2 ja

A pelt from the red fox (*ganti*) -*ganti* . . . . . 2 "

The ja is pronounced *yeh*, like the French *je*.

A pelt from the black-gray fox (*pland*) . . . equals 3 ja

435 A pelt from the black fox (*hadi*), depending on its quality, ... equals 10 ja and more

A marten (*kuntsch*) . . . . . 3 ja

A lynx pelt with head, the leg pieces, and the tail . . . . . 8-10 "

A lynx pelt without head, leg pieces, and tail . . . . . 5 "

/596/ 1

A river otter pelt is estimated according to its size, each finger-span of it is equal to . . . 1 ja

A sable, either *Pinne* (*ambrosiana*) (*gilj*) or *Pl. barbata* (*highitsch*), provided it is very good, is equal to . . . . . 1 "

Four fathoms (1) of ordinary cotton cloth (*sun*) cost . . 1 "

1. That is, arm spans, since the Gilyak do not have any measure other than arm and finger spans.

(inch)

Two fathoms of very velvet (*pantsu-pan*) cost . . . 1 ja

One and a half fathoms of cloth (*khingan*) . . . . . 1 "

Four fathoms of silk brocade (*ilimsch*) . . . . . 1 "

(silk fabric (*ochara*) are equal to . . . . . 1 "

2. More correctly stated, Chinese. Four fathoms of it constitute one piece.

The value that the Gilyak give to their various pieces of clothing is judged according to the quality and price of the materials; thus, it cost for:

A simple cap, ... equals 1-2 ja

A cap made of the red fox (*ganti*) -*ganti* . . . . . 2 "

One wooden case (*kylme-wakim*) of liquor is regarded as equal to . . . . . 10 "

A bottle of tobacco leaves, and a tinder of scarcity even only 5, cost . . . . . 1 "

A very large sturgeon (*kukki-ochu*) equals . . . 2 ja

/596 cont./

A woman's cap made of the same material . . . . . 3 ja

A "Amur-hat" (*ochara*) . . . . . 3 "

A woman's cap made of lynx head-fur (*nuhiyak-hak*) . . . 5 "

The large and beautiful sturgeon (*kukki*) . . . . . 1 "

" woman's robe made of fish skin (*nehuch*), with considerable embroidery on it . . . . . 5 "

" fur coat of lynx pelts (about 5 pelts) . . . . . 10 "

A coat made of dog-pelts is evaluated primarily by the value not here by its quality, that is, whether they came from grown animals or from whelps. That, it costs for:

A large, very beautiful white dog-fur coat (*nuhale-ohich*) . 1 "

" spotted or brown-and-white mixed dog-fur coat . . . . . 1 "

Each ten fathoms of hempen cloth . . . . . 1 "

" white . . . . . dog-fur coat (*kuhang-ohich*) . . . . . 2 "

" black or white dog-fur coat (*ighe-ohich*) made of pelts of grown animals . 3 "

" " " made " " from whelps . . . 2 "

The other garments of the Gilyak, such as skirts of ordinary cotton, lined with rabbit-skins of cloth or velvet, trousers, open skirts of sealskin, ordinary winter caps, summer hats of linen, silk, sleeve-bands, ear muffs, gloves, etc., do not have the value of one ja, though the last three are, as a rule, provided with embroidery. Furthermore, the Gilyak value:

One sack of flour as equal to . . . . . 2 ja

A Manchurian sacks (*yuli*), but measured by the *ulachi* as equal to 4 tables, that is, about 6 or . . . . . 4-8 "

/597 cont./

A very large tobacco (*patch-tuchu*) equals . . . . 4-5 ja

Five, mild young, and small but equals . . . . . 25 "

" " full-grown bear, depending on its size, equals . 30-40 "

" of ordinary quality (*ochi-tuchu*) . . . . . 1 "

" ordinary tied equals . . . . . 1 "

" pair of Tungusic ski with skin covering (*Gilyak ulu-ergi*, i.e., Samogir ski equals . . . 1 "

The local ski covered with seahkin, on the other hand do not reach the value of one ja.

A small to middle-sized bear, depending on its size, equals . . . . . 3-7 "

A large, very beautiful bear . . . . . 13 "

" said made of fish skun equals . . . . . 1 "

Each ten fathoms of hemp cloth . . . . . 1 "

A bow covered with a wholebone plate equals . . . 1 "

" " " "

/400 cont. /

1/10 a whole fur-coat of squirrel skin ? [illegible], whereas the Gilyak with their great wealth of precious furs, pay no attention to these worthless, trifling articles. The Samar-tsi, in contrast to the Gilyak, limiting themselves almost solely to catching fur-bearing animals for food and for trading, the Goldi also bring the hides and skins of the deer-like animals eagerly hunted by them to trade with the Chinese (a roe-deer hide, for example, costs 1/3 in among them, a red doe or elk hide, untanned, 1 ½, tanned 2 ½ like the fur, the principal products from fishing also have a higher [illegible] among the Goldi than among the Gilyak (a large sturgeon, for example, costs 10 in among the former), on the one hand because the fish supply is far more abundant in the Amur upstream, and on the other hand because they are nowhere near so productive in this respect at the Gilyak, who are devoted exclusively to fishing. Cereals and vegetables (beans of various kinds), however, seem to be cheaper for them than for the latter, both on account of their greater proximity to the agricultural Chinese and because they themselves cultivate some vegetables. Finally, the same is quite decidedly also the case for tobacco, in that one "sazup" of it, equal to three handfuls, is valued by them at 30 in (?).

2. At 30 in by the Gilyak, according to the above table (see p. 939).

Incidentally, immediately after the arrival of the Russians, the value of the Chinese (Manchurian) tobacco rapidly sank in the eyes of the Gilyak, since the far stronger Russian (Crimean) tobacco is much more to their taste.

Since principal commodity of the Amur people in trading with the Chinese consists of animal skins, and in particular sable, fox, martens, otter, and fine-furred dogs, as we saw above, are the whole, only /411/ clumsy and not very industrious hunters, they must, above all, in order to be able to carry on this trade on a large scale, think of procuring the commodity in the largest quantities possible, not only by hunting, but in another way better suited to their nature. To this end they trade with their

/411 cont. /

on the west coast. A principal center for this trade, however, is the village of Nakam, not far from Kumara, to which the Aino people from the Sakhalin Island regularly distribute themselves, from Aniwa Bay and elsewhere (3). For

2. Bunge, op. cit., p. 84. Schmidt, op. cit., p. 92.

ecgonical reason the Japanese view this trade with great dislike and try as far as possible to prevent it, because they want to get for themselves the fur captured by the Aino. Since they do this in a way which is very unsatisfactory to the Aino, they buy their goods far below the price in part under threats of punishment and other coercive measures, and, indeed, sometimes for nothing, or payment for alleged debts (3), the Aino, whenever they

3. Bunge, op. cit., p. 84 ff.

can, avoid trading with them and try to sell their furs, kept secret from them, to the Russians and, in the end, preferably, to the Amur Gilyak and Olcha from abroad. The latter are said to pay them two to three hundred times the price, whereas the "sazup" of cloth for one sable pelt, depending on its quality, and just as much for each quarter of an inch of the length of river-otter skin, so that the latter, with a length of 1/4 arshin, which is easily attained as a result of the unavoidable stretching of the fur in skinning, will bring about ten Japanese of the material named (4) - prices which generally correspond to the values

4. Bunge, op. cit., p. 84.

given above for these articles among the Gilyak.

Having reached Sakhalin, the Sisiam voyagers, before they may begin to trade with the Japanese, first go to the Orok people introduced by the latter which consists of two or three blows across the back with a stick received by each of them, as a

/412 cont. /

token of their submissiveness from the highest Japanese official. After this is done, the people are taken to the Japanese, and brought to an official building of the Japanese, which no one except them may enter, in order to be subjected to a close scrutiny (5). It can hardly be doubted that some of the prices

5. According to Rudanofski, in Tichmenef's historich. obozr. obrazov. Rossiisko-amerik. Kompanii, Part II, p. 127.

and certainly not the worst ones, never find their way back to their native [illegible] Rychiwi, Rychiwi, and they must content themselves to trade the newly arrived Gilyak and Olcha in the same inconsiderate and prudent manner as they do the Aino, simply for the reason that otherwise they might easily shy away together with the Aino and the several commodities that they bring to them would be lost. Behind /413/ this trade is all the more profitable for them since they principally use sable, fox, and river-otter furs in trade, articles which they procure in great quantities and almost without cost, thanks to their unremitting persecution of the Aino, whereas other furs, as well as so-[illegible] and for which they have no market in Japan because of the well-known aversion to fur among its inhabitants. They further owe a good part of its profit to the sale of silver-otter skin, so that the latter, with a length of 1/4 arshin, which is easily attained as a result of the unavoidable stretching of the fur in skinning, will bring about ten Japanese of the material named (4) - prices which generally correspond to the values

/412 cont. /

[illegible] Italiaiton albicilla, the amount of rice dented. Fortnightly, in that time head of the agency of the Russo-American Trade Company in Ajan, Shelikof and the Russian, Ivan Ivanof, estimated the total number of animal furs annually obtained in trade from the Japanese by the Sisiam voyager in Sakhamuti at about 2,400 otter pelts, 1,300 sable pelts, and 600 fox pelts (1). This rich

1. Tikhmenef, Istor. obozr. obrazov. Rossiisko-amerik. Kompanii, Part II, p. 128.

supply of furs which the Gilyak and Olcha bring home from their Sisiam voyages is used by them in the trade with the Chinese on the Amur and neighboring rivers, and, in the case of the latter, also simply for the reason that otherwise they might easily shy away together with the Aino and the several commodities that they bring to them would be lost. Behind /413/ this trade is all the more profitable for them since they principally use sable, fox, and river-otter furs in trade, articles which they procure in great quantities and almost without cost, thanks to their unremitting persecution of the Aino, whereas other furs, as well as so-[illegible] and for which they have no market in Japan because of the well-known aversion to fur among its inhabitants. They further owe a good part of its profit to the sale of silver-otter skin, so that the latter, with a length of 1/4 arshin, which is easily attained as a result of the unavoidable stretching of the fur in skinning, will bring about ten Japanese of the material named (4) - prices which generally correspond to the values

/433 cont. /

5 pieces of Chinese silk at 4 ga each, together . . . . . 20 ga
1 Japanese kettle with three handles . . . . . 30 "
1 Manchurian iron-armor . . . . . 30 "
1 large bear . . . . . 50 "
5 especially good dogs (nyin-kan) at 5 ga each . . . . . 25 "
Total . . . . . 155 ga = about 386 rubles.

583 The bride price is therefore very high among the Gilyak, which indicates the relative prosperity of the people (1). Custom

1. For the sake of comparison I shall cite here the bride price among primitive peoples in older and more recent times. At the time of Aldon Rasul (Reverend Bachi, senior grammar Chinese-Tartar, wrote or anno 1692 etc. /Newly Discovered Tartary/ Ch. Ch. Journey Which He in 1692, etc./, Libbek, 1734, p. 96) Kalmuks living in the wilderness among the Tungus on the Wenchuaja Tunguska. A rich Oryak got on the Obi River, so Gmelin, who took part in the expedition, had to give in marriage for less than 100 reindeer and cost him 40 pieces of Chinese silk, 40 pieces of Indian silk, 40 pieces of Russian cloth, 40 pieces of Dutch cloth, 40 pieces of Persian, Prague, Bremen, Reisch /?/ cloth through Various Provinces of the Russian Empire, St. Petersb., Vol. III, 1776, p. 52). According to Castren (1849 /Travel Report and Letters from the Years 1845-49/, St. Petersb., 1856, p. 58), the current price for an ordinary girl in marriage was two reindeer in the Ob region, in exchange for a female skin and for the difference in the various bride price in some other towns.

/646 cont. /

people who themselves are obliged to bear the heaviest yoke, [illegible] Gilyak, who are not subjected to any yoke, and, finally, indicating that this deplorable custom of the Aino and Goldi is rooted in very ancient degenerate; which may have been brought by the oppressive yoke of the Japanese and Chinese on them in the fact that the latter themselves nonetheless negotiate the sale of the Aino and Goldi women as slaves to the Gilyak, for which the trading trips of the latter furnish them the opportunity. The Gilyak, on the other hand, who have been been able to preserve their freedom and independence with regard to these peoples, to be sure buy slaves from the Aino and Goldi and under certain conditions, which, however, are very lenient, treat them, in contrast to any of their own people as slaves or selling them as such to others. In fact, they want to be regarded as the father of a family and to do it, he /647/ would arouse such indignation among his countrymen as to lose his entire reputation and his life.

On the whole, the number of male slaves, as well as that of the female slaves, who are always more common, is small among the Gilyak, the principal reason for this is the high price that they cost both in direct trade to the Aino or Goldi and in the indirect one through the Gilyak. It is not rare for a Gilyak to acquire a slave in trade than to buy a wife. The Gilyak Sogin in Kulk (Sakhalin), paid for the latter, his first slave, a Aino woman named Koe, than for his second wife, Sogin, for his slave, paid twice as much, and, finally, for his third wife, Sogin, for his slave, paid twice as much as for his second wife. The use of a female slave as a concubine is no less strictly forbidden among the Gilyak. If anyone did so, he would not only lose completely all the respect that the [illegible] of a slave /648/ as a sign of great wealth gave him, but would stir up a general storm of indignation among his countrymen. The high price of the female slaves, however, is, either the most austerity of the Gilyak. On the other hand, it makes the female slaves very valuable for the husband, for such a possession may be an enviable to them that in order to obtain it many a Gilyak does not hesitate to sell his daughter into a marriage, or to take in exchange for a female slave and to pay the difference in the various bride price in some other towns.

/647 cont. /

case present motives on the part of the Japanese traveler came into play and gave rise to the vague wording of the report, which can be interpreted in two ways, or at any rate female slaves, among them, Smerenkur (Gilyak) ape Kondra for an opportune moment to carry out his planned trip to Tôkan (on the opposite mainland), which had been unsuccessful the year before. /649/ and this without any provisions, Mamia Rinsô found himself, in order to stay alive, forced to sit all kinds of work, such as cutting wood and the like, in the home where he had taken refuge. For a time, however, he entered the ranks of professional entertainers for money, service in exchange for food and lodging and had to accommodate himself, like the "rest" and the "other" men in a similar position, to the whims of the women, to put himself at the orders of the woman in charge of the house and to being treated like a servant by her, but, since the woman was either partially not a dominant position of the woman over her husband. Pride and vanity, and perhaps also fear of his government, probably prevented the traveler from fully and completely carrying out, or, at least put the undignified and humiliating position and treatment [illegible] Smerenkur, the Gilyak, the Smerenkur, and prompted him to describe the situation in a more favorable light as the alleged [illegible] and indicated to the Japanese that the status of the Smerenkur in an ideal light, saying that "their face and skin are extremely delicate and beautiful due to daily washing," whereas those around them, the Gilyak, Aino, and Goldi people, and those on the mainland as a consequence of staying in the cramped, dirty, and sooty earth huts.

Even though Mamia Rinsô avoids speaking of slaves in referring to his subordinate position among the Smerenkur, he is well aware of the existence of such among them. For he says (1)

1. Op. cit., pp. 186 and 187.

of the inhabitants of southern Krafto (Aina) that in their trade with the Santanar, that is, Gilyak, Olcha, and Goldi, they "even frequently sell human beings, and, to be sure, widowers

/650 cont. /

and widows, unmarried people, orphans, and the needy. 3-4, often 6-7 pieces of gold cloth are paid per head, but young and [illegible] people are not sold, because they are valued as slaves, are exchanged for crude goods." According to him, even the Aino people in the island of Yezo from time to time sell people to Sakhalin in order to buy there human beings in the situation [illegible] country of the Santanar" -- a perfectly correct conclusion, for, as has already been pointed out (2), tattooing is by no means

2. See pp. 631 ff. above.

customary among the Gilyak. Rinsô's observation concerning the Aino and Goldi people, who are generally considered to be very and substantially supplement them, but his latter remark leaves no doubt that not only the Gilyak on the mainland but also those of Sakhalin, the Aino, and the Goldi, or at any rate female slaves, among them, whom the latter obtain probably exclusively from the Aino. Nevertheless, the Gilyak, the Smerenkur, as Rinsô reports, do have their slaves in another, more brutal manner by taking to their country as captives the women, children, and children of those who owe them debts in trading and are unable to settle these debts in the following year when they return. Needless to say, they become slaves there. The Smerenkur, however, which had absolute domination over southern Sakhalin and its main settlement, Nakamura, Rinsô's Tôkan, which belong to the Aino, which lay in the Gilyak province, which ceased only after the island passed into Russian possession.

Before I go further in describing the family relations of the Gilyak, I should like to insert some data concerning slavery among other tribes of a similar primitive culture. As Bunge (1) has set forth, the Aino practice of selling tribesmen as slaves to the Gilyak and Goldi, or, in the case of the Sakhalin Aino, to the Russians or by other traders, to the effect that they keep persons from their own tribe as slaves. What kept them from it, whether it is a matter of the Aino or the Gilyak, is the fear of the Japanese acting as absolute rulers, may be left undecided.

/650 cont. /

what a man! His right arm was worth so many "syalakhr" (1);

1. The syalakhr is a monetary unit which the Gilyak for some reason translate into Russian by the word "tselkovi" /one ruble/ and value in our money at three rubles, -- apparently the Chinese customs duty. It is in these units that the Gilyak evaluate their exchange values -- the shagund (see above).

if he were living, would he be content to take that much? His left arm was worth so much, etc." Then all the other parts of the body are listed, and the amount of the blood money is computed. If the opposing side agrees, it lays in the kettle of the orator as many pieces of wood as it has agreed to pay "tselkovi." But agreement is never reached at once. The orator of the opposing side seeks to find excuses for the slayer and offers a minimum ransom. This angers his opponent, and he wrathfully departs, threatening to break off negotiations. His colleague hastens after him, urging him to make concessions. They sit down, each one lights up a pipe, always with his own fire, they quarrel, again one of them flies into a passion and hastens off, again they come together and return to the settlement... [576] Etiquette demands that an agreement should not be reached at once, but only after stubborn opposition; therefore sometimes two and three days pass in endless meetings and [171] separations. Some khlaj-nivukh on the Amur resort at the [789] last moment, after the manner of the Tungus tribes, to the aid of their magic rods, which they threaten to break and thereby bring the wrath of the gods upon themselves and their stubborn opponents.

*614 628 536 When an agreement has been reached, the religious feature that I mentioned above enters in, the procedure of an imitation of a bloody battle, which is supposed to conceal from the soul of the slain man and the clan gods the peaceful solution of the conflict.

Gilyak (1).

1. See p. 590 above and Plate XXVIII /see p.1008, Fig. 1.

325 326 For this type of work among the Gilyak, in addition to iron (Gilyak wytsch), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass [531] (Gilyak tussi), and silver (Gilyak totta) (2). The more of the [435]

[192] 2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make orna- [439] ments, such as rings, ear pendants, clasps, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to use for their purposes (3).

•[436] 3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

[174] The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is an art practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg 365 stands in agreement with this. Undoubtedly, however, they have [197] borrowed this art from one of the two civilized peoples of East [194] Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relati

G
Gi /594 cont./
435 solely decisive position which the former occupy in the trade
177 with them. Among the Goldi, who live closest to the Sungari
Gi Chinese and have constant retail-trade relations with them, a tenth
[439] part and perhaps even a hundredth part of the ja or the silver
ounce comes into consideration, which makes it necessary for
them in giving a price to name also the pertinent unit of value
G (ja or dicha). For the more distant Olcha and Gilyak, however,
Gi who, as we shall see, obtain what they need in Chinese goods
439 in larger quantities in Ssan-ssin on the Sungari, the tenth and
435 the hundredth of the ja are no longer of any practical significance --
177 for they are concerned only with the whole unit of value and its
multiples, and therefore there is no need among them to name it
expressly in making appraisals, but rather it suffices to give only
the number concerned. If I had made my investigations into this
Gi question, instead of from the Gilyak to the Goldi, in the opposite
435 direction, going from the latter to the former, the unit of value
177 upon which their evaluations are based would have been apparent
to me without any difficulty, automatically, as it were. Inci-
dentally, the unit of value borrowed from the Chinese, since it
is not represented among the latter by any coin, is always only
an imaginary quantity for the Amur peoples, and they are able to
form only an approximate idea of it in terms of the number or
quantity of the corresponding pieces of goods or other articles.
G As is well known, in China only the thousandth part of a silver
[192] ounce is current in the form of coins -- the round brass coins
with a square hole in the center (Gilyak tschcha), which are
usually strung ten and a thousand on a string. On account of
G their insignificant value, however, the Gilyak pay no attention
[436] to them, and, like the variously shaped brass lamellas, they are
[361] used only as decorations for women's skirts or occasionally also
G as shirt and belt buttons. In my time Russian coins, likewise
435 called tschcha (that is, probably "coin" in general) by the Gilyak,
436 were not accepted either by them or by the other natives of the
177 lower Amur region, both out of complete unfamiliarity with their
value and because the Chinese merchants likewise would not
accept them (1). Through their association with the Russians,

1. The only coins for which a use could be

found with respect to the Chinese merchants
during my time in the Amur region were
Spanish (Mexican) piasters, so-called colonnados,
and even these were always first carefully
tested as to their weight with the help of
hand scales.

G Through their association with the Russians
436 however, the Gilyak very soon also became familiar with the
177 use of their coins (2).
439

2. Indeed, now they are said to accept even
Russian notes as payment. As proof of their
great shrewdness in monetary and trade
matters the following incident, which oc-
curred during my stay, might be mentioned.
The frequently mentioned Foswein, a Gilyak
from Kulj, who had been close to the
Russians ever since their first appearance in
the region, made a voyage from Nikolayevsk
to Sakhalin for the sole purpose of exchanging
with his countrymen there various small items
for all kinds of valuables and especially
gold and silver coins, which they had stolen
from a stranded American whaler after kill-
ing part of the crew, and then to make a
profit out of them with the Russians.

G
Gi /595/ By means of the unit of value borrowed from the
43 Chinese and common to all the peoples of the lower Amur
177 region, the barter trade which they carry on among themselves
and with the Chinese is, by and large, given a fixed standard
in that the in part very heterogeneous wares involved in it appear
equal in value to the extent that, with respect to quantity, size,
quality, etc., they represent or contain an equal number of units
of value and can be exchanged without any disadvantage for

* 174 As we have seen, the Gilyak were also furnished with
177 wives by the Chinese; they, just like the Ainu, furnished
them with slaves. Some influence was also exerted by
[221] seasonal trade and hunting expeditions to the territory of
• [437] neighboring peoples. The Amur Gilyak often went into the
[487] Ainu territory for years on hunting expeditions or for purposes
of trade and frequently brought Ainu women back to their
[563] homeland. Conversely, representatives of the Tungus peoples
or Ainu settled among the Gilyak and entered into marital
relations with them or carried off their women. And although
these cases might be isolated, nevertheless they could not
be without influence.

* 174 A quite specific influence in the economic sphere has
177 been exerted by communication with cultured peoples. Until
556 the encounters with the Chinese and the Russians there was no
stimulus for the accumulation of riches. Until then there
were only objects of consumption. No one accumulated
them, and the highest ambition of a more capable or success-
[437] ful man was to share his acquisitions with others. Trade with
the Chinese created the stimulus for accumulation. There
appeared new valuables which it was impossible to consume,
but which they began to value, which were profitable to
accumulate. There appeared rich men, fortunate possessors
of valuables, and others who did not have them and wished
to possess them. In rich men there was born a consciousness
of their wealth and their importance, and together with this
the ambition to become related to their equals. Among the
[583] poor people there arose the temptation to make the marrying
of their daughters a source of the acquisition of valuables.
The old form of the obligatory marriage, where the woman
was given without a bride price, became unprofitable, and
with the slightest loophole everyone /203/ tried to circumvent
[581] the old imperative. Finally, the phenomenon of the insti-
ʊʊ tution of wealth strengthened the institution of individual
marriage. The custom of brothers' living together with one

/379 cont./
556 with a feeling that is strange for people with a primitive mode of
life. There is fear and respect and even reverence in this feeling.
That a rich man should inspire fear and respect is a thing easy to
understand, but the feeling of some sort of reverence has its own
peculiar source, not completely alien, however, to our under-
standing. In primitive society the rich man ordinarily had his
personal talents to thank for his material success -- hence the
respect for him. But since all human success is at the same time
a gift from the gods, the rich man also stands out as their favorite,
556 their chosen one. The degree to which the Gilyak are inclined
538 to attribute supernatural origin to wealth can be seen from a widely
171 diffused legend among them concerning a certain Tungus, still
living today, who amassed his wealth by unscrupulous exploitation
and robbery, a legend which affirmed that this virtuous man /380/
had secured his wealth thanks to a golden rain which showered
down upon him when he was hunting in the taiga. And this golden
rain was, of course, a favor from the god to his favorite.

675 Since the Gilyak have notions of property, there naturally
432 exist among them contracts of purchase and sale, barter, loans,
• 437 etc., but most frequently of all, of course, these contracts have
487 the character of barter.
426

Two words about debt obligations. The Sakhalin Gilyak
426 does not borrow money; his debts arise principally from the non-
fulfillment of one side of the property obligations of a contract.
No interest is charged for waiting for repayment. Interest is known
[184] only to the Amur Gilyak, who borrowed it from the Manchu, but
177 even among the Amur Gilyak interest is extorted only for the loan
of money or sable skins, but never for loans of any other nature. The
[614] popularity of debt obligations among the Sakhalin Gilyak con-
[612] sists, first, in the fact that there is no period of expiration with
regard to debts (complaints about the payment of debts incurred
30-40 years before arose not infrequently), and secondly that in
the event of the insolvency of a debtor and his closest relatives or
after the death of these persons, the clan, in the person of the
clansmen, answers for the debts. The fund from which debts are
made good, in the event of nonfulfillment of the conditions of a

23 country and, in the conviction that I did not understand them,
84 express the suspicion that they were now only exploring the
48 country, just as I was doing, in order to take possession of it later and to push out of it and destroy all the Gilyak. At some places, as in Tyk, Duĭ, and the uppermost Tymy villages, they sometimes even directly opposed me insubordinately and hostilely in that they did not want to permit me to stay in their yurts or to make a fire on their hearth for the preparation of my meal, and refused to sell me the necessary food for my dogs from their supplies. This latter refusal was even worse than the two first ones, because it could not be overcome by threats with pistol in
39 hand, as they could. Thanks to their passion for trade, however,
23 I was always able to put an end to them: one or another of them certainly could not resist the trade articles which I carried with me and produced apparently without design, and, if just one yielded to temptation and made a small trade, the ice was broken and offers rained down from all sides, so that I soon had more than enough of what was needed. With the opening of trade, however, agreement was always also reached on all
39 other matters. The Gilyak show much practical sense, clever-
57 ness, tenacity, and skill in trading. Only articles of known practical utility excites their inclination to buy: on the other hand, anything new and unusual, no matter how striking, is, to be sure, gazed at and admired (with the frequently repeated exclamation of "tsa-tsa-ä," accompanied by striking the head with the palm of the hand), and even accepted as a present, but never bought. Of their own wares they always offer the inferior pieces first and go up to the better ones, in the course of which they praise them and insist on the first demand. In short, everything points to a people skilled and experienced in trade, and how very much this in fact fits them can be seen from the following more detailed statements.

Despite the fact that all trade in the Amur region, and
37 hence also that of the Gilyak, is only barter and no money is used
35 among them, nevertheless a not merely relative but absolute, numerically definable value for all the articles playing a role in

/592 cont./

437 trade or even otherwise in their life and household has been de-
435 veloped among them. This necessarily presupposes, however, the existence of an accepted absolute unit of value among them, through the multiplication of which the appraisal of the objects is made or their price standardized. What is this unit of value or of what does it consist? /593/ It was not easy for me to determine this, as one will see from the following reasons. Since the Gilyak are only familiar with barter, they answer any question about the price of an article, as a rule, by mentioning the quantity of goods desired in return (for instance, three bundles of tobacco, two fathoms of cloth, etc.). A question as to the absolute value of the foremost goods and objects, their price in themselves, the basis of even barter-trade, is rarely understood and only by the more intelligent, and even then the answer consists of only a number preceding the verb "to cost, to be worth" (Gilyak tschalhatsch), without the stating of any unit of value. In this connection, however, that form of the numbers which serves for the counting of animate objects is always used. I cannot say for what reason. To the question as to how much an article costs, properly understood in the above sense, the Gilyak will therefore give as an answer: "njunj, mor, tschor (1), etc.

[802]

1. Not njakr, mjakr, tschakr, etc., as the ordinary form of the numbers used for counting inanimate things runs.

tschalhatsch, or -- with the addition of the suffix ra meaning "is" -- tschalhara" (2), that is, it costs one, two, three, etc.,

2. Similarly, just as kauk means "not," kaukra means "is not"; or ngalskotsch, "bad," ngalskora, "is bad."

[435] and nothing more. The unit of value under consideration is never
[437] expressed, as if it were self-evident, as if it needed no special designation. I was therefore able to make a numerical list of the

nt./

r current prices of all the articles playing a more or
ortant part in the life and household of the Gilyak long
knew the unit to which the numbers referred. Not
as among the Olcha and thanks to my finding there a
no besides his mother tongue, also had a command of
ak language did I get on the right track, and my stay
he Goldi helped to give me complete certainty with
the questionable unit of value also generally current
he Gilyak. Chossiambo, as my guide was called (3),

3. He came from the Olcha village of Uda and owed his knowledge of Gilyak chiefly to the fact that he had a Gilyak woman from Tebach as a wife.

ed the value of various articles in exactly the same
as the Gilyak do, in that he put only the pertinent num-
ont of the verb "ssalé" (to cost, Gilyak tschalhatsch);
es, however, instead of "omu (one) ssalé," he said
n ssalé," etc. After the removal of the n, obviously
on phonetic grounds, it was clear that the unit on which
e of the object was based among the Olcha and Gilyak
-- as was to be expected, a magnitude of value of
origin. The further, confirming and illuminating in-
on concerning it was obtained without difficulty from
i. The term "ja" for the unit of value in appraising
ms and other articles is quite familiar to them; they
o able to say that the Chinese divide the ja into 10 parts,
icha among them (the Goldi), each of which is worth
ese brass coins (Goldi zirikta dicha), so that 1,000
f the latter equal one ja. This is therefore the Chinese
nce (liang or tael), almost equal to two Russian rubles
silver. The fact that the Chinese unit of value also
e peoples of the lower Amur region as the general
the evaluation of trade products and other property
better than anything else the dominant, in fact, almost

484
439 /601 cont./ the alertness, versatility, and enterprising spirit that
439 they lack as hunters, in comparison with the Tungusic tribes,
[157] is theirs to a high degree as traders. Not satisfied that many a Negda, Tungus, and Gilyak from the Sea of Okhotsk, from the Liman, and from Sakhalin come to them in order to get from their supplies of Chinese and, more recently, Russian commodities, tobacco, liquor, cereals, clothing materials, and the like, in exchange for furs, they themselves, provided with these foreign articles and with some of their own products, such as sturgeon or hausen /602/ meat and the like, undertake trade voyages to
[221] the places named. This is done especially in winter when there
[492] is little fishing, and for this purpose they use the numerous dogs which they are able to keep, thanks to the abundance of fish in the Amur River. With their help they are almost constantly on the move all winter in order to look after their trade interests. Although the means of locomotion mentioned permits them to take only a small quantity of commodities with them each time, the frequency and common practice of such trading trips among them on the whole brings about a considerable turnover of goods, and since the main purpose of these trips is always the same, the acquisition of the furs needed for trade with the Chinese, they offer the persons undertaking them a rewarding substitute for the time and effort spent on them instead of in hunting. Here again experience proves that the producer of a commodity always has a smaller profit than the middleman adroitly using it.

439 These trading trips of the Amur Gilyak for the purpose men-
439 tioned principally go in three directions: westward to the Negda
484 on the Amgunj /Amgun/ (Gilyak ivnk) and the Samagir on Lake
648 Udyl, northward to their own countrymen on the Sea of Okhotsk,
[487] and eastward to Sakhalin. The relations of the Gilyak with the Negda are very ancient, as may be seen merely from the fact that of all the Tungusic tribes of the Amur region the latter, aside from the Olcha, has become most assimilated with the Gilyak, or, so to speak, Gilyakized. For this reason alone, they, like the Olcha, are more interested than other Tungusic tribes in benefiting by trade, and, in view of the geographical location of their habitation sites, they do not lack the opportunity.

G /602 cont./
439 First of all, the Amgunj offers them a direct and convenient
439 route to the Chinese merchants along the Amur; secondly, in
484 winter only a short distance separates them from the Samagir on the Gorin, who are likewise visited by Chinese merchants; and, finally, close to the northern border of their habitation area, separated from the Nemilen, the chief northern tributary of the Amgunj, by only a low watershed, where each year in December Yakut and Russian merchants congregate specifically in order to trade with the surrounding Tungusic tribes and, among them, with the Negda in particular (1). Under these circumstances

1. See p. 166 above. Cf. also Fr. Schmidt, "Histor. Bericht über die Sibir. Exp. der Russ. Geogr. Gesellsch. /Historical Report on the Siberian Expedition of the Russian Geographical Society/" (Beitr. zur Kenntn. des Russ. Reiches, Vol. XXV, pp. 134 and 150).

G under these circumstances
439 the chances of the Gilyak middlemen for success among the
439 Negda are not very great, except perhaps in those places where
484 the latter live in the closest proximity to the Gilyak, far from
487 those trade opportunities, namely, on Lake Orell and Lake
361 Tschlja, where there is also a Gilyak village and which, more-
G: over, lie on the route from the Amur to the southern coast of the
439 Sea of Okhotsk. Like the Negda, the Samagir, too, in addition
361 to their principal territory on the Gorin (Gilyak Kyr), have still other habitation sites remote from it and closer to the Gilyak -- these are their settlements on Lake Udyl, and, like the Negda lakes, these, too, are /603/ visited by the Amur Gilyak for trade, and, to be sure, in winter as well as in summer. Thus, on May 18 (30), 1856, I met the Gilyak Mesgun in Patt at the moment when he was about to set out in a boat laden with various Chinese commodities to travel to the "Rdhy" (Samagir) living
G: on Lake Udyl. On the whole, however, the latter lies, geographi-
[197] cally as well as on the basis of the linguistic relationships of the dwellers on it, closer to the Olcha than to the Gilyak.

/603 cont./

The Amur Gilyak find a field for their trading operations as middlemen that is far more favorable than among the Negda and Samagir among their own countrymen along the coast of the Sea of Okhotsk, which they reach in a short time, going either from Pali-wo to Kal via the lakes mentioned, or from Wair to Hinka, or by way of the Amur Liman, and where they are the sole suppliers of Chinese and, since the abandonment of the Petrofski post, also Russian wares. In exchange for these, they are supplied with animal pelts which the Gilyak living on the spot in part capture themselves in the coastal region and on the Schantar Islands and in part obtain from the Tungus hunting along the Tugur and in the Mitwatchan Mountains in exchange for the yield from their fishing and hunting of sea animals and articles previously procured from the Amur Gilyak. Furthermore, they buy eagle tails from their countrymen in order to use them in trade with the Japanese, and, finally, they cheaply procure there seal oil and skins both for their own use and for trade with their southern neighbors on the Amur, the Olcha and Goldi.

The Amur Gilyak, and in part also the Tschoini Gilyak, get their greatest booty in animal skins for trade with the Tschoini, however, on Sakhalin, and, to be sure, the former chiefly in the northern part of the island, along the Liman and Tro coasts, and the latter on the west coast south of Poghobi and along the upper course of the Tymy River, without there being any strict division of these trade areas between them. It is strange that the Sakhalin Gilyak, unlike their aforementioned countrymen, do little moving about and almost never come to the mainland, to say nothing of their undertaking more distant trading trips, but rather they are content to exploit their nearest neighbors on the island, the Orok and the Ainu, and, in turn, let themselves be supplied with the Chinese commodities coveted by them, too, tobacco, liquor, cloth, and the like, by the continental Gilyak, who come over to them. The Tymi-Chaselach route only rarely roam beyond the Liman in order to approach the Chinese traders in Pulj along the Tymi-Chaselach route, and, finally,

/604 cont./

will be discussed separately later, after we have first become acquainted with that which they carry on with the Chinese, and which furnishes them the means for the former.

As was pointed out at great length above (1), there is along

1. See pp. 142 and 144.

the lower Amur, in the Olcha and Goldi area, a number of centers at which Chinese merchants stay temporarily or even more or less permanently, and which were very cleverly chosen by them in order to carry on trade with the adjacent native tribes and especially to acquire from them the precious furs. They are cunning and sly traders, who do not shrink from any trouble and deprivation or from any means, in order to draw the greatest possible profit from their calling in either their own or their employer's interest. Outwardly they are very affable and courteous toward the native tribes, so as to win them over; when I was in the above-mentioned village of Pulj, in a yurt in which one of the three Chinese permanently living in the village had his domicile, and the Olcha and Gilyak in whose company I had come from the Liman entered it, the Chinese immediately took pains to help them shake the snow off their fur coats and then handed each of them a leaf of tobacco. After he had again taken his former seat on the plank-bed, he asked the newcomers to take a seat likewise, lighted his pipe at the basin filled with glowing charcoal that stood beside him, and passed it around from /605/ hand to hand. Conversation was soon flowing, and it was not long before the Chinese lifted a small can filled with liquor from the coal-pan, put several small porcelain bowls on the low table standing beside him, filled them, and handed them to his guests. During the conversation the Chinese talked boastfully and took pains to point out to his listeners and to me that his countrymen, the Nekan, were the best friends of the Olcha, Goldi, Gilyak, etc., because they provided for their needs and paid for every piece of his clothing materials, millet, tobacco, liquor, or the like, according to their desires, and were always friendly to them, whereas the Manchu were their mutual enemies and only exploited and

/605 cont./

mistreated them. In the Amur region I often heard similar assertions, sometimes reinforced with very liberal sprinkings of liquor, made to the native traders by Chinese merchants, and they never miss their mark, especially in the case of the Goldi who, living in the closest proximity to the Manchu and entirely dependent on them, have often personally experienced their cruelty and avarice and even give them the nickname "ningane," rau, to indicate that they act like the latter around their supplies and possessions. On the Gilyak, however, to whom the Manchu officials do not come to collect tribute and to practice all kinds of extortion, the flattering and seductive behavior of the Chinese merchants makes little impression. On the other hand, the great profit that the latter make by selling to the Amur peoples at retail for a very high price the commodities that they purchased cheaply at wholesale on the Sungari is obvious to their commercial sense, and, little inclined to contribute to it at their own expense, they try to imitate them and keep the profits for themselves. This explains their above-mentioned opposition to granting Chinese merchants access to their territory and the little encouragement that the latter find among them in general. The Chinese trade center on their border, in Pulj, is visited, apart from the Olcha, Samagir, and Orok, almost exclusively by the Tschoini Gilyak, who, far from the Amur, find there the means for their trade with their countrymen on Sakhalin and especially along the Tymy River. The Amur Gilyak, on the other hand, try to utilize the route offered to them by nature and, avoiding the profit-merchant middlemen located on it, fetch what is needed for their own use, as well as for further trading, from the Sungari themselves.

To be able to undertake a trading trip to the Sungari or, as the Gilyak usually express it, "to the Manchu," is the goal of their most ardent desires and constant practical endeavors. It is chiefly for this purpose that sables, otters, and foxes are hunted and that the trip to the neighboring tribes to buy precious furs are carried out. For without a considerable supply of this

/605 cont./

barter commodity, which is practically the only one that is considered by the Chinese on the Sungari, the long journey would not only be unrewarding and hence purposeless, but could hardly be made in view of the necessary payments of tribute and bribes to the Manchu officials. Since such a supply can at first only be procured with difficulty, several usually make /606/ such a journey together, under the leadership of a traveled and experienced man. Or it may be started by an experienced man who invites other and younger men to participate in it in return for an appropriate share in the profits or for a definite wage. An association of several persons is always required for its accomplishment, for a Sungari journey cannot be carried out, like the shorter trading trips, in winter on sleds drawn by dogs, with each one his own master. This is impossible for the Gilyak simply because of the length of the trip, as well as the fact that in lesser degree (1) also on the small settlements of Tschoini Gilyak, but also of the more distant Goldi, among whom they cannot always count on a hospitable reception for themselves and their dogs, and, from the Usuri to the Sungari, cuts through a sparsely populated area where they must pass through Manchu territory, the fact that the Manchu-Chinese government grants the Gilyak access to the Sungari, which is prohibited for all foreigners, indicates /607/ that it views them as its subjects, though it does not do so in their region to give proof of its rule over them and does not lend either military or tribute-collecting officials to them, as a consequence of which the Gilyak regard themselves as independent of it. Perhaps it neglects to do this for reasons of precedence, in order not to expose itself to resistance, the removal of which would involve more cost than benefit. On the other hand, it tries to make up for it by collecting from the Gilyak coming to trade in Stan-sisin as high a tribute as possible for permission to do so, as I have mentioned from first hand. The Gilyak have no choice but to submit to any demand, if they are not to lose their anticipated profits from trading and to have undertaken the whole long journey in vain. At the same

/606 cont./ They are not permitted

by the Manchu-Chinese government to go farther upstream, just as they and all the other peoples of the lower Amur region are not permitted to enter the Amur above the mouth of the Sungari, the so-called Sachali River -- a prohibition whose observance and bribes to the Manchu officials. Since such a supply can at first only be procured with difficulty, several usually make /606/ such a journey together, under the leadership of a traveled and experienced man. Or it may be started by an experienced man who invites other and younger men to participate in it in return for an appropriate share in the profits or for a definite wage. An association of several persons is always required for its accomplishment, for a Sungari journey cannot be carried out, like the shorter trading trips, in winter on sleds drawn by dogs, with each one his own master. This is impossible for the Gilyak simply because of the length of the trip, as well as the fact that in lesser degree (1) also on the small settlements of Tschoini Gilyak, but also of the more distant Goldi, among whom they cannot always count on a hospitable reception for themselves and their dogs, and, from the Usuri to the Sungari, cuts through a sparsely populated area where they must pass through Manchu territory, the fact that the Manchu-Chinese government grants the Gilyak access to the Sungari, which is prohibited for all foreigners, indicates /607/ that it views them as its subjects, though it does not do so in their region to give proof of its rule over them and does not lend either military or tribute-collecting officials to them, as a consequence of which the Gilyak regard themselves as independent of it. Perhaps it neglects to do this for reasons of precedence, in order not to expose itself to resistance, the removal of which would involve more cost than benefit. On the other hand, it tries to make up for it by collecting from the Gilyak coming to trade in Stan-sisin as high a tribute as possible for permission to do so, as I have mentioned from first hand. The Gilyak have no choice but to submit to any demand, if they are not to lose their anticipated profits from trading and to have undertaken the whole long journey in vain. At the same

/607 cont./

time they must submit to being treated like the Goldi and other peoples directly subject to the Manchu-Chinese. And in order to achieve their commercial ends, they behave, as they themselves told me, toward them on their part just like the latter, that is, they bend the knee before them in greeting or to make a request, which otherwise is not at all customary among them. The Gilyak in Stan-sisin put on an act of complete submission to the Manchu-Chinese government, and the latter is satisfied with this, along with the gifts collected from them in the form of tribute and probably going into the pockets of the local officials, and otherwise leaves them in peace.

The treatment of the natives of the lower Amur appearing annually on the Sungari for trade on the part of the Manchu officials and Chinese merchants there is extremely harsh, inconsiderate, and humiliating, and in particular the gentle and shy Goldi, who live closest to them and are directly subject to them, have suffered most from them. According to the description by Chikhofalsj (1) and Barabasch (2), who traveled up the Sungari

1. Khilkovskii (Izvient. Russk. Geogr. Obsch., Vol. II, 1866, Sec. II, P. 227. In the excerpt in Petermann's Geograph. Mittheil., 1868, p. 345).

2. Iu. Barabash", "Sungarilsk. Eksped. 1872 g. /The Sungari Expedition of 1872/" (Voenn. Sborn., 1874, No. 3, p. 141).

to Pe-tune (Bo-dune) in 1866 and 1872, they first had to pay for a permit for travel to Sun-sisin and for the trading itself, which was done in the village of Susu, lying somewhat below the latter, by paying a considerable amount of sturgeon and bauam-sage and also a fee to the Manchu judicial and national tribune. Upon reaching Sun-sisin, they first of all have to pay the tribute (alban) owed to the Chinese Crown, which consists of one sable,

/608 cont./

men and women, black woolens and velvet materials, silk fabrics, silk thread of all colors, sewing needles, buttons, and a quantity of Chinese ornaments, silver ear-pendants, rings and bracelets, glass beads, sheet-brass figures for decorating women's robes, and the like, as well as, finally, a number of household utensils, such as large and small kettles, etc. If the quantity of goods acquired in trade in Stan-sisin, in part heavy and bulky, is too large to be transported without injury in the small boats in which the Gilyak customarily make the arduous upstream voyage to and on the Sungari, a so-called "bauam" boat is built by the Goldi there, is bought, in which the return voyage downstream can be made easily and quickly. And since, in order to have a stronger current, one usually stays far from the banks, he at the same time avoids the danger of being heavily fleeced even yet by the Manchu officials and Chinese traders stationed or residing here and there temporarily or permanently. After the return trip is completed, the boat can still be used for a second type of trading voyage -- the trip to Sakhalin (Japanese), to a consideration of which we must now turn.

Among the above-named commodities which the Gilyak obtain by trade in Stan-sisin, one article plays an especially important role. It is the colorful Chinese silk fabric serving as designs of dragons and other figures and often with gold and silver interwoven in it, which is brought to market in part in whole pieces and in part worked up into long and wide-sleeved dressing gowns. /609/ Whereas the other commodities serve the Gilyak primarily for their own use or for trade with their neighbors, these find their foremost and best purchasers outside of the Amur region, among the Japanese, and therefore give them the principal reason for direct trade with the latter. There is mention of this trade, which, however, does not take place in Japan, but in the Japanese settlements on Sakhalin, even in the oldest accounts of this island which we have from the Japanese. The Japanese interpreter Kawamura, who visited Jesso /Yesso/ before 1852, already speaks of special fabrics which the inhabitants of this island get from "Krato" or "Kraft"

/609 cont./

designation (1 810/ for the lower Amur region, there can be no doubt but that the Gilyak, Olcha, and Goldi trading on Sakhalin were meant by it.

The principal center for the trade of the Gilyak with the Japanese is Naiwo, the foremost settlement of the latter and located close to the southwestern tip of the island (1). It is,

1. See pp. 146-156 above concerning the designation of the island and the character of the Japanese settlements on Sakhalin.

therefore, also the most distant goal of the "Sisian" voyages of the Gilyak, on which they, as already mentioned, visit the Japanese, but also with the Ainu. The journeys are made in summer and in winter, by boat and on sleds. For the sea voyage the Gilyak use either the above-mentioned Manchu boats brought from the Sungari, or, for the most part, their own ordinary river boats described above, on which they only raise the sides by a board put on either side for protection against the higher waves of the sea. Making allowance for these heedless vessels of theirs, they cautiously avoid the open sea on the voyage and always stay, after they have crossed Mamia Blind Strait in calm weather at its narrowest point, from Cape Lasaef (Gilyak Piljan-khy (2), that is, "Great Cape," Olcha Wasfun)

2. The th is to be pronounced as in English.

to Poghobi, where it is about four nautical miles wide and thus have reached the west coast of Sakhalin, as close to it as possible. But even the voyage along the coast, which is open, and especially south of Dui as far as Pilia-wo, is steep and rocky, offers many dangers, and, in the Japanese interpreter Kawamura's view, is only in calm weather or light winds. Because of this, as well as because of the fact that, in order not to overload their boats,

/410 cont. /
439 they take only a small supply of food with them and depend al-
439 most entirely on their fish nets for their subsistence (3), the
439
439

3. Fr. Schmidt, "Histor. Ber.," etc., op. cit., p. 54.

sea voyage sometimes takes a longer time. Under favorable conditions, however, they are said to be able to cover the short stretch, from Dut to Kusunai, often in four to five days. On winter voyages to the Sisiam, which are made in dog-drawn sleds, the above-mentioned steep, rocky coastal stretch puts great obstacles in the way. For the sea dogs use a steep trail along it, and even if a fringe of ice has formed, with a strong wind it often, and sometimes very suddenly and unexpectedly, is broken up again and carried off by the high waves of the sea. The travelers are therefore forced to go around the high land, and, on account of the mountains lying behind it, that can be done only by way of a long detour: they leave the seacoast at Arisai, shortly before Dut, turn inland over low passes to the Tymy sources, go from them to the Pyr, or Kusunai, River, and follow its course up to the mouth in the Bay of Patience, on which there are settlements of all three of the peoples represented on Sakhalin, the Gilyak, Orok, and Ainu. From there they travel along the east coast of the island to Mamia Bay then, along a low and convenient pass located at the narrower point of Sakhalin, /411/ cross again to the west coast, which they reach at Kusunai and which they then follow to Sisiranuri (1).

1. Fr. Schmidt, "Histor. Ber.," etc., op. cit., p. 110.

439 As has already been mentioned, one of the purposes of the Sisiam voyages of the Gilyak is to trade with the Ainu and to obtain furs from them in exchange for cotton cloth, tobacco, pipes, glass beads, and other Manchu-Chinese articles. This is done wherever they meet them, on the east coast of Sakhalin as

/413 cont. /
439 If one surveys all of the above-described trade activities
439 of the Gilyak, he will not hesitate to acknowledge that they are
439 a people extremely gifted for trade by nature and completely
439 dedicated to it. Their tendency to obtain by trade what they need
439 for trade with the neighboring civilized peoples on a larger scale
439 in keeping with their inclinations, they know how to win them
439 from the tribes neighboring them, who are more of a hunt-
439 ing, by means of trade indefatigably pursued from small be-
439 ginnings. Thus enriched, they undertake, in spite of their primi-
439 tive means of locomotion, long trade journeys to the Sungari
439 and to southern Sakhalin, to the Amur, and to the Sisiam,
439 and since they exchange the wares and products of the one for
439 those of the other, they serve as middlemen between the two
439 greatest civilized peoples of East Asia, the Chinese and the
439 Japanese. This latter activity of the Gilyak permits comparing
439 them with another Paleo-Asiatic people, the Chukchee, who,
439 likewise only poor hunters, but animated by a great genius for
439 trade, roam over the northern tundra and cross the Bering Strait
439 in order to trade for the last bagged by the Eskimo that lawning
439 and self-degradation are foreign to them. They do not
439 make much of productions, but do it largely because they are
439 forced to. Thus those Gilyak who decide to travel up the
439 Sungari to the Chinese with their fur must, as a matter of
439 course, look before the Chinese officials. And probably the
439 Chinese are responsible for teaching them such humiliating
439 expressions of veneration. [427]

735 Begging is practically non-existent among the Gilyak. The
273 only specimen one can see begging is the so-called Mamia-
Gilyak, a degenerated half-idiot who goes begging along the
streets of Nikolayevsk-na-Amure and who long since has
deserved his countrymen. He is also the only one who can
be seen in a drunken state, swaying and noisily roaming about.
In general drunkenness has not taken root to such an extent
that there are professional alcoholics, and this is probably
partly because Gilyak cannot have spirits whenever they
want, for it necessitates a trip to the Russians. But they
love liquor very much, and unfortunately it is to be foreseen
that this habit will become wide-spread.

XII. Contracts, Jurisdiction, Duels, Prosecution of Criminals

Meetings and councils are seldom held. If they are, they

/413 cont. / 439
439 changes must have arisen in consequence of the long trade relations
439 of the Gilyak with the Manchu-Chinese and Japanese, who in Stan-
439 ovin, as well as in Sisiam, have their officials and trade agents
439 who demand such carpatio benevolentiae in their own interest and
439 to the advantage of their countrymen, the Japanese and Chinese.

Moreover, the Gilyak conclude no transaction without expressing the wish or the request that something over the price agreed upon be given as a free gift, /414/ and this is precisely what Indin did at first. Of all, the crowded way in which people live together does not permit such delicacy; however the Gilyaks try to hide their greed from the strangers, but their pretense is so crude that they do not exactly perform in the open, but they are not particularly ashamed in front of members of the opposite sex, as well as women and children, in urinating. Women, at any rate younger women, guard against exposing their bodies before strange men. I had some difficulty in persuading them to do this when I was taking body measurements.

It is impossible to describe the more subtle expressions of modesty in all their forms, but it seems that the Gilyak are most of all ashamed of being taken for thieves and cheats. Their entire idea of cycle of life begins with the idea that lawning and self-degradation are foreign to them. They do not make much of productions, but do it largely because they are forced to. Thus those Gilyak who decide to travel up the Sungari to the Chinese with their fur must, as a matter of course, look before the Chinese officials. And probably the Chinese are responsible for teaching them such humiliating expressions of veneration. [427]

533 **boats. However, there are some to be found among them**
534 **who are sufficiently well-to-do to be improvisers of a sort**
535 **who entertain the others with their song.**

The dance does not exist among the Gilyak, unless one in-
401 cludes in this category the spontaneous jumping with which a
537 tipsy one occasionally cools off his exuberance. There is a
521 special dance that they performed when the chief spoke
above. It is neither sullen nor sad, but also not unhappy
or good natured; it is serious or undifferent. But I must
listen to add that this immobility and indifference only
reaches to a certain point. The Gilyak's imagination and
abundance of ideas are always led by several men who
pulls up the necessary number of chains and ropes on all
sides. In the middle is placed the fish, milkey, and cran-
berries, and sometimes he is also teased. Some Gilyaks also
prosaicate themselves before him. This is by no means wor-
ship, however, as some have assumed. Some do it for fun,
some in earnest, calling on the spirit of the bear not to seek
revenge on him for the slaying. Sometimes the bear is
not quite such expressions of veneration.

27 When the bear's immolation nears, he is tied to a stick
782 which has been driven in the ice, and then he is shot with
766 arrows. In this procedure the archers seek to outdo them-
selves. A particular bravery and brain is given a natural
blow with a lance. He usually dies in peace and majesty,
with his fore-paws resting on his wounded chest. When this
happens, the village is set free to make the change of him is often heard
to weep loudly. Finally, funeral pyres are lit and the Gilyak
seat themselves around them. Pieces of bear meat are
passed around and before they are eaten they are lightly [237]
roasted. Eating and tea-drinking are the main activity at a
bear feast. The bear's skull and tongue which is here offered as ent-
ertainment has been described. Special music is produced
528 in the village of Kolo Bol. This village is the northernmost
361 of the Gilyak settlement, on the coast of the Sea of Okhotsk,
534 about 200 versts from Nikolayevsk-na-Amure. (1) Here are

1. This distance is measured according to the curve of the coast line; in a straight line it would be much shorter.

to be found - and this has only recently been discovered - two
old church bells bearing Slavonic inscriptions. They were
supposed to have been taken from Fort Albasin when it was
destroyed by the Chinese and since then to have belonged to

527 Sometimes the dogs also draw sleds in these races.
541 Dog racing, besides being an amusement also has a prac-
437 tical significance, for the good runners find immediate
buyers. During this time the festival is a sort of fair, where
various things are bartered.

527 The chief figure of the festival, namely the bear, is well-
825 fed throughout the whole period and is repeatedly led through
the village, at which time he pays a call at each house and
this is done in the following way. He has to go from one house
to another at an angle, by way of the adjacent section of the
river. This symbolic procedure assures the house of "an
abundance of fish." He is always led by several men who
pulls up the necessary number of chains and ropes on all
sides. In the middle is placed the fish, milkey, and cran-
berries, and sometimes he is also teased. Some Gilyaks also
prosaicate themselves before him. This is by no means wor-
ship, however, as some have assumed. Some do it for fun,
some in earnest, calling on the spirit of the bear not to seek
revenge on him for the slaying. Sometimes the bear is

534 about 200 versts from Nikolayevsk-na-Amure. (1) Here are

776 elder who also determines how many and which bears are
622 to be killed by the consent of their owners, for it is not the
774 village as such but individuals in it who are the owners of
the captured animals. Great care and the trash at times; the best ut-
776 on this point the animals intended for slaughter are led from
the village to a place where the bear feast will take place. Such bears are
spend a night in each, in order to bring its inhabitants luck
by their stay. During this time the animals get only a little
food, but at the end of it they are indemnified for their in-
voluntary fast by being allowed to gorge the night from house
to house and feed the choicest titbits, namely, fresh and dried
fish, berries and cakes prepared from millet.

776 While making the rounds through the village, the bears are
563 treated by being pricked, and they are enraged by a bear
hunt staged in them with lances. The bears are then that have
been captured young in the woods or bought full-grown from
the Chinese or Ainu are also led by several men who pulls
776 Gilyak territory. During the mock-hunt the Gilyak naturally
At the end of the festival, the whole crowd, closely follow-
ed by the traveller, of course, went back to the enclosure
Sometimes the bear's head is placed in the prison. The
the entire male population of Vaiza, together with the guest
chains, in turn—altogether there are more than 100 persons—and the
bear down the hill on which the fence was erected, to the
522 more or less by means of the tights attached to the back. Di-
this, the company raised a terrible racket. Now both part
would shoot the medicine-man's bear, which, as I said, was
another would fall into the deep snow to the amusement of
the spectators, and those that had shot him would kick and
jostle him in the most merciless manner, without this, ho
776 the village, or, between two trees. The again, the bear
bear would attempt to seize one of its tormentors with its
teeth and claws and it always had to endure a resounding,
scornful laughter if it did not succeed. In short, it was a
highly agitated scene that presented itself here to the new
our traveller. When they arrived in the village, [381] they
stopped its last meal the evening before. He is a beam sho
enjoyed its last meal the evening before. He is a beam sho
three meters long had been attached to a stand in front of
door in such a manner that it hung down vertically about
776 meter above the ground. Beside this beam there stood six
533 eight girls and women who were provided with cob-like st

ridently on a trading expedition. He had a boat about
twenty-five feet long by eight wide, with a single mast carry-
ing a square sail. His boat was full of furs and hides and
had a crew of four men. A small skiff was towed astern
for another single man. These Manjour merchants are quite
enterprising, and engage in traffic for small profits and large
risks when better terms are not attainable. Before the Rus-
sian occupation all the trade of the Amur Amoor was in Man-
chour hands. Boats annually descended from San-Sin and
Ninguta bringing supplies for native consumers, a mem-
bant would spend five or six months making his round
trip.

The merchants visited Go-ngingen on the route and bar-
tered their goods for furs. There was an annual fair at the
Gilyak village of Pul, below Mariinsk, and this was made
the center of commerce. The fair lasted ten days, and dur-
ing that time Pul was a miniature Nijne Novgorod. Manjour
and Chinese merchants met Japanese from the island of Sak-
alin, Tungusu from the coast of the Okotsk Sea, and others
from the head waters of the Zeya and Amgunya. There were
Gilyaks from the lower Amoor and various tribes of natives
from the coast of Manjuria.

A dozen languages were spoken, and traffic was conducted
in a jumble of all the dialects. Cloth, powder, lead, knives,
and brandy were exchanged for skins and furs. A gentleman
who attended one of these fairs told me that the scene was
full of interest and abounded in amusing incidents. Of late
years the navigation of the Amoor has discontinued the fair
at Pul. The Manjour traders still descend the river, but they
are not as numerous as of yore.

With a good glass from the deck of the steamer I watched
a native process of catching salmon. The fishing stations
are generally, though not always, near the villages. The
fishers use gill nets and seines in some localities, and scoop
nets in others. Sometimes they build a fence at right angles
to the shore, and extend it twenty or thirty yards into the

Amur region. To be sure, there are Manchu-Chinese boats there, which are used by the Manchu officials and Daur traders, and, indeed, a number of junks have come down in years past from Ninguta, Sansin, and Ningpo, but these are rare. I myself counted 37 of them, divided into three groups — but these old boats, painted black and red and decorated at the stern with crudely carved and likewise colorfully painted dragons, which represent the military might of China and are supposed to inspire the Amur peoples with respect for it, are of course, quite inaccessible to the latter. Moreover, these boating nomads, dependent on the tributaries, are, as we said, completely satisfied with their primitive canoes, that they, in fact, are, as regards the avaricious Chinese traders acting as intermediaries as they do along the Sungari and the lower Amur.

In looking back at all the means used by the Amur peoples to move and to get from place to place on land and on water, it seems justifiable to conclude that they show very essential and characteristic differences in the upper and in the lower Amur region, and in the latter have reached a higher development than in the upper Amur region. The Amur peoples, in fact, show that here the sans and purposes served by them must be much more far-reaching, and, in general, that the trade maintained among the Amur peoples themselves and with the neighboring civilized peoples has had more active and extensive here than there, for which, in fact, many examples and confirmations will be given in the following, with a more detailed consideration of these conditions.

1. See p. 467 above.

/184. cont./

Tale as in the case of fishing, so also in these two branches of work the Gilyaks stand first among all the peoples of the Amur region. One can well enough from the Gilyak's habitat conjure up how great and manifold the direct use of the seal is among them for food and clothing, for feeding their dogs, in preparing the means of locomotion, and for other needs of daily life. Next to fishing, hunting seals is their most important occupation, which, thanks to the geographic location of their habitation area, they can pursue everywhere: along the coast of the Sea of Okhotsk, on the mainland as well as on the island of Sakhalin, along the Amur-Liman, and on the Amur River, in which, as we saw, they penetrate far up the stream where the Chinese traders acting as intermediaries as they do along the Sungari and the lower Amur.

In looking back at all the means used by the Amur peoples to move and to get from place to place on land and on water, it seems justifiable to conclude that they show very essential and characteristic differences in the upper and in the lower Amur region, and in the latter have reached a higher development than in the upper Amur region. The Amur peoples, in fact, show that here the sans and purposes served by them must be much more far-reaching, and, in general, that the trade maintained among the Amur peoples themselves and with the neighboring civilized peoples has had more active and extensive here than there, for which, in fact, many examples and confirmations will be given in the following, with a more detailed consideration of these conditions.

1. See p. 467 above.

/184. cont./

1/2 oz. a whole fur-coat of squirrel skins 7 zo), whereas the Gilyak with their great wealth of precious furs, pay no attention to these valuables. Nothing is more characteristic for the Gilyak, limiting themselves almost solely to catching fur-bearing animals and fur trading, the Goldi also bring the hides and skins of the deer-like animals eagerly hunted by them to trade with the Chinese (a roe-deer hide, for example, costs 1/2 zo among them, a red deer or elk hide, untanned, 1 zo, tanned 2 zo). Like the fur, the principal products from fishing also have a higher price among the Goldi than among the Gilyaks. The salmon, for example, costs 16 zo among the former, on the one hand because the Amur region is the most important salmon region, and on the other hand because they are nowhere near as productive in this respect as the Gilyaks, who are devoted exclusively to fishing. Fish (and vegetable foods of various kinds), however, seem to be cheaper for them than for the latter, both on account of their greater proximity to the agricultural Chinese, and because they themselves cultivate some vegetables. Finally, the same is should also be noted in this connection, that one "tang" of fish, equal to three hundred bundles, is valued by them at 20 zo (2.

2. At 20 zo to the Gilyaks, according to the above table (see p. 903).

Incidentally, immediately after the arrival of the Russians, the value of the Chinese (Manchurian) tobacco rapidly sank in the eyes of the Gilyaks, since the far stronger Russian (Caucasian) tobacco is much more to their taste.

Since primitive community of the Amur peoples in trading with the Chinese consists of animal skins, and in particular sables, fox, and otter skins, and the Gilyak, as we saw above, are, on the whole, only /185/ clumsy and not very industrious hunters, they must, above all, in order to be able to carry on this trade on a large scale, think of the Gilyaks, the Amur-Gilyaks, the largest quantities possible, not only by hunting, but in another way better suited to their nature. To Gil and they trade with their

/185. cont./

neighbors, who are more skillful and active in hunting, and the Amur Gilyaks, who have the most dealings with the Chinese, also trade with their more distant countrymen living along the Sea of Okhotsk and on Sakhalin and buy from them the desired furs. The Amur Gilyak, and in part the Tschonsi Gilyak on the lower Amur, are the active trade, through which the Chinese were are brought into circulation throughout the territory of the Gilyak and of the tribes immediately neighboring them, the Negda, Reindeer Tungus, Goldi, and even the Ulca, and they are also the ones who draw the greatest advantage from it. For, there is no Chinese merchant in the coastal region and on the Schantar Islands and in part obtain from the Tungus hunting, otter, and sable skins, which they exchange for the Gilyaks from the Tymi-Chaselach route, and finally, the Amur Gilyaks, who are the mainland remains to the Ainu. Thus, the trade in Chinese commodities on Sakhalin was almost exclusively in the hands of the continental Gilyak. And they know how to draw great advantage from it for their own purposes. As we have already seen, the island is exceedingly rich in the furbearing animals particularly sought by them and hunted successfully by all these nomadic tribes, and, in addition, by the bands of the Sakhalin Gilyak. The greatest quantity of fur-bearing animals is undoubtedly captured by the Orok, roaming and hunting throughout the whole winter, who, however, impelled or forced by their nomadic life, as well as by their, on the whole, carefree and lazy disposition, do not depart from any trouble deprive part of it over to the sedentary and enterprising Tymi and other Sakhalin Gilyaks. The latter know how to take advantage of the scarcities that not infrequently occur among their wandering neighbors with regard to food and luxuries for themselves or food for their dogs, and, in this way, they obtain the furs of the island Gilyak or stored by them themselves, they carry on an extensively profitable trade with Chinese, Japanese, and Russian merchants, at times, at a great profit, even make them their debtors. They particularly know how to take advantage from the Ainu, who, when they can, prefer to turn to them with their hunting booty rather than to the Japanese, for they are always underpaid by the latter with only a few trifles and are not treated with good faith at all. Thus, the Ainu, even the Sakhalin Gilyak, though they lack the enterprising spirit of their countrymen on the continent, do not in any way betray the passion for trade and profit peculiar to their tribe. Inasmuch, however, as they sell to them the animal pelts captured by them themselves or bought from their neighbors, they furnish them with the means to carry on trade on a large scale with the Chinese, which also benefits them. Moreover, the continental Gilyak make their purchases on the island not only among their countrymen or through the Ainu, but, particularly in the north and south of the island, outside the Tymi region, occasionally trade directly with the Orok and Ainu. In fact, they obtain a great portion of the coveted animal skins from the Japanese. But this

/185. cont./

steals through from Pul along the deserted left bank of the Amur to the Negda on the Amgunj, but carefully avoids the right bank, inhabited by the Gilyak, and, in the northern part of the island, they will not permit any Chinese merchants in their territory and, along the upper course of the Tymi-Chaselach route, they assumed this hostile attitude toward the Chinese merchants in order to defend themselves against the domination of the Manchu-Chinese or in order to shake it off is still uncertain, but in any case it is greatly to their advantage commercially. For the role that is played further upstream by the Chinese merchants living among the Olcha, Goldi, Samagir, and other peoples of the lower Amur region or visiting them, as that they act as middlemen in the trade between them and the Manchu-Chinese wholesalers along the Sungari, falls in the Gilyak-Tungusic area, inasmuch they are not always active in the Amur Gilyak territory, and the Amur-Gilyaks are the ones who draw the greatest advantage from the trade in Pul along the Amur-Liman, or, as we saw, the Chinese traders in Pul along the Tymi-Chaselach route, and, finally,

/185. cont./

the mainland remains remote to the Ainu. Thus, the trade in Chinese commodities on Sakhalin was almost exclusively in the hands of the continental Gilyak. And they know how to draw great advantage from it for their own purposes. As we have already seen, the island is exceedingly rich in the fur-bearing animals particularly sought by them and hunted successfully by all these nomadic tribes, and, in addition, by the bands of the Sakhalin Gilyak. The greatest quantity of fur-bearing animals is undoubtedly captured by the Orok, roaming and hunting throughout the whole winter, who, however, impelled or forced by their nomadic life, as well as by their, on the whole, carefree and lazy disposition, do not depart from any trouble deprive part of it over to the sedentary and enterprising Tymi and other Sakhalin Gilyaks. The latter know how to take advantage of the scarcities that not infrequently occur among their wandering neighbors with regard to food and luxuries for themselves or food for their dogs, and, in this way, they obtain the furs of the island Gilyak or stored by them themselves, they carry on an extensively profitable trade with Chinese, Japanese, and Russian merchants, at times, at a great profit, even make them their debtors. They particularly know how to take advantage from the Ainu, who, when they can, prefer to turn to them with their hunting booty rather than to the Japanese, for they are always underpaid by the latter with only a few trifles and are not treated with good faith at all. Thus, the Ainu, even the Sakhalin Gilyak, though they lack the enterprising spirit of their countrymen on the continent, do not in any way betray the passion for trade and profit peculiar to their tribe. Inasmuch, however, as they sell to them the animal pelts captured by them themselves or bought from their neighbors, they furnish them with the means to carry on trade on a large scale with the Chinese, which also benefits them. Moreover, the continental Gilyak make their purchases on the island not only among their countrymen or through the Ainu, but, particularly in the north and south of the island, outside the Tymi region, occasionally trade directly with the Orok and Ainu. In fact, they obtain a great portion of the coveted animal skins from the Japanese. But this

/185. cont./

trade will be discussed separately later, after we have first become acquainted with that which they carry on with the Chinese, and which furnishes them the means for the further.

As was pointed out at great length above (1), there is along

1. See pp. 142 and 144.

the lower Amur, in the Olcha and Goldi area, a number of centers at which Chinese merchants stay temporarily or even more or less permanently, and which were very cleverly chosen by them in order to carry on trade with the adjacent native tribes and especially to acquire from them the precious furs. They are coming and ty trades, who do not depart from any trouble deprive tion or from any means, in order to draw the greatest possible profit from their selling in either their own or their employer's interests. Outwardly they are very affable and courteous toward the natives in order to win them over, which is the aforementioned village of Pul, in a yurt in which one of the three Chinese permanently living in the village had his domicile, and the Olcha and Gilyaks in whose company I had come from the Limun entered it. the Chinese immediately took pains to help them shake the snow off their fur coats and then handed each of them a leaf of tobacco. After he had again taken his former seat on the plank—bed, he asked the newcomers to take a seat likewise, signed his pipe to the hum tribes with growing contact that stood beside him, and passed it around from /186/ hand to hand. Conversation was lively, and it was not long before the Chinese filled a small can filled with liquor from the coal-pan, put several small porcelain bowls on the low table standing beside him, filled them, and handed them to his guests. During the conversation the Chinese talked boastfully and took pains to point out to his listeners and to me that his countrymen, the Dakan, were the best friends of the China, Goldi, Gilyak, etc., because they provided for their needs and paid for every piece of fur with clothing materials, millet, tobacco, liquor, or the like, according to their desires, and were always friendly to them, whereas the Manchu were their mutual enemies and only exploited and

/186. cont./

mistreated them. In the Amur region I often heard similar assertions, sometimes reinforced with very liberal servings of liquor, made to the natives by Chinese merchants, and they always made a great impression on me. In the case of the Goldi who, living in the closer proximity to the Manchu and entirely dependent on them, are in a very unfavorable relation to their greedy and avarice and even give them the nickname "mangun," zato, to indicate that they act like the latter around their suppliers and their masters. On the Gilyak, however, to whom the Manchu officials do not come to collect tribute and to practice all kinds of extortions, the Manchu and adjacent Dauri and Chinese merchants makes little impression. On the other hand, the great profit they make on their wares and the ease with which people or retail for a very high price the commodities that they purchase cheaply at wholesale on the Sungari is obvious to their countrymen the natives in order to induce their countrymen to it at their own expense, they try to imitate them and keep the profits for themselves. The Chinese merchants are very generous in granting Chinese merchants access to their territory and the little encouragement that the latter find among them in general. The Chinese merchants, the center on their border, in Pul, is visited, apart from the Olcha, Samagir, and Goldi, almost exclusively by the Gilyak, who, living in the Amur-Liman, are the most means for their trade with their countrymen on Sakhalin and especially with the Tymi River. The Amur Gilyak, on the other hand, try to utilize the route offered to them by nature and, avoiding the profit-seeking middleman located on it, fetch what is needed for their own use, as well as for further trading, from the Sungari themselves.

As the Gilyak usually express it, "go to the Manchu," is the goal of their most ardent desires and constant practical endeavors. It is chiefly for this purpose that sables, otters, and foxes are hunted and the trips to the neighboring tribes to buy precious furs are carried out. For without a considerable supply of this

140 general precautions. Nevertheless, it happens that now
141 and then one of these unfortunates is shot down by the steady
142 Gilyaks, even though the majority of them would not think
143 of concerning themselves with the affairs of their neighbors.

XIII Economic and Social Conditions.

144 Among Gilyak there are no particular of a King of Laws, to
145 say nothing of written statutes. Nevertheless, common law
146 which functions in place of these statutes is equitable and
147 just. The shadow of a prerogative may be felt only where
148 it is accompanied by social qualities. But even the preponderance
149 of natural talents is very modest; the race consists of
150 individuals among whom the capabilities and the other
151 assets which are given them by nature are pretty evenly
152 distributed.
153a There are "rich" and "poor" Gilyak, but these terms must
153b be interpreted in a very limited sense. A wealthy man who
153c is in a position to support three to four wives is a rare
153d exception. The "rich" man is usually one who has a number
153e of wives, possesses objects which have a certain value,
153f such as "beautiful" tinfoil (Sil), many and good dogs, etc.
153g and sometimes quite useless objects which are kept merely
153h for effect, as, for instance, lengths of cloth of gold (which
153i in Greek churches are used for various decorations). The
153j above-mentioned clumsy items belong to such luxury articles.
153k There are many rich men who keep on hand a couple
153l hundred silver rubles in a box.
153m Contrariwise, there are very few Gilyak who are not
153n capable of supporting a single wife or even themselves.
153o Such individuals are either sick or alcoholics, for there are
153p no actual reasons for natural poverty. Fish, game, wood,
153q berries etc., are everywhere to be found, but of course one
153r must obtain them with one's own efforts. A scarcity of fish
153s is a rare exception among the Amur-Gilyak. It happens in
153t these years in which the fish is scarce (this usually coincides
153u with very high water). The Sakhalin-Gilyak often have
153v reason to complain of a scarcity, for there the various
153w species of salmon, even in ordinary years, do not come up
153x the rivers in such numbers. On the other hand, dogs have
153y more bears, and thus the island Gilyak are in a position
153z to trade young bears for dried fish with the Japanese and Ainos.
If there are not enough fish, the Gilyak eat other roots,
berries, game, etc. All these are of course only a poor
substitute, but in any case we cannot speak of actual
'famines' here.

/205 cont./

At we have seen, the Gilyak were also furnished with
174 wives by the Tungus, but, just like the Aino, furnished
175 them with slaves. Some influence was also exerted by
176 seasonal trade and hunting expeditions to the territory of
177 neighboring peoples. The Amur Gilyak often went into the
178 Aino territory for years on hunting expeditions or for purposes
179 of trade and frequently brought Aino women back to their
180 homeland. Conversely, representatives of the Tungus peoples
181 or Aino settled among the Gilyak and entered into marital
182 relations with their women folk. Nevertheless, although
183 these cases might be isolated, nevertheless they could not
184 be without influence.
185 Finally, there was also influence in the economic sphere has
186 been exerted by communication with cultured peoples. Until
187 the encounters with the Chinese and the Russian colony was no
188 stimulus for the accumulation of riches. Until then there
189 were only objects of consumption. No one accumulated
190 riches, and the highest ambition of a poor man was to accumu-
191 late enough to make his acquisitions with others. Trade with
192 the Chinese created an incentive to accumulate, and there
193 appeared new valuables which it was impossible to consume,
194 but which they began to value, which were profitable to
195 accumulate. These were primarily Chinese goods, precious
196 of valuables, and other who did not have them and wished
197 to possess them. In the men there was born a consciousness
198 of their wealth and their importance, and together with this
199 the ambition to become related to their equals. Among the
200 poor people there arose the temptation to make the marriage
201 of their daughter a source of the acquisition of valuables.
202 The old Gilyak with their simple, several articles of tradition,
203 was given without a bride price, became unprofitable, and
204 there the slightest temptation arose /207/ tried to circumvent
205 the old imperative. Finally, the phenomenon of the insti-
206 tution of wealth strengthened the institution of individual
207 marriage. The custom of brothers' living together with one

/277 cont./

of safety from evil magical influences and social, as a symbol
222 of friendship, analogous to the exchange of blood signs in con-
223 clusion of ceremonial brotherhood. We see from the item which
224 are observed when the bride moves to the house of the groom that
225 the Gilyak give a socio-religious significance to such symbolism
226 of new relations.
227 And it is also possible that into the concept of bride price
228 there was introduced an element not only magical, but also purely
229 religious. Giving a woman in marriage to a clan not orthodoxly
230 prescribed was taboo, and every violation of a taboo, according
231 to the logic of primitive minds, should be atoned for in some way
232 -- if not by blood, then by valuables. Bride price from the
233 point of view appears to be tribute for appeasing the gods of the
234 clan offended by the violation of the clan taboo. By this
235 alone can one explain why the Gilyak react just as strongly to the
236 nonpayment of the bride price for a woman as they do to the sly-
237 ing of a clansman. The obligation to receive satisfaction in this
238 case, as in the case of a killing, extends to the third generation
239 in the whole clan.
240 For the sake of obtaining this, persons are ready to take the
241 same risk (mentioned in an earlier passage) as for blood re-
242 venge. The heroic exploits of such persons who have undertaken
243 long and dangerous treks into the most remote places are one of
244 the most cherished themes of the Gilyak epic.
245 The objects used for bride price and the conditions of payment.
246 An object that is part of the bride price is usually a particular
247 kind of valuable, an object sui generis, the so-called thygrund
248 (W.D.), thygrund (W.D.). These are valuables which are pre-
249 dominantly obtained from the Chinese and Japanese by trade.
250 Among these objects are: Chinese silk garments and pieces of
251 material, clothes made of silk, several articles of tegkine,
252 Manchurian spears inlaid with silver, Japanese sabers, and also
253 big, cast-iron kettles. Besides this, objects of this class include
254 and sable fur coats and feminine articles of adornment, such as
255 ancient times, evidently, axes, too, /278/ of iron stone, later

/283 cont./

deception and exploitation everywhere, but by degrees they will
284 end up by making use of the same weapon. The Sakhalin Gilyak
285 have a good advantage in obtaining more fur-bearing animals than
286 they are farther from the center of settlement. But Russian influ-
287 ence makes itself felt even on them. From all the settlements
288 they go out to work for wages and go to make their purchases at
289 Nikolayevsk, and every Gilyak who returns from work to his native
290 settlement brings back the same atmosphere as the youth who re-
291 turns to a Russian village from work in the big cities. Moreover,
292 work in the towns, with its varying fortunes, ever more /284/ and
293 more develops that primitive egoism which constitutes the dom-
294 inant feature of the simple economic life of such peoples as the
295 Gilyak. Together with the wealth that they have amassed in the
296 new environment, people bring back the economic customs of that
297 environment. But for the present, let us not look into the new
298 phenomena in the life of the Gilyak; let us turn now to their still
299 unshaken foundations.

III.

Religious Views

300 Though the dominant feature of the polytheism of the Gilyak
301 is its animism, nevertheless, the spirit of ancestor worship is
302 its foundation. This, among them, fare is a deity. "A small-
303 small deity," it is true, but one nevertheless. To the question
304 "why?" a Gilyak replies: "But without fire how can one live?"
305 It is considered a sin to put out a fire in the hearth; even damaging
306 the fence of a hearth is a sin. During the season of seal hunting,
307 or when a newborn child is in the yurt, and in many other cases,
308 it is considered a sin to bring the fire out of the yurt. It is a fire,
309 as to a divine element, that the Gilyak address the deities of his
310 dead. It is the intercessor of deities, however, fire is far from
311 occupying first place. The fact that obtaining fire is a taboo, the
312 power of that greatly diminishes in majesty in the eyes of the

/117 cont./ A'mur-tyuzic Olcha from Tyr, who
himself had repeatedly been with the Japanese on Sakhalin,
named them for me as "Mangunsi" -- expressly noting that
this was the name that the Aino, and following them, the
Japanese, gave to the Gilyak. Indeed, in origin from the Aino
language is immediately evident from the final syllable, for
"ur, kotu, guru" means "man" in it (8. Perhaps, however,
3. Klaproth, Asia polyglotta, Paris, 1823,
pp. 302, 309; Siebold, Nippon, VII, p.
198, note 5.

the etymology of the rest of this name can also be explained,
for "mimat" among the Aino of Sakhalin means "fox" (6), and

4. According to Fr. Schmidt, see my
Bemerk. über die Mongolischen und Mandschu-
Sachalin's und der südl. Kurilen /Notes
on the Mammalian Fauna of Southern
Sakhalin and the Southern Kurilian/"
(Bulletr. de la cl. phys.-math. de l'Acad.
Imp. des sciences de Saint-Pétersbourg, t. XX,
p. 420; Mél. biol., Vol. IV, p. 103).
According to Klaproth (Asia polygl., p.
309) the Aino called the Gilyak "Mimat-
gdole" des trois royaumes /General Survey
of the Three Kingdoms/. Siebold, from the
Japanese-Chinese original, Paris, 1832, p.
345; see also Langsdorff, "Bemerk. auf-
einer Reise um die Welt /Notes on a Voyage
around the World/" Frankf. on the Main,
Vol. I, p. 201: "-schumat" and
"-schimat".

5. Dr. Sternberg, Ethnol. Bulletin, Vol. I, p. 103.
According to Klaproth (Asia polygl., p.
302), mimat is said that the Japanese
name for Sakhalin is "Jasbur," one can
easily recognize in it, by both the initial
and the final syllables, the above-mentioned
Aino designation, through the mediation
of the Gilyak, for the Tungusic Amur
peoples visiting their island.

so "Sisumarinkur" would mean something like "fox people." I
cannot say with certainty what made the Aino give this name
to the Gilyak perhaps because, as middlemen in the trade be-
tween the Aino and the Manchu-Chinese, they were the principal

/117 cont./
buyers of the fur captured by them and among them the Ma-
Manchu common on Sakhalin; or, what seems more probable to
me, because of the Manchu-Tungusic word for ice (Sakhalin
ice), greater wealth than the Aino, for the most part were them-
selves clothed in fox skins (9).

6. In the seventeenth-century tale from
the great Amur River (Yenisei), see Fr. Müller,
Geogr. Obsch., Part VII, 1853, Sec. II,
p. 370 it is said that the Gilyak lived in the
large island facing the mouth of the Amur
were table and ice for clothing.

The situation is different with regard to the customary
Japanese designation of the dwellers beyond the Gilyak
tribes who come from the mainland to Sakhalin for trade. I
must note at once that they are not only Orcha, but in like
manner Goldi, also, however, are not distinguished by the
Aino and Japanese, but rather are covered by the collective
name "Santan" or "Jantan." In the Japanese language used by
them, the Amur region, is designated by the same name, after
the people (1). Mamia Rinsh's predecessor, the Japanese

1. During his visit to the island of Jesso
(Yezo) (1785), the Japanese explorer Mamia Rinsh
learned the speak of the "Sandan-ainu"
(Sandan people), who came to Sakhalin
to trade; he, however, took them for
Koreans (cf. Krusenstern, "Cursiv." --
Zap. Imp. Russk. Geogr. Obsch., Part
Otd. Etnogr., Vol. IV, 1871, pp. 450,
541). Krusenstern was quite erroneously
led by the Japanese to think that on
Sakhalin that this latter island, or, as he
heard in Aino, even only its northern
part, was called "Sandan" by the Aino

borrowed from the Gilyak the designation S'janta for the
Goldi (and Olcha), so to the same people do the Manchu and
Chinese owe their name for the Aino. As we shall see later,
visiting with the trade goods that the Gilyak traders carried
to the Aino, the Japanese and the Aino received the Manchu-
Chinese they were also the middlemen among them for those
tribal names.

/129 cont./

(cont.)
"Lan" for Sakhalin among the Gilyak
along the Sea of Okhotsk (see his travel
report in the Bull. de la cl. phys.-math.
de l'Acad. Imp. des sc., Part
XXI, 1858, Sec. II, pp. 161, 165).
Nippon, I, p. 131).

Tyre also gave the name as "S'janta," with which, according to
him, the Aino and after them the Japanese designate his people.
And this leads us to what I consider the true origin of this name.
It comes from the Gilyak. "Jant" or "Janta" is the Gilyak name
for the Goldi. Now, since, on the one hand, the Gilyak are the
immediate neighbors of the Aino on Sakhalin and, on the other
hand, the major and certainly the oldest middlemen in their
trade with the Aino people up to the Manchu, it is scarcely
conceivable but that the Aino first became acquainted with the
most numerous and most dwellers beyond the Gilyak, through the Gilyak. And this it is understandable that they also
accepted the Gilyak name for them, only changed slightly in
accordance with their language, and, in accordance with the
Olcha, who in their eyes were members of the same people (6).

4. When, therefore, in a Russian document dated 1789 which Middendorff
found among the archival papers in
Udskoi Ostrog (Reise; etc., Vol. IV,
p. 1.), mention is said that the "Japan-
ese" gave the Gilyak the "Sandan-aino"
(Sandan people), who came to Sakhalin
to trade; he, however, took them for
Koreans (cf. Krusenstern, "Cursiv." --
Zap. Imp. Russk. Geogr. Obsch., Part
Otd. Etnogr., Vol. IV, 1871, pp. 450,
541). Krusenstern was quite erroneously
led by the Japanese to think that on
Sakhalin that this latter island, or, as he
heard in Aino, even only its northern
part, was called "Sandan" by the Aino

/119/ Though the name Santan or S'janta is plainly used
by the Aino and Japanese on Sakhalin for the Olcha as well as
the Goldi, this is not at all the case in the travel report by
Mamia Rinsh. Along the Amur he only stayed in the areas of the

Gi 101 /136 cont./ A Gilyak from Ytkyrn in the
G [015] Tymy Valley, very well-versed for his means in the geography of the Amur region and who had undertaken many trading voyages to the mainland and was acquainted with the Ainu and Olcha languages, named for me, among other peoples on the continent already known to me, the "Kākal," who were said to live along the seacoast to the south of de Castries /De-
G [361] Kastri/ Bay. There has already been mentioned many times above a village located on the east coast of Sakhalin and at
G Gi [162] present inhabited by Gilyak and in addition by Orok, which, according to the former people, bears the Gilyak name of "Kākr-wo" (10). A conjecture as to what circumstance is

G [192] 10. "Wo" means "village" in Gilyak.

responsible for this name is /137/ to be expressed later. If, however, we first continue to discuss the names Kākal or Kāk(
I would draw the conclusion from the fact that among the Gilyak it sounds just the same as among the Goldi and, with
G. Gi 101 177 minor modification, also among the Manchu that the first borrowed it from the latter, and not vice versa. For along the entire line from the Chongar to the sources of the Ussuri, the Goldi are the immediate neighbors of the Orochi, they have al kinds of associations and contacts with each other; I myself ha repeatedly met Orochi passing through Goldi territory; between Gilyak and the Orochi, on the other hand, there extends a larg stretch of uninhabited land, and the contacts between these tw
G [439] [484] peoples can only be exceedingly few. Though the Gilyak in t interests of trade often come down along the west coast of Sakhalin as far as Ssiranussi, the deserted mainland coast, onl very sparsely inhabited by Orochi, remains alien and unknown
G. Gi [133] to them. The sea, too, becoming wider toward the south and not freezing in the middle in winter, precludes any contact be tween the Orochi and the Sakhalin Gilyak living opposite them and, of course, to a greater extent the Ainu as well. Judging by those designations, then, the Gilyak seem to have first become acquainted with the Orochi through the Goldi. If one

Tungus RU5
Daur

/174 cont./

Gilyak. For example, I often asked the latter about the peoples living upstream on the Amur, and they always named for me the "Jam-Manchu" beyond the Manchu. For a long time I did not know what people they meant by that. I now no longer doubt but that it is the Daur. Despite the prohibition of the Chinese government, Daur merchants from the sources of the Bureja or the Ssilimdshi come across the Jam-alin Mountains to Burukan on the Tugur (2), where at times Tungus from the Tugur and from the

2. Cf. also the statements of an eyewitness, the priest Djatschkovskij, in Kosmin, in Zap. Gidrogr. Depart. Morsk. Minist., Part IV, p. 36.

Sea of Okhotsk, Negda from the Amgunj, and Gilyak from the Amur appear for trade. In exchange for the always desired sable pelts, they obtain there from the Daur probably much the same commodities as from the Chinese on the Amur and naturally must have learned from them on occasion the role they play in the region beyond the Jam-alin, along the Bureja, Ssilimdshi, and the Dseja, down to the Amur; that they carry on all trade there, collect the tribute from the Birar and Manegir for the Chinese government, etc. (3). If one now considers that the Gilyak, as

3. Middendorff (Reise, etc., Vol. IV, p. 166, note 1) says that the Daur, impressing even the Yakut Trofim, described how they occupied a large city on the Amur where the river was blocked by means of a strong chain across it.

has been noted above (4), not infrequently designate both the

4. See p. 144.

Manchu and Chinese simply as "Manchu," though they distinguish them by nationality, it is quite understandable that they also

/328 cont./

proportions in this respect and at the same time show other previously discussed details in the construction and interior arrangement of a Gilyak winter-house. In concluding this description I must mention that along the walls (n), immediately to the right and left of the entrance, there are sometimes shelves or cupboards for storing household utensils, and here, too, is the place for one or more large receptacles which contain the water needed for drinking and cooking the food. An open cabinet with various cooking and eating implements similarly hangs on the wall behind the hearth. Finally, it should be noted that in the front transverse wall of the house, close to the roof, there is a round hole which can be closed with a similarly-shaped, straw mat and is used for ventilating the house when it is filled with smoke and steam during the preparation of the fish broth for the dogs or with smoke when there is insufficient draft in the pipes. Incidentally I almost always saw it open, and closed only at night. Since, because of this smoke hole, the /329/ plank bed along the front transverse wall is very drafty, it is regarded as the worst place in the house and usually lacks the straw mats, whereas the bench along the front longitudinal wall and, after that, the one along the rear transverse wall are regarded as the best, and here, to honor a guest, a small rug acquired by trade from the Chinese is sometimes also spread out over the straw mat, which is never lacking.

As advantageous as the Chinese winter-yurt of the Gilyak is over their earth yurt, insofar as it is much more spacious, lighter, and in general, due to the pipe lines under the plank beds, also warmer and not subject to such sudden changes of temperature, nevertheless it, too, has many disadvantages, and in part some that the earth yurt does not have, or at least not to the same degree. The thin outer walls and large windows do not offer sufficient resistance to the heavy frosts and violent snowstorms. There is often a strong draft, and in many places fine powdered snow comes in, or there is a deposit of ice. The draft is even stronger along the floor, especially since the door opens directly to the outside and not into a protected space in front, as in the earth yurts. In addition, it must occasionally be kept open for

/354 cont./

permanently among the natives, who were greatly decimated by the previous bloody battles, building their houses in their own way and entering into permanent, peaceful relations with the Kamchadal, even mixing with them more and more. It is therefore not surprising that their style of building soon became the customary one throughout the region. Matters were different in the lower Amur region among the Chinese and Manchu: a conquest and colonization of this region by the peoples named have never taken place. As was discussed above in detail (3),

3. See pp. 119, 142-144 above.

it instead was and is visited only from time to time by individual Manchu officials and Chinese merchants who, in a few places where they have their own houses, always take up residence in the houses of the natives, and this only among the Tungusic Amur-peoples, for the Gilyak have even denied the Chinese traders entry into their region. Hence, it undoubtedly must have taken a long time before the Chinese winter-yurt reached the Gilyak from the Chinese on the Sungari, spreading down this river and the Amur from people to people, and the trading expeditions which the Goldi, Olcha, and Gilyak from ancient times to now have conducted annually to the Chinese along the Sungari and on which they have had repeated opportunities to become familiar with and to appreciate the type of construction of the Chinese house, must certainly have contributed most of all to its adoption and further spread among the Amur peoples.

/355/ In April and May, when spring comes, the Gilyak find it necessary to abandon their winter dwellings and to move into their summer dwellings. First the inhabitants of the earth yurts are driven out of their houses, because they are made wet and uninhabitable by the water running in both from the top and the sides as a consequence of the melting snow and the thawing of the ground. The Chinese winter-yurts, set on level ground, are more serviceable, even in spring and summer, though even in them water sometimes comes through or over

/384 cont./

most surely and best obtained by stable, permanent residence in a place known to be favorable by experience, be it on a river rich in fish, like the Amur, or on the seacoast. Hunting comes into consideration among the Gilyak only insofar as it provides them with the precious pelts so necessary for trade with the Chinese and Japanese, and in exchange for which fabrics needed for clothing, tobacco, liquor, and other luxury items are obtained.

The situation is different among the Tungusic tribes surrounding the Gilyak. Among them hunting is a necessary, indeed essential means of subsistence and existence, and the more so the farther upstream and the deeper inland one goes. Moreover, in view of the more limited talents for trading of these peoples in comparison with the Gilyak and their less frequent and less extensive winter trips and journeys, the number of dogs to be fed, and consequently the need for large supplies of fish, is reduced. Also, with the distance from the main river to the mountains that skirt its tributaries, fishing becomes less rewarding, whereas the abundance of game, increasing in the same proportions, makes hunting /385/ all the more tempting. The more that fishing recedes into the background and hunting, requiring a frequent change of locality, comes to the fore, however, the life of the people becomes more unsettled. It has been repeatedly pointed out above that the Orochi living in the forest and mountain wildernesses along the left tributaries of the Amur and Ussuri are already more hunters than fishermen. And this is far more the case for the peoples of the upper Amur region, the nomadic Birar, Manegir, and Orochon. Among them, completely in contrast to the Gilyak, hunting is the first and foremost source of subsistence, whereas fishing comes into consideration only to a subordinate degree, in that they leave their hunting grounds only temporarily in summer and move to the Amur, the Dseja, or the Bureja to fish. Also, they do not need any supply of fish for their domestic animals, since they use the dog at most for hunting, and not as a draft animal, as is possible only among sedentary peoples. Their domestic animals, in particular riding and draft animals, the horse and the reindeer,

/385 cont./

are, on the contrary, of such a type that they find all the more abundant food with a nomadic life because of the change of grazing areas and therefore in a way give their owners an additional motive for the nomadic life.

/386/

Section 5

External Appearance: Clothing, Hair Style, Ornaments, Tattooing

The clothing of primitive peoples, even more than the dwelling, is intimately bound up with their total way of life and means of subsistence. For insofar as the materials required by them for clothing are not obtained through barter with a civilized people, they secure them from the same source as their food, whether this be fishing, hunting, or the raising of domestic animals used for food or for transport, and give them a style suitable to their life and activity, their crafts and occupations.

As for the Gilyak, with whom we shall again begin our discussion, it must first of all be repeated that fishing and sealhunting are their chief occupations, whereas hunting takes only second place among them; furthermore they keep only one domestic animal, the dog, but this in large numbers as draft animals, and finally, as the oldest reports that the Russians had about them said (1), they maintain constant trade with the

1. See p. 203 above.

Chinese. Accordingly, their principal materials for clothing, besides cottons, which since ancient times they have obtained from the Chinese and at the present time also from the Russians (Gilyak, possj; Russian-Siberian, dabá), are the skins of dogs and seals and fish skins, while the furs of forest animals, fox, otter, sable, squirrel, etc., are used only for trimmings or for smaller articles of clothing, such as caps, gloves, scarves, etc., but otherwise

/386 cont./

291 represent the principal articles in the trade with the Chinese.
439 Since in connection with it, the Gilyak receive in exchange,
[199] besides various fabrics both in solid colors and patterned, many ready-made articles of clothing, this, as well as their general association with this civilized people next to them, easily explains the influence of Chinese customs and Chinese taste discernible in their clothing in the shape, cut, and the type and patterns of embroidery and other decorations.

291 /387/ The clothing worn next to the body by the Gilyak consists of drawers, which are not taken off even at night, trousers (Gilyak warsch), an under and an outer shirt (Gilyak larkch) reaching to the knees and buttoned from left to right at the neck and
[199] chest. These articles of clothing are always made out of Chinese,
[296] or nowadays also of Russian, blue or grey cotton material, and sometimes also of white, which, however, since the Gilyak never wash their clothing, very soon turns a more or less dirty gray. As a rule, no outer garment is needed during the summer, but if unfavorable weather, not infrequent even in this season, requires it, a winter garment, in particular the dog-fur coat to be described later, is used. High boots of seal leather and fur always serve as footgear. As a rule, the lower or foot part of the
[239] boot (Gilyak ki) and the sole are made of the skin of Phoca barbata (Gilyak kighitsch and kighitsch-langr), which, especially in the case of older specimens, is thicker and more durable than that of the other type of seal very common in the waters of the Amur region (Ph. nummularis; Gilyak pyghi and pyghi-langr) (1) and

1. See my Reis. und Forsch. im Amur-Lande, Vol. I, pp. 180 ff. Langr simply means "seal."

for this purpose deprived of its hair. In accordance with the foot structure of the Gilyak, the lower part of the boot is small and graceful, with a high back keel-shaped in the middle, and the pointed end, turned somewhat upward and back, shows unmistakably the influence of the Chinese pattern. The legs of the boots, broad

/390 cont./

000 possession. I believe that the reason that a lynx skin, and all
291 the more a coat made of six skins of this kind, has so high a
435 conventional value must be sought in the influence of Chinese
439 conceptions. In any case the lynx skin also has considerable real
237 worth for the Gilyak, since in trade with the Chinese it is regarded as the equivalent of two otter skins or 10 sable skins (1), but

1. Merely two leg-pieces from a lynx skin and the tail are worth as much as two sables.

there are even more expensive furs, such as black fox, for example, which in trade is equal to 15 to 20 sables, and yet it is not used by the Gilyak like lynx skins for fur coats of imaginary value. As a table to be presented below on the values given by the Gilyak to various objects will show, there are also a number of things in the household which they value even more than a lynx coat and which nevertheless do not impart to their possessor such an aura of wealth and distinction as the latter does. Conceptions
825 of another kind must therefore come into play here. In view of the
171 active, centuries old trade relations of the Gilyak with the Chinese,
[439] they could not fail to know in what high honor the skin of the tiger, as the mightiest, most ferocious, and most dangerous of all animals, as well as that of its related species, the panther, stands in China, up to the throne: for example, the seats of high Chinese officials, governors, mandarins, generals, etc. are draped with tiger and panther skins for solemn occasions or processions, and the chair cushions carried behind them have just such fur coverings (2); the hunting tents of the emperor are

/391 cont./

825 influence similar use of the tiger skin as a mark of honor has be-
171 come established in Korea (3). The trading trips of the Gilyak
000
[113] 3. Thus, Przewalski (Putesh. v" Ussuriisk. kraie, 1867-1869 g. /Travels in the Ussuri Region in 1867-1869/, St. Petersburg, 1870, p. 116) reports that during his visit to the Korean border town of Kygenpu on the Tumen-ula the governor appeared, carried on a chair over which a tiger skin was spread. After he had descended, it was spread on the ground and the traveler was invited to sit on it.

825 The Trading Trips of the Gilyak
439 to Ssan-ssin on the Sungari gave them an opportunity to witness
171 the extraordinary fear which the Chinese there (Man-dse), as well as the Goldi, have of the tiger and, prompted by this fear, the respect that they show for it everywhere, in that the former erect small chapels or temples for it and put up in them pictures of it (4), which the latter call it "ambanj," i.e., "master," and

4. Arkhimandr. Palladii, "Usuriiskie Man'tszy" (op. cit., p. 377). Barabash", "Sungar. Eksped. 1872 g." (Voennyi Sborn., 1874, No. 2, p. 347).

even bow to the ground before its remains (5). The impressions

that the natives of the Ussuri region (Goldi and Orochi or Ta-dse) always answered his questions about the character and way of life of the lynx: "igajan Lau-masa," which means, "like the tiger."

prized and dearly paid for by the Chinese (3). I am referring

[113]

3. Radde (Reisen im Süden von Ost. Sibirien in den J. 1855-1859 /Journeys in the Southern Part of Eastern Siberia in the Years 1855-1859/, Vol. I, "Die Säugethier-Fauna /The Mammalian Fauna/," St. Petersburg, 1862, p. 93) was unable to buy a lynx skin among the Manchu and Daur, even for silver coins, and heard the latter say that it, like a tiger skin, could be acquired only by high Chinese officials. Gerbillon (in Du Halde, Descr. de l'Emp. de la Chine, Vol. IV, p. 295) reported that the animal schulon (French "choulon"), a specimen of which Emperor Kang-hi killed during a hunt in 1692 and which he regarded as a lynx ("loup cervier"), which seems in fact to be wholly correct according to the description, provided one of the most highly prized pelts, which cost 15-20 ducats each in Peking. Elsewhere in Du Halde (op. cit., p. 29) this animal is called "chelason."

25 to the lynx. Therefore, the Gilyak transfer to it some of their conceptions about the tiger as a particularly noble, princely, or royal beast.

/399 cont./

31 and snail-shaped spiral figures prevail throughout.

/400/ As on their garments, the Gilyak like to decorate all the other implements in their household and their lives with all kinds of designs and ornamentation, as we noted on the above-mentioned implements worn at the belt and as we shall frequently have occasion to see below. The general character of these decorations is always the same, as is described in more detail above, whether the articles are made of wood, tree bark, leather, bone, or iron, and only the execution will be less exact and neat in the case of more brittle material, although with every type of object we shall come across some which testify to the great skill and dexterity on the part of the Gilyak in the use of the simplest tools. The talent of the Gilyak for ornamentation, 31 294 however, appears to us in its boldest and greatest development in the embroideries for the decoration of their clothing, utilizing for this in particular, besides the easier reproduction of diverse lines and figures, also the effects obtained by putting together various colors. And of this the Gilyak, as much as in general they prefer somber colors for their clothing, also popular among the Chinese (1), a more or less dark blue or gray, make liberal,

1. Du Halde, Descr. de l'Emp. de la Chine, Vol. II, p. 82. Girard, France et Chine, vie publ. et privée des Chinois anc. et mod., Paris, 1869, Vol. I, p. 59.

but moderate and tasteful use in decorating their clothing, as [439] the above illustrations show. This is made possible by the variously colored silk and cotton thread obtained in trade from the Chinese.

531 170 I have previously described the general character of Gilyak ornamentation as unique and completely different from that of the Siberian peoples. Also, no trace of Russian national influences, as are quite explicable among the latter as a result of centuries old, manifold, and constant intercourse with the Russians, is found among the Gilyak. On the other hand, much of the Gilyak ornamentation, spiral-shaped coiled lines,

/400 cont./

531 197 artistic interlacing of bands, tapering ornamental borders with multiple points, and the like, can also be recognized on ancient Chinese articles, costly garments and porcelain and ivory objects such as our museum has. Furthermore, quite similar ornamentation is found on some old Japanese objects, for example, on the brass mountings of half decayed wooden scabbards in our possession, which we obtained through Mr. Poljakof from ancient Ainu graves on southern Sakhalin and which undoubtedly are of Japanese origin. I therefore feel justified in concluding that the [439] Gilyak ornamentation has developed largely under the influence of ancient Chinese and, in part, ancient Japanese models, since in view of the anciently established and constant trade relations of the Gilyak on the mainland up the Amur and Sungari with the Chinese and on Sakhalin with the Japanese, and the Ainu completely subject to their influence, it could scarcely be otherwise (2).

2. The role that the Gilyak play as middlemen in trade between the Chinese and the Japanese will be discussed below.

531 170 /401/ Thus, as in other things, so also with regard to ornamentation, Chinese cultural influence spread along the natural route of trade, down the Sungari and Amur to the Gilyak. If, in addition to what has been presented above, more direct proof were needed, it is provided by the fact that the same type of ornamentation on clothing and other objects is found among all the other peoples of the lower Amur region, from the Gilyak upstream along the main river, as well as along its tributaries up to the Sungari. Though these peoples are from Tungusic tribes, they nevertheless have nothing in common with the Russian-Siberian Tungus with regard to the ornamentation customary among them, but rather are linked to the Chinese and Gilyak. In this connection, however, we are met by the striking phenomenon that the feeling for ornamentation and the development of the latter in the Amur region do not decrease but increase with greater distance from the civilized people concerned,

531 170 /401 cont./ the Chinese, and reach their climax among the people farthest from the latter, the Gilyak. I think that the reason for this is not, say, in the natural disposition of the peoples concerned, 531 but in political conditions. The Gilyak were able to keep them- 170 selves independent of Manchu-Chinese domination and to prevent 442 direct visits and settlements of the latter in their territory (1).

1. See p. 144 above.

[439] Since in this manner they escaped continuous exploitation by the Manchu officials and the Chinese merchants, they could attain greater affluence than the Tungusic Amur peoples subject to the Manchu-Chinese, and, secure in their possessions, they must have found greater joy in them and along with this felt a desire and an incentive to concern themselves, beyond acquiring the mere necessities, with decorating and beautifying their clothing and other equipment, in which they were furthermore lent a helping hand by the trade with the Chinese, conducted on their part with innate cunning and circumspection.

294 Returning specifically to the clothing of the Gilyak, I must 412 mention a few tools customarily used among them for making it. [439] For sewing and embroidering the Gilyak of today use only steel needles, which, on the mainland, they obtain from the Chinese, or, more recently, from the Russians, and on Sakhalin from the 294 Japanese (2). The container for storing the needles (Gil. nugis, 415 412

2. Steller's statement that the Kamchadal [114] obtained steel needles from the Japanese and the erroneous explanation of their designation for them linked with it are discussed above (pp. 407 ff.) in detail.

from nug, "the needle"; see Pl. XXIX, Fig. 2) $\frac{3}{4}$ worn by the women at the belt, is peculiar. It consists of a bone tube through which a strap provided with two stoppers runs and into which the needles are stuck: whereas the lower stopper is tied fast to the strap, the upper one can be moved along it; if one lifts the [See Category 116, P. 1009--Analyst]

415 /402 cont./ 170 on an object the influence of any evil spirit involved will be 531 removed and the use of the tool will be accompanied by suc- 170 cess -- a belief that I shall discuss in another place.

294 The thread with which garments are sewed varies accord- 283 ing to the variety of material in them. Fish-skin robes, for example, and birch-bark hats are sewed with fish-skin yarn, that is, fine thread cut out of fish skin, which the Gilyak call mydisk and distinguish, according to the type of fish from which it was taken, as pilengat-mydisk, mimk-myd., kych-myd., etc. (5), fur coats and similar articles of clothing with the thread

5. Pilengat is Cyprinus Carpio L.; mimk -- Hypophthalmichthys Dybowskii Herz.; I do not know what type of fish the name kych refers to.

(Gil. kuba) that the Gilyak know how to make from the ordinary stinging nettle, and which is also used for making cord and fish- [199] ing nets (6). The garments made out of cotton or cloth are sewed [439] 171

6. As is also known for the Siberian peoples, the ancient Kamchadal (Steller, op. cit., p. 83; Krascheninnikof, op. cit., Vol. I, p. 332), and others. The Gilyak method of making thread and cord from nettle fibers will be discussed in this work in a later section dealing with fishing.

with Chinese cotton thread, and for the various quiltings and embroideries the Gilyak use either the latter or the silk thread likewise obtained from the Chinese, depending on the delicacy of the 294 work and the elegance aimed for. I have never seen a Gilyak 412 woman use scissors during her sewing and embroidering, although 197 they know of them, thanks to the Chinese and have a special term (chata) for them; instead they only use a knife. For smoothing 531 the fabric they use a smoothed piece of wood (pam), which is

/428 cont./

226 2. (cont.) 262 europäisch-asiatischen Störarten /A Few 113 Words about the Sturgeon Species of Europe and Asia/" (Bull. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIV, pp. 171 ff.

114 On March 6/18, 1856, when returning from 226 Sakhalin, I reached the village of Tcheharbach at the mouth of 262 the Amur, the Gilyak there were near the end of their fish sup- 332 plies and impatiently awaited the thawing of the river, for then the 439 sturgeon would immediately collect in great numbers in order to ascend the river. But farther up the Amur some are caught at practically every season of the year and even throughout the winter. In 1855 and 1856 the Gilyak supplied the Nikolayev post so amply with sturgeon meat and caviar, especially from the tukki-tsche which, it seems, is more common in the lower Amur, that this was our principal and almost daily food in the winter, /429/ and, despite its initial tastiness, we became very tired of it in time. They especially liked to sell their caviar in particular, 226 since the Russians paid them a good price for it, whereas they 262 themselves, although they likewise use it as food, do not prize it 439 very much. The meat of sturgeon and hausen, however, which 252 they always eat raw in the manner indicated above, is regarded among them as one of the tastiest of foods. Enormous quantities 196 of sturgeon and hausen are consumed especially during the bear festivals, which take place in the winter. On such occasions I saw whole rows of the mighty great animals lying on the floor of the yurt decorated for the celebration, though they are not on the menu of the actual feasts at the bear festival and are only eaten in between them or on the days preceding or following the festival. 231 Like the human beings, the dogs, too, get their share of these 439 fish, in that a soup is cooked for them out of the discarded, less desirable pieces and especially out of the gristly skeleton with the meat clinging to it, but the gristle itself is fished out of the kettle in order to be sold, cleaned and dried, to the Chinese.

/434/

262 The use of the dog for food on the part of the Gilyak is of 23 a wholly different significance, not so much social as practical. Understandably they must try to get the greatest possible from their sole domestic animal, which, moreover, they are obliged to keep in large numbers as draft animals. This is attained 237 inasmuch as even in case it becomes useless for transportation, because of deafity or injury, they utilize it by using its skin for clothing and its meat for food. As a result of this triple usefulness, the dog has the same significance for the Gilyak as the reindeer has for the Tungus and other reindeer nomads. Moreover the Gilyak find great tastiness in dog meat, which is understandable inasmuch as it, as a consequence of the almost exclusively fi diet that the dogs have among them, must likewise taste strongly like fish, and this can be nothing but most agreeable to the Gilya 123 palate (1). For this reason the Gilyak were always willing to buy 439

114 1. I could not bring myself to taste even the 122 dog meat that the Gilyak ate in my presence, but I know that the meat of an animal fed on fish acquires a strong fishy taste, from my experience with a little pig which Maximowicz and I bought from the Goldi on the Ussuri and which we soon, although long deprived of meat, gave up eating for the reason mentioned. As early as Strabo 113 one finds the remark that in the land of the ichthyophagi (on the coast of present-day Baluchistan) the meat of cattle tasted like fish (Tyler /Tylor/, Forsch. über die Urgesch. der Menschheit und die Entwickel. der Civilisation /Researches into the Early History of Mankind and the Development of Civilization/, translated from the English by H. Müller, p. 269). It is known that in Kamchatka even the milk of cows, if they have been fed jukola for a time because of a shortage of hay, always gets a more or less strong fishy taste.

/434 cont./

231 *262 [123] [134] from me for a small consideration the dogs that had become useless on a trip. The Gilyak do not consume their dogs, however, without an urgent reason. Such a reason can appear readily enough, however, if individual animals are injured or rendered useless, or if there are too many of them and, correspondingly, a shortage of food; in fact, even superstitious ideas can give rise to it. Thus, I have seen it happen, for example, in the village of Tyk on Sachalin, where I was delayed on account of severe snowstorms for several days in February, 1856, in the company of a few traveling Tschomi and Tymi Gilyak that, in order to calm the bad weather, after other means had already been sought in vain, three young dogs were strangled and consumed, which was to be repeated on the next day in case of failure. The meat and the entrails of the animals were thrown into the kettle, a part being added to the jukola soup for the dogs, and -- characteristically enough -- I saw the woman occupied with these preparations bite off a piece of the bloody entrails beforehand for herself and hand another little packet of it to a child, who likewise seemed to enjoy it very much. On another occasion, in the village of Duĭ, I was a witness to the entertainment of a large company of Gilyak with dog meat. This happened only as a celebration subsequent to a bear festival held there a short time before, traces of which were still to be seen in the exterior and interior decoration of the yurt. The dogs, among them a couple of invalids furnished by me, were killed in front of the yurt, skinned, disemboweled, the meat and the bones cut up, and all the pieces belonging to one animal wrapped in its pelt. /435/ Inside the yurt, the place between the rear sleeping bench and the hearth, where the scaffold with the bear's head had stood during the bear festival (1), was

traced back to Chinese influence.

Birds furnish the Gilyak much less food than do mammals, merely for the reason that they are not hunted very much on account of their little use otherwise and, as a rule, they are much more difficult to catch. Whatever the Gilyak do catch, however, is consumed indiscriminately, and some birds which are periodically more easily caught make a somewhat larger contribution, though always a minor one, to their diet here and there. At several places, for instance, the ptarmigan (Lagopus albus Gm., Gilyak parrā, on Sakhalin tschleola-nga) is caught by them in large numbers by means of simple snares. Along the west coast of Sakhalin, from Tyk to Duĭ, I saw them consuming with great relish the Phaleris cristatella Pall. (Gilyak nochla-nga), which easily falls prey to them in winter because they alight individually or in small flocks on the ice near open places in the sea and freeze to it. The meat of the sea eagle, which the Gilyak lift out of its nest and raise with fish in order to sell the tail to the Japanese, is consumed by them when its hour of death tolls.

252 *262 [137] [192] prepared, but with the difference that, instead of the fish roe, finely chopped seal-blubber was mixed in with the leaves. The Gilyak also use various lichens in quite similar ways, especially reindeer moss, Cetraria islandica L. (Gilyak chitwyrk) (3), and

3. Among the Olcha: chity.

a tree moss, Usnea (Gilyak tschwalch, and, to be sure, distinguished as kana (white) and piula (blue) tschwalch), for food by making soups out of them with the addition of fish roe or seal oil.

Finally, the sea, like the forest, also yields some vegetable food for the Gilyak, especially an edible alga, which they call tschollach (4), and the Laminaria esculenta (Gilyak putsch).

4. Glehn, op. cit., p. 214.

I have seen the latter consumed in the village of Tyk in much the same fashion as the above-mentioned tree moss and other plants, in that, mixed with chopped jukola it was cooked in water, whereupon, when fully cooked, it made a sticky, viscous mass of a white color in the soup. The Gilyak collect and dry the Laminaria in small stocks for the winter, which they may have learned from the Ainu, /442/ who, according to Schmidt (1), for their part

[177] [171] [251]

1. Op. cit., p. 98.

learned it from the Japanese, who keep the Ainu busy at it and annually send whole shiploads of dried and artificially rolled up Laminaria from Sakhalin to Hakodate and Matsmai.

While the natural vegetable products discussed above are of great importance for the Gilyak inasmuch as they are available to everyone, with a little trouble and care, and, though not very nutritious in themselves, contribute essentially to the greater tastiness and variety of their diet, and in times of scarcity when no fish and no animals are caught and the supplies of animal food run low, they may even prevent starvation,

*262 439 177

/442 cont./

*262 439 177 [554] matters are quite different with respect to those vegetable foods that the region itself does not produce and which the Gilyak can obtain only by trade with the adjacent civilized peoples, the Chinese, Japanese, and Russians. These foods, a few cereals and legumes, are to be sure, much more nutritious but on the whole have less significance for them, and indeed to a certain extent may even be called luxury items because they are directly available only to those who are better off and not always to them, but rather are eaten only upon certain occasions. In daily life they are used only rarely or hardly at all by the Gilyak. During the bear festivals, however, great quantities of them are consumed, and since these festivals are celebrated rather frequently and, in keeping with the communistic spirit of the Gilyak, are attended by numerous participants, the foods of this kind, stored up by an individual who becomes the host for the occasion, are always shared with a greater or lesser number of other and less prosperous Gilyak. On such occasions I have learned in detail the various foods of this kind that are customary among the Gilyak and the form in which they are eaten. As was said, there are not many of them. First come the cereals obtained from the Chinese. The most common and the most popular among the Gilyak is Chinese, or, as they always say, Manchurian millet, Setaria italica (Gilyak budā), and next Chinese barley (Gilyak mudī). Far rarer and less popular is Sorghum vulgare L. (Gilyak ssjussj) (2).

*262 439 177 [554] 177 [114]

[192]

2. The first two have the same designation among the Olcha; the latter is called ssjussu by them and by the Goldi.

Japanese rice, on the other hand, is highly esteemed by the Gilyak, though it is only very rarely found among them. Judin, a very distinguished Gilyak, the host of a bear festival which I attended in the winter of 1856 in the village of Tebach, still had the remnants of a supply which he had acquired years ago from the Japanese (Sisam) on Sakhalin, but there was not enough to set before the numerous guests. As soon as the Russians settled in the

*262 439 177 [137] [137] [137] [137]

*262 /442 cont./As soon as the Russians settled in the lower Amur region, in Petrofskoje Simowjo, Nikolayevsk, and Mariinsk, the Gilyak began to obtain small quantities of various cereals from them. Buckwheat groats in particular found the greatest approval among them, and I saw it served in great quantities during the above-mentioned bear festival of 1856. They greatly liked the inexpensive Russian rye flour (Gilyak dwa), which they /443/ could obtain from the Chinese only small quantities, wheat flour (Gilyak rhak) at a high price. All the above-mentioned cereals are cooked by the Gilyak to a thick dry mush and eaten with fish oil, which, like melted butter among us, is poured with a spoon or a small stick into a depression made in the groats. It has a variety of uses among them. The principal one is in the preparation of a kind of cake or small loaf of bread. For this purpose, it has fish oil poured over it and is kneaded into a dough, a work which the women accomplish by taking a mouthful of water and, while kneading the dough, let as much of it as is in run into it. From this dough, flat, longish, or round small loaves are formed, cooked in water in the large kettle at the hearth, and finally, broken into pieces and sprinkled with fish oil. They another dish which is very pleasing to the Gilyak palate by mixing the flour with fish oil and partly crushed bilberries or cranberries (Empetrum nigrum /crowberry/) and stirring this to a mush. one garden vegetable is used among them, and this almost solely on festive occasions. It is the common white or yellowish bean (Phaseolus vulgaris L., Gilyak tursch), which they obtain from Chinese living farther up along the Amur and Sungari. They first cooked and then mixed with fish oil, chopped kyp (see above) and finely chopped dried leeks (hagi), and sometimes also berries from Empetrum nigrum -- a truly peculiar culinary achievement owing to its curious composition.

*262 439 177 [554] 252 439 177 [137] [137] [137] [137]

*262 Thus, not merely the various native vegetable foods, which serve more as supplements, but also the few really nutritious exotic ones which the Gilyak use as food are not eaten by them other than with a more or less strong addition of fish oil. The ichthyophagous nature of the Gilyak remains true even here. thus, in spite of the not inconsiderable vegetable foods listed a

/A84 cont./

resistance. It certainly existed among them long before they became acquainted with talk, as can be seen from the fact that they do not have any independent designation for it, but only a somewhat modified foreign one. For the Gilyak designation tahsch for talk was probably /A85/ borrowed from the Manchurian dahsun (dangolian. dahsun) (1). On the basis of this etymology, I would

[115] 1. Klaproth, Asia polyglotta, p. 298;
Xenothalias (Longinotic Asia) p. XXXXVI.

also presume that the Gilyak first became acquainted with talk at the time when a Manchu tribe, the Dzutschwen, engaged in agriculture, livestock breeding, and the like, lived along the lower Amur from the mouth of the Sungari to below the mouth of the Ussuri, from where they were transplanted to the Chinese in the middle of the seventeenth century upon orders from the Chinese government (2).

[116] 2. See p. 318 above.

In the two centuries since then talk has found no acceptance among the Gilyak —certainly proof that there was no physiological need for it.

Whereas the Gilyak aversion to talk is so pronounced and [117] generally signified (tahsch tahsch), on the other hand, there prevail very [118] great sympathy, and to be sure, in the form in which they become acquainted with it from the Russian (3). The Chinese

[119] 3. Could it not be that the Gilyak designation given for it was borrowed from the Russian (Tsachar?)?

[120] tsachar (tsachar) known to them earlier, brown in color and only [121] [illegible] sweet in taste, but not so important for them, and since, moreover, it is to be had only for a high price and only by way of exception from the Chinese traders along the Amur, who usually carry with them only small quantities of it for their own use,

/A86 cont./

4. Mamia Rinsô (Sôbôtô, Nippon, VII, p. 189) says that the Gilyak (Smenenkur) on Sakhalin have a Japanese sugar that he gave them to try very tasty, but did not ask for more of it.

[122] In the upper Amur, they are very avid for Russian sugar; at the time of my stay there, next to tobacco, it was the chief object of their frequent and very importunate begging, during which, as a rule, they pushed the chief-item forward, to arouse sympathy, pretended that they had an eye disease, maintaining that it could be cured only with sugar, but subsequently they also bought some in Nikolayevsk in order to [123] add it to their dishes, especially to the aforementioned Dzur-cakes and to those prepared with cranberries or bilberries and the like. They declared that they would not hesitate to do this to the [124] dishes prepared for the bear festival; it were available in sufficient quantity, which shows they entirely different attitude toward sugar and salt.

To conclude our statements on the food of the Gilyak, there [125] follows here a brief mention of those more important implements and utensils used for holding the foodstuffs, as well as for the preparation and consumption of the same. First, only the ordinary objects of this kind used in daily life will be mentioned, while the special utensils used in connection with the bear festivals will be [126] discussed later at the proper place. At was already stated above, [127] that in the entrance of the yurt there is a bucket made of birch bark and filled with water, on which hangs a couple of bowls for dipping and drinking. The water for this and for the other bowls [128] [illegible] is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke *PN*, *FIIIA*, Fig. 1 and *F*. [illegible] (also made of birch bark, respectively). /A87/ Similarly consideration has been given to the large iron kettle (Gilyak [illegible] [illegible]) which in the winter house is embedded in each of

"Ueber den Fischfang und die Jagd der am Amur wohnenden Giljaken /On the Fishing and Hunting of the Gilyak Living on the Amur/" (Bullet. de la Soc. Imp. des Natural. de Moscou, Vol. XXXIV, Part II, 1861, p. 594). also Vambéry Ferne v. 1866, p. 59 and elsewhere.

Tobacco smoking is common among all the peoples of the ur region, and, indeed, both men and women smoke, and ve the children are given the opportunity to become accustomed it at an early age. It seems obvious to me where these peoples learned about the tobacco plant and its use. As is well-known, scharia is the country from which China, at least the northern ART obtained the tobacco plant and the custom of smoking. acco, and, indeed, this is said to have happened only about and a half centuries ago when the now reigning Manchu dynasty ended the throne (1644), upon whose orders the introduction of acco into China took place (2) and under whose protection the

the Manchu (dambago) and Mongols (tamachi), is always the same, with very minor variations, among all the Amur peoples, too, thus, among the Goldi and Olcha dambe, tamche, and tamacho, among the Gilyak tamgich, among the Ainu tambako, etc.

Later, after the Manchurian Tobacco had already spread among all the Amur peoples and had become an indispensable necessity for them, Russian tobacco entered the Amur region from the west and north, both as a result of the constant intercourse maintained by the Russian Cossacks, hunters, and traders with the Orochons, Tungus and other tribes of the upper Amur region, and through the Yakut merchants who in part followed these nomads and in part visited certain trading points at which they exchanged goods with them as well as with the other peoples of the lower Amur region (2). Nevertheless, up

2. See pp. 160-166 above.

until the Russian occupation of the Amur region in the fifties, Manchurian tobacco was entirely predominant among all the peoples there, and it was only after this event that the Russian (Circassian) tobacco began to replace it very rapidly, first and especially of course, among those peoples who did not cultivate tobacco themselves, hence among the Gilyak, Olcha, etc. What made it especially popular among them is its much greater strength or acridness in comparison with the Manchurian tobacco, as well as its being far cheaper. The great popularity of Russian tobacco and the general and heavy demand for it among the peoples named soon made it the most important and most necessary article of trade in dealing with them.

Like tobacco, the Gilyak and the other peoples of the Amur region also adopted from the Manchu the form of the pipe (Gilyak tai), which is also widespread throughout China and consists of two metal pieces connected by a thin, black-colored,

1. (cont.)

at St. Pétersb., Vilth series, Vol. XII, No. 2, p. 99).

Among the Gilyak, the tobacco, chopped fine on a special board (Pl. XXXIV, Fig. 8)[a], and, when dry, disintegrating almost to powder, is kept in a pouch, which, adopted everywhere in the Amur region, seems to be of one and the same Manchu-Chinese form: long and narrow and provided with a lateral slit close to the upper end, by means of which the pipe is stuck in, in order to be filled with tobacco inside the pouch. It is always carried in this position, together with the pouch, which as a rule is fastened to one of the top buttons of the fur coat or the shirt and hangs down from there over the chest. Usually it is made of fine skin, leather, or a piece of fur, bordered with Chinese cotton or silk along the edges, decorated at the top with some embroidered or painted arabesque, and occasionally made out of one of these fabrics.

The Gilyak likes to share the pleasure of smoking tobacco with others. Thus it never done, however, that a party passing the pipe around among all the persons sitting around the hearth or a fire burning outdoors. This is prohibited simply by the small size of the pipe, as well as by the usual or ideal difference between the existing bet-ween those present. As a rule, however, one seat the pipe go back and forth between two persons sitting side by side. In particular, if a newcomer appears in the yurt, the host, after he has taken a seat beside him, hands him his newly lighted pipe, which the latter, after he takes a puff from it, returns again to the former, receives it from him again, and so forth, until the pipe is finished, whereupon the guest pays him back in the same way. This is always a sign of friendly welcome and of good understanding, or of a certain esteem and equal footing. I often saw the Chinese merchants on the Amur do this with the natives who entered the yurt and approached them, which undoubtedly was for the purpose of winning them over by such advances, very flattering to them, and putting them in a more favorable mood for the business dealings.

[See category 114, Pl. 104 - Analysis]

1. (cont.)

durch versch. Prov. des Russ. Reichs /Journey through Various Provinces of the Russian Empire/, Vol. III, p. 44), the Ostyak on the lower Obj also keep their draft-dogs outside, but always feed them in the yurt.

The dogs of the Russians on the Amur, bought from the Gilyak, to be sure, but, as we mentioned above, treated differently and in particular only fed outside, may fall short of the Gilyak dogs in this respect.

The Gilyak sled (7a) has a peculiar form and nature. In comparison with the Tungus-Siberian sled, on the sled used for traveling with dogs is called by the Russians, the Gilyak sled is very light, delicately and gracefully built, and, as a result of its flexibility, it is less durable. Its form and construction is always the same, even if the size varies, so that in making it it seems that a certain proportion with regard to the individual dimensions and parts is always observed. I had many opportunities to become familiar with the construction and measurements of these sleds because the Gilyak used my house in Dikolayevsk as temporary quarters and never had permission to put their sleds in a corridor of it, after the dogs had been unharnessed, while they tended to their affairs in the village. An ordinary sled which I measured, illustrated in Plate XXXVI, p.104/, Fig. 1, had the following /487/ principal dimensions: the length from one end to the other was 14 feet and 8 inches (Russian or English), the width 1' 4", the height in the middle (including the protective sides to be discussed forthwith) 11". Thus, the sled was precisely 11 times longer than wide and 16 times longer than high. Regard as a whole and with respect to the individual parts, its construction is the following: the narrow and thin soles /runners/ Gilyak tunlej, a in the illustration) are horizontal only in the middle sections, but toward the ends gradually and gently slope upward. Because of their thinness, they would wear out easily; to protect them from this and at the same time to give them the proper upward curve toward the ends, they are provided by the understide-

Fortunately for the Orok, however, the Gilyak intellect, directed him toward warfare than toward gain and profit, since made them recognize that they did not have to fear any curtailment of their interests by the immigrating newcomers, but rather could get considerable gain, for the treasures of precious fur-bearing, as skilled hunters, brought to light on their migrations in the remote mountainous forests of the island would have to benefit them the most as the fast buyers and inevitable middlemen in the trade with the Chinese and Japanese. I don't intend to that trade later. The advantage that the Gilyak derive from the Orok by means of it sufficiently explains the tolerance and forbearance that they show toward the latter in allowing them, despite the many inconveniences to themselves, to pass unhindered with their reindeer on the /485/ paths made by their dog sleds through the Tymy Valley. Such a possibility for the Orok, growing out of their good relations with the Gilyak and enabling them to use the paths made by the Gilyak sleds through the entire Tymy Valley and beyond, across the mountains and the Laman to the Amur, and along the Poronai to the Bay of Patience, may have prompted them to use these paths for their annual migrations in the same manner as the Gilyak and Ainu did with their dogs, that is, to harness them to sleds constructed for this purpose. Indeed, they must have come to it all too soon readily since, as a result of their relations with the Gilyak, they were sometimes forced, for example, when they came into the latter's villages for trading purposes, to use dogs for driving. Furthermore, a few sleds harnessed to dogs are indispensable to them on their migrations in order to hasten in front of the reindeer expedition and prevent sudden encounters with Gilyak or other dog-teams. The sleds that I met near Pilb we were of this kind. Later on I repeatedly saw Orok traveling on dog-drawn sleds near Joj and in the upper reaches of the Tymy mouth. Thanks to their contact and intercourse with the Gilyak, the Orok on Sakhalin represent for us the certainly very rare, though not wholly unique case of a primitive people that has no less than three methods of locomotion by land, in that the reindeer is ridden and driven, and in addition the dog is used for

boat on the Sungari as well as on the Amur, began to build their yurts on the same pattern as the Gilyak and in the same form that they borrowed from that boat only the basic and fundamental parts satisfying their needs and gave them the small dimensions appropriate to their number of persons and powers. Indeed, in all the more probable inasmuch as the Sungari Chinese, always intent on exploiting the labor power of the natives for their own advantage, had probably long since arrived at the idea of not building their boats themselves, but of having them built by the latter according to a given pattern and in return for small pay, at in done to this day. In particular the lower Goldi and the Olcha living next to them (for instance, those of Adi), in whose regions the wood required, tall cedars, is found in abundance, provide the most and the most highly skilled labor that both the Manchu-Chinese boats and those for their own people and the other peoples of the lower Amur region. Maximovicz (Bullet. de la Soc. Imp. des Natural. de Moscou, Vol. XXXIII, p. 186) describes a Manchu-Chinese boat made to order by the lower Goldi, with an over-all length of eight fathoms and at its greatest width an opening of one and a quarter fathoms, for which the Chinese merchant had paid a price of two feet silk and a foot-wide, three fathoms of cotton cloth, and four sacks of millet groats. Only in one point, as is seen from the above, is there an important difference between the Goldi-Gilyak boat and the Manchu-Chinese one, though in part it is due to the difference in size. It is in the mode of arranging the oars, since the former has bored oars tied on each side, while the latter has ordinary oars resting in appropriate indentations on the sides. I am not aware that the first mode occurs among the Chinese or any of the neighboring Siberian peoples; in the other hand, it occurs generally among the Ainu of Sakhalin and Jezo (1) and

1. Siebold, Nippon, VII, Plate XXIII.

therefore may perhaps be an Ainu-Gilyak or general Paleo-Asiatic invention or peculiarity, which was imparted by the Gilyak to their Tungusic neighbors along the Amur, the Olcha and Goldi, and, on account of its usefulness, was also

Amur region. To be sure, there are Manchu-Chinese boats there, which are used by the Manchu officials and Daur traders, and, indeed, a number of large boats of this kind constantly lies before the city of Aigun -- I myself counted 27 -- but these divided into three groups -- but these old boats, painted black and red and decorated at the stern with crudely carved and likewise colorfully painted dragons, which represent the military Tsupik of China and are supposed to inspire the Amur peoples with respect for it, are of course, quite inconsiderable to the latter. Moreover, these hunting nomads, depending more on the tributaries, are, as we said, completely satisfied with their primitive canoes, and, finally, also lacking there are the avaricious Chinese traders acting as intermediaries who do along the Sungari and the lower Amur.

In looking back at all the means used by the Amur peoples to move and to get from place to place on land and on water, it seems justifiable to conclude that they show very essential and characteristic differences in the upper and in the lower Amur region, and in the latter have reached a higher development on the whole than in the former -- a fact that in itself shows that here the aims and purposes served by them must be much more far-reaching, and, in particular, that the trade maintained among the Amur peoples themselves and with the neighboring civilized peoples is far more active and extensive here than there, for which, in fact, many examples and confirmations will be given in the following, with a more detailed consideration of these conditions.

Hunting the Animals of the Forest. Hunting Equipment. Iron Hunting-weapons and Iron Iron Weapons and their Manufacture. Protective Armor and Arms of Honor.

As we now turn to the second main source of subsistence of the Amur peoples, hunting the animals of the forest, I must first point out, recapitulating briefly and summarily the remarks frequently made above, that it, in direct contrast to fishing, increases the more in immediate importance and significance the farther we upstream one goes from the mouth of the Amur and into its tributaries, and, finally, in the upper Amur region, where fishing in the lower one, becomes the primary and most essential condition for the existence of its peoples.

The Gilyak, with whom we again begin our observations, are accordingly, at the most sedentary, the most fishing-peoples, and at general the most precontrived fishing peoples of the Amur region, the least devoted of all its peoples to hunting the animals of the forest. Whereas for them catching fish, seals, and white whales serves for the immediate satisfaction of their needs in clothing and in food for themselves and their dogs, hunting by and large serves these ends

/559 cont./

which also bears fine silver decorations on the specimen illustrated. Sometimes used for this purpose are thin plates from Chinese buffalo horn, which not far away in the Gilyak call puntsch-ngynif, i.e., bow bones, or from the nose-piece of the Rhinoceros tichorhinus, which presumably reaches the Amur region by way of the Tungus and Yakut. The bow-string (Gilyak kich) is twisted out of fine strips of the skin or gut of the whale. A case made out of fur or fish skin (Gilyak puntsch-chat) is used to protect the bow, especially on trips. The arrows (Nu) have wooden shafts with vanes from the tail feathers of the fishing eagle (Haliaëtus albicilla) set in the lower part of two opposite sides (Pl. XLV /See p.1025/, Fig. 4) (4) and points of various forms,

4. By this characteristic alone they are essentially different from the simple shafts of the arrows used on the self-firer and, accordingly, have a special designation; it is known that they are called uch, but the latter winnger. The eagle feathers on the arrow shaft are called kyla-ngar in Gilyak; the notch at the lower end of the shaft, just above the vane on the bowstring, is called lorm.

depending on the animals for which they are intended. In ancient times among the Gilyak iron arrow points (Gilyak kich) were almost the only ones used, but there were also some of bone (Gilyak kranghch), which were supposedly made of the leg bones of the musk deer in particular. Some of these iron arrow points are intended for larger animals, elk, reindeer, and the like, and equipped on either side with a more or less sizable barb and in most cases also with a series of smaller barbs and notches, are illustrated on Pl. XLV /See p.1025/, Figs. 1-3. The two-pronged point (kor) used on the arrows for both the bow and the self-firer for killing smaller animals, table, otter, fox, etc., has already been discussed above. An arrow with a very special shape, called

/564 cont./

to fishing or seal-hunting, a natural explanation is found in the circumstance already pointed out in the beginning, that among them, hunting does not by far stand in the foreground of life to the degree that fishing and seal-catching do.

In discussing the various kinds of arrows used by the Gilyak, the hunting of wild fowl was also considered above in passing. A few pertinent remarks might in addition follow here. By far the greatest number of ducks, geese, and other waterfowl are not killed by the aforementioned knob-shaped arrows, which on the whole are used very little, but are caught in nets during the molting season and simply beaten to death. Only incidentally, but not infrequently, they capture birds that get their food by diving into the water and become entangled in the nets. Among these they pay special attention to the divers (Colymbus septentrionalis L. and C. arcticus L. (Gilyak ugn), which however, is done, not for practical, utilitarian reasons, but out of superstition, about which I shall speak later when discussing their methods of burial. The hazel grouse (Gilyak hang) and white grouse (Gilyak parrâ, along the Tymy on Sakhalin tschkoia-ngâ), with which the Gilyak /565/ amply supplied the Nikolayevsk post during the winters of 1850-1851, are caught by them in snares (Gilyak kun). With regard to the white grouse, which one also finds represented on amulets among the Gilyak, although in a completely unrecognizable, only symbolic fashion, I likewise noted among them the above-mentioned superstition relating to the head of the animal, in that in selling this bird they greatly desired to remove the head first.

For the Gilyak the most important of all the birds are the fishing eagles Haliaëtus pelagicus Pall. (Gilyak tscharngaitschkam) and H. albicilla Brins. (Gilyak mygir-tscham, in the interior of Sakhalin ach-tschar). The former, however, occurs only rarely in their territory and only along the seacoast, but the latter, on the other hand, is common and occurs throughout the region, and it is therefore always meant when merely the eagle (eagle) is mentioned. The benefit that the Gilyak derive from it consists in the fact that the feathers are an important

/565 cont./

article of trade with the Japanese, among whom, as the former said at the time, they are used to decorate the windows in the dwellings of prominent persons, thereby distinguishing them from the dwellings of ordinary people. Moreover, the Gilyak use eagle feathers to feather their arrows and to make certain articles of symbolic significance for their little burial houses. In order to obtain the rectrices of the eagle as undamaged as possible, the Gilyak take the young birds out of the nest, in connection with which they tell tall trees that are hard to climb and have nests in their tops before the young can fly. The captured young eagles are kept chained to the fish-drying racks by feed and with fish scraps until they are in full feather, whereupon they are killed, but their tail feathers are carefully spread out between sheets of birch bark and in this fashion stored for trading. The number of eagles annually caught and raised by the Gilyak must be very considerable, since one can scarcely enter a Gilyak village in which he does not see several of them in the fish-drying racks. In particular, however, the southern coast of the Sea of Okhotsk is regarded as the eagle region proper, because there not only the mygir-tscham is captured, but also the tscharngai-tscham, whose tail feathers are especially prized by the Japanese. Thus, it is not at all unusual for the Amur and Liman Gilyak to go to the coast of the Sea of Okhotsk for a stay of several years in order to obtain eagles' tails there. Like the Gilyak, their closer and more distant neighbors, the Amur, the Olcha and Goldi, and the Orochi occupy themselves with raising young fishing eagles of the same species (Hal. albicilla, Olcha guni, Goldi kâktscha), and, to be sure, not, as Maack thinks (1), in order to show their religious veneration or to keep

1. Puteshi, na Amur", pp. 143, 170, 206.

other birds away from the fish hanging on the drying racks, but likewise only in order to sell their tails to the Japanese, which is done either directly or through the Gilyak. Finally, the same is done by the Ainu of Jesso and the Kuriles, as has been

/568 cont./

Gilyak (1).

1. See p. 590 above and Plate XXVIII /See p.1008/, Fig. 1.

For this type of work among the Gilyak, in addition to iron (Gilyak wrtschi), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass (Gilyak tussi), and silver (Gilyak totta) (2). The more of the

2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make ornaments, such as rings, ear pendants, clasps, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to use for their purposes (3).

3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is an art practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg is in full agreement with this. Undoubtedly, however, they have borrowed this art from one of the two civilized peoples of East Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relations

/572 cont./

their eyes, of course, were surrounded with the aura of great wealth and esteem, made those who saw, swear, and the like which they themselves (the Ainu) prized so highly and paid for so dearly in trade with them. How very much this was the case can be seen from Steller's information that the Kurile Ainu gladly gave 20 sea beavers for an old Japanese saber and that Steller himself had made a very good trade, but wore such sabers only on festive days or during festive processions and made "the strangest figures during the welcoming" with them.

For the moment the most certain undecided whether the above-mentioned iron needles, which came from Japan to the Kamchadal as their first iron implements, spread from the latter to their neighbors, the Koryak and the Chukchee, before iron was brought these peoples by the Russians. At any rate, three Paleo-Asiatic peoples, the Ainu, the Gilyak, and the Kamchadal, received iron from Japan, and this was a natural consequence of the geographical position of the latter. The originality of these peoples, for just to the north of Nippon, the principal island of Japan, is the island of Jesso, the principal region of the Ainu (1),

1. The view advanced chiefly by Ph. Siebold that the Ainu formerly also inhabited the north of Nippon (see above, p. 585) has recently been attacked by Braun ("Die Bewohner des Japanischen Inselreichs /The Inhabitants of the Japanese Island-Realm/" in the Jahrerber. der Frankfurter Verein für Geogr. u. Statist., Years 48 and 49, 1883-1884, 1884-1885, Scientific Part, pp. 5 ff).

which, in turn, on the one hand, leads to the half-Gilyak Sakhalin, and, on the other hand, via the chain of the Kuriles, to Kamchatka. One may therefore draw the further conclusion that at the time when these peoples lived farther in the interior

/578 cont./

Gilyak have gained far greater scope among all the Tunguzic peoples of the lower Amur region and must be of more essential significance for their entire lives than is the case among the Gilyak.

Among the Tunguzic peoples of the lower Amur region, too, just as among the Gilyak, the catching of precious furbearing animals, such as sable, river otter, and the fox, comes first, simply because by trading them they obtain not only clothing materials and foodstuffs, but also the universally popular luxury items, and especially tobacco, which has become indispensable to them. It is also practiced in the same ways and with the same means, but over a greater area and with more adroitness and skill and, therefore, with more success.

But whereas among the Gilyak hunting is limited almost solely to the catching of fur-bearing animals and fish, which by the interests of trade, among the Tunguzic Amur /579/ peoples it also extends to no less an extent to the above-mentioned kinds of red deer, big game, wild boars, and, to be sure, they are not merely slain and utilized on occasion, as happens among the Gilyak, but are pursued regularly and zealously, because they are used directly and very essentially for their clothing and food. This has already been pointed out above in the discussion of these two points. With regard to food, however, all the more significance must be ascribed to hunting among the Tunguzic Amur peoples, for it takes up much more of their time than among the Gilyak, and the further upstream and inland the more, and the more exclusively, it takes up the entire winter and part of the fall and spring.

Hand in hand with the longer period of hunting among the Tunguzic Amur peoples also goes its extension over a far larger area. Whereas the Gilyak content himself with a relatively small sphere for hunting, sets up his traps and self-firers in the localities that he knows to be favorable from experience and at the spots suggested by animal tracks in the snow, visits them from time to time, and at night always returns again to his

Section 10

Trade. Value of the Principal Items Occurring in Trade, the Household, and the Rest of Life. Trade Relations of the Amur Peoples with One Another and with the Manchu-Chinese, Japanese, and Russians. A Look at the Recent History of Trade and the Rule of the Manchu-Chinese in the Lower Amur Region.

As essential as fishing and hunting may be for the existence of the Amur peoples, they nevertheless cannot directly satisfy all of their needs; they cannot procure some of their requirements in food and clothing, as well as the luxury items that have become no less essential to them, except by selling part of their hunting and fishing products to the neighboring civilized peoples, that is, by trading. Thus, in this latter, a third source of subsistence is opened to them, by means of which the first two are essentially supplemented and brought to their full significance.

It is clear that even more than in the earlier sections the observations on the trade of the Amur peoples should begin with the Gilyak. None of the indigenous peoples of the lower Amur region had as much interest and talent for trade and such extensive trade relations as the Gilyak. It is typical for them that in the first information which the Russians received about them -- I mean the above-mentioned account that the Cossack leader Pyrlitsyn had heard from the Witim /Vitim/ Tungus in the years 1639 and 1640 (1) -- they were already designated as a people living

1. See p. 203 above.

at the mouth of the Amur (Schilka) and having trade connections with the Chinese. In fact, they do more trading with the Chinese and Japanese than the other peoples of the lower Amur region, although they /581/ live farther from them, and often act as middlemen in the trade of the latter with the former as well as in that of the two civilized peoples with each other.

1. According to the Gilyak "belkowtj." i.e., to pursue squirrel-hunting.

/591 cont./

439 in that of the two civilized peoples with each other. Thus, they stand in the center, so to speak, of all international trade relations in the lower Amur region. This is especially true of the
439 Amur Gilyak, while those on Sakhalin and the southern coast
184 of the Sea of Okhotsk have hardly less a peripheral position in this respect than the other peoples of the region. The former, however, are also favored more than the latter two by their geographical position, in that, besides the sea route to the Japanese by way of the Liman and along the west coast of Sakhalin, they also have a second water artery on the Amur River, which leads them to the Chinese living on it as well as on the Sungari. Finally, in the trade with the Russians, too, the Gilyak, and, to be sure, again those of the Amur River, occupy a central and intermediary position, so to speak, in contrast to the neighboring peoples, merely as a result of the fact that the occupation of the Amur region in the 50's by the Russians started at the mouth of the Amur and the first settlements were founded in Gilyak territory, in particular the Nikolayev post, which for some time remained the headquarters of the Russian administration and from which the further exploration of the lower Amur region and of Sakhalin took place.

If one calls to mind the violent and bloody resistance with
195 which the Gilyak opposed the Russian freebooters in the seven-
648 teenth century (1) and considers that by nature they are by no
157

1. See pp. 218-227 above.

means as good-natured, docile, and indolent as the Tungus, but rather, far to the contrary, are malicious, spiteful, and deceitful, while at the same time energetic and even ready to shed blood if humiliation or greed are involved (2), it might be surprising

2. The killing of de la Brnière by the Gilyak mentioned above (p. 575, note 1) is evidence of this. Shortly before my arrival in the Amur region, the crew of a

/591 cont./

195 2. (cont.)
648 whaler that had run aground in the vicinity
157 of the northwestern tip of Sakhalin was killed by the especially notorious Gilyak from Tammlawo and the boat was plundered. In 1855, among the Gilyak
[114] of Poghobi, I saw a bucket bearing a number and an English inscription, which presumably came from it.

that the occupation of their territory achieved by the Russians with very few means in the beginning took place in such a peaceful manner and without any bloodshed. Undoubtedly the love of trade inherent in the Gilyak to a high degree very
439 essentially contributed to this. The possibility of being able to
[174] exchange in the Russian settlements an assortment of products of which they had an abundance, and for which they otherwise could find no market, such as fish, game, berries, etc., for various articles greatly coveted by them, especially material for clothing and tobacco, must have made them peaceably disposed toward them, and the great advantage that they were able to draw from this trade by their industriousness, cleverness, and skill kept suppressed the suspicion and fear that the newcomers and their rapidly growing numbers and strength aroused in them. The Nikolayev post soon became the most important trade center of the Amur Gilyak, and, thanks to the active trade /592/ that the latter maintained with their fellow-tribesmen along the Sea of Okhotsk and on Sakhalin, as well as with the Ainu and the Tungusic Amur peoples, many Russian wares were soon widely distributed in the region. Nevertheless, in my time among the
184 Gilyak of Sakhalin, where, apart from the Murawjof post in Aniwa
648 Bay, already destroyed again, there were not yet any Russian settlements, there was a suspicious and hostile attitude toward the Russians, which made it necessary for the traveler to be on his guard constantly against actual attacks. In the evening,
[123] when they sat around the fire blazing in the yurt, I repeatedly heard them argue about the Russians who had come into their

/592 cont./

123 country and, in the conviction that I did not understand them,
184 express the suspicion that they were now only exploring the
648 country, just as I was doing, in order to take possession of it later and to push out of it and destroy all the Gilyak. At some places, as in Tyk, Duĭ, and the uppermost Tymy villages, they sometimes even directly opposed me insubordinately and hostilely in that they did not want to permit me to stay in their yurts or to make a fire on their hearth for the preparation of my meal, and refused to sell me the necessary food for my dogs from their supplies. This latter refusal was even worse than the two first ones, because it could not be overcome by threats with pistol in
439 hand, as they could. Thanks to their passion for trade, however,
123 I was always able to put an end to them: one or another of them certainly could not resist the trade articles which I carried with me and produced apparently without design, and, if just one yielded to temptation and made a small trade, the ice was broken and offers rained down from all sides, so that I soon had more than enough of what was needed. With the opening of trade, however, agreement was always also reached on all
439 other matters. The Gilyak show much practical sense, clever-
150 ness, tenacity, and skill in trading. Only articles of known practical utility excites their inclination to buy: on the other hand, anything new and unusual, no matter how striking, is, to be sure, gazed at and admired (with the frequently repeated exclamation of "tsa-tsa-ā," accompanied by striking the head with the palm of the hand), and even accepted as a present, but never bought. Of their own wares they always offer the inferior pieces first and go up to the better ones, in the course of which they praise them and insist on the first demand. In short, everything points to a people skilled and experienced in trade, and how very much this in fact fits them can be seen from the following more detailed statements.

Despite the fact that all trade in the Amur region, and
439 hence also that of the Gilyak, is only barter and no money is used
435 among them, nevertheless a not merely relative but absolute, numerically definable value for all the articles playing a role in

G
Gi /594 cont./
435 solely decisive position which the former occupy in the trade
197 with them. Among the Goldi, who live closest to the Sungari
G Chinese and have constant retail-trade relations with them, a tenth
[439] part and perhaps even a hundredth part of the ja or the silver ounce comes into consideration, which makes it necessary for them in giving a price to name also the pertinent unit of value
G (ja or dicha). For the more distant Olcha and Gilyak, however,
Gi who, as we shall see, obtain what they need in Chinese goods
• 439 in larger quantities in Sian-sian on the Sungari, the tenth and
435 the hundredth of the ja are no longer of any practical significance --
197 for they are concerned only with the whole unit of value and its multiples, and therefore there is no need among them to name it expressly in making apparatus, but rather it suffices to give only the number concerned. If I had made my investigations into this
G question, instead of from the Gilyak to the Goldi, in the opposite
Gi direction, going from the latter to the former, the unit of value
435 upon which their evaluations are based would have been apparent
197 to me without any difficulty, automatically, as it were. Incidentally, the unit of value borrowed from the Chinese, since it is not represented among the latter by any coin, is always only an imaginary quantity for the Amur peoples, and they are able to form only an approximate idea of it in terms of the number or quantity of the corresponding pieces of goods or other articles.
G As is well known, in China only the thousandth part of a silver
[142] ounce is current in the form of coins -- the round brass coins with a square hole in the center (Gilyak tscheha), which are usually strung ten and a thousand on a string. On account of
G their insignificant value, however, the Gilyak pay no attention
[436] to them, and, like the variously shaped brass lamellae, they are
[361] used only as decorations for women's skirts or occasionally also as shirt and belt buttons. In my time Russian coins, likewise
G called tscheha (that is, probably "coin" in general) by the Gilyak,
436 were not accepted either by them or by the other natives of the
197 lower Amur region, both out of complete unfamiliarity with their value and because the Chinese merchants likewise would not
G accept them (1). Through their association with the Russians,

1. The only coins for which a use could be

/594 cont.)

1. (cont.)
found with respect to the Chinese merchants during my time in the Amur region were Spanish (Mexican) piasters, so-called colonnados, and even these were always first carefully tested as to their weight with the help of hand scales.

G Through their association with the Russians
436 however, the Gilyak very soon also became familiar with the
197 use of their coins (2).
• 434

2. Indeed, now they are said to accept even Russian notes as payment. As proof of their great shrewdness in monetary and trade matters the following incident, which occurred during my stay, might be mentioned. The frequently mentioned Foswein, a Gilyak from Kulj, who had been close to the Russians ever since their first appearance in the region, made a voyage from Nikolayevsk to Sakhalin for the sole purpose of exchanging with his countrymen there various small items for all kinds of valuables and especially gold and silver coins, which they had stolen from a stranded American whaler after killing part of the crew, and then to make a profit out of them with the Russians.

G
Gi /595/ By means of the unit of value borrowed from the
439 Chinese and common to all the peoples of the lower Amur
197 region, the barter trade which they carry on among themselves and with the Chinese is, by and large, given a fixed standard in that the in part very heterogeneous wares involved in it appear equal in value to the extent that, with respect to quantity, size, quality, etc., they represent or contain an equal number of units of value and can be exchanged without any disadvantage for

/595 cont./

G
Gi either the buyer or seller. The price or the value of the trade
43 commodities depends, on the one hand, on the greater or lesser
197 demand which they enjoy among the Chinese and, on the other hand, the more or less strong need for them found among the Gilyak, Olcha, and Goldi, and which is itself determined in turn in large part by their use in the trade carried on by them among one another and with the Japanese. Great changes in the prices of certain commodities inevitably arose when the Gilyak, and after them the other peoples of the lower Amur region, also came in contact with the Russians, besides the Chinese and Japanese, with whom they had ancient trade connections, and the Russian merchants began in part to compete very successfully with those of the Chinese and Japanese.
G More than elsewhere, therefore, it must be kept in mind in
[128] connection with the trade relations of the Amur peoples that my descriptions refer to a period when this contact had first been made and had not yet had the consequences that it has today. Finally, concerning the value of objects not involved
435 in trade among the Gilyak, but associated with their households and the rest of their life and activities, the decisive factors are to be sought in their customs, conceptions, and views, evidence of which will be given in the following.

By means of many and repeated inquiries among the Gilyak
G and my own trade and other relations with them, I was able to
435 learn the values, given in the following table, of both the most
• 439 important commodities in their trade with the Chinese, Japanese, and in part also with the Russians, and the foremost articles in their life and households, discussed and in part illustrated in the above descriptions. Thus, among them:

A table pelt, depending on its quality, ... equals 1-2 ja
A pelt from the red fox (pasi(1)-ngā) . . " 2 "

G
[104] 1. The ā is pronounced soft, like the French e.

A pelt from the black-gray fox (pladi) . . equals 3 ja

/595 cont./

435 A pelt from the black fox (hādi), depending
439 on its quality, ... equals
A lynx pelt with head, the leg pieces, and the tail . . . . . .
A lynx pelt without head, leg pieces, and tail . . . . . .

/596/
A river otter pelt is estimated according to its size, each finger-span of it is equal to . . .
A sealskin, either Phoca numminiana (pegbi) or Ph. barbata (highsch), provided it is very good, equals . . . . . .
Four fathoms (1) of ordinary cotton cloth (possi) cost

[804] 1. That is, arm spans, since the Gilyak do not have any measure other than arm and finger spans.

Two fathoms of terry velvet (poihrō-possi) cost .
One and a half fathoms of cloth (dshangta) . . . . . .
Four fathoms of Manchurian (2) (very colorful) silk fabric (tscharp) are equal to . . . . . .

2. More correctly stated, Chinese. Four fathoms of it constitute one piece.

The value that the Gilyak give to their various clothing is judged according to the quality and price materials; thus, it costs for:

A long, wide-sleeved robe of Manchurian silk (tscht) . . . . . .

3. Perhaps reckoned somewhat too low.

224 439 only indirectly inasmuch as it furnishes them with those articles by means of which they can acquire through trade with the neighboring civilized peoples the foreign clothing, food, and stimulants which have become necessities for them. Hence, among them hunting is principally directed toward those animals for whose furs there is a sure and good market among their principal trade-lords, the Chinese, and since, merely in order to preserve the pelts as intact as possible, it is practiced for the most part by means of various kinds of traps, snares, poison pellets, etc., one can designate it, in accordance with its greatly predominant purpose and character, as the catching of fur-bearing animals.

224 /551/ Obviously, the Gilyak engage in hunting only in the winter, for they are then occupied with fishing only a little, have enough time for it, and, on the other hand, the animals are in their full, valuable winter-fur. In addition, the deep snow then covering the dense underbrush in the forest facilitates to a great extent movement through it, so that, as experience has taught, the Gilyak, too, know without any doubt that the heavier the snow is in winter, the more rewarding and successful the hunting will be. Nevertheless the Gilyak do not devote [171] themselves to hunting in winter nearly as much as their Tungusic neighbors do. Whereas the latter, as we shall see, frequently move then from their own habitation area into distant forest and mountain wildernesses, in order to live there for weeks entirely by hunting, the Gilyak content themselves with practicing it only in their own territory in a certain area, larger or smaller according to the locality, around their winter dwellings. For this purpose the latter are often erected separately, and sometimes even quite far from the summer dwellings, at such places which have an especially favorable location for hunting.

The most important fur-bearing animals for the Gilyak, because they are generally highly valued in trade and are present in great numbers in the Amur region, are the sable (Gilyak lumr, among the Tymy and Tro Gilyak oghrob and myghr-nga, i.e., brown animal), the otter (Gilyak ngy, among the Tymy and Tro Gilyak pehyik), and the fox (Gilyak käkch, among the Tymy

ont./

nally, the Gilyak also set out poisoned pellets in order to foxes and wolves, and the poison seems to be strychnine, they buy for the purpose from the Chinese for a high price n accordance with the use that they make of it, call -ocht, i.e. fox poison (3).

3. Among the Gilyak ocht means "substance" in general -- a meaning which we shall encounter on several occasions in the following, but also "medicine" and in the present case probably "poison" -- a naïve-instinctive identification of curative and deadly agents, medicine and poison!

hen I was among the Gilyak, firearms were not used at all, they were acquainted with them, and, to be sure, from two ons: in the first place by way of their northern and western ors, the Russian Tungus, Negda, and Samagir, among , thanks to Yakut traders, one of the well-known, small- r, Russian-Siberian rifles (a so-called pea-shooter (4) is

4. Accordingly, among the Samagir on the Gorin, the powder also had a name borrowed from the Russian (póroki"): póroke.

onally found, and, on the other hand, by way of their n neighbors, the Olcha and Goldi, to whom, though lie- nly rarely, one of those often-described, long and clumsy e matchlock penetrated (5). The Gilyak also have their

5. (cont.) Great Britain in 1793 and 1794/, translated from the English by Hüttner, Vienna, 1805, Vol. I, p. 302; Vol. II, p. 58), these are exact copies of the old Portuguese matchlock guns imported to Macao and therefore are by no means very old.

411 192 The Gilyak also have their own, in part very characteristically formed terms for the gun, its individual components, and various kinds of ammunition. For example, among them a gun, regardless of type, is called mäotscha, the barrel of it -- kolm (6), the gunpowder --

6. Accordingly, a single-barreled gun is designated as njakr-kolm-mäotscha, a double-barreled one as mjakr-kolm-mäotscha.

mäotscha-ocht, i.e., "gun substance," or, according to the above observation, in view of its deadly effect, perhaps also "gun poison," the bullet -- mäotscha-ku, i.e., "gun arrow," shot -- matschi-ku (short for matschi-mäotscha-ku), i.e., "small arrows," 000 and the piston -- pachlan-tur, i.e., "copper fire" (7). It was

7. In the case of the Russian-Yakut gun, the Gilyak call the fork fastened movable to the barrel, and used to support the gun while shooting, simply ngytschch (i.e., foot or feet), and for the powder horn they use the expression notrossj, whose etymology is unknown to me.

411 177 152 It was surprising how little /558/ pleasure the Gilyak showed over a gun, whereas a Tungus goes into noisy rapture and shouts for joy at the sight of a neat gun -- obviously they not only lack practical knowledge of the thing, but also a true hunter's heart. At the

/597 cont./

The value of the kettle embedded in the hearth and the portable kettle is reckoned in part, on the basis of size, but in part and chiefly on the basis of their origin, because the Manchurian (Chinese) kettles are far inferior in quality to those of Japanese: the former easily crack over the fire if they contain no water, but the latter will not. Accordingly, it costs for:

A large Manchurian hearth-kettle (tsch) (ormoz-wunj)	4 ja
/598/	
A smaller Manchurian hearth-kettle	3 "
" Manchurian portable kettle (matsch-wunj) with handles, depending on the size	3-7 "
A small Japanese kettle (Gilyak kughi-wunj, i.e., Ainu kettle)	7-8 "
A large kettle of the same kind	20 "
" " Japanese kettle with three handles . . .	30 "

The evaluation used among the Gilyak for their houses is very peculiar, inasmuch as it costs for:

A winter yurt (tschadryf) with two hearths only . .	4 ja
" summer yurt (käryf) only	2-4 "
A storehouse(njö), on the other hand, depending on the number of compartments	10 " and more.

A number of conclusions concerning the trade of the Gilyak, as well as telling numerical evidence of certain of their customs and beliefs, can be drawn from this table, some of which have already been discussed in the previous sections and some will be discussed in the following. For the moment it will suffice to draw attention only to the following points:

1) Furs, the most important barter item of the Gilyak in their trade with the Chinese, have a relatively low price, which

/598 cont./

439 435 291 pieces for elegant women's caps -- but rather because they want them for trade with the Japanese -- a matter that I shall come back to in the following and which gives the best proof for their outstanding talent for trade.

439 273 435 5) Something similar is the basis for their very high evaluation of the liquor (araki /arrack/) in the barter trade with the Chinese. One would be very much mistaken if he concluded from this evaluation of the liquor that they were strongly addicted to drinking it and therefore readily let themselves be plundered by means of it. To be sure, they do not reject liquor, but they used it, as was pointed out above (1), in moderate fashion at the time

1. See p. 719 above.

of my stay among them. On the other hand, their gaze, constantly looking for advantages and profit, could not miss the value of so generally popular a commodity in the trade relations with both their own countrymen living farther away from the source of supply and in particular their less energetic Tungusic neighbors. Thus, their genius for trade also proved itself with respect to liquor and, as has already been mentioned, with the help of it they were even able to obtain many an advantage in their barter with the Russian Cossacks and sailors.

435 6) The articles that they themselves make for their household and the rest of their life and activities, such as utensils of all kinds, pieces of clothing, etc., however neatly made and adorned with decorations they might be, are not very highly valued by the Gilyak, unless they contain a precious material acquired from the Chinese, such as bows covered with buffalo horn, or the lances furnished with inlaid figures of silver, etc. It is not the fineness and beauty of the work or the time and labor spent on them, but the bit of silver or horn that gives these objects their high value in the eyes of the Gilyak.

/603 cont./

the mainland remains remote to the Ainu. Thus, the trade in Chinese commodities on Sakhalin rests almost exclusively in the hands of the continental Gilyak. And they know how to draw great advantage from it for their own purposes. As we have already seen, the island is exceedingly rich in fur-bearing animals particularly sought by them and hunted successfully by all three tribes on it, but chiefly concentrated in the hands of the Sakhalin Gilyak. The greatest quantity of fur-bearing animals is undoubtedly captured by the Orok, roaming and hunting throughout the winter, who, however, impelled or forced by their nomadic life, as well as by their, on the whole, carefree and lighthearted Tungusic nature, /604/ turn the largest part of it over to the sedentary and enterprising Tymy and other Sakhalin Gilyak. The latter know how to take advantage of the scarcities that not infrequently occur among their wandering neighbors with regard to food and luxuries for themselves or food for their dogs; with the help of supplies bartered from the Amur Gilyak or stored by them themselves, they carry on an extremely profitable trade with them, indeed, by means of advances, sometimes, at a great profit, even make them their debtors. They similarly draw advantages from the Ainu, who, when they can, prefer to turn to them with their hunting booty rather than to the Japanese, for they are always underpaid by the latter with only a little rice and sake and not infrequently are not paid at all. Thus, even the Sakhalin Gilyak, though lack the enterprising spirit of their countrymen on the continent, do not in any way belie the passion for trade and profit peculiar to their tribe. Inasmuch, however, as they sell to them the animal pelts captured by them themselves or bought from their neighbors, they furnish them with the means to carry on trade on a larger scale with the Chinese, which also benefits them. Moreover, the continental Gilyak make their purchases on the island not only among their countrymen or through their agency, but, particularly in the north and south of the island, outside the Tymy region, occasionally trade directly with the Orok and Ainu. In fact, they obtain a great portion of the coveted animal skins from the Japanese. But this

/604 cont./

trade will be discussed separately later, after we have first become acquainted with that which they carry on with the Chinese, and which furnishes them the means for the former.

As was pointed out at great length above (1), there is along

1. See pp. 142 and 144.

the lower Amur, in the Olcha and Goldi area, a number of centers at which Chinese merchants stay temporarily or even more or less permanently, and which were very cleverly chosen by them in order to carry on trade with the adjacent native tribes and especially to acquire from them the precious furs. They are cunning and sly traders, who do not shrink from any trouble and deprivation or from any means, in order to draw the greatest possible profit from their calling in either their own or their employer's interests. Outwardly they are very affable and courteous toward the natives in order to win them over; when I was in the above-mentioned village of Puli, in a yurt in which one of the three Chinese permanently living in the village had his domicile, and the Olcha and Gilyak in whose company I had come from the Liman entered it, the Chinese immediately took pains to help them shake the snow off their fur coats and then handed each of them a leaf of tobacco. After he had again taken his former seat on the plank-bed, he asked the newcomers to take a seat likewise, lighted his pipe at the basin filled with glowing charcoal that stood beside him, and passed it around from one to the other hand. Conversation was soon flowing, and it was not long before the Chinese lifted a small can filled with liquor from the coal-pan, put several small porcelain bowls on the low table standing beside him, filled them, and handed them to his guests. During the conversation the Chinese talked boastfully and took pains to point out to his listeners and to me that his countrymen, the Nekan, were the best friends of the Olcha, Goldi, Gilyak, etc., because they provided for their needs and paid for every article of fur with clothing materials, millet, tobacco, liquor, or the like, according to their desires, and were always friendly to them, whereas the Manchu were their mutual enemies and only exploited and

/605 cont./

mistreated them. In the Amur region I often heard similar assertions, sometimes reinforced with very liberal servings of liquor, made to the natives by Chinese merchants, and they never miss their mark, especially in the case of the Goldi who, living in the closest proximity to the Manchu and entirely dependent on them, have often personally experienced their cruelty and avarice and even give them the nickname "sungaru," rats, to indicate that they act like the latter around their supplies and possessions. On the Gilyak, however, to whom the Manchu officials do not come to collect tribute and to practice all kinds of extortion, the flattering and seductive behavior of the Chinese merchants makes little impression. On the other hand, the great profit that the latter make by selling to the Amur peoples at retail for a very high price the commodities that they purchased cheaply at wholesale on the Sungari is obvious to their commercial sense, and, little inclined to contribute to it at their own expense, they try to imitate them and keep the profits for themselves. This explains their above-mentioned opposition to granting Chinese merchants access to their territory and the little encouragement that the latter find among them in general. The Chinese trade center on their border, in Puli, is visited, apart from the Olcha, Samagir, and Orok, almost exclusively by the Tscholi Gilyak, who, far from the Amur, find there the means for their trade with their countrymen on Sakhalin and especially along the Tymy River. The Amur Gilyak, on the other hand, try to utilize the route offered to them by nature and, avoiding the profit-seeking middlemen located on it, fetch what is needed for their own use, as well as for further trading, from the Sungari themselves.

To be able to undertake a trading trip to the Sungari or, as the Gilyak usually express it, "to the Manchu," is the goal of their most ardent desires and constant practical endeavors. It is chiefly for this purpose that sables, otters, and foxes are hunted and the trips to the neighboring tribes to buy precious furs are carried out. For without a considerable supply of this

/605 cont./

barter commodity, which is practically the only one that is considered by the Chinese on the Sungari, the long journey would not only be unrewarding and hence purposeless, but could hardly be made in view of the unavoidable payment of tribute and bribes to the Manchu officials. Since such a supply can at first only be procured with difficulty, several usually make /606/ such a journey together, under the leadership of a traveled and experienced man. Or it may be started by an experienced man who invites other and younger men to participate in it in return for an appropriate share in the profits or for a definite wage. An association of several persons is also arranged for its accomplishment. For a Sungari journey cannot be carried out, like the shorter trading trips, in winter on sleds drawn by dogs, with each one his own master. This is impossible for the Gilyak simply because of the length of the trip, as well as the fact that it leads through the territory, not only of their neighbors, the Olcha, but also of the more distant Goldi, among whom they cannot always count on a hospitable reception for themselves and their dogs, and, from the Uturi to the Sungari, cuts through a sparsely populated area where they could quite easily lose their dogs altogether, and through that get into the greatest difficulty. Moreover, at best by this method such a small quantity of wares could be transported that the journey would pay only slightly, if at all. The only way to do it safely and profitably is by boat up the Amur and Sungari. For this, however, a number of men are needed to propel the boat, loaded with furs and some supplies, even though not heavily, against the occasionally very strong current, sometimes by rowing and sometimes by pulling on ropes. Hence, a small, but well-organized company, with an authoritative and commanding leader at the head, is always required for such a journey.

The goal of the Sungari journeys of the Gilyak is always the town of Ssan-ssin, or Itscha-choton, as it is called by all the Amur peoples, located at the point where the Churcha or Mutuan-ho empties into the Sungari. They are not permitted

/606 cont./ They are not permitted

by the Manchu-Chinese government to go farther upstream, just as they and all the other peoples of the lower Amur region are not permitted to enter the Amur above the mouth of the Sungari, the so-called Sachalin River -- a prohibition whose observance the Manchu officials stationed in Dshang-ssin at the confluence of the two rivers have to watch over very strictly (1). Hence this is

1. Cf. pp. 73 and 800 above.

also the extreme western and southern boundary of that part of the Amur and Sungari region known to the Gilyak through personal observation. What they have to say about the towns of "Kirchi-choton" and "Nungdy-choton" (Ninguta?) located, respectively, above Itscha-choton on the Sungari and on its above-mentioned tributary, which they call "Ula" (which, however, in Manchu and Tungusic, as is well known, simply means "river"), as well as about the "large" town of "Aicho" (Aigun) on the Sachali River is based only upon hearsay, on tales which they may have heard in part from the Chinese on the Sungari and Amur and in part perhaps through Daurian-Yakut traditions in Burukan. The fact that the Manchu-Chinese government grants the Gilyak access to the Sungari, which is prohibited for all foreigners, indicates /607/ that it views them as its subjects, though it does nothing in their region to give proof of its rule over them and does not send either military or tribute-collecting officials to them, as a consequence of which the Gilyak regard themselves as independent of it. Perhaps it neglects to do this for reasons of precedence, in order not to expose itself to resistance, the removal of which would involve more cost than benefit. On the other hand, it tries to make up for it by collecting from the Gilyak coming to trade in Ssan-ssin as high a tribute as possible for permission to do so, which must be obtained from it first. The Gilyak have no choice but to submit to any demand, if they are not to lose their anticipated profits from trading and to have undertaken the whole long journey in vain. At the same

/607 cont./

time they must submit to being treated like the Goldi and other peoples directly subject to the Manchu-Chinese. And in order to achieve their commercial ends, they behave, as they themselves told me, toward them on their part just like the latter, that is, they bend the knee before them in greeting or to make a request, which otherwise is not at all customary among them. The Gilyak in Ssan-ssin put on an act of complete submission to the Manchu-Chinese government, and the latter is satisfied with this, along with the gifts collected from them in the form of tribute and probably going into the pockets of the local officials, and otherwise leaves them in peace.

The treatment of the natives of the lower Amur region appearing annually on the Sungari for trade on the part of the Manchu officials and Chinese merchants there is extremely harsh, inconsiderate, and humiliating, and in particular the gentle and shy Goldi, who live closest to them and are directly subject to them, have to suffer under them. According to the description by Chlikofaklij (1) and Barabasch (2), who traveled up the Sungari

1. Khlikovskii (Izviest. Russk. Geogr. Obshch., Vol. II, 1860, Sec. II, p. 227. In the excerpt in Petermann's Geograph. Mitthei., 1868, p. 343).

2. Ia. Barabash", "Sungariisk. Ekiped. 1872 g. /The Sungari Expedition of 1872/" (Voenn. Sborn., 1874, No. 3, p. 141).

to Pe-tune (Bo-dune) in 1866 and 1872, they first had to pay for a permit for travel to Ssan-ssin and for the trading itself, which was done in the village of Susuu, lying somewhat below the latter, by paying a considerable amount of sturgeon and hausen cartilage and glue to the Manchu official stationed there. Upon reaching Ssan-ssin, they first of all have to pay the tribute (albun) owed to the Chinese Crown, which consists of one sable,

/607 cont./

and, to be sure, the best, per man. In order to find it, however, the officials in charge of this rummage through and inspect the entire collection of sables of each of the newcomers -- a procedure during which the owner in question must continually kneel down in respect, and many a one remains on his knees for an hour and longer before the best sable has been selected from his collection. It is obvious that, as a rule, this does not stop at one, but no protests or resistance would help here, since for the slightest offense of this /608/ kind the one concerned is punished immediately by beatings with bamboo. When the officials are satisfied, it is the merchants' turn to plunder, and they have at their disposal, among other things, so powerful a means as liquor, which no Tungus can easily resist. It is said that not infrequently the Chinese traders confront the Goldi with fabricated or false claims and demand from one or another of them the repayment of so many sable pelts allegedly still owed by his father or grandfather -- demands which the Goldi, out of fear of the punishment threatened and especially of the withdrawal of their trading permit by the officials, who have an understanding with the merchants, usually obey.

For furs, especially sable, otter, and fox furs, and sturgeon and hausen cartilage, spinal cords, and glue, the only products of their region that the Gilyak bring to Ssan-ssin, they get in trade from the Chinese various commodities produced by them in part for their own subsistence and in part for trade with the neighboring peoples. Among these are the aforementioned cereals and vegetables used in great quantities at the bear festivals, such as millet, barley, wheat flour, white and yellow beans, and then liquor and tobacco, along with the implements customarily used in enjoying them, the small porcelain bowls and the Chinese pipes distributed everywhere and provided with brass, glass, or stone (agate and chalcedony) mouthpieces. Of special importance for the Gilyak, furthermore, are the clothing materials which they obtain from the Chinese: the indispensable blue and gray cotton cloth worn by

/608 cont./

439 men and women, black woolens and velvet materials, silk fabrics, silk thread of all colors, sewing needles, buttons, and a quantity of Chinese ornaments, silver ear-pendants, rings and bracelets, glass beads, sheet-brass figures for decorating women's robes, and the like, as well as, finally, a number of household utensils, such as large and small kettles, etc. If the quantity of
439 goods acquired in trade in Ssan-ssin, in part heavy and bulky,
437 is too large to be transported without injury in the small boats
484 in which the Gilyak customarily make the arduous upstream
[501] voyage to and on the Sungari, a so-called Manchu boat, made by the Goldi there, is bought, in which the return voyage downstream can be made easily and quickly. And since, in order to have a stronger current, one usually stays far from the banks, he at the same time avoids the danger of being belatedly fleeced even yet by the Manchu officials and Chinese traders stationed or residing here and there temporarily or permanently. After the return trip is completed, the boat can still be used for a second type of trading voyage -- the voyages to the Ssisam (Japanese), to a consideration of which we must now turn.

439 Among the above-named commodities which the Gilyak obtain by trade in Ssin-ssan, one article plays an especially important role. It is the colorful Chinese silk fabric bearing designs of dragons and other figures and often with gold and silver interwoven in it, which is brought to market in part in whole pieces and in part worked up into long and wide-sleeved dressing gowns. /609/ Whereas the other commodities serve the Gilyak exclusively for their own use or for trade with their neighbors, these find their foremost and best purchasers outside of the Amur region, among the Japanese, and therefore give them the principal reason for direct trade with the latter. There is mention of this trade, which, however, does not take place in Japan, but in the Japanese settlements on Sakhalin, even in the oldest accounts of this island which we have from the Japanese. The Japanese interpreter Kanmemon, who visited Jesso /Yesso/ before 1652, already speaks of special fabrics which the inhabitants of this island get from "Krato" or "Kraft"

/609 cont./

439 (Sakhalin), and which he therefore calls "Kraft-ori" (1).

[113] 1. "Jesoki, ou Descr. de l'île de Jesso," translated from the Japanese by the late M. Titsingh (Annales des Voyages, publ. by Malte-Brun, Vol. XXIV, Paris, 1814, pp. 162, 164). Cf. also p. 262, note 3, above.

175 There is an even more definite statement in Rinsifée's work, San
439 kokf tsou ran to sets, published in Jedo /Yedo, or Tokyo/ in 1785 or 1786, where it is said that the inhabitants of Jesso (Matsmai) exchange their products on Karafuto with the "Mantsiu" for blue glass beads, eagle wings, tobacco pipes, silken fabrics embroidered with dragons, and colored linen and cotton materials (2). This undoubtedly refers to the trade which

[113] 2. Klaproth, San kokf tsou ran to sets, ou Aperçu général des trois royaumes /General Survey of the Three Kingdoms/, Paris, 1832, p. 190. Cf. also Ritter, Asien, Vol. III, p. 487.

the Manchu-Chinese, Gilyak, and Olcha, with the above-named, mostly Chinese commodities, but in part also indigenous products of the Amur region (such as the eagle tails), conducted on Sakhalin with the Japanese and Ainu of this island and, through their intermediation, also with the inhabitants of Jesso, and which the last-named indigenous peoples of the lower Amur region and some of the Goldi still conduct. To be sure, they are not named there, but this is not to be expected in view of the lack of knowledge about the peoples of the lower Amur region at that time on the part of the Japanese, and, rather, it is to be assumed that under "Mantsiu" in the collective sense they meant all those people there carrying on trade with Manchu-Chinese

/609 cont./

175 commodities. The Gilyak and Olcha coming to Sakhalin to trade
439 with the Japanese are simply designated as "Manchu" even by many a more recent Russian reporter (3), though at present

[113] 3. For instance, by Rudanofskij (cf. P. Tikhmenev", Istor. obozr. obrazovaniia Rossiisko-amerik. Kompanii i dieistv. eia do nastoiashch. vrem. /Historical Survey of the Founding of the Russian-American Company and of Its Activities up to the Present/, Part II, St. Petersburg, 1863, p. 127), Busse, (Otrov" Sakhalin" i Eksped. 1853 g. /Sakhalin Island and the Expedition of 1853/, St. Petersburg, 1872, pp. 62, 72, 85), and others.

neither they nor the Chinese merchants referred to as a rule under this name by the Russians visit Sakhalin. The first Russian report concerning the trade in question is almost as old as the last-mentioned Japanese account. In 1792, Adam Laxmann heard the Japanese on Jesso speak of the "Sandan-aino" who bring beads and fabrics to "Karap" (Krafto, Sakhalin) and barter for animal furs, sable, fox, etc. (4). To be sure, he thought that

[113] 4. Cf. Polonskii, "Kurily /The Kuriles/" (Zap. Imp. Russk. Geogr. Obshch., po otd. Etnogr., Vol. IV, pp. 493, 541). Similarly see p. 245 above.

these "Sandan People" must be Koreans, but since, as was discussed above at length (5), "Santan" is the Japanese and Ainu

5. See pp. 245 and 247, as well as the footnote.

/609 cont./

175 designation /610/ for the lower Amur region, there can be no
439 doubt but that the Gilyak, Olcha, and Goldi trading on Sakhalin were meant by it.

439 The principal center for the trade of the Gilyak with the
437 Japanese is Ssiranussi, the foremost settlement of the latter and
484 located close to the southwestern tip of the island (1). It is,
487

1. See pp. 146-156 above concerning the founding and the character of the Japanese settlements on Sakhalin.

therefore, also the most distant goal of the "Ssisam" voyages of the Gilyak, on which trade is conducted, not only with the Japanese, but also with the Ainu. The journeys are made in summer and in winter, by boat and on sleds. For the sea
[501] voyage the Gilyak use either the above-mentioned Manchu boats brought from the Sungari or, and for the most part, their own ordinary river boats described above, on which they only raise the sides by a board put on either side for protection against the
[103] higher waves of the sea. Making allowance for these keelless vessels of theirs, they cautiously avoid the open sea on the voyage and always stay, after they have crossed Mamia Rinsô Strait in calm weather at its narrowest point, from Cape Lasaref (Gilyak Piljan-kthy (2), that is, "Great Cape," Olcha Wasfun)

[104] 2. The th is to be pronounced as in English.

to Poghobi, where it is about four nautical miles wide and thus have reached the west coast of Sakhalin, as close to it as possible. But even the voyage along the coast, which in spots, and especially south of Duĭ as far as Pilja-wo, is steep and rocky, offers many a danger, which the Gilyak try to avoid by going to sea only in calm weather or light winds. Because of this, as well as because of the fact that, in order not to overload their boats,

/610 cont./

439 they take only a small supply of food with them and depend al-
437 most entirely on their fish nets for their subsistence (3), the
484
487

3. Fr. Schmidt, "Histor. Ber.," etc., op. cit., p. 54.

sea voyage sometimes takes a longer time. Under favorable conditions, however, they are said to be able to cover the worst stretch, from Duĭ to Kussunai, often in four to five days. On winter voyages to the Ssisam, which are made in dog-drawn sleds, the above-mentioned steep, rocky coastal stretch puts great obstacles in the way. For the sea does not always freeze along it, and even if a fringe of ice has formed, with a strong wind it often, and sometimes very suddenly and unexpectedly, is broken up again and carried off by the high waves of the sea. The travelers are therefore forced to cover this stretch by land, and, on account of the mountains lying behind it, that can be done only by way of a long detour: they leave the seacoast at Arkai, shortly before Duĭ, turn inland over low passes to the Tymy sources, go from them to the Plyi or Poronai River, and follow its course up to the mouth in the Bay of Patience, on which there are settlements of all three of the peoples represented on Sakhalin, the Gilyak, Orok, and Ainu. From there they travel along the east coast of the island to Manuê and then, along a low and convenient pass located at the narrowest point of Sakhalin, /611/ cross again to the west coast, which they reach at Kussunai and which they then follow to Ssiranussi (1).

1. Fr. Schmidt, "Histor. Ber.," etc., op. cit., p. 110.

439 As has already been mentioned, one of the purposes of the Ssisam voyages of the Gilyak is to trade with the Ainu and to obtain furs from them in exchange for cotton cloth, tobacco, pipes, glass beads, and other Manchu-Chinese articles. This is done wherever they meet them, on the east coast of Sakhalin as

/611 cont./

well as on the west coast. A principal center for this trade
however, is the village of Najoro, not far from Kussunai,
which the Ainu come for this purpose from considerable di
tances themselves, from Aniwa Bay and elsewhere (2). Fo

2. Busse, op. cit., p. 84. Schmidt, op. cit., p. 92.

egoistical reasons the Japanese view this trade with great d
and try as far as possible to prevent it, because they want
for themselves the furs captured by the Ainu. Since they
in a way which is very injurious to the latter, in that they
their goods far below the price in part under threats of pun
and other coercive measures, and, indeed, sometimes for
ing, as payment for alleged debts (3), the Ainu, whenev

3. Busse, op. cit., p. 71.

can, avoid trading with them and try to sell their furs, ke
hidden from them, to the Sakhalin Gilyak or, preferably,
the Amur Gilyak and Olcha from abroad. The latter are s
[435] pay them two to three fathoms (arm spans) of Chinese cott
cloth for one sable pelt, depending on its quality, and jus
much for each quarter of an arshin (finger span) of river-o
skin, so that the latter, with a length of 5/4 arshin, which
easily attained as a result of the unavoidable stretching of
fur in skinning, will bring about ten fathoms of the materi
named (4) -- prices which generally correspond to the val

4. Busse, op. cit., p. 84.

given above for these articles among the Gilyak.

Having reached Ssiranussi, the Ssisam voyagers, be
[648] may begin to trade with the Japanese, submit to a cerem
introduced by the latter which consists of two or three blo
across the back with a stick received by each of them, as

/600 cont./

1/2 ja, a whole fur-coat of squirrel skins 7 ja), whereas the Gilyak with their great wealth of precious furs, pay no attention to these worthless, trifling materials. In further contrast to the Gilyak, limiting themselves almost solely to catching fur-bearing animals and fur trading, the Goldi also bring the hides and skins of the deer-like animals eagerly hunted by them to trade with the Chinese (a roe-deer hide, for example, costs 1/2 ja among them, a red deer or elk hide, untanned, 1 ja, tanned 2 ja). Like the furs, the principal products from fishing also have a higher price among the Goldi than among the Gilyak (a large sturgeon, for example, costs 10 ja among the former), on the one hand because the fish supply in the Amur River decreases upstream, and on the other hand because they are nowhere near as productive in this respect as the Gilyak, who are devoted exclusively to fishing. Cereals and vegetables (beans of various kinds), however, seem to be cheaper for them than for the latter, both on account of their greater proximity to the agricultural Chinese and because they themselves cultivate some vegetables. Finally, the same is quite decidedly also the case for tobacco, in that one "string" of it, equal to three hundred bundles, is valued by them at 20 ja (2).

2. At 30 ja by the Gilyak, according to the above table /see p. 935/.

Incidentally, immediately after the arrival of the Russians, the value of the Chinese (Manchurian) tobacco rapidly sank in the eyes of the Gilyak, since the far stronger Russian (Circassian) tobacco is much more to their taste.

Since principal commodity of the Amur peoples in trading with the Chinese consists of animal skins, and in particular sable, fox, and otter skins, and the Gilyak, as we saw above, are, on the whole, only /601/ clumsy and not very industrious hunters, they must, above all, in order to be able to carry on this trade on a large scale, think of procuring this commodity in the largest quantities possible, not only by hunting, but in another way better suited to their nature. To this end they trade with their

/601 cont./

439 438 184 Tungusic neighbors, who are more skillful and active in hunting, and the Amur Gilyak, who have the most dealings with the Chinese, also trade with their more distant countrymen living along the Sea of Okhotsk and on Sakhalin and buy from them the desired furs. The Amur Gilyak, and in part the Tschomi Gilyak too, are the life and soul of this entire trade, through which Chinese wares are brought into circulation throughout the territory of the Gilyak and of the tribes immediately neighboring them, the Negda, Reindeer Tungus, Orok, and even the Ainu, and they are also the ones who draw the greatest advantage from it. There is not a single Chinese merchant in this whole area. 439 648 [487] The northernmost and easternmost point in the lower Amur region where such a one stays temporarily is the village of Pulj, located still in Olcha territory on the Amur, near the Gilyak border, which can easily be reached in winter, even from Tschomi, via the oft-mentioned Tymi-Chaselach route from the Liman (1). It was said that sometimes a Chinese merchant

1. See pp. 144 and 909 above.

steals through from Pulj along the deserted left bank of the Amur to the Negda on the Amgunj, but carefully avoids the right bank, inhabited by the Gilyak, because they, as they themselves told me, will not permit any Chinese merchants in their territory and 25 years ago killed one who ventured it. Whether they assumed this hostile attitude toward the Chinese merchants in order to defend themselves against the domination of the Manchu-Chinese or in order to shake it off is still uncertain, but in any case it is greatly to their advantage commercially. 439 For the role that is played farther upstream by the Chinese merchants living among the Olcha, Goldi, Samagir, and other peoples of the lower Amur region or visiting them, in that they act as middlemen in the trade between them and the Manchu-Chinese wholesalers along the Sungari, falls in the Gilyak-Tungusic area, intowhich they are not allowed to come, to the Amur Gilyak themselves. And the latter perform their role of middlemen with great skill and success. The alertness, versatility, and enterprising spirit that

484 437 /601 cont./ The alertness, versatility, and enterprising spi

439 [157] they lack as hunters, in comparison with the Tungusic tribes, is theirs to a high degree as traders. Not satisfied that many a Negda, Tungus, and Gilyak from the Sea of Okhotsk, from the Liman, and from Sakhalin come to them in order to get from their supplies of Chinese and, more recently, Russian commod ties, tobacco, liquor, cereals, clothing materials, and the lik in exchange for furs, they themselves, provided with these for eign articles and with some of their own products, such as stur or hausen /602/ meat and the like, undertake trade voyages to the places named. This is done especially in winter when ther [221] is little fishing, and for this purpose they use the numerous dog [492] which they are able to keep, thanks to the abundance of fish i the Amur River. With their help they are almost constantly on the move all winter in order to look after their trade interests. Although the means of locomotion mentioned permits them to take only a small quantity of commodities with them each tim the frequency and common practice of such trading trips amon them on the whole brings about a considerable turnover of goo and since the main purpose of these trips is always the same, the acquisition of the furs needed for trade with the Chinese, they offer the persons undertaking them a rewarding substitute for the time and effort spent on them instead of in hunting. Here again experience proves that the producer of a commodit always has a smaller profit than the middleman adroitly using

439 437 484 648 [487] These trading trips of the Amur Gilyak for the purpose m tioned principally go in three directions: westward to the Neg on the Amgunj /Amgun/ (Gilyak Hynk) and the Samagir on the Udyl, northward to their own countrymen on the Sea of Okhots and eastward to Sakhalin. The relations of the Gilyak with the Negda are very ancient, as may be seen merely from the fact that of all the Tungusic tribes of the Amur region the latter, aside from the Olcha, has become most assimilated with the Gilyak, or, so to speak, Gilyakized. For this reason alone, they, like the Olcha, are more interested than other Tungusic tribes in benefiting by trade, and, in view of the geographical location of their habitation sites, they do not lack the opportu

Goldi KKS
Negida!
Samagir

/602 cont./

First of all, the Amgunj offers them a direct and convenient route to the Chinese merchants along the Amur; secondly, in winter only a short distance separates them from the Samagir on the Gorin, who are likewise visited by Chinese merchants; and, finally, close to the northern border of their habitation area, separated from the Nemilen, the chief northern tributary of the Amgunj, by only a low watershed, where each year in December Yakut and Russian merchants congregate specifically in order to trade with the surrounding Tungusic tribes and, among them, with the Negda in particular (1). Under these circumstances

1. See p. 166 above. Cf. also Fr. Schmidt, "Histor. Bericht über die Sibir. Exp. der Russ. Geogr. Gesellsch. /Historical Report on the Siberian Expedition of the Russian Geographical Society/" (Beitr. zur Kenntn. des Russ. Reiches, Vol. XXV, pp. 134 and 150).

Under these circumstances the chances of the Gilyak middlemen for success among the Negda are not very great, except perhaps in those places where the latter live in the closest proximity to the Gilyak, far from those trade opportunities, namely, on Lake Orell and Lake Tschlja, where there is also a Gilyak village and which, moreover, lie on the route from the Amur to the southern coast of the Sea of Okhotsk. Like the Negda, the Samagir, too, in addition to their principal territory on the Gorin (Gilyak Kyr), have still other habitation sites remote from it and closer to the Gilyak -- these are their settlements on Lake Udyl, and, like the Negda lakes, these, too, are /603/ visited by the Amur Gilyak for trade, and, to be sure, in winter as well as in summer. Thus, on May 18 (30), 1856, I met the Gilyak Mesgun in Patt at the moment when he was about to set out in a boat laden with various Chinese commodities to travel to the "Rdhy" (Samagir) living on Lake Udyl. On the whole, however, the latter lies, geographically as well as on the basis of the linguistic relationships of the

/603 cont./

The Amur Gilyak find a field for their trading operations as middlemen that is far more favorable than among the Negda and Samagir among their own countrymen along the coast of the Sea of Okhotsk, which they reach in a short time, going either from Pall-wo to Kulj via the lakes mentioned, or from Wair to Hisska, or by way of the Amur Liman, and where they are the sole suppliers of Chinese and, since the abandonment of the Petrofski post, also Russian wares. In exchange for these, they are supplied with animal pelts which the Gilyak living there in part capture themselves in the coastal region and on the Schantar Islands and in part obtain from the Tungus hunting along the Tugur and in the Mäwatschan Mountains in exchange for the yield from their fishing and hunting of sea animals and articles previously procured from the Amur Gilyak. Furthermore, they buy eagle tails from their countrymen in order to use them in trade with the Japanese, and, finally, they cheaply procure there seal oil and skins both for their own use and for trade with their southern neighbors on the Amur, the Olcha and Goldi.

The Amur Gilyak, and in part also the Tschomi Gilyak, get their greatest booty in animal skins for trade with the Chinese, however, on Sakhalin, and, to be sure, the former chiefly in the northern part of the island, along the Liman and Tro coasts, and the latter on the west coast south of Poghobi and along the upper course of the Tymy River, without there being any strict division of these trade areas between them. It is strange that the Sakhalin Gilyak, unlike their aforementioned countrymen, do little moving about and almost never come to the mainland, to say nothing of their undertaking more distant trading trips, but rather they are content to exploit their nearest neighbors on the island, the Orok and the Ainu, and, in turn, let themselves be supplied with the Chinese commodities coveted by them, too, tobacco, liquor, cloth, and the like, by the continental Gilyak, who come over to them. The Orok likewise only rarely roam beyond the Liman in order to approach the Chinese traders in Pulj along the Tymi-Chaselach route, and, finally,

/611 cont./
token of their submissiveness from the highest Japanese official. After this is done, the goods are taken away from them and brought to an official building of the Japanese, which no one except them may enter, in order to be subjected to a close scrutiny (5). It can hardly be doubted that some of the pieces

5. According to Rudanofski, in Tichmenef's Istorich. obozr. obrazov. Rossiisko-amerik. Kompanii, Part II, p. 127.

and certainly not the worst ones, never find their way back to their rightful owners. The Japanese, however, do not permit themselves to treat the newly arrived Gilyak and Olcha in the same inconsiderate and predatory manner as they do the Ainu, simply for the reason that otherwise they might easily shy away altogether from trading with them and the coveted commodities that they bring to them would be lost. Besides /612/ this trade is all the more profitable for them since they principally use sable, fox, and river-otter furs in it, articles which they procure in great quantities and almost without cost, thanks to their systematic extortion practiced on the Ainu on Sakhalin, as well as on Jesso, and for which they have no market in Japan because of the well-known aversion to fur among its inhabitants. They further owe great profit to the popularity of their iron kettles, provided with handles, among the Gilyak. Finally, rice, tobacco, sake, porcelain and lacquered wooden bowls, and the like are readily marketable articles for them in this trade, in exchange for which they principally try to obtain from the Gilyak and Olcha those colorful, red and blue Chinese silk materials and the eagle tails likewise mentioned several times. How popular the one as well as the other is among them can be seen from the high prices that they pay for them. According to Poswein, the Gilyak from Kulj, the Japanese give for a piece of silk material seven fathoms long and one arshin wide five river-otter pelts, five fox pelts, and five sable pelts, and for an eagle tail from Haliaëtos pelagicus 12 otter pelts, and from the far less

/612 cont./
439 prized Haliaëtos albicilla, the amount of rice desired. Furuhjelm,
[435] at that time head of the agency of the Russo-American Trade Company in Ajan, Nikolayevsk and the Murawjof post, estimated the total number of animal furs annually obtained in trade from the Japanese by the Ssisam voyagers in Ssiranussi at about 2,400 otter pelts, 1,300 sable pelts, and 640 fox pelts (1). This rich

1. Tikhmenev", Istor. obozr. obrazov. Rossiisko-amerik. Kompanii, Part II, p. 128.

supply of furs which the Gilyak and Olcha bring home from their Ssisam voyages is used by them in the trade with the Chinese on the Amur and especially on the Sungari in the manner described above and thus contributes greatly to the maintenance, stimulation, and augmentation of all their trade operations.

439 Meanwhile, the stay of the Ssisam voyagers on Sakhalin
484 for the purpose of trade with the Ainu and Japanese often ex-
487 tends over a considerable length of time. In particular those arriving in the summer either wait for winter in order to return with their dogs on the above-mentioned route via Kussunai, Manuë, the Poro-nai, and the Tymy sources, or even remain through the entire winter in the southern part of the island and not until the next spring or summer set out on the return voyage by boat along the west coast of Sakhalin. On this voyage they
[231] still carry on trade with the Ainu so far as they can and, as Fr. Schmidt reports (2), are especially anxious to get bear cubs in

2. "Histor. Ber.," etc., op. cit., p. 54.

648 order to raise them at home.
439 The Japanese do not permit the Ssisam voyagers to go
484 beyond Ssiranussi and to visit, say, the Japanese settlement of Kussun-kotan in Aniwa Bay. This, then, as in Ssan-ssin, is the
[823] southernmost boundary of the world known to the Gilyak from

/612 cont./
439 their own observations, and concerning Japan, the homeland of
484 the Ssisam, they know only that it is a land beyond Sakhalin
648 (Lär-mif) and separated from it by a "small sea" (matsch-kerchk).
[823] /613/ In the years immediately following the occupation of the
175 Amur region by the Russians, however, the Japanese also tried
648 to keep the traders from there away from Ssiranussi and Endungomo,
439 their second-largest settlement on the west coast of Sakhalin and, at the same time, to extend their colonization of the island as far north as possible in order to prevent any eventual expansion of Russian power beyond it and especially any alienation of the Ainu subjugated and exploited by them (1). In 1859, for instance,

1. Concerning these events, see pp. 153-156 above.

the Gilyak coming to Sakhalin to trade were no longer admitted to Ssiranussi by the Japanese but only as far as Endungomo, and in the following year the Olcha traders were prohibited from entering even that place, so some of them remained in Kussunai and some went to Taraika on the east coast (2). Even Judin, the

[113] 2. Brylkin", "Pis'ma s" Sakhalina /Letters from Sakhalin/" (Zap. Sib. Otd. Imp. Russk. Geogr. Obshch., Book VII, pp. 22, 26). Also, Schmidt, "Hist. Ber.," etc., op. cit., pp. 107 and 108.

Gilyak from Tebach, was affected by this prohibition, though in former years he had often been in Sziranussi and was well known there; in fact, he had frequently been used as an interpreter, thanks to his knowledge of the Ainu language, which was familiar to him from his mother, stemming from this people. But these, as well as all the later changes and upheavals in trade conditions caused by the Russian occupation of the Amur region, fall outside the scope of our considerations.

Chukches RX
Golj RX3
Olcha

G /613 cont./
439 If one surveys all of the above-described trade activities of the Gilyak, he will not hesitate to acknowledge that they are
G a people extremely gifted for trade by nature and completely
[181] dedicated to it. Too indolent to obtain by hunting the means for trade with the neighboring civilized peoples on a larger scale in keeping with their inclinations, they know how to win them from the tribes neighboring them, who are more skilled at hunting, by means of trade indefatigably pursued from small be-
G ginnings. Thus enriched, they undertake, in spite of their primi
[439] tive means of locomotion, long trade journeys to the Sungari
[484] and to southern Sakhalin, to the "Manchu" and to the "Ssisam," and since they exchange the wares and products of the one for those of the other, they serve as middlemen between the two greatest civilized peoples of East Asia, the Chinese and the
C Japanese. This latter activity of the Gilyak permits comparing
439 them with another Paleo-Asiatic people, the Chukchee, who,
437 likewise only poor hunters, but animated by a great genius for
484 trade, roam over the northern tundra and cross the Bering Strait in order to trade for the furs bagged by the Eskimo in the Yukon territory with the commodities of the Russo-Siberian merchants, and, conversely, along the Anjui, the latter for the former, and so in the polar north they act as trade intermediaries between Europe-Asia and America (3). None of the Siberian peoples can

C
[113] 3. Concerning this trade of the Chukchee, see the detailed and exhaustive account by Matjuschkin /Matiushkin/ (in Wrangell's /Vrangel'/ travel account, Russian edition, Vol. I, pp. 331 ff.), Ditmar (Bull. de la cl. hist.-philol. de l'Acad. Imp. des sc. de St.-Pétersb., Vol. XIII, 1856, pp. 129 ff.; Mél. russes, Vol. III, pp. 39 ff.), and others.

Gi None of the Siberian Peoples Can
439 be compared, with regard to its trade activities, /614/ to these
197 two Paleo-Asiatic peoples, except perhaps the Olcha, whose strongly developed genius for trade, however, as we shall see in a moment, must be traced back to the influence of the Gilyak.

A /621 cont./
175 Manchu language. Rinsô continues his report, "The successors
648 of those first harata and kasinta, accompanied by other natives,
439 from then on annually brought the designated gifts to the officials
622 in Deren. Even today, the most intelligent and most suitable of the natives on the island are appointed as harata and kasinta by the Manchu. Their number is now limited to eight: one harata, in Najoro, and seven kasinta, three of whom are on the west coast and four on the east coast (their names and their places of residence, which are all in the Ainu area, follow). Several years ago, because the furs on Krafto became rarer, the chiefs brought their gifts to Deren only every three years, and with an even greater decline, only every four or five years. But then the Manchu had the stipulated gifts collected by the Santaner, and, as a consequence, this year the kasinta of Usijoro, Najoro, and Raitsiska personally brought the gifts to Deren." Rinsô met these people on their journey there and asked them about the manner in which the gifts were offered. They confirmed for him that the gift consisted of a black sea-otter fur, and at the same time disclosed to him that the Manchu officials had taken it amiss that they had failed to deliver the gifts for a few years and had pointed out to them that in the future they should better appreciate the favor that they had received from the Manchu and should be more careful about bringing the stipulated gifts.

G /622/ It was approximately in the middle of the previous
Gi century, according to these reports, that the Manchu, who had
A formerly come to Sakhalin only to trade, expanded their tribu-
175 tary relationships with the peoples of the lower Amur region,
648 among them the Olcha and Gilyak, to include the Sakhalin
439 Gilyak and the Sakhalin Ainu as well, in that at various places
622 there, too, they appointed chiefs or elders and imposed upon them the obligation of bringing to them at Deren an annual tribute of furs -- an obligation which, to be sure, was not always punctually observed, but was still in full force in Mamia Rinsô's time. A few facts noted by European travelers may be cited
G to confirm these statements, quite credible in themselves,
Gi
A by the, as already noted several times above, extremely accurate
[114] and reliable Japanese traveler.

SS /622 cont./
G Let us now compare the conditions described by Mamia Rinsô
Gi with the position that the Manchu-Chinese occupied in relation
648 to the indigenous peoples of the lower Amur region half a century
178 later at the time of my visit. This has already been discussed
439 in the foregoing on various occasions, and therefore I shall now only recapitulate /623/ briefly the principal features of it to make comparison easier. At the time of my visit, the Manchu or Chinese no longer made any trade journeys to Sakhalin at
A all (1). An obligation for the payment of tribute by the Sakhalin
[648]
B
[622]

1. Also, the above-mentioned Ssetakurero questioned by Mr. Schmidt could not remember having seen Manchu about (in Najoro): it was always only "Ssanta" (Olcha) or "Ssumeri" (Gilyak) who came there for trade purposes (Schmidt, op. cit., p. 94).

Ainu and Sakhalin Gilyak to the Manchu likewise did not exist, and thus there were none of those appointed chiefs or elders among them. Almost the same situation prevailed with regard to the Amur Gilyak and Olcha; the former were visited neither by the Manchu nor by Chinese merchants; among the latter, to be sure, Chinese traders stayed here and there, but they carried on their business entirely by their own hands, and a tribute, or, more accurately, a specific assessment in furs, was collected from the one as from the other only in Ssan-ssin for the
Gi granting of permission to trade. The Goldi, on the other hand,
178 were required to pay tribute to the Manchu-Chinese authorities,
439 and in their territory, in Mylki near the mouth of the Gorin,
648 there was a permanent residence for Manchu officials who were entrusted to collect the tribute. From this comparison it
SS must be concluded that in the period between Mamia Rinsô's
174 travels in the Amur region and mine a retreat of the Manchu-
648 Chinese control from Sakhalin and the lowermost course of the
439 Amur, from the territories of the Ainu, Gilyak, and Olcha, had
178 taken place.

Gi /626 cont./
361 Goldi, in order to escape pressure by the Manchu, have moved
167 into the deserted area -- a movement which was still going on
Gi in my time (3). It is therefore not surprising that the inhabitants
[443]
[439]

3. Concerning this, too, see p. 56 above.

of Dyra, just such Goldi who had immigrated later, could give me no information in answer to my inquiries about the trade center of Deren which had once stood there.

SS
Gi
T
439 With regard to trade in the upper Amur region, which I only became acquainted with on a journey through it along the main river, I must limit myself to pointing out a few general features particularly characteristic of it in contrast to the lower Amur region. If we first consider the peoples of the former which are analogous to the indigenous tribes of the latter, the Birar, Manegir and Orochon, both the articles that they bring to trade and those that they take away in exchange are practically the same for the one as for the other. For the former, which in both places are obtained solely by hunting, show only the /627/ minor, almost exclusively quantitative differences and modifications pointed out above in discussing hunting, and, concerning the latter, they are in general also the same clothing, food, and luxury items often mentioned above, which have become indispensable for the primitive peoples of both regions. An essential and characteristic difference between the upper and the lower Amur peoples with regard to trade, however, is to be found in their disparate relations with the neighboring civilized peoples caused by the location and other geographical and political conditions of the region. As was pointed out above,
G the peoples of the lower Amur region, prior to the occupation of
Gi it by the Russians, had practically no trade relations with them at
SS all, apart from some slight contact along the Tugur. Instead,
439 such took place only with the Japanese and Chinese, and the latter was centered on the Sungari, from where Chinese goods, through the intermediation of the Chinese merchants as well as

G /627 cont./
Gi of the Goldi, Olcha, and Gilyak, were carried down the Amur
SS to the coast of the Sea of Okhotsk and along the island of Sakhalin
439 to the Japanese. Therefore, as far as trade was concerned, the lower Amur region was a region closed toward the west and completely dominated by the Sungari, to a certain extent a continuation of the Sungari region extending as far as the sea and including the island of Sakhalin stretching out in front of it.

T The situation is different for the upper Amur region. Be-
439 cause of its continental location and great distance from the sea, it is out of reach for communication, and its population is kept away from the lower Amur and the Sungari by the political measures of the Chinese government. Following the policy of keeping the Sungari cut off from the upper Amur, adopted in the seventeenth century in order to ward off a Russian invasion, it permits no direct trade and shipping connections between them and also prevents free communication between the inhabitants of the upper and lower Amur on the river connecting them. As a consequence of these geographical and political conditions the trade of the upper Amur peoples, the Birar, Manegir, and Orochon, turned toward the west and north, that is, first toward the source region of the Amur River, or so-called Russian Dauria, and the Lena area, and in the south, following the uppermost Amur, the Desja /Zeya/, and the Bureja /Bureya/ downstream, is concentrated in the culture area of the Amur River located between the mouths of these last two rivers and occupied by Manchu, Chinese, and Daur, in which Aigun, the Ssan-ssin of the upper, or more correctly, the middle Amur, is located, which, in turn, is oriented toward Tsitsikar, the administrative center of the Chinese Helong-Kiang district, which embraces the upper Amur region. The trade link between the upper Amur region and the Sungari region is, therefore, not the mouth of the Sungari, but Tsitsikar, which is located on the Nonni.

The extent and complexity of the trade ties which connect the Orochon, Manegir, and Birar with the Russians and Yakut of the adjacent sections of Siberia have already been indicated above in the discussion of the indefinite, overlapping, fluctuating, and

/666 cont./
556 named for me as mykstschr-kolla. The latter in particular was especially esteemed and popular among his countrymen, aside from other reasons, on account of his lavish and much visited bear festivals, in one of which I, too, took part. They related that he was held in such esteem that even the Chinese in Ssansin and the Japanese on Sakhalin referred to him as Gilyak dshangin and treated him accordingly, which prompted some of them, too, to refer to him occasionally in this way, and yet, they said, he is no dshangin, of whom there are none among them, but only a mykstschr-kolla nibach. Thus do they cling, even with the great differences in means and, accordingly, also in social position, to their complete equality legally.

426 435 When I previously said that the poor Gilyak, in case of necessity, count on the help of their richer countrymen and may expect to receive from them some things on credit, but others for nothing, this needs an explanation. One might accordingly [439] think that the latter treat the former in about the same way as the Chinese traders, who, in an emergency, give the Goldi, Orochi, and other natives of the region among whom they reside the things required, calculated at a very high price, on credit, in order that afterwards, by means of repeated and unchecked promissory notes, they will never be out of debt to them for the rest of their lives; in fact, the debts are even inherited by their children. This never happens among the Gilyak. As much as I was in contact with the rich and the poor among them, I never heard of anything that would permit one to conclude that there is any considerable debt relationship between the one and the other. Both are also probably too cautious and practical, too subtly and cleverly calculating, to enter into such relationships, disadvantageous for both, for the one injurious to his respect and popularity, for the other to his existence. Not that they do not have any debts among one another -- but these always seem to be only small advances within their means to one person or another, the casual repayment of which is taken for granted, but often, and probably usually in cases of unequal means, /667/ is not even claimed, 426 and not much is said about it. Perhaps related to this is the fact

507 /672 cont./ with regard to me,
123 however, neither the one nor the other would apply, and yet I, [935] too, never received any thanks from the Gilyak. I am not thinking now of the gifts given in response to begging, which in Gilyak houses can become very annoying to the traveler and for which mainly children are urged forward. They may never have learned to say thanks or may have forgotten it in their inquisitive amazement at the traveler. But I have often enough shown the Gilyak greater services. For instance, they always found a hospitable reception at my house, where the safety of their possessions, their dogs, and all the rest of their outfit were attended to so that they could calmly go about their business in the village. Among other things, I once saw to it, thanks to the strict sense of justice of the then governor, Rear Admiral Sawoiko, that an investigation was made about the theft of a whole vehicle laden with all kinds of wares, which had happened to the Gilyak Judin; the culprit was convicted, and Judin was paid a sizable sum in compensation. Even in this case I was not thanked, though I was dealing with the best and most respected Gilyak.

431 On the other hand, it is customary for the Gilyak to
123 exchange small gifts as a sign that they wish to enter into closer, perhaps even business relations with each other. When I received such a gift for the first time, I asked the price of it, but was told that the word pai, that is, gratis or free, went with it and that I was informed by the Gilyak Jutschin, whom I already knew, that, in accordance with their custom, I would now have to give a gift in return, while repeating the same word /673/ pai. If the latter were not done, the objects offered in return would be rejected, and the word pai would be stressed once more. Sometimes I was even told in what form the return gift should be, for example, that it might consist of several tobacco leaves, some bread, sev-
431 eral buttons, or the like. Custom requires, however, that, upon acceptance of the return gift, the number of items is not to be closely examined, and in praise of the Gilyak I must admit they never deviated from this custom and that they were always satisfied with the return present, whatever it turned out to be. But this did not
• [439] by any means prevent them in accordance with their greedy natures, from demanding very high prices in trading later. This

431 /673 cont./ this
• 439 custom may have arisen in consequence of the long trade relations
177 of the Gilyak with the Manchu-Chinese and Japanese, who in Ssan-
648 ssin, as well as in Ssiranussi, have their officials and trade agents who demand such captatio benevolentiae in their own interest and to the detriment of the government or the trading houses concerned.

439 Moreover, the Gilyak conclude no transaction without expressing the wish or the request that something over the price agreed upon be given as a free gift, pai. And this is precisely what Judin did when, in the transaction with the Russian-American Company for the sizable sum that he received for compensation, he wanted to be given various costly fabrics and other luxury items.

439 I must say for the Gilyak, however, that as a rule one can
123 trust their word and their honesty in business dealings with them,
157 for example, the delivery of wares or other articles paid for in advance. As guides, too, they are generally trustworthy, in fact, some of them so identified themselves with my interests that they occasionally even warned me against the thievish instincts of the population of this or that village which in their eyes was notoriously
114 bad. For the most part, especially in remote areas, it is very diffi-
157 cult to get guides for a trip, for as a rule the Gilyak are too suspi-
123 cious and fearful to give up their freedom and cast their lot in with that of the traveler. More than once I failed completely, but when I did get some I usually had reason to be satisfied with their determination, their exact knowledge of the locality, and, in the evening beside the blazing fire, with their communicativeness and cleverness. Among the many guides whom I had on my journeys, there were only two who deserted me. And that happened under circumstances which in part make their faithlessness understandable. On one occasion, when I was traveling along the coast of the Sea of Okhotsk, I was surprised by a bad snowstorm. The broad-soled Russian sled stubbornly stuck to the wet snow, and the dogs were already so tired that they constantly collapsed and could not be started up again by being beaten. There was nothing for us to do but to drag the dogs and the sled up the moderate height of the bank, which, covered with small dwarf larch trees, did not even offer the prospect of a cheerful campfire. No wonder that under such circumstances my guide, who on account of the earlier

/677 cont./
805 Tymy Gilyak shift the designations current on the Amur for
184 January, February, and March one month ahead -- a shift for which I could not find an explanation. According to the sound
805 of the word, tscham-long (January or February) means eagle-
184 month, karr-long (February or March) crow-month, since the
825 former seems to be named after the white-tailed eagle (Haliaëtos albicilla), and the latter after the raven-crow (Corvus corone). Both birds play a not unimportant role in the superstitious ideas
• [439] of the Gilyak, and the former, moreover, also in their trade with the Japanese (1), but it is a mystery to me why these particular

1. See pp. 668, 669, and 883 above.

months are named after them. During the winter the white-tailed eagle even leaves the mainland and northernmost part of the Gilyak territory because of the lack of fish for its special diet, and at this time of year it holds out only on the northern coasts of the Sea of Japan, where the ice is often broken up by storms, and in the interior of Sakhalin along the upper Tymy River which does not freeze in winter (2). There the white-tailed eagle is

2. See pp. 226 and 227 of Vol. I of this work.

indeed an impressive sight in the midst of the snowy landscape at a temperature falling below the freezing point of mercury. But in this respect January and February are alike, and the shift of the designation current on the Amur for the former month to the latter one by the Tymy Gilyak is not explained at all by this. Could it be that the name "eagle month" is foreign, perhaps of Chinese 000 origin (3)? In the Tymy Valley I heard January called klu-long --

805 825 171 113 3. Among the Chulyma Tatars and the Baraba inhabitants March is called "eagle month" (kutschugen-ai and kutschigar-ai, resp.) Falk, Beytr. zur topograph. Kenntn.

/682 cont./

33 whom at that time there were only some of the poorest kind among
14 the Russians, could have understood the content of a Gilyak song;
instead, he rendered it, as did not escape Middendorff, only
praeter propter. The aforementioned license of the singers is also
26) the reason why I understand so little of the Gilyak songs dictated to
me by Jutschin, Tenghan, and others toward the end of my stay of
two years among the Gilyak that I can only recognize isolated words
in them, such as the place names and personal names occurring in
them. The same thing happened to Dr. Grube, though, besides
my Gilyak vocabulary, the lexical material collected by Glehn
was available to him. Only the song given to me by Jutschin under
the title of Walghytsch (1) has greater interest for me, and this only

1. No. III in Dr Grube's Gilyak word list;
see the appendix to Vol. III of this work, p.
41 /this appendix is not included in the book
translated here/.

on account of the explanations which he gave me in connection
with the /683/ place Mlygh-wo mentioned or sung about in it, a
place to which, according to Gilyak belief, the souls of those who
die a natural death are supposed to go. More about this later.

534 The musical performances of the Gilyak are even poorer, but
are not by far as peculiar as the singing. Aside from the drum of the
shamans, which serves other purposes, the Gilyak have only two
439 musical instruments -- both of a very primitive kind. One of them
is a jew's-harp (Gilyak kanga or wutschranga; Olcha mugheny), an
instrument which they allegedly get from the "Manchu" and, ac-
cordingly, prize very highly, but which is so simple in construction
that they could very well make it themselves. It is distributed
among them in three forms: made out of brass, made out of wood,
and made out of iron. (See the woodcuts a, b, and c below.) The
first (a) consists of a narrow brass plate several inches long, into
which a tongue-shaped lamina is cut lengthwise, remaining at-
tached to the frame at one end. Both ends of the frame are pierced
and equipped with a thread in order to hold the instrument in front
of the mouth, and, by expelling air, the tongue-shaped lamina is

545 theatrical presentations, no fantastic costumes, no masks, etc.
171 whereas other Paleo-Asiatic peoples, for instance, the Aleuts
and the Northwest American Eskimo, have such a wealth of these
and such great delight in these entertainments that there are
complicated arrangements for setting up the stage, the entrance
of /685/ the actors, etc. in the kashim for the most part erected
[157] for the purpose (1). The Gilyak seem to have such a sober frame

Eskimo, see above, pp. 492-498.

of mind that they are not capable of illusion.

527 Their social entertainments are principally of such a kind
[526] as to offer the men an opportunity, in competitive tests, to parade
their great skill, fearlessness, boldness, and strength, and after-
ward to enjoy an opulent, hearty meal, whereas the women, ex-
cept for their very active participation in preparing the latter,
play an almost entirely passive role at them and hardly have a
128 chance to enjoy the results of their own labor. In the next section,
devoted exclusively to the bear festival of the Gilyak and their
immediate neighbors, I shall also discuss the entertainments on
the program for it and in the order in which I myself became
acquainted with them.

524 Mention might be made here, however, of one Gilyak game
•439 which does not belong there and which they owe to the Chinese;
I mean playing with cards. They are the well-known, small,
Chinese playing-cards, which Chinese traders bring from the
Sungari and upper Ussuri down the Amur, through the territory
of the Goldi and Olcha (2), and thus into the hands of the Gilyak.

[171] 2. Maack (Putesh. na Amur", p. 198)
saw for example, these Chinese playing

G /685 cont./
524 2. (cont.)
•439 cards, the game being played with 120
171 cards, in use among the Goldi of Ykka.

G The latter have only the expression pai, that is, gratis or free, for
524 card-playing, proof of the harmless fashion in which it has been
525 practiced up to now. In fact, in my time the Gilyak only played
171 for tobacco, which, in view of the common enjoyment of each
pipe of tobacco as a rule, even more reveals it as an entirely
harmless pleasure. But they knew that the "Manchu" (Chinese)
made a quite different use of it and played for much higher stakes.
Przewalski describes how widespread the card game is among the
Chinese in the upper Ussuri and the adjacent coastal area, espe-
cially along the Zymu-che and Ssutschan, where during the winter
unemployed riffraff spend entire days and nights playing cards and
cause the ruin of many a formerly rich houseowner (3). Under

3. Przheval'skii, Putesh. v" Ussur. kraie
/Journey to the Ussuri Region/, St. Peters-
burg, 1870, p. 90.

these circumstances it is surprising that it has not spread more
rapidly down the Amur and that it has not found favorable soil in
particular among the greedy and acquisitive Gilyak. It is un-
doubtedly because of the energy with which the latter have been
able to keep the Chinese away. In the meantime it may also have
been carried to them by the Russians.

Gi Before I start the description of the bear festival of the
648 Gilyak, I must cast a brief comparative glance at the peoples
immediately adjacent to them, the Olcha and Goldi, with re-
gard to the social and co-operative relations touched on above.

/686/ In my time, after the official Manchu-Chinese trade
center of Deren was abandoned sometime in the twenties the
Olcha, like the Gilyak, were not tributary to either China or
G Russia Only if one or the other went to the Sungari to trade
[439] did they have to pay, as has been mentioned above (1), to the

1. Cf. p. 950.

10 resettled. In southern Sakhalin, individual families live in the village of
[361] Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast
and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

197 The Nivkhi language is usually classed with the group of paleo-
Asiatic languages. But among the languages of this group, it has a distinct
place.

[194] In its structure, the Nivkhi language belongs to the synthetic-aggluti-
native languages. The synthetic features are the fusion of the nominal
and verbal elements (kkan—dog; pil'a-ǧan—big dog). The agglutinating
[193] features include the addition of affixes (kkan-gu—dogs). The phonetics
of this language are very complex. The language has the following parts of
speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives
have many similarities with verbs. The Nivkhi numerals are interesting:
802 in the Nivkhi language, there are no numerals common to all objects,
instead, there are various groups of numerals, for the counting of: 1)
long objects (sticks, staffs, trees, plants, etc.); 2) small round objects;
3) large, round, cylindrical objects and objects of indefinite shape; 4)
thin, flat objects; 5) animals and insects; 6) people and manlike spirits;
7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one
bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—
one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled;
and n'a—one handbreadth, etc.

197 As a result of the Nivkhi's close ties with the Tunguso-Manchurian
peoples, the Nivkhi language contains a large number of words in common
with the languages of these peoples.

174 In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants.
There are enough grounds to consider them the most direct descendants of
the neolithic population of this territory. This population left behind numer-
ous pits—marks of old dugouts of square or round shape, polished stone im-
plements, and a special type of ceramic ware—flat bottomed, with spiral
ornament. Such pits have been found both along the Amur and in Sakhalin.
There are different points of view as to which is the older site of Nivkhi
habitation—the Amur or Sakhalin. The well-known student of the Amur
peoples, Academician L. Shrenk, held that Sakhalin was the original home of
the Nivkhi, whence they spread to the continent. The opposite viewpoint was
expressed by L. Ya. Shternberg, who insisted on the continental origin of the
Nivkhi and their considerably later migration to Sakhalin. Historical data
indicate a larger northward distribution of the Nivkhi along the coast of the
Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once
lived farther up the Amur than they do today. According to Chinese sources,
tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th
century; there is every reason to conclude that these were Gilyaks, or
Nivkhi.

175 The first Russian data on the Nivkhi date to the 17th century. According
to these data, the Nivkhi did not pay tribute to China. The first Russian to
travel down to the mouth of the Amur was the "writing chief" Vasilly
Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba,
the boyar's son Pushchin, the official Stepanov and others. In the Cossack
reports of the 17th century, both the Nivkhi and the Ul'chi are referred to
[361] as "Gilyak peasants." According to these reports, they lived in large vil-
[342] lages in wooden winter houses, flanked by barns, racks for hanging fish and
[343] log structures for bears. The Nivkhi wore clothing of fishskins and animal
[251] pelts; they kept many dogs, engaged in fishing, and their diet consisted
[33] mainly of fish. They traded with the Chinese, Ainu and Tungus.
[362]

Means of transportation and hunting:
1—river boat made of boards; 2—old dogsled; 3—club for killing seal; 4—brake poles used in steering sled; 5—old dog-harness; 6—fishing with seines.

Food was Prepared with
fish-oil or seal-fat. A favorite delicacy was mos', prepared with fishskins, 26
seal-fat, berries, rice, and sometimes crumbled yukola. Another favorite 25
dish was talkk—a salad of raw fish, garnished with wild garlic. The Nivkhi 42
became acquainted with rice, millet and tea from the time when they traded 42

/630 cont./

Manchu officials there, in that the privilege of collecting tribute among the Manegir and Birar is conferred upon them by the latter, though presumably in return for a suitable guarantee and substantial payment, for which, however, they know how to get ample repayment in the trading. If one looks at their entire trading activity briefly outlined above, they can be compared, on the one hand, with the Chinese carrying on trade in the lower Amur region, and, on the other hand, in an even more striking way, with the Gilyak. For like the latter they carry their own and, even more, Chinese goods and products great distances to the neighboring tribes and, through trade, use their hunting booty for their own advantage. In any case, with regard to trade, these two peoples, the Daur and the Gilyak, are the most prominent and the most significant characteristic formations in the Amur region -- the former in the upper and the latter in the lower part of it. But it is noteworthy that these two peoples nowhere come in direct contact with each other except in that one place on the Tugur located outside the Amur region -- a consequence of the above-mentioned mutual isolation determined by geographical and political conditions in which the upper and the lower Amur region are found with regard to the trade of their peoples, and which has essentially contributed to the formation and preservation of peculiar ethnographic conditions in them.

/640 cont./

462 would think that for the man, too, there could never be any lack
411 of domestic work. But these objects are by no means made every-
[463] where and by everyone, but rather at only a few places by expert
[439] Gilyak and used for trade (1), so that one need only make a woode

1. A large portion of them, as was mentioned above (p. 894), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the
462 complete weapon. The situation is similar with respect to bows,
321 boats, and other implements that are used specifically or chiefly
322 by the men. The domestic activities of the men among the
517 Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and he still has much time left for idleness, smoking, and sleeping.

593 The domestic tasks and accomplishments of the wife, howeve
[462] are far from exhausted by what has been presented above, for in addition to all that there are still the maternal duties, the care and tending of the children. The Gilyak, husband as well as wife, find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, not even when he was about to leave on a journey or returned from one.
[855] On the other hand, I have often seen a Gilyak man, not to speak of the women, tenderly caress and kiss small children. Every
593 married Gilyak wants as large a swarm of children as possible,
842 and one who has them prides himself on it. One in Xyi was boasting in front of me about his many children, but to my question as to how many he had, he could only answer: tammlà, tammlà, that is, many, many. Mixed in with this joy, however,
[592] there is also an egoistical, utilitarian viewpoint, for in his growin sons he will soon have helpers in his lucrative hunting, fishing, and trading business, and the daughters promise, /641/ apart from the help that they give in the household, a fine bride p

/646 cont./

567 people who themselves are obliged to bear the heaviest yoke, the Ainu, are the ones most involved in the slave trade. Finally, [170] indicating that this deplorable custom of the Ainu and Goldi is [648] rooted in the moral degeneracy to which they have been brought [181] by the oppressive yoke of the Japanese and Chinese on them is [439] the fact that the latter themselves sometimes negotiate the sale of Ainu and Goldi women as slaves to the Gilyak, for which the trading trips of the latter furnish them the opportunity. The Gilyak, on the other hand, who have best been able to preserve their freedom and independence with regard to these peoples, to be sure buy slaves from the Ainu and Goldi and under certain conditions sell them again, but they most decidedly abhor keeping any of their own people as slaves or selling them as such to others. In fact, they were of the opinion that if one of them tried to do it, he /647/ would arouse such indignation among his countrymen that he would be in constant danger of his life.

567 435 On the whole, the number of male slaves, as well as that of the female slaves, who are always more common, is small among the Gilyak. The principal reason for this is the high price that they cost both in direct trade with the Ainu or Goldi and in [583] particular in their resale by the Gilyak. It is much more expensive to acquire a slave in trade than to buy a wife. The Gilyak Ssogin in Kufk, for instance, paid far more for his slave, an Ainu woman named Kot, than for his second wife, Malguk from Langr: as noted above, he bought the latter for 155 ja = 310 rubles, but the former cost him 40 pieces of Chinese silk, which alone amounted to 200 ja, or about 400 rubles, aside from other things. In appearance she was far behind his two wives. As will be seen from the following, however, this does not matter at all, in view of the social position of female slaves among the Gilyak. Because [556] of the high price of the female slaves, only very rich Gilyak can afford to keep any, and whoever has one is usually very boastful about it, as, for instance, Ssogin was. Such a possession seems [584] so enviable to them that in order to obtain it many a Gilyak does [583] not hesitate to sell his daughter to a countryman as a wife in [556] exchange for a female slave and to pay the difference in the purchase price in some other form.

/650 cont./

114 and widows, unmarried people, orphans, and the needy; 3-4, 175 often 6-7 pieces of gold cloth are paid per head, but young and 567 stupid persons, however, who cannot be used for any services, [435] are exchanged for crude goods." According to him, even the [439] Ainu from Jesso /Yesso/ and from the island of Risiri come over to Sakhalin in order to buy there human beings in the situations [304] named. He adds: "This is why one finds tattooed women in the country of the Smerenkur" -- a perfectly correct conclusion, for, as has already been pointed out (2), tattooing is by no means

2. See pp. 631 ff. above.

[184] customary among the Gilyak. Rinsô's observation concerning the slave trade of the Ainu correspond completely with ours above and substantially supplement them, but his latter remark leaves no doubt that not only the Gilyak on the mainland but also those of Sakhalin keep slaves, or at any rate female slaves, among them, whom the latter obtain probably exclusively from the Ainu. Be- 175 sides purchase, however, the Santaner, as Rinsô reports, also get 567 their slaves in another, more brutal manner by taking to their country as security the brothers, sisters, and children of those Ainu who owe them debts in trading and are unable to settle these debts in the following year when they return. Needless to say, [648] they become slaves there. The Japanese government, which had absolute domination over southern Sakhalin and its main trade center, Ssiranussi, did not /651/ feel bound to check this scandalous practice, which ceased only after the island passed into Russian possession.

567 Before I go further in describing the family relations of the 171 Gilyak, I should like to insert some data concerning slavery among other Paleo-Asiatic peoples for comparison. As disgraceful as the Ainu practice of selling fellow tribesmen as slaves to the Gilyak and Olcha is, yet nothing is reported, either by Rinsô or by other travelers, to the effect that they keep persons from their own tribe as slaves. What kept them from it, whether it was their own kindheartedness and weakness or a prohibition of the Japanese acting as absolute rulers, may be left undecided.

Trade. Value of the Principal Items Occurring in Trade, the Household, and the Rest of Life. Trade Relations of the Amur Peoples with One Another and with the Manchu-Chinese, Japanese, and Russians. A Look at the Recent History of Trade and the Rule of the Manchu-Chinese in the Lower Amur Region.

433
439
171

As essential as fishing and hunting may be for the existence of the Amur peoples, they nevertheless cannot directly satisfy all of their needs; they cannot procure some of their requirements in food and clothing, as well as the luxury items that have become no less essential to them, except by selling part of their hunting and fishing products to the neighboring civilized peoples, that is, by trading. Thus, in this latter, a third source of subsistence is opened to them, by means of which the first two are essentially supplemented and brought to their full significance.

439

It is clear that even more than in the earlier sections the observations on the trade of the Amur peoples should begin with the Gilyak. None of the indigenous peoples of the lower Amur region has as much interest in and talent for trade and such extensive trade relations as the Gilyak. It is typical for them that

[195]

in the first information which the Russians received about them -- I mean the above-mentioned account that the Cossack leader Perfiliev heard from the Witim /Vitim/ Tungus in the years 1639 and 1640 (1) -- they were already designated as a people living

1. See p. 203 above.

at the mouth of the Amur (chitka) and having trade connections with the Chinese. In fact, they do more trading with the Chinese

[441]

and Japanese than all the other peoples of the lower Amur region, although they /591/ live farther from them, and often act as middlemen in the trade of the latter with the former as well as in that of the two civilized peoples with each other.

583 554 735 chance to establish an independent economy. But there is another side to the coin -- it is almost impossible for a poor man to settle down with a family, and, consequently, an independent economy. But to a certain degree the rights of group marriage and the possibility of leading a common domestic life with his brothers come [183] to his rescue. Everyone's dream, however, is to settle down with [614] his own family. Usually the clan in the persons of the well-to-do [406] clansmen comes to the rescue of the poor man. But not every clan has rich people, and, besides, there are persons whose clan has died out. The only solution then is to obtain a wife by work. Usually such a transaction is entered into by a family in which there are no offspring of the male sex, and it is as though the son-in-law were declared an adopted son, although, as a member of another clan, he cannot be an actual heir. Methods of 583 554 lightening the payment of the bride price are practiced: a wife is purchased in small installments with yearly payments until her 452 majority. But also in the purchase of an adult, /279/ installment 735 buying is sometimes practiced, depending on the contract. A curious means of paying the bride price is the case of payment 583 735 with the bride price of a future daughter. I know of such a case. 554 The Gilyak Kanka married the sister of the young boy Pletunka. He did not pay a bride price, but he promised to support his widowed mother and to hand over to him the bride price of his own future daughter. And the agreement was fulfilled. Pletunka was about twenty years old when Kanka gave his own daughter in marriage, and he handed over the whole bride price to Pletunka.

583 As a matter of principle the bride price belongs to the clan. 614 At a difficult moment of life, for example, if it becomes [627] necessary to pay blood money, each clan-member takes part with his shagynd. But usually the bride price is distributed among the brothers, although not proportionately; the youngest, as heir to the house, usually receives the smallest share. Besides this, the elder brother buys a wife for the younger brother before his own marriage, so that the younger brother does not need the shagynd for bride price. Along with the distribution of the bride

/281 cont./

583 422 428 She may sell it or give it to her daughters in their dowries. After her death it goes to her daughters, and, if there are none, she may will it, or else it goes to her brothers.

583 585 After the agreement on the bride price. The negotiations over the bride price amount to two questions -- the question of the quantity and the question of the term. It may happen that the bride price is paid immediately after the negotiations, and then the marriage is at once considered concluded. The bride and the groom are summoned, ordered to eat and smoke a little together, a small feast with drinks is spread, and in the evening the mother of the bride orders the groom to lie down on the bed of his wife, and after spending the night in the nuptial bed the newly wedded husband carried off his wife, with a certain ceremony of which we shall speak below, to his home. But such cases are rare. It does happen, when both the groom and the bride belong to families of little means and the bride price is therefore small, that it is brought at once, and the dowry of the bride amounts to the most necessary things of her toilette, and 583 no preparations whatsoever are demanded. Among rich families, 585 the immediate removal of the bride occurs only when the groom 556 lives very far away, when the given marriage is especially valued, either as a result of the high social standing of the parents of the bride or as a consequence of the particular renown enjoyed by the bride ("a maiden famed throughout the entire land"), and they are afraid of any delay for fear of the agreement's being broken if a richer competitor appears. In such cases they come at once in several boats with the whole bride price and in the company of their noblest clansmen, and after the bringing in of the bride price, a feast, and several short ceremonies, they carry the bride away along with her dowry. 583 But, I repeat, such cases are rare. Usually in such cases the 585 wedding is delayed. The delivery of the bride price is arranged [452] in installments. At first only one object is left, usually a kettle; the remaining part is brought either directly before the removal of the bride, or, if the bride price is very large, part of it is even brought within a certain agreed-upon length of time after the removal of the bride.

555 556 156 and the chosen one cannot either evoke envy or pride himself his advantages (1).

1. The following example can serve as a good illustration of the outlook of the Gilyak on the origin of personal wealth. On the western shore of Sakhalin the wealthiest man in my time was a certain Gibl' from the village of Tangivo. He had, in effect, a fine intelligence and was an able hunter and an energetic man. Moreover, he was aided by his acquaintance with the Russian officials, whom he served in the capacity of supplier of furs and collections. But the Gilyak logic saw the cause of his extraordinary wealth in a quite-special circumstance: that he once found far away in the hills under a log a piece of some kind of substance, a magic talisman, sent to him by the gods. [789]

614 156 His protectors, sending him the beasts of the taiga and [454] fish of the water, are the common genii of the clan. To hoa [783] one's wealth, not sharing it with one's clansmen, would be equivalent to appropriating for oneself that which belongs to jointly with all, and the highest ambition of such a man is to display his benevolence and generosity to those around him.

Such are the economic relations, producing a whole pe sonality equal to others in preparation and knowledge, /116/ cluding the possibility of mutual slavery, and creating for ea person a healthy atmosphere of consciousness of his own freed and self-determination.

156 But the greatest wholeness is given to a person by his re 557 religious world-outlook. The basic axiom of everyone is that his existence and welfare are completely in the hands of the g in particular the clan gods, who shower their beneficence no

middle of a village, and there fattened upon fish. On fete-days he is led, or rather dragged, in procession, and of course is thoroughly muzzled and bound. Finally a great day arrives on which Bruin takes a prominent part in the festival by being killed. There are many superstitious ceremonies carefully observed on such occasions. The ears, jawbones, and skull of the bear are hung upon trees to ward off evil spirits, and the flesh is eaten, as it is supposed to make all who partake of it both fortunate and courageous.

I did not have the pleasure of witnessing any of these ursine festivals, but I saw several bear cages and looked upon a bear while he lunched on cold salmon. If the bear were more gentle in his manners he might become a household pet among the Gilyaks; but at present he is not in favor, especially where there are small children.

Ermines were formerly domesticated for catching rats, the high price of cats confining their possession to the wealthy. Cats have a half-religious character and are treated with great respect. Since the advent of the Russians the supply is very good. Before they came the Manjour merchants used to bring only male cats that could not trouble themselves about posterity. The price was sometimes a hundred roubles for a single mouser, and by curtailing the supply the Manjours kept the market good.

The Gilyaks, like nearly all the natives of Northern Asia, are addicted to Shamanism. The shaman combines the double function of priest and doctor, ministering to the physical and spiritual being at the same time. When a man is taken sick he is supposed to be attacked by an evil spirit and the shaman is called to practice exorcism. There is a distinct spirit for every disease and he must be propitiated in a particular manner. While practicing his profession the shaman contorts his body and dances like one insane, and howls worse than a dozen Kamchadale dogs. He is dressed in a fantastic manner and beats a tambourine during his performance. To accommodate himself to the different spirits he modulates his voice, changes the character of his dance, and alters his cos-

with the Chinese. After the appearance of the Russians in the Amur region, the Nivkhi began to use small quantities of bread, sugar and salt.

The immemorial, and until recently the only, domestic animal of the Nivkhi was the dog. It served as a draught animal and provided for fur clothing and meat for food; it was widely used as a medium of exchange and played an important part in religious ideas and rituals. The number of dogs in a household was an index of wealth. As a rule, every household kept 30-40 dogs, which demanded considerable care. They were fed chiefly fish and seal-fat; feed had to be stocked for the whole winter, when dogs were used most as draught animals.

The old sled of the Nivkhi, which was still found in use by Shrenk in the middle of the last century, was so narrow that the driver sat astride it, resting his feet on small skis; sometimes he raised himself and ran in this position on skis. The runners of this sled were curved both in the back and in front. The dogs were harnessed to the towing strap alternately on either side, rather than in pairs. The harness was a simple collar, so that the dog pulled with the neck.

Until quite recently, dog races were still a part of the bear festival; in these, the Nivkhi used the old sled and the old type of harness. The harness and the sled which appeared among the Nivkhi in the beginning of the 20th century were considerably different from the old type. They were of the so-called Eastern Siberian type; the sled was of greater capacity and equipped with a vertical shaft-bow and paired harness, not in collars but in yokes, which the dogs pulled with the chest.

The development of the carting trade brought with it a new type of sled. Its greater size and stability permitted the transportation of up to 200 kg of goods. It was usually drawn by 9 to 11 dogs. The best trained and most valuable dog was the leader. The driver—kayur—usually called out his directions to this dog. The dogs were stopped with a shouted order and a brake pole. Dogs were sometimes also harnessed to a boat on a longer tow strap.

The horse as a draught animal appeared among the Nivkhi relatively recently.

In addition to dog transportation, winter travel on land was done by skis—bare skis without fur lining, or skis lined with seal fur. The former were used for short trips; the latter, for distant expeditions during the fur-hunting season. The Nivkhi skis were distinguished by the wooden strips nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed boats made of poplar. These dugouts were so light that they were carried by hand across barriers (shallows and isthmuses). They were propelled with oars or poles (usually employed for upstream travel). For long-distance travel, the Nivkhi had a large boat similar to that of the Ul'chi, Nanays and Orochi. It was made of three wide cedar boards, of which the bottom one was bent upward in front, projecting like a spade. It was rowed with 2 to 4 pairs of oars, by lifting alternately the right and the left ones.

The Nivkhi villages were usually situated near the mouths of spawning-rivers, and seldom exceeded 20 dwellings. Until recently, the dwellings of kinsmen were set side by side. Some 40 to 50 years ago, the Sakhalin Nivkhi still widely used the dugout house. It was made by digging a pit some 1.25 meters deep, over which a wooden framework was built of thin logs, and covered on the outside with earth. The smoke vent served as a window as well; the hearth was built in the center, and plank beds were set around the walls. At the end of the 19th century,

Mud hut.

the entrance to the hut was no longer from the roof, but through a long low corridor.

From about the period of the Ming dynasty, the Nivkhi dugouts began to give way to Manchu fanzas of the frame type, which spread over the entire Nanay territory and were taken over by the Nivkhi. The structure and layout of the winter dwelling were similar to those of the Ul'chi. In summertime, the Nivkhi usually lived in summer dwellings built on piles some 1.5 m high. They usually consisted of two parts: the rear part, which served as living quarters and was lighted by an opening in the roof, and the front part, which served as a warehouse. The summer house was usually surrounded by racks for jerking fish and storehouses on piles for storing various products. The general appearance of the Nivkhi summer dwelling was similar to the Ul'chi summer storehouse.

The old summer dress of the Nivkhi men was similar in many features to that of the Nanays. It consisted of trousers (varsh), a robe, reaching to the knees and closing from left to right, footwear of sealskin, and a conical birchbark hat (kh'ifkh'akk). The trousers and robe were made of blue or gray cotton cloth. The women's summer robe of fishskin or fabric was longer, and was decorated along the edge with copper disks. In winter, an outer garment of dark fur, with the fur outside, was worn above the robe. During sled trips, the men wore a kilt of sealskin above the fur garment, to save it from wear (sealskin was not used for dressing the dead). The head was protected by earmuffs and a fur hat. Men's and women's clothing differed only in that the latter had more embroidery and appliqués, and was made of a greater variety of materials (silk, cloth, lynx-fur on the hat).

Formerly, the Nivkhi obtained material for their clothes from Chinese and Russian merchants. Footwear, robes and overcoats were made of

parties to agree. When agreement was reached, the khlay-nivkh came to the offending clan with men of the victim clan, fully armed, and a duel was enacted between the representatives of the two clans. Then each clan representative killed a dog, and peace was considered established. After that, the ransom was paid. It consisted of coats of mail, spears, silk materials and other valuable objects.

The Nivkhi had a classificatory system of kinship. But, in distinction to the Tunguso-Manchurian system, the specific term of kinship among them applied always to persons of one, rather than different generations. As Shternberg showed, the classificatory system of the Nivkhi reflected even in his time the existing marriage norms. The Nivkhi retained until the end of the 19th century some remnants of group marriage. These relations were possible only for persons of the same generation, and were categorically forbidden among persons of different generations.

All the members of a clan were divided into four age groups: 1) grandfathers and great-grandfather (atak); 2) fathers (ytyk), their brothers (tuvng), the husbands of the mother's sisters and the brothers of the husbands of the mother's sisters; 3) brothers and sisters (tuvng); and 4) children (ola).

Trade ties with China and the transformation of fur-hunting, and later of fishing, into economic activities directed to commercial ends stimulated the disintegration of the clan order among the Nivkhi, which occurred first among the Amur Nivkhi. The latter had early begun to trade with the Manchus. Nivkhi merchants sailed up the Sungari to San-hsing, and bartered furs and beluga backbones for tea, tobacco, fabrics and metal articles. They also bartered with the Ainu, the Japanese and with other neighbors. Members of the Tvabing clan, for instance, were for a long time the middlemen between the Sakhalin Nivkhi and the Ainu. Thus, long before Russian colonization, the Nivkhi began to be divided into rich and poor. The rich could have several wives and 3-5 slaves. The rich man's bride-price always included large quantities of imported valuables. But commodity relations developed slowly, since exchange was only in the medium of furs and, to a lesser extent, fish. The mass of the Nivkhi continued in a subsistence economy.

Slaves did only housework. They could set up their own households and marry free women. The slave's descendants of the fifth generation were considered free. On the whole, slavery was not widespread among the Nivkhi and was of a patriarchal character.

At the end of the 17th and in the 18th centuries, the Manchus established among the Nivkhi, as well as the Nanays, the posts of khalada— clan elders, and gasyanda—village elders.

After the middle of the last century, the disintegration of the Nivkhi subsistence economy proceeded more rapidly. After the Nivkhi had finally become a part of Russia, slavery disappeared; a new form of exploitation appeared, in the institution of "half-shares." Nivkhi who lacked the implements of production fell into the position of "half-sharers." The catch was divided according to the number of participants, but those who used the implements of others had to yield half of their share to the owner.

Before the Revolution, the Nivkhi were officially considered Orthodox Christians, but their views remained animistic. They thought of the island of Sakhalin as an anthropomorphic creature; similar ideas were held about trees, mountains, rivers, water, earth and cliffs. The killer whale was in their thinking an yz'—a "master" of other animals. Almost every natural phenomenon had its yz'. The chief of these were Pal-yz'—the "master" of the mountains and the taiga, and Tayrnadz, or Tol'yz'—the "master" of

were forced to take the boat from him for not one of them had a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry we saw that the share of the owner of the boat who also happened to the pilar was precisely the same as that of the other hunters and that he was not specially rewarded for supplying the boat and for his work in connection with organizing and leading the collective.

The last quoted example illustrates the exploitation that arises out of ownership of the tools of labor. The Exploitation is effected under the guise of the particular form of leasing tools. Here the owner of the boat does not participate in the hunt. He rents the boat to others and still gets a share of the quarry which he would get had he participated in the hunt.

Going from Kul - which is at the present time the northernmost Gilyak village on the continent - in the direction of the town of Nikolayevsk -na -Amur, until recently the center of capitalist influence on the Gilyaks, we note an interesting phenomenon. In the villages located in the proximity of the town of Nikolayevsk-na-Amur and, consequently, exposed most pronouncedly to its influence, the owner of the boat until recently claimed two shares: one - as a participant in the hunt and the other - as owner of the boat. This represents another forward step in the development [91] of the exploitative relations whose rise we noted in the fishing industry of the Gilyaks of the village Kul. On top of that, the owner of the boat claims shares for his wife and children who take no part whatever in the hunt.

The tendency to claim for oneself extra shares of the quarry can be explained by the fact that some time after the founding of the town of Nikolayevsk-na-Amur the commercial value of fish increased. The lower reaches of Amur, one of the world's richest Siberian salmon areas, attracted many people from the fishing industry as well as merchants, who brought up Siberian salmon from the Gilyaks. The Gilyaks of the lower reaches of the Amur, who formerly traded with the Chinese and Japanese began selling Siberian salmon to the Russians; an item of no importance in their trade with the Chinese and Japanese. Owners of zayezdki and seins turned into entrepreneurs supplying whole-sale fish-dealers, Luri, Viderman and others. They began to increase zayezdki and to hire labor from among Russians, Koreans and, especially, Gilyaks who come to them from Sakhalin and from the villages located North of Nikolayevsk-na-Amur. "With a zayezdok as a source of income, the Gilyak turned into a rentier who was always idle and drunk throughout the summer, "says the ardent colonizer

91 pipe-like pants (gari) made of seal-skin. The upper part of these are not fastened like regular pants but are held to a strap belt by a few thongs. In fall and spring some of them wear these gari made of padded Chinese cotton. Under the gari they wear a pair of regular linen pants which reach to the knees. Instead of wearing stockings, they stuff straw into their torbassa. Straw is a poor heat-conductor, and the same is true of seal-skin. These boots are also water-proof
77 if they are properly sewed. The Gilyak's bodies and arms
91 are covered with a short jacket made simply of dog skin with the fur on the outside. This jacket is sewed like a shirt and has a slit on the left side of the chest, which can be buttoned up. The shirt does not have a collar, the neck and back of the neck are covered by a cap. The color of the jacket differs with the color of the dogs, but the all-black ones are [illegible] attire. Sometimes this jacket con-

262 Of farinaceous food, they eat only buda (millet). It is
● 439 bought from itinerant Russian or Chinese merchants and eaten as a porridge or in soup. They love potatoes and bread, but both are more expensive than millet and therefore they seldom have either.

Cedar nuts and berries are their favorite dainties. Cranberries, raspberries and black alder berries are gathered for the winter. In bad years, when the salmon catch was poor, they gather and consume great numbers of berries and especially cedar nuts, as a substitute for more substantial nourishment.

272 Tea the Gilyak love almost as much as spirits. They use, of course, only the commonest variety, that is, brick tea which is sold in the form of compactly pressed bricks but has nothing added. They do not, however, drink it regularly.

224 For the bear festival (see below) live young animals are
527 sought and are raised in a special enclosure. If they cannot be caught in any other way (1), they are sought out together

> 1. Sometimes young bears roam
> about so far from their mamas
> that they can be easily caught.

with the mother bears. The Gilyak wait for winter and then seek out a bear cave. On the appointed day 10-12 Gilyak set out for the cave with lances, hatchets, straps, and several empty dog sleds. They begin to irritate the bear by thrusting long sticks into the cave. Whereupon bruin begins to roar tremendously and starts to leave his cave. At this instant the bravest and strongest of the Gilyak takes his stand

224 even this hunt is not as easy as one might think. First of
278 all, the preparation of the bait requires great caution;
339 furthermore, the hunting ground where the bait is left lying about must be frequently visited on snow shoes, for countless crows are usually on the look-out and as soon as the fox succumbs, they pounce on him and his pelt can soon become eaten away.

224 Sometimes cross-bows are set up to catch the fox, but these are not as effective for this animal as for the sable.

Up to now the sable has been one of the most important sources of income for the Gilyak, although the Amur sable is less valuable than that which comes from the Okhotsk and Kamchatka. The sable is hunted in fall and winter. In fall numerous snares are laid; for instance, horse hair among willow shrubs along the rivers. Or [illegible]

[illegible]

[illegible] Only when [illegible]

[illegible] During my annual trips through the coastal area I also came through regions that abounded in tigers and I heard a great many tiger stories. But I

411 instead of this point some arrows have a crescent-shaped
piece of pointed iron. This latter device is used for duck
325 shooting, if there is no powder to be had. On the hunt the
411 arrows are usually kept in a quiver, which usually does not
439 hold more than three. It consists of a flat and hollowed-out
531 small board and is usually decorated on the outside with various designs or figures of animals. It is fastened to the belt.

The lance consists of a shaft about one and three-quarters meters long with a flat iron tip. Some lances made by Gilyak are artfully decorated with silver and gold figures. Moreover, all weapons except firearms are made by the Gilyak themselves. Forging is done simply at the domestic hearth, but the fire is kindled with a bellows. Iron is bought from the Chinese or Russians. Occasionally fragments of

[illegible]

[illegible] amounts to 400-500 rubles. There are no special religious ceremonies, but the wedding celebrations which must [illegible] by the bridegroom last a rather long time, a week or more. Besides millet, fish and ice, a great deal of alcohol is consumed.

A curious, although not altogether unique custom are marriages between boy and five year old children. As soon as the parents reach an agreement, a boy and girl are pronounced man and wife. The father of the boy pays the bride and takes the girl with him, in order to bring her up with his husband; sometimes, however, she remains a few more

of Gilyak, as it is the number of Goldi. Rittich estimates their number to be about 3000. On the Amur Jakobsen found quite a large number of villages; on Sakhalin Island, on the other hand, there were far fewer villages.

439 Like their neighbors, the Gilyak are fishermen and hunters;
433 only now and then do they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and flour for the inhabitants of Sakhalin. In accordance with their primary occupations they spend their summers on the river banks while in winter they move into the mountains and roam through the woods. I am unable to say with certainty whether they have summer and winter dwellings like the Goldi, but I think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-brick ovens and the benches, warmed by the pipes, along the [illegible] are also to be found in these houses. On the other hand, [illegible] found in September 1884 above Nikolayevsk a [illegible] of Gilyak villages that were at a considerable [illegible] the river bank, while the summer settlements [illegible] by their nature as fishing villages used to be [illegible] by the river. One might conclude from this, [illegible] these Gilyak villages were not simply fishing [illegible] the summer, but served as dwellings for the [illegible] unless one wanted to assume that the Gilyak were [illegible] withdraw from the immediate neighborhood of the [illegible] because of the partically marshy and there- [illegible] river bank. In Sakhalin, moreover, there was [illegible] of the larger houses of the Gilyak such as those [illegible] above; rather, the huts were only small and half [illegible], so that they had a certain similarity to the [illegible] the Eskimos in Labrador and in Alaska. They [illegible] unenviable abode for the European traveller, [illegible] confined space one can hardly avoid close con- [illegible] inhabitants and the dangers connected with that, [illegible] being tormented by a multitude of vermin. In addition [illegible] were created by the crowd of people present, by [illegible] of the dogs, by the manifold provisions hung up [illegible] for smoking, and by the smoke which can only [illegible] difficulty, is hardly bearable. The large houses [illegible] land are in better condition, but they, too, have

N. V. Slyunin. (1) It is of interest to note that the new

1 N. V. Slîunīn, Sovremennoîe polozhenīe nashevo Dal'nevo Vostoika [The present conditions in our Far East], p. 96, 1908, SPb.

exploitative relations evolved among the Gilyaks on the basis of ownership of the tools of labor did not produce new forms of distribution. Distribution persisted, as of old, in the form of the hunter's ancient way of dividing the quarry into shares. It was only new claimants of shares who appeared. A new content was given to the old form. The owner of the tools of labor, striving to receive a greater part of the quarry, began to claim shares for members of his family who did not participate at all in the process of production such as wives and children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

of the tools of labor such as the boat and the seine and even for the use of the bench in the boat (mləṭ) and of the stick over the door of the house (ŋγəmr-ṭis).

We give here illustrations of the above.

According to the Gilyak ¡argun (?) now living in the village Cγarvaγ (Charbakh), back in 1917 or 1918 he and three other Gilyaks from the village Kal'ma as well as fourth one from the village Ṭəlmə went to the lower reaches of the Amur and worked there during the run of Siberian salmon on the island Langer for the Gilyak Armən who was an inhabitant of the island. I often saw Armən in 1931. Armən's brother worked with him. In all there were seven men working. When the fishing season was over, Armən divided the quarry. He and his brother got six shares, while the remaining Gilyaks received five shares, one share per man. The six shares obtained by Armən were accounted for as follows: one share for Armən, one share for his brother, one share for the use of the boat, one share for the use of the seine, and finally, one share each for his wife and his old mother, neither of whom took part in the fishing.. The Gilyak workers got no shares

462

/373 cont./

583 in the event of the dissolution of the marriage, takes it back. It is inalienable during the life of the wife and is customarily burned with her on her funeral pyre. This form of the dowry confirms Ather's /Ather's/ view of the dowry in primitive societies as a present to the bride.

585 Marriage is effected among the Gilyak without any ceremonies. A feast is held, of course, upon the departure of the bride and upon her arrival at the home of the bridegroom, but nothing more. The marriage is as easily dissolved as it is concluded. The husband, disappointed in his wife, takes her back to her father and gets his bride price back. Similarly, the father, dissatisfied with the position of his daughter in the new family or /374/ the incomplete fulfillment of the conditions of payment by the son-in-law, takes his daughter back, returning the bride price. In general, the method for peacefully acquiring a wife among the Gilyak falls entirely under the "purchase-sale" agreement, with its accompanying "rectification," etc. I have seen how one middle-aged Gilyak, not having the wherewithal to feed his wife, sold her (with her consent, however) to another Gilyak for a small compensation.

But in spite of the character of this acquisition of a wife, and despite the fact that the assent of the woman is not only not required, but is not even asked, nevertheless the position of women is in general not as bad as it may appear. It is required of her that she be industrious and thrifty. Much, in fact, is required of her. She cleans and dries an incredible quantity of fish, which is used for the year-round maintenance of the family and dogs. It is she who sews not with horsehair, sinews or wire thread, and so smooth, therefore, the two [illegible] seam, [illegible] to the [illegible] [illegible] the [illegible] family, [illegible] [illegible] the [illegible] [illegible] [illegible]

23] The diet of the Gilyak dogs, like that of their masters, con-
[136] sists almost exclusively of fish. Their principal food is provided in particular by the same fish appearing on the coasts and in the rivers in shoals at certain seasons on which the existence of the Gilyak also principally rests, that is, the various species of salmon, especially kyghi-ucho and tengi-ucho (Salmo lagocephalus and Salmo gorbuscha), and in winter chiefly the ubiquitous kanji fish (Cottus cochinus), which, however, on account of its smallness, stands far behind the former. The part of these fish especially and exclusively intended for the dogs is the above-mentioned (2).

2. See p. 646.

so-called chark in Gilyak, the pieces consisting of the head and backbone with a little flesh attached to it (3). Only if there is no

3. The Russians in the Amur region and throughout Siberia very aptly call it kosstj, that is, bones, which in fact is all it is.

more of it available is the jukola intended for the people used as dog food. Next to this, seal and white-whale meat, and along the seacoast not infrequently the meat and blubber of stranded whales, serves the same purpose. With the exception of the farmer, which, as was mentioned above, may not be brought into the yurt, according to Gilyak superstition, /480/ food is never given to the dogs in the raw state, as the Russians do, but rather cooked to a soup. This, the feeding does not take place outside, but always in the yurt. Like all housework, it falls upon the women. In the [illegible] the cook found in the yurts [illegible] is used for this purpose, in the [illegible], the platform in the

deception and exploitation everywhere, but by degrees they will end up by making use of the same weapon. The Sakhalin Gilyak have a good chance of maintaining themselves longest of all since they are farthest from the center of settlement. But Russian influence makes itself felt even on them. From all the settlements they go out to work for wages and go to make their purchases at Nikolayevsk, and every Gilyak who returns from work to his native settlement brings back the same atmosphere as the youth who returns to a Russian village from work in the big cities. Moreover, work in the towns, with its varying fortunes, ever more /364/ and more destroys that primitive equality which constitutes the dominant feature of the simple economic life of such peoples as the Gilyak. Together with the wealth that they have amassed in the new environment, people bring back the economic customs of that environment. But for the present, let us not look into the new phenomena in the life of the Gilyak; let us turn now to their still unshaken foundations.

III.

Religious Views

Though the dominant feature of the polytheism of the Gilyak is its anthropomorphism, the worship of the powers of nature lies at its foundation. Thus, among them, fire is a deity, "a small-small deity," it is true, but one nevertheless. To the question "why?" a Gilyak replies: "But without fire how can one live?" It is considered a sin to put out a fire in the hearth; even damaging the fence of a hearth is a sin. During the season of seal hunting, or when a newborn child is in the yurt, and in many other cases, it is considered a sin to carry the fire out of the yurt. It is to fire, as to a divine element, that the Gilyak entrusts the bodies of his dead. In the hierarchy of deities, however, fire is far from occupying first place. The fact that obtaining fire is within the power of man greatly diminishes its majesty in the eyes of the

/378 cont./

422 clansmen, even in those cases where the families eat separately.
422 And, conversely, it happens that in large families, keeping house
594 together and eating together, individual members, such as, for example, the unseparated sons, are independent owners of dogs, boats, and other movable property. Thus, the sons who live with their father obtain in good time property for their future independence or for the purchase of a wife with their own means.
[431] Such independent property of unseparated sons is either obtained
[224] as a present /379/ from the father, augmented by the fruits of
[465] success in hunting through the efforts of the children or as the result of employment in towns. If an unseparated son kills a bear,
[224] the meat goes for general use, but he gets the skin. If he sells his fox and sable, he will purchase various articles for the family, but
[465] he will certainly obtain something especially for himself. The
[226] same is true of his wages. But never will the son reserve for himself a special share of his catch of fish, where ordinarily the skill
422 of one individual plays no role. These same economic relations
606 prevail between the father-in-law and son-in-law who maintain a joint household (furs and wages constitute individual acquisi-
422 tions). There is a category of articles sui generis which constitute
556 the exclusive individual property of the Gilyak. This is his
[454] "wealth." The Sakhalin Gilyak, at least, does not treasure and does not store up money. On the other hand, he stores up valuable fur coats, fox and sable, pieces of costly Chinese silk, spears with silver fretwork, silk gowns, Japanese sabers, etc. These riches pass from generation to generation, from father to son, and only at extremely important moments of life are they taken out of the storehouse. When it is necessary to purchase a wife for his son, when the need arises to provide presents for his daughter, departing for the clan of her husband, when the clan through its common efforts concludes a peace with the clan of the avenger, when he himself dies, or some other person who is dear to him and whom he wishes to see upon the funeral pyre in all the splendor of sable fur coats and Chinese silks -- then the treasured objects are
556 brought out of the storehouse. The attitude of the Gilyak toward rich men is interesting. The Gilyak regards his wealthy brother

46

/380 cont./

contract, are those sacred treasures which customarily lie untouched in the storehouse of their possessor. The creditor lays hands on these objects in those rare cases when he is compelled to recover his debt by force. The public or secret unharnessing of the dogs from the sled of the debtor is also one of the methods of collecting a debt. But what is most curious, what speaks in favor of the uprightness of the Gilyak and is most important at the trials of their lawsuits, is the fact that not a single debtor will ever repudiate his debt, no matter how ancient and unpleasant it may be to him. The Gilyak is greatly astonished when you ask him whether he has any evidence for the debt. "Ask him (the debtor)!" replies the puzzled creditor.

Speaking of their economic and juridical relations, one cannot fail to mention the role of labor in these relations. Capital, as the basis for reward, hardly plays any role among them as yet. In their communal hunting, for example, in the hunting of seals and dolphins, when the Gilyak gather for this purpose, several men to a boat, the catch is divided equally among the participants. The master of the boat gets the same share as the youth who sits /381/ at the oars. Even the craft of the metalworker who makes the spear or the arrow does not constitute a basis for special reward. Moreover, on distant expeditions, for example, from the Amur to south Sakhalin, the one who obtains more than an equal share of the catch is not the master of the boat, but the one who performed the troublesome chores on the way, such as the preparation of the food and the collection of firewood. In joint fishing the master of the boat and the net obtains the same share as his have-not companion ("navkh"). True, I have seen an instance where the master of the boat and net obtained 2/3 of the catch, while his have-not comrade -- only 1/3, but to my question as to the reason for this inequality I received the reply: "And why should he have more? He is a bachelor, alone; he does not need any more." I encountered a status resembling to any degree that of a workman only two or three times, but even in these rare cases the status of the worker does not remind one of our practices. The master will help his worker purchase a wife and will make him a sharer in the inheritance after his death.

461

461 LABOR AND LEISURE--ideas of the value and dignity of labor; notions of pleasant and unpleasant tasks; distribution of labor and leisure time; incentives to labor (e.g., pride in craftsmanship, prestige, material rewards, compulsion); time and motion studies; intensity of effort; palliation of labor (e.g., with drugs, rhythm, music); work tempo (e.g., steady, intermittent); standards of productivity and production norms; laziness and malingering; rest periods; loafing and loitering, etc. See also:

561 the distribution of the quarry in the village Kul can be appropriately concluded with the following passage from L. IA. Shternberg's work "Sakhalinskiie Gilyaki" (The Sakhaline Gilyaks), mentioned by F. Engels and published in "Etnograficheskoie Obozrenie" in 1893, i.e. 40 years ago. "During the common hunt, for instance, during a seal or dolphin hunt, when a group of Gilyaks banded together for this purpose set out in a single boat, the quarry is shared equally by the participants. The owner of the boat receives a share equal to that of the young man sitting na grebkakh. The skill of the maker of spears and arrows is not specially rewarded. Moreover, during a long expedition, i.e. from Amur to the South of Sakhalin, it is not the owner of the boat who receives more than his share of the quarry, but rather the man who in the voyage performs the most duties connected with the steering of the kind of the collaboration of man Onkha [illegible] in a public hunt [illegible] extra [illegible]

476 It is necessary to give one more example of the
225 distribution of the quarry in the collective of Kzoun, for in it we come across an entirely new phenomenon.

The quarry of Kzoun's collective consisted of 16 sivuchs. They [illegible] of 20 sivuchs on arrival. They [illegible] the hunt of the Kzoun's hunters [illegible] and the hunt of the [illegible] hunt. There were seven hunters in an [illegible] of [illegible] of the remaining sivuchs Kzoun gave one and a half sivuchs to each of the seven members of the collective. [illegible] half sivuchs. The lot of the remaining one and a half sivuchs was divided unfortunately, [illegible] the hunters decided to let them try and then [illegible] Kzoun's and [illegible] for about [illegible] Kzoun there were a women [illegible] and [illegible] were [illegible]

Under ordinary circumstances it takes little effort on the part of the Gilyak to nourish himself and his family. It is only during the salmon run that the Gilyak works hard, during the rest of the time only the women are industrious. The men often sleep at home during the day, and they get up after sunrise. In the evening, however, they often sit up a long time and chat. Well-to-do mainland Gilyak sometimes even hire Russian workmen. The men who work for gold-seekers are discharged in the autumn and could live quite well throughout the winter on their pay, but it never occurs to them to save; in a few weeks everything is spent and then they do not know what to do. Such hungry chaps often wander as far as the Gilyak villages and pledge themselves to cut wood and do odd jobs in exchange for board. Gilyak hate monotonous work. In the vicinity of Nikolayevsk-na-Amure [231] they sometimes turn to haying in order to earn something; but as for digging, wood cutting, sawing and similar work, they do not let themselves be enticed into it even for good wages. This, moreover, shows that they are ordinarily not in great straits. The Gilyak almost never trade on a commission basis.

Among themselves they are very punctual about paying. If a debtor dies or becomes incapable of working, his relatives endeavor to pay off his debts. They know nothing whatever of going into bondage or slavery because of debt.

The law of inheritance is very simple. The father's property goes to the children if they no longer have a mother. If the children are under age, their uncle or some other close relative is their guardian and later returns their property if it has not been entirely used up. If a widow is left with children, the property remains intact in the family, and the mother is called "the elder" in possession. If the widow is childless she keeps a small part, about an eighth of the fortune, the rest belongs to the relatives of the deceased. If she wishes to enter a new marriage, the brother or some other close relative of the husband becomes, as we said, her second spouse, but if she already has children, they keep the estate of their father. If she is poor and does not wish to re-marry, she must be helped, and this help she usually pays off in work as best she can. If a father whose wife died earlier leaves a son or daughter, the estate is usually divided upon the daughter's marriage. In this case, the relatives of the bride look over the bridegroom. If they regard him as irreproachable, the bride gets half, but if he is not of the best sort, she gets less, probably in

372 there were sivuch heads. At home she threw them into the
782 fireplace. These pebbles are called uskis 'pay' (j-uski-d
225 'to pay,' s - suffix of the implement of action).
77

There arises the question why this pebble is called pay and why the Gilyaks pay for the hunt to the master of fire?

Of some help in answering this question may be the following opinion of the Gilyaks of which I was told on Sakhalin in 1927 by the Gilyak Murmur of the village Chayvo. Murmur informed me that while the hunter is still asleep the master of the fire hunts seals for him. If the master of the fire fails to kill a single seal, then the hunter will fare no better. "We sleep, fire first kill seal. Fire seal not kill, we also not kill."

The ceremony of throwing the heads into the sea concludes the seal hunt.

115 A seal hunt. (1) Supplement
225

1. This is a translation from the Gilyak language. The text was taken down in the village Hiski, 40 versts from Kul, on July 10, 1931, and was told by old man Jajpan.

225 In the spring we came to a summer village, we were suffering hunger, we caught only fish, catching bullheads on hooks, only ate. Then the sea ice moved. The pilaŋ said: "Let's hunt seals. How many will go? Six gathered to go. "Women make mos, make muvi." Then we slept. In the morning we got up and ate. "Prepare your things, harpoon tips, harpoon shafts, oars, small benches, and put everything in the boat." Then we brought out things to the boat and put them down. All got down into (entered) the boat. Then we pushed off the shore. Five rowed. Then, rowing, we got to sea. After we got to sea, we came alongside the shore. When we came alongside the shore, we pulled out the boat and lighted a fire. The fellows said: "Big man (2) make

/528 cont./

The great numbers in which the salmon, and in particular the two species repeatedly named, go up the Amur and its tributaries make catching them in the largest quantities an easy matter for the Gilyak. In the small tributaries, such as the Litsch, Kamr, etc., the fish crowd and almost push themselves onto the bank and can be taken from the shallow water simply with the hand, and from deeper water scooped up in dragnets or pulled up with hooks and thrown into the boat. Women and children participate in this work, and within a short time one boat after another, filled with fish, returns home, where the previously described, more strenuous work of skinning, cutting up, and hanging the fish on the drying racks is undertaken. While the women attend to this, the men bring more and more new material. In the smaller rivers, a net is also often drawn across the entire width of the river, and in this manner the whole shoal of fish ascending at the time is caught, insofar as the net permits this without tearing. In the large river where fishing is done exclusively by the men, the schools of ascending fish are likewise so densely crowded that the simplest nets suffice to catch vast quantities in a short time. The fishermen, in two boats and holding a net between them, go downstream toward the ascending fish and draw up the filled net first into the one boat and then into the other, until both are full. Or two men, holding one end of a net, travel downstream at some distance from the shore toward the fish, while a third man, with the other end of the net in his hand, walks along the shore in the same direction. When they notice that the net is sufficiently filled, the fishermen sitting in the boat turn their vessel about and quickly row toward the man walking along the bank, in order to jump out of the boat near him and, joining forces, drag the net to land. The nets used for catching salmon are given different names by the Gilyak in part according to slight differences in shape and the manner in which they are used and, in addition, are differentiated according to the species of salmon for which they are intended on the basis of the size of their meshes. For example, the above-mentioned, simple,

/531 cont./

226 stuck in the snow behind him and leaned against a sled turned sidewise served as protection from the wind. There were several other fishermen sitting on the ice in this manner at some distance from one another. As soon as a considerable quantity of fish had been caught, they were carried away on the sled. It is bound to be surprising that the Gilyak do not use a more appropriate method for catching this fish; even a simple net would undoubtedly be far more successful. It seems, however, that the many superstitions associated with the kangi fish, as mentioned above, among them, for example, the one that they may not be put in a bag, makes them persist in the ancient and traditional way of catching them.

286 In conclusion, it remains for me to say a few words about
283 the making of fish nets by the Gilyak. The material for them is
[824] provided by a nettle, Urtica dioica L. (Gilyak chisk, Olcha and Goldi pikta), growing luxuriantly, along with artemisia as tall as a man and other plants common to rubbish heaps, around their dwellings on soil fertilized by refuse of all sorts. Their stems are cut in the fall and soaked in water; in winter they are dried and tied into bundles, and the preparation of thread and twine begins early in the spring, as does the plaiting and repairing of the nets, for which there is a great need in summer. The first
[462] part of this work, the preliminary readying of the nettle stems and the preparation of the thread, falls to the women; the twisting of the /532/ string, however, and the knotting of the nets are,
[114] as a rule, done by the men. On April 18/30, 1855, I witnessed the preparation of the thread in the village of Kulk. With the help of a smooth, wooden knife /Falzmesser/ pointed at the end, called chukka in Gilyak, the dried stems are pressed flat, split lengthwise, and broken on one place, whereupon the skin is stripped off and stroked until it is completely reduced to fibers and all the woody parts removed. With the help of hand-spindles this fiber is spun into a fine thread, part of which is allotted to the women themselves for their sewing work, but the other and larger portion is used for making cord of varying thickness (Gilyak puksi) for the nets. Mr. Maximowicz had an opportunity to watch

/638 cont./

36 material reasons, which are always decisive to a great extent among the Gilyak, each of the two parties avoids taking the initiative in the dissolution of the marriage.

62 For the most part similar utilitarian considerations lie at the root of the peaceful life shared by the husband and wife and the good treatment which the latter receives from the former. /639/ The Gilyak is much too practical and too intent on the preservation and increase of his possessions not to realize the great usefulness of his wife and to appreciate the tremendous amount of work she achieves through her industriousness, skill, patience, and experience. In the division of labor between husband and wife for their common household, the greater share by far falls to her. In 62 general, the man only has to attend to providing the most 22 important means of subsistence. Hunting, catching sturgeon and hausen, killing the seal and dolphin, and trade, and, in particular, the many trips and voyages required for it, 51 make up the field of action that is exclusively his. To be sure, he also does other fishing and, at the time of the mass migrations of the various species of salmon, even does this in a very energetic fashion, but in this the women are of great help to him, and the tiresome work of cleaning the tremendous amount of fish brought ashore, of cutting them up and hanging them on the racks to dry in the sun, falls entirely on them. They also collect, in part with the help of the children, all the winter supplies of vegetable foods insofar as they are part of the native flora, the various edible berries, 62 roots, herbs, moss, and the like. In addition, the wife has to tend to the entire household and everything pertaining to it. The single thing that the man does for it directly is to 83 cut the needed firewood in the nearby forest, split it, and bring it to the front of the house. To carry it into the house as needed, however, is again left to the women, just as they are obliged to fetch the water needed for drinking and cooking -- a task which in winter and in bad weather involves much toil and effort in the villages that lie high above the river. These are, as a rule, also the first tasks of the day,

/639 cont./

462 since the house, which has cooled off during the night, must be heated again in the morning, the fish broth cooked for the dogs, and the latter fed in order for them to be ready for possible ex- [251] cursions by the men. The storing of all food supplies and the [252] preparation of food for the occupants of the house likewise fall, of course, entirely on the women. In the morning and during the day, however, the Gilyak usually eat only cold food. The 462 main meal, for which hot foods, too, are to be prepared, does 264 not take place until toward evening, for that is when the men [574] return from their outside activities and when persons traveling through who have ties of hospitality with one of the occupants of the house and claim shelter for the night may arrive. Moreover, through the preparations for this meal the yurt is heated to the temperature which the Gilyak finds agreeable for the night.

294 Making the clothing for the whole family occupies the women 467 even more than the preparation of food for the human beings and [281] dogs. First of all, this involves procuring or putting into proper condition the materials used for it: to dress the animal pelts and skins; to clean, pound, and dry the fish skins, which, besides being used for clothing, also replace window glass; to prepare the sewing thread from nettle fibers or from animal and fish skins, and so forth. This is followed by the cutting, /640/ sewing, and quilting of the various articles of clothing, which, as we have seen, are provided, in accordance with Gilyak taste, with all sorts of colorful, intertwined embroidery and other decorations 462 and embellishments. There are still other domestic duties, such as making household utensils, bowls, baskets, buckets of birch bark, sewing blankets and large and small bags and pouches out of cloth or animal pelts or skins for various uses, and the like.

462 Thus one literally never sees a Gilyak woman without work 411 even for a moment, whereas the man, upon his return from hunting [517] or fishing, spends much time in rest and idleness and at home he has nothing to do but to make the implements needed for his own activities. Since these are very numerous and complicated, in that, among other things, they include all the varied and in part artistic wrought-iron lances, knives, harpoons, and the like, one

/640 cont./

462 would think that for the man, too, there could never be any lack 411 of domestic work. But these objects are by no means made every- [463] where and by everyone, but rather at only a few places by expert [439] Gilyak and used for trade (1), so that one need only make a wooden

1. A large portion of them, as was mentioned above (p. 894), are bought in crude form from the Orok and only given the finishing touches by the Gilyak.

handle or shaft and fasten the iron to it in order to produce the 467 complete weapon. The situation is similar with respect to bows, 321 boats, and other implements that are used specifically or chiefly 322 by the men. The domestic activities of the men among the 517 Gilyak, therefore, are not very numerous and are mostly limited to a few manual tasks with the knife or the drill to produce sleds, ski, animal traps, and other implements of wood or bone, and he still has much time left for idleness, smoking, and sleeping.

593 The domestic tasks and accomplishments of the wife, however, [462] are far from exhausted by what has been presented above, for in addition to all that there are still the maternal duties, the care and tending of the children. The Gilyak, husband as well as wife, find great pleasure in children and not infrequently express it, though they are generally very reserved about expressing their feelings. I never saw a Gilyak give his wife a kiss, not even when he was about to leave on a journey or returned from one.

[855] On the other hand, I have often seen a Gilyak man, not to speak 593 of the women, tenderly caress and kiss small children. Every 842 married Gilyak wants as large a swarm of children as possible, and one who has them prides himself on it. One in Xyi was boasting in front of me about his many children, but to my question as to how many he had, he could only answer: tammlä, tammlä, that is, many, many. Mixed in with this joy, however, [592] there is also an egoistical, utilitarian viewpoint, for in his growing sons he will soon have helpers in his lucrative hunting, fishing, and trading business, and the daughters promise, /641/ apart from The help that they give in the household, a fine bride price.

the very front, on the forehead, the last bears a frog shape. This is striking, since the frog (dhal) is not regarded as unlucky, is not magä. (Bm. II, pp. 44-46.)

756 30. Gilyak. Amazing, miraculous acts which the Gilyak 554 shaman performs are chiefly the means by which he wins admiration and esteem among his countrymen. The more these acts deviate from the natural course of things, the greater is the reputation of the sorcerer. Such is enjoyed, for example, by the Gilyak

179 strongly developed among the continental Nivkhi. The old forms of collective 433 production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in 22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola 262 took the place of bread. Meat was eaten rarely. Food was prepared with

[illegible] taste and skill. Wood-carvings also decorated sums, bar[illegible] and dwellings. In motif and style, the Nivkhi design is related to the design of the Ul'chi and Nanays. The principal motifs of the ornamentation of clothing and birchbark utensils were symmetrical combinations of bent lines, often almost spiral, and stylized representations of birds. Appliqués from fish-skin, fabrics and birchbark were cut out according to birchbark or leather patterns, transmitted from generation to generation. Robes, birchbark boxes and hats, and other articles had standard combinations of ornamental motifs, reproduced on articles of specific groups. The main colors in appliqués of birchbark, fishskin and fabric were black, white, red and blue. Appliqué on birchbark, fabric and fishskin was women's work; carving on wood and bone was done by men. Many women were famed for their skill and craftsmanship.

The origin of the Nivkhi ornamental art, as well as the art of other Amur peoples, has not yet been sufficiently established. Some of the motifs (such as roosters, dragons and monster-serpents) were unquestionably suggested by Chinese art and mythology, but underwent considerable local transformation; others (spirals) probably date back to neolithic times.

281 (the work of stretching the hides on frames and of cutting
462 straps is performed by men). Finally, the heads have to be cooked and prepared for throwing out into the sea.

281 I watched the two wives of Xitkun work after he returned from the hunt. The younger of the two was busy peeling suet from hides. In this she was helped by a woman, the wife of one of Xitkun's kinsmen. The job of peeling suet from hides is very hard. Most of the time the woman has to work in a bent position. I saw Xitkun's wife lift a hide in the process of cleaning it of suet by seizing a part of the cleaned hide with her mouth. At the same time she held the peeled suet with her left hand and continued the peeling process using a large narrow and somewhat curved knife which she held with her right hand.

237 The Gilyaks prepare thin seal fat in the following manner.
415 They cut the suet (ŋ[illegible]) into pieces. They put the pieces into
251 a barrel (in the past they used to put them into a large, deep trough) which they then place in a warm spot. There the suet begins to decompose and to melt (I am not in a position to give a more detailed account of the process which takes place in the suet). This yellow fat (tom) flows out of the suet. Depending on the age and variety of the seal the fat is either light or dark and turbid. The Gilyaks pour the melted fat into dried seal stomachs. They give the leavings of the melted suet (ta) to the dogs. Stomachs of seals are used by the Gilyaks for storing seal fat. Having killed a seal the Gilyaks empty out its stomach, blow air into it and hang it up to dry. The fat can be stored for a long time in such a bladder. Once the bladder is filled with fat, it is hung in the barn.

888 While one of Xitkun's wives was busy peeling suet from
252 hide, the other wife, Hemanʒ 'old woman,' was preparing the heads for cooking. It was certainly no accident that it was Hemanʒ, Xitkun's older wife, who was preparing the heads for cooking. Preparing of the heads requires a certain knowledge of religious ceremonies the guardians of which are the old people.

193 (93) A propos the interpretation of the words hemanʒ
197 old woman' and hemar 'old man'. Both words have in common the sound combination hem and differ in their respective endings ar and anʒ. Ar means in the Gilyak language male and anʒ - female. What then is hem? In the village Chayvo where a certain form of the Sakhalin dialect is spoken, they call an old man hajmɣar. In comparison with the Amur dialect the Sakhalin dialect has retained a great many ancient forms. The etymology of the word hajmɣar can be easily

remember only two instances when Europeans were assaulted by it without having been the attackers. The one case occurred in the year 1875 in broad daylight on the ice near a post station. A post servant was gored by the tiger. The skull of this animal which was itself killed the next day now belongs to me. It measures seven and one-half vershok (33 centimeters), the upper canines are as long as a finger.

himself takes the offensive, does the monster lose his instinctive fear of him, and then suddenly shows all its terrible natural qualities, to which belong an amazing toughness. Even with five or six rifle balls inside it, it still takes enormous leaps, and even in its death throes it can still overcome a man. The bullets bounce off its skull, and one is supposed to aim at its chest, for only one bullet in the heart finishes it off. Thus an open battle with the tiger is so dangerous that bear hunting may be considered child's play in comparison, and the peasants and Cossacks decide on it in dire necessity when the tiger breaks into their stables and cannot be got in any other way. In that case 15-20 men with bayonets on their rifles and in closed ranks descend on the place where the animal was scented. But the regular method of capture is poisoning with strychnin or the setting up of rifles which go off when the tiger approaches the bait. The corpse of an animal that was killed by the tiger himself usually serves as bait, for the tiger has the laudable habit of returning the day after his assault.

The wolf exists on the lower Amur, but rarely shows itself and does no harm. It is seldom shot.

223 Birds, especially ducks and geese, partridges and hazel grouse are now usually shot with rifles. Snares are also set for partridges on flat islands in the willow shrubbery. Hazel grouse are lured in spring with whistles, in winter they are openly hunted in spruce thickets. The Gilyak who live in the surrounding country are the chief purveyors of wild game for Nikolayevsk-na-Amure.

462 We mentioned above the other occupations and embryonic handicraft and trades. Specialization [124] consists in not much more than a division of labor between men and women. The man hunts, does carpentry, makes weapons, sleds, etc.,

takes trips on various business matters and so forth, he also takes care of fishing. The woman spins, makes nets and clothing, cooks, takes care of the children and the dogs. Weaving is entirely unknown to the Gilyak, artificial materials, such as twine and needles are bought; the latter, moreover, they formerly fashioned in a very primitive manner. In general it can be said that every Gilyak man and woman knows how to do all the work necessary for their existence, although not in the same degree. For instance, with respect to metal work: everyone knows how to make a knife, not everyone can make a hatchet, and only a few, finally, concern themselves with the making of a jew's harp (to be described below) and the more intricate weapons, as for example lances with silver decorations.

572 This is the place for us to say something of fire-making. The Gilyak customarily wears a pouch on his belt, containing flint, steel and tinder. The birch fungus is used as tinder, flint is found in abundance on the banks of the Amur. If they should lack fire tools they make fire, just as other primitive peoples do, by friction. A dry stick, on both ends of which is tied a bit of fungus, is put into a groove on a block of wood; one person holds the stick upright, another winds a string around it, takes the ends of the string in his hands and makes a sawing motion back and forth. Usually fire is produced after a half hour.

IX. Weapons

The Gilyak customarily carries no other weapon except his knife which is seldom used for defense. The knife consists of a pointed blade and a wooden handle. The blade and half the handle are carried in a leather sheath which is worn on the belt. To the actual weapons belong lances, bows and arrows and at present also the gun which many of them have obtained.

The bow is made of wood but has an underlayer of whale bone which is glued to the wood with fish glue. They like best to use ash wood (frax. mandshurica). On the inner, i. e., the whale bone side not far from the ends there are two [125] small grooved strips for the bow string. The unstretched bow is bent so that the whale bone faces outward, but in use it is on the inside, otherwise it might be damaged. The string consists of intertwined sinews of rope. It requires some effort to stretch the bow, and the shot is powerful. The arrow has three small feathers at one end, the other end is somewhat thicker and has an iron point which is barbed, but

[illegible] and are essentially the same as those discussed earlier. [illegible] (Number XIII, p. 207) [see Goldi source 18: Genest--Analyst]. The Gilyak on Sakhalin Island whose houses [illegible] were invariably indignant whenever he left the house with a lighted pipe in which his companions [illegible] the fire burning in it, but by pouring water on it. For in their opinion such things tended to confuse up their position not only over the inhabitants of the one but but over the whole tribe. The inhabitants of one house in the village of Vaiki below Nikolayevsk predicted the same result when Jakobsen was about to light a fire for making the tea, and they forced him to wait till the house-wife saw to this task, since, in their opinion, this was a job only to be performed by her. Plainly this conduct has its basis in the sacred position of fire. [380] Though this no longer leads to a personification of a fire god among the Goldi and the Gilyak, it no doubt existed among them at one time as it still does today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious con-
ceptions of the Goldi; the most important difference seems
to me the one that was touched upon earlier (XIV, p. 223),
[see Goldi source 18: Genest--Analyst] the fact that the Goldi
pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are
fed plentifully for an extended time by means of large wooden
spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually
held late in autumn and in winter and they are affairs of
the greatest importance to their celebrators. I will now
give the description of the festival that Jakobsen had the
opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a
festival was to take place on that day. From several other
villages, some of which were considerable distances away
large numbers of guests had come in already, and the whole
place was astir in anticipation of the festival at hand. The
opening of the bear festival is in the hands of the village

brass bowls and enormous amber mouth-pieces."

252 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.

263 When the heads were cooked, Xitkun, his son and other
177 hunters started to eat. They were served meat on flat
258 wooden dishes. At the same time they were given a small
314 bottle with salt and a tiny cup containing finely cut cheremsha
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeĭa Antropologii i Etnografii a wooden plate of the an-
415 cient Gilyaks, black with age. This plate, which was sold
263 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.

462 On the following day, after the meat was taken off the
782 heads, the Gilyaks prepared them for throwing in the sea.
225 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of qosk-qəks 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemanŋ. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pəs. In a row with the skulls lay jugular
vertebrae (maʒt) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

463

.1 OCCUPATIONAL SPECIALIZATION-- number of partially and fully specialized occupations; major occupational categories (e.g., learned and artistic professions, independent industrial and business entrepreneurs, managerial personnel, independent and tenant farmers, government officials, clerical and white-collar workers, skilled artisans, semi-skilled and unskilled industrial workers, farm laborers, domestic servants, slaves); general information about occupational specialization; vocational guidance; specific information on occupations not classifiable elsewhere; etc. This category is designed for summary statements about occupational specialization; in nearly all instances specific information will be classified elsewhere under a wide range of functional and occupational headings. See also:

000 weakly developed. Among the Gilyak there are very few
152 such outstanding, passionately devoted hunters as are to be
224 found among the Tungus. Nor do the Gilyak, especially
152 during the past half-century, possess the heroic emotions of
72 war. Indeed, what the Gilyak called wars in ancient times
[614] were in fact nothing more than sporadic clan skirmishes
[578] motivated by vengeance or, even more frequently, were over
[463] women. The Gilyak have never known war as a profession,
as the favorite occupation of youth. It is natural that their
831 emotional energy should be principally directed toward
[152] sexuality. The Gilyak begin their sexual life with the onset
of puberty and devote all their leisure, all their thoughts, to
women, the more so since by far not every Gilyak, as we
836 shall see, finds it possible to marry. The bachelor youth is
not content with the women to whom they have rights in their
own settlement, they do not stop with the circle of women to
whom they have rights by law. The only category of women
before which the Gilyak halts is the class of women prohibited
491 to him. Neither length of time nor immensity of distance will
836 deter the Gilyak from his romantic adventures, if he can but
find his fill of feminine society. The young man sets off most
eagerly of all, of course, for the village of his "fathers-in-
law" --akimalk'i but he is not averse to undertaking a journey
even to completely alien villages. During the time of my
[122] travels, young men frequently voluntarily joined me, offering
me their assistance without compensation for many weeks,
and this was done in the hope of finding occasion for romantic
adventures, since this was not so very difficult. Owing to
836 the Gilyak's traditional hospitality and eagerness for any news,
674 the doors of every home are wide open to each new arrival.
Thus, the Gilyak feels at home everywhere. A few hours
[203] after his arrival in some settlement, he has already managed
to spend some time in every home, everywhere relate his
news, to which the men and women listen with equal avidity,
and has already managed to let his glance fall on some
woman who has caught his fancy. The rest is a matter of his
amatory experience and art.

786 Peoples of Northern Siberia and the Far East

177 Many Nivkhi with secondary schooling enter higher educational institu-
648 tions. In 1953, 2 Nivkhi attended Leningrad State University, and 10 studied
873 at the A. I. Herzen Pedagogical Institute. At present, 16 Nivkhi are attending
the institute. Among the students there are also women. In 1953, Liza
Dekhal' of the village of Pad on the Amur graduated successfully from the
A. I. Herzen Institute in Leningrad. The Nivkhi Chuner Taksami of the
[463] village of Kal'ma is today doing graduate work at the Institute of Ethno-
graphy of the USSR Academy of Sciences. Nivkhi with special training are
working today as captains, enginemen on cutters, teachers, librarians and
club directors.

177 The political activity of Nivkhi workers has grown tremendously. Many
648 have risen to leading posts on collective farms and in various institutions;
many work as instructors with rayon Party committees and executive
474 committees.

Wide educational work among the Nivkhi has been conducted and is con-
[64] ducted today by the cultural bases established on their territory. The first
of these was founded in 1928-29 in the village of Nogliki, at the mouth of the
Tym' River in Vostochno-Sakhalinskiy Rayon. The second cultural base of
the peoples of the North was founded on Sakhalin in 1946, in the village of
Yukovo. These bases have libraries, reading rooms, clubs, seven-year
schools for Nivkhi and Evenk children, and also dormitories and boarding
schools.

[52] At the amateur concerts on the collective farms, both men and women
entertain, singing and performing native and Russian dances. Frequently the
songs are created on the spot, impromptu. The collective-farm youth also
participate in regional Olympic games.

Theatre arts are also developing among the Nivkhi. In the beginning, the
[545] Nivkhi, who had never seen a theatre before the Revolution, were merely
spectators at performances organized by Russians. Soon, however, dramatic
clubs were organized in the collective-farm clubhouses, and the Nivkhi
began to present plays in their own language.

The Nivkhi are great lovers of sports. In former times they did not know
[526] how to swim and feared the water. Today the Nivkhi young people enthusias-
tically engage in water sports. There are now special sports omorochki
(canoes) with a single oar, in which young men and women hold speed races.

The Nivkhi have also preserved native sports, such as rope-jumping.

The changed working, living and cultural conditions of Nivkhi life—the
[182] collectivization of their economy, their participation in industry, the unifi-
cation in collective-farm villages of people who had formerly belonged to
different clans, and the general rise in their cultural level—all these factors
have completely destroyed the old ties and rules, based on the numerous
remnants of clan relations which had survived until the Revolution. The old
177 religious ideas, holidays and rituals have lost all their meaning. The
648 greatest change has occurred in the position of women. In former times, the
562 Nivkhi woman was timid and oppressed, and knew only the narrow circle of
her domestic duties. She could be bought and sold, or turned out of the
house. When she met men, she had to cover her face and turn her back to
them. During the early post-Revolutionary years, a great deal of effort had
to be applied toward the elimination of survivals of the past. When they
attempted to study, many young women and girls were ridiculed by their
fiancés, husbands and mothers. Some were unable to withstand the pressure
and discontinued their studies. It proved especially difficult to overcome
the ancient custom of placing a woman in childbed in a special hut, built
near the dwelling. This tent was usually cold and damp. The woman had
to remain under these conditions for several days without any help.

462 takes trips on various business matters, and so forth; he
also takes care of fishing. The woman spins, makes nets
and clothing, cooks, takes care of the children and the dogs.
286 Weaving is entirely unknown to the Gilyak, artificial ma-
326 terials, such as twine and needles are bought; the latter,
463 moreover, they formerly fashioned in a very primitive
manner. In general it can be said that every Gilyak man
and woman knows how to do all the work necessary for their
existence, although not in the same degree. For instance,
with respect to metal work: everyone knows how to make a
knife, not everyone can make a hatchet, and only a few,
finally, concern themselves with the making of a jew's harp
(to be described below) and the more intricate weapons, as
for example lances with silver decorations.

572 This is the place for us to say something of fire-making.
The Gilyak customarily wears a pouch on his belt, containing
flint, steel and tinder. The birch fungus is used as tinder,
flint is found in abundance on the banks of the Amur. If they
should lack fire tools they make fire, just as other primitive
peoples do, by friction. A dry stick, on both ends of which
is tied a bit of fungus, is put into a groove on a block of
wood; one person holds the stick upright, another winds a
string around it, takes the ends of the string in his hands
and makes a sawing motion back and forth. Usually fire is
produced after a half hour.

IX. Weapons

411 The Gilyak customarily carries no other weapon except
his knife which is seldom used for defense. The knife con-
sists of a pointed blade and a wooden handle. The blade and
half the handle are carried in a leather sheath which is worn
on the belt. To the actual weapons belong lances, bows and
arrows and at present also the gun which many of them have
obtained.

The bow is made of wood but has an underlayer of whale
bone which is glued to the wood with fish glue. They like
best to use ash wood (frax. mandshurica). On the inner, i.e.,
the whale bone side not far from the ends there are two [125]
small grooved strips for the bow string. The unstretched
bow is bent so that the whale bone faces outward, but in use
it is on the inside, otherwise it might be damaged. The
string consists of intertwined sinews of rope. It requires
some effort to stretch the bow, and the shot is powerful. The
arrow has three small feathers at one end, the other end is
somewhat thicker and has an iron point which is barbed, but

464

464 LABOR SUPPLY AND EMPLOYMENT--availability and scarcity of labor force; skilled and unskilled labor; incidence and types of unemployment (e.g., voluntary, intermittent, seasonal, cyclical, residual, technological); employment opportunities; labor mobility and turnover; employment agencies; regulation (e.g., age and sex restrictions); etc. See also:
Internal migration 168

/363 cont./

177 deception and exploitation everywhere, but by degrees they will
end up by making use of the same weapon. The Sakhalin Gilyak
have a good chance of maintaining themselves longest of all since
they are farthest from the center of settlement. But Russian influ-
ence makes itself felt even on them. From all the settlements
178 they go out to work for wages and go to make their purchases at
• 464 Nikolayevsk, and every Gilyak who returns from work to his native
[439] settlement brings back the same atmosphere as the youth who re-
turns to a Russian village from work in the big cities. Moreover,
work in the towns, with its varying fortunes, ever more /364/ and
more destroys that primitive equality which constitutes the domi-
nant feature of the simple economic life of such peoples as the
[454] Gilyak. Together with the wealth that they have amassed in the
new environment, people bring back the economic customs of that
environment. But for the present, let us not look into the new
phenomena in the life of the Gilyak; let us turn now to their still
unshaken foundations.

III.

Religious Views

796 Though the dominant feature of the polytheism of the Gilyak
397 is its anthropomorphism, the worship of the powers of nature lies
[971] at its foundation. Thus, among them, fire is a deity, "a small-
small deity," it is true, but one nevertheless. To the question
"why?" a Gilyak replies: "But without fire how can one live?"
It is considered a sin to put out a fire in the hearth; even damaging
the fence of a hearth is a sin. During the season of seal hunting,
[688] or when a newborn child is in the yurt, and in many other cases,
it is considered a sin to carry the fire out of the yurt. It is to fire,
as to a divine element, that the Gilyak entrusts the bodies of his
dead. In the hierarchy of deities, however, fire is far from
occupying first place. The fact that obtaining fire is within the
power of man greatly diminishes its majesty in the eyes of the

/376 cont./

593 inheritance. Only with relation to the daughters does the father
594 enjoy a despotic authority, regarding them as commodities to be
disposed of as dearly as possible, although in practice this authority
is considerably relaxed by the natural attachment of the father
593 to his children. The considerable independence of the sons is
594 determined by the forms of acquiring the means of existence.
475 For fishing with the small nets used by the Gilyak, the co-operation
[126] of only two men is required; consequently, in this respect the
[866] existence of large family households is not caused by necessity.
[124] Likewise, the hunting of the Gilyak at the present time does not
[125] require collectivism, while for the spring and fall seasons of seal
hunting the Gilyak join in temporary artels, whose composition is
594 completely accidental. The practice of going to Nikolayevsk for
593 work undoubtedly has assisted in the dissolution of the large
178 family, although among the Gilyak, as among our own peasantry,
• 464 such employment for one of them is frequently one of the kinds of
division of labor within the family. Those who go away for such
work are either bachelors or members of a large family, leaving
their father and brothers at home to prepare fish for the winter. In
594 any case, the separation of adult, married sons from the family
594 of the father is far from being a predominant phenomenon, espe-
178 cially in northern Sakhalin. Evidently it is of very recent origin.
[768] But at the same time the separation of the adult brothers after the
death of the father is a customary phenomenon, although we
should not think of this phenomenon in our sense. The brothers
continue to live in one yurt, they frequently use the same equip-
ment, but they eat apart; frequently this is the only sign of the
division of the household.

593 We shall say more later concerning the economic relations
of the members of a family.

It is pertinent to point out that in many respects mutual
aid, as well as the feeling of kinship and attachment between mem-
bers of a family in general, is more extensive and constant among
these barbarians than in a civilized family.

[The western Coast]

166 /386 cont./ To make some money,
• 464 115 individuals, i.e., one-sixth of the adult population, make
183 the trip to Nikolayevsk. The settlements richest in seals and
433 dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is
[244] also richer in sables than the others. Potatoes are raised by the
Gilyak in Khoe and Tangi. In the settlement of Tyki, the
[162] Gilyak have made a request concerning the settlement among
[197] them of at least one Russian with whose help they could raise
[244] potatoes. The settlement of Tyki should be mentioned for sev-
224 eral other reasons. In the first place, starting from this point
433 the Gilyak are ceasing to hunt sables because of the overwhelming
198 competition from the Tungus who have killed off the sables in the
648 vicinity of the settlement and now pursue them on their reindeer.
Before the appearance of the Tungus, the Gilyak were very suc-
cessful in hunting wild deer and sables. In the second place, be-
348 ginning at this settlement one notices a progressive improvement
178 in the construction of the winter yurts. In Tyki the dugout rises
354 a little above the ground, it has windows made of fish skin, and
[231] in one yurt even of glass; in the middle of the yurt, instead
of a smoking hearth, one finds a chimney-like stove with a pipe.
Farther on, beginning with the settlement of Tengi, one encounters
enormous yurts with half a dozen large windows and a fairly com-
plex heating system which resembles our steam heating. The
horizontal stone pipes which lead out from the stove and stretch
along the wall under the plank beds serve mainly to heat these
latter; the smoke goes through a subterranean passage into a
high vertical pipe which is made of a hollow tree trunk especially
[184] adapted for this purpose. A similar system of heating is used by
[171] the Amur Gilyak and in the fanza /houses/ of the Manchu, from
[177] whom it may have been borrowed.

As to the character of the region, the maritime sections
133 of the western coast are mostly tundra-like, with sparse vegeta-
[137] tion. The road runs partly along the sea, partly through the
[491] taiga, and occasionally over the mountain ridges. Near the
settlement of Pomr the coast becomes more elevated, and, be-
ginning at the summer settlement of Muz'vo, it strikingly

[illegible] the boat; [illegible] as in the Siberian salmon fishing season they [illegible] unite in a collective which centers around the seine or the [illegible] yèzdka.

166 When the hunting season opens, the owner of such a boat starts collecting his companions. If the owner happens to have
225 a son-in-law (ore) in the village, he asks him to join him in
614 the hunt. In general, however, the owner of the boat selects
476 hunters regardless of clan membership.

Thus, for instance, the boat owner, Gilyak Norp of the clan [illegible] Tf-nu, was accompanied by hunters from the following clans: Otaq from clan Hutevi, Potaq from clan Neo-afi, [illegible]t from clan [illegible]a-amla, Onkan from clan Lez-ran and Tesk from clan Tf-nu.

A similar situation existed in collectives of hunters who went hunting in 1931.

The hunter collective centering around a boat is sometimes named after the owner of the boat. For instance, [illegible]l tun-munim ('one boat of Gylkhtyun') Xitkun-mu-nim (one boat of Xitkun).

225 The owner of the boat is the organizer and leader of the
556 collective of hunters grouped around him. Those who travel
[illegible] with him are his subordinates. The leader of such a collective
[illegible] of hunters is called pila (bolshak') (2) (from pila-d--'to

2. This is the name of the oldest in the clan and generally of any foreman in industry.

be big,' - suffix used in forming verbal nouns.)

225 The duties of pila are many. A pila is supposed:
476 1. To look over the boat, the rowlocks and, if need be,
202 to effect repairs.

2. To prepare and to take along a strap, harpoon tips (tamra), harpoons shafts (ve-l), his gun and the guns of his fellow-hunters, a kettle and a tea-pot (the hunters are obliged to take only cups with them), a tent, a sail, a tripod for the tea-pot and the kettle, and a compass. (3) Most of these items

3. Earlier they used to take to sea [illegible]afq-va ("friend-stone" or "friendly stone"). See the remark in the supplement to "Seal Hunting."

are the property of the pila[illegible].

225 3. To perform a number of religious-magical ceremonies
782 before setting out for the hunt as well as during the hunt. In
372 this capacity the pila[illegible] exposes the boat to smoke, performs
476 mu-zi[illegible]d and t[illegible]aj; ceremonies to be described in detail below.

471

471 OWNERSHIP AND CONTROL OF CAPITAL--major forms of productive capital (e.g., land, cattle, industrial plants); extent to which the instruments of production are individually, collectively, internationally and publicly owned; forms and elaboration of governmental control (e.g., nationalized industries); etc. Only generalized data will be filed here: for information on specific ownership and organization, see the more specialized categories below. called əmləus and the sea-end is called əz-baχ-puks 'master's stone tie.' To this end, which is lowered into the sea, is tied əz-bax 'master's stone' or 'master stone,' which, according to the Gilyaks, weighs two poods. This stone, the Gilyaks explained to me, forms the anchor of the seine. In place of plummets, stones are attached to the bottom of the seine. They are called tətr-paγ. Large wooden floats (vaŋ) are fastened to the upper cord of the seine. When the head of a sivuch gets caught in the net, the sivuch starts to flounder; at times so violently that it throws the lower edge of the seine together with the plummets over the upper cord and finds itself literally in a sack. Sometimes dolphins fall into the seine. The seals pəγi are shrewd and are seldom caught in the net.

In the past as well as at the present time the Gilyaks of the village Kul set the tola-k'e at Kivf-ŋalu, Ke-ŋalu, Vilk, Lo ri, and ət.

According to old man Virp, some clans in the village Kul owned seal hunting places in the past.

Thus clan Qavjuŋ owned: 1. Lulvəχ-pər, 2. ŋaγqej, 3. ət.

Lulv -p r and a reqej are names of rocks sticking out of the water. Seals crawl out of the water onto these rocks. ət is a small island close to which there is another such rock(β)

3. In a fog the hunters come alongside of the shore or of the small island ət. Then the young hunters amuse themselves and play. There are onət two laqr-paγ stones for a game: "who can lift it and who cannot." Close to the rocks there is a flat place where the Gilyaks compete. The competition consists in jumping on one foot (teŋot terd).

Clan Ṭnaunuŋ owned: 1. Maṭ-loŋri, 2. Tŋəri-γrə, 3. Zomivər.

The first two places form parts of the shore and are resting places for seals. The third is a rock.

Clan Kezoŋ owned the shore off Vilk, a resting place for seals and Hapzə- vər - a stone.

[84] Once at sea, the hunters take a number of measures to ensure a successful hunt. Thus, in conversation, they substitute prearranged names for the usual names of certain objects. This prearranged language is an echo of a distant past when hunters used it to keep their plans from animals

476 were forced to take the boat from him for not one of them had
225 a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry
427 we saw that the share of the owner of the boat who also
476 happened to the pilaγ was precisely the same as that of the
225 other hunters and that he was not specially rewarded for supplying the boat and for his work in connection with organizing and leading the collective.

The last quoted example illustrates the exploitation that arises out of ownership of the tools of labor. The Exploitation is effected under the guise of the particular form of leasing tools. Here the owner of the boat does not participate in the hunt. He rents the boat to others and still gets a share of the quarry which he would get had he participated in the hunt.

471 Going from Kul - which is at the present time the northern-
225 most Gilyak village on the continent - in the direction of the
476 town of Nikolayevsk -na -Amur, until recently the center of
427 capitalist influence on the Gilyaks, we note an interesting
178 phenomenon. In the villages located in the proximity of the town of Nikolayevsk-na-Amur and, consequently, exposed most pronouncedly to its influence, the owner of the boat until recently claimed two shares: one - as a participant in the hunt and the other - as owner of the boat. This represents another forward step in the development [91] of the exploitative relations whose rise we noted in the fishing industry of the Gilyaks of the village Kul. On top of that, the owner of the boat claims shares for his wife and children who take no part whatever in the hunt.

226 The tendency to claim for oneself extra shares of the quarry
439 can be explained by the fact that some time after the founding
177 of the town of Nikolayevsk-na-Amur the commercial value of
427 fish increased. The lower reaches of Amur, one of the world's
476 richest Siberian salmon areas, attracted many people from the fishing industry as well as merchants, who brought up Siberian salmon from the Gilyaks. The Gilyaks of the lower reaches of the Amur, who formerly traded with the Chinese and Japanese began selling Siberian salmon to the Russians; an item of no importance in their trade with the Chinese and Japanese. Owners of zayezdki and seins turned into entrepreneurs supplying whole-sale fish-dealers, Luri, Viderman and others. They began to increase zayezdki and to hire labor from among Russians, Koreans and, especially, Gilyaks who come to them from Sakhalin and from the villages located North of Nikolayevsk-na-Amur. "With a zayezdok as a source of income, the Gilyak turned into a rentier who was always idle and drunk throughout the summer, "says the ardent colonizer

226 and proponent of a policy of oppression of "foreigners,"
439 N. V. Slyunin. (1) It is of interest to note that the new
177

427 1 N. V. Sliunin, Sovremennoie polozhenie nashevo
476 Dal'nevo Vostoika [The present conditions in our Far East], p. 96, 1908, SPb.

471 exploitative relations evolved among the Gilyaks on the basis
427 of ownership of the tools of labor did not produce new forms
476 of distribution. Distribution persisted, as of old, in the form
226 of the hunter's ancient way of dividing the quarry into shares
177 It was only new claimants of shares who appeared. A new content was given to the old form. The owner of the tools of labor, striving to receive a greater part of the quarry, began to claim shares for members of his family who did not participate at all in the process of production such as wives and children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

of the tools of labor such as the boat and the seine and even for the use of the bench in the boat (mlət) and of the stick over the door of the house (ŋγəmr-ṭis).

We give here illustrations of the above.

225 According to the Gilyak ŋargun (?) now living in the village
471 Cəarva (Charbakh), back in 1917 or 1918 he and three other
427 Gilyaks from the village Kal'ma as well as fourth one from the village Təlmə went to the lower reaches of the Amur and worked there during the run of Siberian salmon on the island Langer for the Gilyak Armən who was an inhabitant of the island. I often saw Armən in 1931. Armən's brother worked with him. In all there were seven men working. When the fishing season was over, Armən divided the quarry. He and his brother got six shares, while the remaining Gilyaks received five shares, one share per man. The six shares obtained by Armən were accounted for as follows: one share for Armən, one share for his brother, one share for the use of the boat, one share for the use of the seine, and finally, one share each for his wife and his old mother, neither of whom took part in the fishing.. The Gilyak workers got no shares

Under ordinary circumstances it takes little effort on the part of the Gilyak to nourish himself and his family. It is only during the salmon run that the Gilyak works hard, during the rest of the time only the women are industrious. The men often sleep at home during the day, and they get up after sunrise. In the evening, however, they often sit up a long time and chat. Well-to-do mainland Gilyak sometimes even hire Russian workmen. The men who work for gold-seekers are discharged in the autumn and could live quite well throughout the winter on their pay, but it never occurs to them to save; in a few weeks everything is spent and then they do not know what to do. Such hungry chaps often wander as far as the Gilyak villages and pledge themselves to cut wood and do odd jobs in exchange for board. Gilyak hate monotonous work. In the vicinity of Nikolayevsk-na-Amure [231] they sometimes turn to haying in order to earn something; but as for digging, wood cutting, sawing and similar work, they do not let themselves be enticed into it even for good wages. This, moreover, shows that they are ordinarily not in great straits. The Gilyak almost never trade on a commission basis.

Among themselves they are very punctual about paying. If a debtor dies or becomes incapable of working, his relatives endeavor to pay off his debts. They know nothing whatever of going into bondage or slavery because of debt.

The law of inheritance is very simple. The father's property goes to the children if they no longer have a mother. If the children are under age, their uncle or some other close relative is their guardian and later returns their property if it has not been entirely used up. If a widow is left with children, the property remains intact in the family, and the mother is called "the elder" in possession. If the widow is childless she keeps a small part, about an eighth of the fortune, the rest belongs to the relatives of the deceased. If she wishes to enter a new marriage, the brother or some other close relative of the husband becomes, as we said, her second spouse, but if she already has children, they keep the estate of their father. If she is poor and does not wish to re-marry, she must be helped, and this help she usually pays off in work as best she can. If a father whose wife died earlier leaves a son or daughter, the estate is usually divided upon the daughter's marriage. In this case, the relatives of the bride look over the bridegroom. If they regard him as irreproachable, the bride gets half, but if he is not of the best sort, she gets less, probably in

465

465 WAGES AND SALARIES--wage levels (e.g., real and money wages); range and variation by occupational categories; composition (e.g., proportion paid in money, in board and keep, in share of product); fees and percentages; determination of wages (e.g., by custom, negotiation; edict or legislation); payments (e.g., daily, weekly, monthly); regulation (e.g., minimum wage legislation); etc. See also:

Income and purchasing power . . . . . 434 Standard of living 611

/378 cont./

clansmen, even in those cases where the families eat separately. And, conversely, it happens that in large families, keeping house together and eating together, individual members, such as, for example, the unseparated sons, are independent owners of dogs, boats, and other movable property. Thus, the sons who live with their father obtain in good time property for their future independence or for the purchase of a wife with their own means. Such independent property of unseparated sons is either obtained as a present /379/ from the father, augmented by the fruits of success in hunting through the efforts of the children or as the result of employment in towns. If an unseparated son kills a bear, the meat goes for general use, but he gets the skin. If he sells his fox and sable, he will purchase various articles for the family, but he will certainly obtain something especially for himself. The same is true of his wages. But never will the son reserve for himself a special share of his catch of fish, where ordinarily the skill of one individual plays no role. These same economic relations prevail between the father-in-law and son-in-law who maintain a joint household (furs and wages constitute individual acquisitions). There is a category of articles sui generis which constitute the exclusive individual property of the Gilyak. This is his "wealth." The Sakhalin Gilyak, at least, does not treasure and does not store up money. On the other hand, he stores up valuable fur coats, fox and sable, pieces of costly Chinese silk, spears with silver fretwork, silk gowns, Japanese sabers, etc. These riches pass from generation to generation, from father to son, and only at extremely important moments of life are they taken out of the storehouse. When it is necessary to purchase a wife for his son, when the need arises to provide presents for his daughter, departing for the clan of her husband, when the clan through its common efforts concludes a peace with the clan of the avenger, when he himself dies, or some other person who is dear to him and whom he wishes to see upon the funeral pyre in all the splendor of sable fur coats and Chinese silks -- then the treasured objects are brought out of the storehouse. The attitude of the Gilyak toward rich men is interesting. The Gilyak regards his wealthy brother

/380 cont./

426 contract, are those sacred treasures which customarily lie untouched in the storehouse of their possessor. The creditor lays hands on these objects in those rare cases when he is compelled to recover his debt by force. The public or secret unharnessing of the dogs from the sled of the debtor is also one of the methods of collecting a debt. But what is most curious, what speaks in favor of the uprightness of the Gilyak and is most important at the trials of their lawsuits, is the fact that not a single debtor will ever repudiate his debt, no matter how ancient and unpleasant it may be to him. The Gilyak is greatly astonished when you ask him whether he has any evidence for the debt. "Ask him (the debtor)!" replies the puzzled creditor.

433 46 Speaking of their economic and juridical relations, one cannot fail to mention the role of labor in these relations. Capital, as the basis for reward, hardly plays any role among them as yet.

[225] In their communal hunting, for example, in the hunting of seals and dolphins, when the Gilyak gather for this purpose, several men to a boat, the catch is divided equally among the participants. The master of the boat gets the same share as the youth who sits /381/ at the oars. Even the craft of the metalworker who makes the spear or the arrow does not constitute a basis for special reward. Moreover, on distant expeditions, for example, from the Amur to south Sakhalin, the one who obtains more than an equal share of the catch is not the master of the boat, but the one who performed the troublesome chores on the way, such as

226 the preparation of the food and the collection of firewood. In

465 joint fishing the master of the boat and the net obtains the same

433 share as his have-not companion ("navkh"). True, I have seen an instance where the master of the boat and net obtained 2/3 of the catch, while his have-not comrade -- only 1/3, but to my question as to the reason for this inequality I received the reply: "And why should he have more? He is a bachelor, alone;

554 he does not need any more." I encountered a status resembling

476 to any degree that of a workman only two or three times, but

466 even in these rare cases the status of the worker does not remind one of our practices. The master will help his worker purchase a wife and will make him a sharer in the inheritance after his death.

466

466 LABOR RELATIONS--respective rights, privileges, and powers of employers and employees; hiring and firing; tenure of employment; instruction and supervision, promotion and retirement; pension plans; working conditions (e.g., hours, hygienic conditions, safety provisions, recreational facilities); prevalence and types of forced labor; indentured labor; regulation (e.g., labor legislation); etc. See also:

426 contract, are those sacred treasures which customarily lie untouched in the storehouse of their possessor. The creditor lays hands on these objects in those rare cases when he is compelled to recover his debt by force. The public or secret unharnessing of the dogs from the sled of the debtor is also one of the methods of collecting a debt. But what is most curious, what speaks in favor of the uprightness of the Gilyak and is most important at the trials of their lawsuits, is the fact that not a single debtor will ever repudiate his debt, no matter how ancient and unpleasant it may be to him. The Gilyak is greatly astonished when you ask him whether he has any evidence for the debt. "Ask him (the debtor)!" replies the puzzled creditor.

433 46 Speaking of their economic and juridical relations, one cannot fail to mention the role of labor in these relations. Capital, as the basis for reward, hardly plays any role among them as yet.

[225] In their communal hunting, for example, in the hunting of seals and dolphins, when the Gilyak gather for this purpose, several men to a boat, the catch is divided equally among the participants. The master of the boat gets the same share as the youth who sits /381/ at the oars. Even the craft of the metalworker who makes the spear or the arrow does not constitute a basis for special reward. Moreover, on distant expeditions, for example, from the Amur to south Sakhalin, the one who obtains more than an equal share of the catch is not the master of the boat, but the one who performed the troublesome chores on the way, such as

226 the preparation of the food and the collection of firewood. In

465 joint fishing the master of the boat and the net obtains the same

433 share as his have-not companion ("navkh"). True, I have seen an instance where the master of the boat and net obtained 2/3 of the catch, while his have-not comrade -- only 1/3, but to my question as to the reason for this inequality I received the reply: "And why should he have more? He is a bachelor, alone;

554 he does not need any more." I encountered a status resembling

476 to any degree that of a workman only two or three times, but

466 even in these rare cases the status of the worker does not remind one of our practices. The master will help his worker purchase a wife and will make him a sharer in the inheritance after his death.

782 225 766 415 they keep for a long time. When some one is drowned the Gilyaks arrange a boat race, fight, and run. In this connection I wish to note that in the valleys Chayvo, on the Okhotsk shore of the Sakhalin peninsula, where I studied the cult of drowned men in great detail, no felicitations are allowed when a man is drowned.

fed. (Mos for these troughs is prepared by men). Next, mos is emptied out of the tol-ir ('sea troughs') for which it is prepared, as in all other cases, by women. The offering completed, the troughs are turned around so that their "eyes" are directed to the houses instead of to the sea. (3) Next,

3. The troughs are in the form of animals. As I observed in the village of Chayvo, drops of mos meant to be "eyes" are put on one end of a tol-ir, which apparently no longer has animal form.

pebbles, picked up from the shore are put into the troughs. At home these pebbles are thrown into the fireplace.

782 The Gilyaks regale their kinsmen with whatever is left 262 over from the offering and also eat themselves. Mos from the 225 ui-ir is eaten only by old people. Women, children, and 561 young hunters must not taste this mos.

225 It is imperative that the "feeding of the sea" be completed 782 before the departure of the hunters. Once the hunters put out to sea, "feeding of the sea" is not allowed. At present this custom is not strictly observed, and if someone happens to be late, he "feeds the sea" late in the evening when it is reasonable to assume that the hunters at sea have gone ashore although they sometimes spend the night on floes.

After the offering the Gilyaks begin preparations for putting out to sea on a hunt.

225 The essential prerequisite for seal-hunting at sea is a large 501 spacious, many-oared boat. Not every Gilyak is the owner of 476 [80] such a boat, suitable for long voyages. In the village Kul 422 there are no more than ten such boats. (1) In the seal-hunting 565

1. Unfortunately, it did not occur to me to count the number of these boats during my stay in the village Kul.

season the hunters unite in a collective which centers around

for their families.

I observed analogous facts on the very same island in 1927 and in 1931.

In the village Vaz-vo (cape Vasin) from which the Gilyaks were driven out in 1934 or 1935, the system of exploitation on the basis of ownership of the instruments of labor was, it seems, even more cruel. According to the expert of Gilyak life, the inquisitive Gilyak n-ish, an owner of a zayedok claimed one share for himself, one share for the boat, one share for the plank-bench in the boat (mlrt) and one share for the n-gmr-tin - the shelf over the door in the entrance-hall. I failed to find the reason for the claim to an extra share in connection with the n-gmr-tin. I am inclined to think that no such reason exists and that n-gmr-tin is used by the owner of the tools of labor [92] solely as a pretext for getting an extra share for himself.

The Gilyak Miskin, inhabitant of the village Puir, told me of an incident that sounds like an anti-Semitic incident too: place in that village in 1931. An old Gilyak, called for one reason or another Telkin, asked the young Gilyaks Pnadaimu, Lashkaiku and Kondinu (?) to come with him to hunt (ABI: fish?) kajuga. On return Telkin took for himself four shares: one for himself, one, for some other obscure reasons for some Russian acquaintance of his in the village Maxarevka, one for a daughter in the village Langer and one for a daughter in the village Charbakh. As for his companions he gave a single share to each. I later confirmed this incident the Pnadaimu. Pnadaimu confirmed Miskin's story and further clarified it. Unfortunately, I wrote down Pnadaimu's information on a separate piece of paper and, it seems, lost it.

My lengthy discussion is meant as a very general introduction to the problem. It is meant to show how the kulak, the Gilyaks, the owner of the tools of work, as still found in the village Kul, could under the influence of Russian capitalism turn into a kulak-exploiter. This discussion is also meant to show how he utilized the old forms of the distribution of the quarry into shares for the purposes of exploitation. This interesting process deserves careful study.

After the distribution of the quarry the hunters and their wives at once start to work. There is a lot of work to do. The suet has to be separated from the hides. The hides have to be stretched on special frames. The skins are then sewed. Some hides have to be cut into straps and those have to be stretched to dry, for one cannot make dry hides into straps

474 COOPERATIVE ORGANIZATION--producers' and consumers' cooperatives, relationship between ownership, control, and management, organization (e.g.: Kolozhi, Kolozhi-sovkhoz, machine-tractor, collective farm, etc. See also: wholesale marketing . . . . . 102 Cooperative work group 476
craftguilds 467

Among the Sakhalin Nivkhi, who differed in their economy and material culture from the above peoples, socialist reconstruction followed a somewhat different pattern. Many Nivkhi went to work in fishing and lumbering enterprises. The first Primary Productive Organizations were organized among the Nivkhi in 1927. Subsequently, the Nivkhi began to socialize the instruments and means of production—nets, boats, dogs, etc., and went on to a more advanced form of social production—the agricultural cooperative. A part of the Nivkhi population joined Russian collective farms, situated near Nivkhi villages.

As they learned new methods of conducting their economic activities and mastered the techniques of production in collective farms, the Nivkhi began to develop new economic activities, formerly unknown to them; tillage, gardening and cattle-breeding. At first, they made rapid strides after the Primary Productive Organizations, particularly on the eastern coast, where villages lie at considerable distances from one another, and were inhabited by the owners of the tools of labor [92] solely as a pretext for getting an extra share for himself.

The Gilyak Miskin, inhabitant of the village Puir, told me of an incident that sounds like an anti-Semitic incident. The incident took place in that village in 1931. An old Gilyak, called for one reason or another Telkin, asked the young Gilyaks Pnadaimu, Lashkaiku and Kondinu (?) to come with him to hunt (ABI: fish?) kajuga. On return Telkin took for himself four shares: one for himself, one, for some other obscure reasons for some Russian acquaintance of his in the village Maxarevka, one for a daughter in the village Langer and one for a daughter in the village Charbakh. As for his companions he gave a single share to each. I later confirmed this incident the Pnadaimu. Pnadaimu confirmed Miskin's story and further clarified it. Unfortunately, I wrote down Pnadaimu's information on a separate piece of paper and, it seems, lost it.

My lengthy discussion is meant as a very general introduction to the problem. It is meant to show how the kulak, the Gilyaks, the owner of the tools of work, as still found in the village Kul, could under the influence of Russian capitalism turn into a kulak-exploiter. This discussion is also meant to show how he utilized the old forms of the distribution of the quarry into shares for the purposes of exploitation. This interesting process deserves careful study.

After the distribution of the quarry the hunters and their wives at once start to work. There is a lot of work to do. The suet has to be separated from the hides. The hides have to be stretched on special frames. The skins are then sewed. Some hides have to be cut into straps and those have to be stretched to dry, for one cannot make dry hides into straps

In 1951, the Nivkhi collective "Chir-Urevd" collected 200 tsentners of potatoes and cabbage per hectare. In the course of only 3 years, from 1949 to 1951, the cultivated area increased by 30%.

Along with agriculture, the "Chir-Urevd" collective engages in animal husbandry. Since the war, it has substantially increased its herd of cattle and established a sheep-breeding farm. Other Nivkhi collectives have also progressed.

An essential prerequisite for the successful organization and development of collective farms was the unification of small villages, formerly scattered over large distances. Before the Revolution, Nivkhi villages often consisted of no more than 3-5 households. But even in the larger villages, the houses were scattered without plan. The enlargement of old villages and the formation of new populated centers made rapid strides after the collectivization of the Nivkhi economy. The modern Nivkhi villages are comfortable, well-planned, and laid out in streets. In the building of new villages, particular attention is given to selecting convenient and wholesome sites. Since the Revolution, most of the Nivkhi have lived in dug-outs, and most of the continental Nivkhi lived in frame huts resembling the Manchu-Chinese hutz.

The most widespread of the new dwellings in the warm Russian log house. Near the houses of the collective members are various barns, sheds, etc. Every collective-farm village has a number of public buildings: a school, a reading room, a club, an administrative building, and buildings devoted to economic uses: a collective-farm garage, a smithy, a vegetable storehouse, cattle-yards, etc.). Almost every collective-farm village has a bathhouse—something the Nivkhi never used in the past. Today, many individual collective-farm families build their own private bathhouses.

The internal furnishings of the Nivkhi home have also changed, and are today similar to those of Russian homes. Some collective-farm villages have electricity and radio, in the Nivkhi homes, especially on the continent, one often sees bedstead and sideboard walls, or walls covered with wallpaper, and a variety of bought furniture, as well as curtains and flowers in the windows. The Nivkhi are very fond of pictures, and adorn the walls of their homes with illustrations, calendars and photographs.

Today, the Nivkhi widely wear bought clothing of the Russian type. They also wear sheepskin, which was unknown in the past. In winter, the continental Nivkhi wear silk-type coats, felt boots, high overshoes, and fur-lined fur-coat or short sheepskin jacket. Formerly, clothing was made of reindeer or seal skins. They obtain the reindeer skins from Orok collective-farm members. The fur clothing and boots are remnants of the traditional out-door attire. Many Nivkhi women make their own clothing of factory-made fabrics, bought in stores opened in collective-farm villages. Here and there, one encounters the traditional costume, the holiday, the young people love to wear robes made of fabric and richly ornamented. Such robes are made even today. Clothing of fishskin is almost discontinued, as are the old conical birchbark hats.

Substantial changes have taken place in the Nivkhi diet. There is greater use of vegetables, bread, butter, tea, sugar and other purchased products. The incidence of illness, and particularly of tuberculosis, which had been widespread in the past, has dropped sharply as a result of raising the improved sanitary conditions and the wide network of medical institutions. Upvala during the early years of the Soviet regime, hospitals and medical and maternity centers were opened for the Nivkhi, but wide educational work was needed to accustom the Nivkhi to use these institutions for medical and Soviet medicine rapidly won the confidence of the Nivkhi.

Many Nivkhi with secondary schooling enter higher educational institutions. In 1953, 2 Nivkhi attended Leningrad State University, and 10 studied at the A. I. Herzen Pedagogical Institute. At present, 18 Nivkhi are attending the institute. Among the students there are also women. In 1953, Lisa Dekhak' of the village of Pad on the Amur graduated successfully from the A. I. Herzen Institute in Leningrad. The Nivkhi Chunar Taksami of the village of Kal'ma is today doing graduate work at the Institute of Ethnography of the USSR Academy of Sciences. Nivkhi with special training are working today as captains, engineers on cutters, teachers, librarians and club directors.

The political activity of Nivkhi workers has grown tremendously. Many have been elected to leading posts in collective farms and in various institutions, many work as instructors with rayon Party committees and executive committees.

Wide educational work among the Nivkhi has been conducted and is conducted today by the culture and enlightenment institutions. The first Nivkhi school was founded in 1928-29 in the village of Noglikl, at the mouth of the Tym' River in Vostochno-Sakhalinsky Rayon. The second school was founded in 1930 in the village of Pad on the Amur River. In 1946, in the village of Yukovo. These bases have libraries, reading rooms, clubs, seven-year schools for Nivkhi and Evenki children, and also dormitories boarding schools.

At the amateur concerts on the collective farms, both men and women sing and performing native and Russian dances. Frequently the songs are created on the spot, impromptu. The collective-farm youth also participate in regional Olympic games.

Theatre arts are also developing among the Nivkhi. In the beginning, the collective-farm performances were limited to amateur theatricals, or merely spectators at performances organized by Russian, Soon, however, dramatic clubs were organized in the collective-farm clubhouses, and the Nivkhi put on present plays in their own language.

The Nivkhi are great lovers of sports. In former times they did not know how to swim and feared the water. Today the Nivkhi young people enthusiastically engage in water sports. There are now special sports omorochai (cames) with a single oar, in which young men and women take speed races.

The Nivkhi have also preserved native sports, such as rope-jumping.

The changed working, living and cultural conditions of Nivkhi life—the collectivization of their economy, their participation in industry, the unification in collective-farm villages of people who had formerly belonged to different tribes, and the general rise in their cultural level—all these factors have completely destroyed the old ties and rules, based on the numerous remnants of clan relations which survived after the Revolution. The old religious ideas, holidays and rituals have lost all their meaning. The greatest change has occurred in the position and customs, in the home, of the Nivkhi woman was timid and oppressed, and knew only the narrow circle of her domestic duties. She could be bought and sold, or turned out of the house. When she met men, she had to cover her face and turn her back to them. During the early post-Revolutionary years, a great deal of effort had to be applied toward the elimination of survivals of the past. When they attempted to study, many young women and girls were ridiculed by their fiances, husbands and mothers. Some were married against their wishes and discontinued their studies. It proved especially difficult to overcome the old ideas in the Nivkhi. Upvala during the early years of the Soviet regime, a woman in childbed in a special hut, built near the dwelling. This tent was usually cold and damp. The woman had to remain under these conditions for several days without any help,

Having bathed the bear and teased it to their satisfaction and made fun of it, they tie it between two posts and leave it alone. It generally uses this respite to give in to the instinct, now futile for it, to dig the ground with its paws for a lair.

The feeding of the bear continues for several years, until the cub becomes a well-fed, large beast, and then they begin the prefestival preparations. This means extensive preparations. For several days, one will have to feed and entertain with all kinds of delicacies, not only clansmen and villagers, but also a great number of guests from other places and. /61/ in addition, the numerous dogs on which these guests came. All this requires trouble, work, and great expense. Because besides dishes of local products, large purchases of rice, buda, flour, tea, sugar, and vodka or Chinese grain vodka are made. Here is displayed that remarkable clan organization of the Gilyak, so impressive in its harmonious combination of social solidarity and individual freedom.

There is no ceremonial organ to assemble products, to compel, demand, or control. Conscious of its obligation to participate in the common religious affair, each family works with all its might, not out of fear, not from conscience, cooks all sorts of dishes, helps with the chores, and contributes its mite, according to its means, toward the expense of the purchases. The money and supplies are handed over to the master of the bear, who disposes of them without control. No one reprimands anyone, for each one strives to make the festival come off most brilliantly. Several days before the festival, which is generally celebrated in February, a different kind of work begins — the building of an arena for the killing of the bear. The arena consists of a small stamped-down plot of ground. In which, depending on the number of bears that are being killed, is placed one or several pairs of sacred trees-posts hung with inau and covered with complicated ritual carving; a bear is tied between them. Up to this plot of ground is stamped a long narrow alley, on both sides of which, in two rows, are set up 30 pairs of posts. Crest the first 15 pairs are fir; the other 15 are purple willow.

/91 cont./

very great sin; one might die." It is a sin not to be hospitable, not to share edibles. And the reason is clear: the gods, as we have seen, are the ones that "feed" man, and principally the clan gods, who provide for not one man, but the whole clan, which brings them sacrifices and which is bound to them by clan ties; to eat, therefore, without sharing with a clansman who is present and, in general, not to feed him, is a "sin" and a direct risk of losing the benevolence of the gods-sustainers. It is not by chance that in all this the "hearth" plays a great role. In the fire of the hearth lives the "master and mistress of the fire," a clansman or even an ancestor, who does not miss a single thing that takes place in the house; they, as we have seen, are the intermediaries between the clan and its clan gods, and there is nothing more natural than that the gods of the hearth should above all be the guardians of the principle of hospitality.

But the ties of the clansmen, living by the favors of their gods-clansmen, are not delimited by reciprocal "regaling" alone, but by the real, most extensive principle of the community of earthly benefits. If this does not find expression in a purely communistic form, it is only because there is no necessity whatever for it. Life is so simple, the conditions of acquiring food are so simple, the gifts of nature lie so widely and freely before each person, that there is no necessity for communistic production and distribution. Yet the principle is in full force. In the communal hunting for sea animals, for example, in one boat, it is the owner of the boat who is generally also the most skillful hunter, but he receives no more than the last adolescent rower, and, in addition, a part of the catch is distributed to those families whose members for one reason or another could not participate in the hunting. Dried fish, the principal food of the Gilyak, is regarded almost as communal property, and anyone whose supplies have run out takes some from his neighbor without any objections. At any rate, no one goes hungry as long as any clansman has provisions. All the hungry individual has

/121 cont./

in practice, as we know, these bonds extend far beyond the confines of the original four clans. First of all, in addition to these last, every clan with which at least one clansman has formed matrimonial ties is already an akhimal'k or ymgi to all his clan. On the other hand, we know that every akhimal'k and every ymgi retains its appellation not only with respect to those clans with which it is directly bound matrimonially, but also with respect to those who consider themselves the corresponding ymgi and akhimal'k of the former, so that in addition to the akhimal'k and ymgi of the first degree, each clan has still others of the second, third degrees, etc. All these clans call each other pandfy, individuals of a common origin.

[528] Thus we see that the basic principle, simple and clear, which lay at the basis of the family and clan, a principle according to which a man preferably marries the daughter of the brother of his mother, becomes the basis of blood ties and sympathy, not only within each separate clan, but of even more extensive unions, interclan and, finally, of the whole tribe. True, by virtue of the unfavorable circumstances mentioned by us, such as the dispersion of a small tribe over an enormous territory and many other circumstances, these bonds could not take formal shape in such completed organizations as the phratries and tribes, for example, of the North American Indians, but here also they created an atmosphere of social unity which led the clan from an egoistic isolation onto the path of interclan community and brotherhood.

/122/ Let us consider a little more closely the bonds which arise between the pandf clans, between each clan and those from which the Gilyak takes his wives or to which he gives his women. These bonds are not limited to feelings alone; they are expressed in quite real forms.

First of all, there is the obligation of mutual sustenance and hospitality. This in essence is only an extension of that same obligation existing within the clan to the blood pandf; the extension to them of that benevolence of the clan deities

/122 cont./

which belongs to them by right through the female line. "Ymgi (son-in-law /syat'y/ must be fed" -- such is the formula of this interclan obligation.

This rule, however, does not find expression at all in an obligation of the akhimal'k to support his son-in-law /syat'/ and his family permanently in his own home. It may be that at a very remote time, in the period of matriarchy when the husband went to live in the home of the wife, it was actually so, but at the present time, under agnatic principles, the wife goes to the home of the husband and customarily moves completely to the clan site of her spouse's habitation. Nevertheless, the principle of "sustenance," as we shall see, plays a definite role in the institution of the clans.

It is consolidated in a special, extremely peculiar religious rite, which consists of the following. At the last moment before the bride is carried away from the home of her father, there is placed just inside the threshold a large, four-handled cast-iron kettle brought by the bridegroom as a part of the bride price for the bride, and on the outside a small kettle belonging to the father of the girl. When going out, the bride and bridegroom must step with the foot first on the inner and then on the outer kettle; the former remains with the father-in-law, the second is borne home by the bridegroom -- ymgi. In a year, when, according to custom, the couple pay a visit to the akhimal'k, the same ceremony is repeated before their departure; only this time on each side of the threshold there is placed a pot and a cup, which are again exchanged, as in the first instance. It is characteristic that the exchanged objects bear the designation nich (mine-thine, a symbol of mutual sustenance), while the whole rite is called nich aychyvnd (trampling of the nich). It is also called lymya'n-zand -- trampling of the threshold, which points to the religious element of the rite, in which a role is played by the so-called lymya'n-mam -- an old woman, the mistress of the threshold, the woman-forbear, the guardian genius of the home, whose

/122 cont./

blood flows equally /123/ in the veins of both of the newlyweds, the children of brother and sister. Standing in close connection with this rite is the previously described moment in the bear festival, when, before the shooting at the mark, the master of the bear (the akhimal'k) and his ymgi each sets beside himself an ax and a kettle, which are also called nich and which are also mutually exchanged. If the first rite symbolizes mutual sustenance, the second symbolizes reciprocal co-operation in hunting, which, as we shall soon see, has a quite real basis.

The principle of "sustenance" is not limited to periodic visits to the relatives of the wife, although they have some economic significance, since the akhimal'k'i each time, in addition to the hospitality shown, give a valuable present to their ymgi, especially on the first visit after the marriage, when the son-in-law /syat'/ is customarily given, depending on the resources, one or several pairs of smart garments for men. Cases of actual need are much more important. There are times when one's own clan is powerless to aid its clansman, because misfortune, having overtaken one, has overtaken all. Let something happen during the season of the fish run to turn them from their accustomed path, and general disaster is at hand. At such a time there is a simple way out. A man gathers up his family, his dogs, and all his movable goods and chattels in general and emigrates for the whole season to the settlement of his father-in-law.

Here he is met with outstretched arms, and from the first minute he feels himself at home, where they give him food and drink and share everything with him. The son-in-law /syat'/, of course, is not a do-nothing; he helps in one way or another, but this is far from making up for the expenses involved in the long and unexpected visit of a whole family, often at a time when the supplies of fish have already been prepared and it is impossible to increase them.

Similar fraternal relations between akhimal'k'i and ymgi are manifested in sea hunting and land undertakings.

The most important of these require the participation of several persons: hunting bear in summer and winter (taking it

/114 cont./

Let us look more closely at these conditions, and first of all at the economic ones.

The predominant form of labor is individual labor or the simplest co-operation. The principal source of food is fishing. The sea and rivers are so rich in this product that with the most meager equipment under normal conditions everyone can secure his existence through his own efforts. In hunting sea animals, it is true, the co-operation of several men is necessary, but the whole business is so simple that there can be no talk here of masters and workmen, nor of any special organization; everyone performs that for which he is /115/ most qualified. Moreover, the artel is generally composed of kinsmen, and it never occurs to anyone to divide the catch in any way other than according to the number of workers. A share is also assigned to those who have not participated in the hunting, for do the clan gods give only to some and not all the members of the clan? The same is true of hunting for forest beasts, if carried on by a group, but ordinarily the hunter, like the fisherman, can get along perfectly well in his pursuits without the help of others. And, in fact, during the fishing season the Gilyak population disperses in all directions; each master departs to his favorite site. During the hunting season everyone sets off for his hunting balagan and from there keeps watch over his traps, sometimes not seeing a stranger for weeks.

Thus, the predominant form of labor is individual. Everyone must be able to do everything, master all the knowledge of his tribe, be an individual equal with all, comprehensively developed and prepared for life.

And since the gifts of nature are plentiful, free, and accessible to the efforts of all, the well-being of a man depends exclusively, in consequence, on his abilities and diligence. Inequality, which under more complex conditions is a source of dimension and social differences, does not show its thorns here. A wealthy man owes everything exclusively to his own personal talents and virtues. His accumulation cannot enslave or humiliate anyone. Moreover, the personal accomplishments of a man are a gift of the gods,

/91 cont./

to do is to move to the yurt of a well-off clansman, or even simply visit him two or three times a day, and they will share with him without a murmur their last yukola, their last handful of tobacco.

/92/ With respect to luxury articles, such as valuable spears, sabers, fabrics, fur coats, etc., there is more individualism, introduced by more recent conditions of exchange, but in cases of real necessity, such as the purchase of a wife, the payment of blood money, funerals, and so on, everyone considers it his direct obligation to sacrifice his individual wealth for the objectives of the whole clan.

This same principle of the communality of the material goods of the clansmen is the basis of the right of inheritance, the basic rule of which is -- the property of the clansman must not go out of the clan. In this respect, the well-known thesis of the Twelve Tables is literally in effect among the Gilyak: Si suos heredes non habet, gentiles familiam habento. In the absence of members of the family, in which the "workers" are also classed, the property passes to the agnate clansmen, no matter how distant, excluding even the closest cognates. The latter, according to the will, can obtain only the so-called shagund (1), and only

1. "Treasures" -- a property sui generis, consisting of unused objects, designated only for exceptional cases: bride price, dowry, ransom, funerals. It is divided into 1) the iron "shagund" -- large cast-iron kettles, spears decorated with silver inlays, valuable Japanese sabers, coats of mail, and so forth, used chiefly for the bride price; 2) the fur, consisting chiefly of expensive fur coats, used principally for dowry; 3) the silk -- Chinese silk materials and garments, which are

from its lair), sable hunting, and especially the hunting of sea animals in boats. And it is noteworthy that in these instances the Gilyak most frequently invites the participation, not of his clansmen, but of the ymgi, and not necessarily those married to his sister or daughter, but ymgi in general, i.e., the young men from that clan which takes its wives from him. The Gilyak feels more at ease with them than he does with his own /124/ clansmen; he can freely converse and joke with them, while he may not do this, as we know, with all of his clansmen. In turn, in their akhmal'k clan the ymgi feel like a fish in water; all the women of their generation are their an'gej (wives) -- all future wives and at any rate women to whom at any time they have conjugal rights in the broadest sense of the term. As concerns the local young male population, they find their revenge in the clan of their akhmal'k'i, where they meet the same reception from their "fathers-in-law" and among their numerous "wives." Between the male youth of both clans ("navkh'i") (1), as a result of

*614

1. Let us recall that ymgi and the "brothers" of their "wives" mutually call themselves navkh'i.

frequent meetings, not to mention relationship by marriage, the most touching relations are established. It is in these surroundings that friendships flower most of all. Among the Gilyak the practice of ceremonial brotherhood is very much in vogue. Ordinarily it manifests itself in the periodic exchange of presents, mutual aid in misfortune, and other such services. But the most touching instances of ceremonial brotherhood may be found among the navkh'i. Here is one such example, especially surprising to me, which I chanced to observe in the settlement of Ngambevo on the eastern shore of Sakhalin. Both friends, "navkh'i," lived in one yurt; they had everything in common, went about together like lovers, almost never separated -- a modern Orestes and Pylades. They were both,

/278 cont./

chance to establish an independent economy. But there is another side to the coin -- it is almost impossible for a poor man to settle down with a family, and, consequently, an independent economy. But to a certain degree the rights of group marriage and the possibility of leading a common domestic life with his brothers come

to his rescue. Everyone's dream, however, is to settle down with his own family. Usually the clan in the persons of the well-to-do clansmen comes to the rescue of the poor man. But not every clan has rich people, and, besides, there are persons whose clan has died out. The only solution then is to obtain a wife by work. Usually such a transaction is entered into by a family in which there are no offspring of the male sex, and it is as though the son-in-law were declared an adopted son, although, as a member of another clan, he cannot be an actual heir. Methods of

583
554
452
735

lightening the payment of the bride price are practiced: a wife is purchased in small installments with yearly payments until her majority. But also in the purchase of an adult, /279/ installment buying is sometimes practiced, depending on the contract. A

583
735
554

curious means of paying the bride price is the case of payment with the bride price of a future daughter. I know of such a case. The Gilyak Kanka married the sister of the young boy Pletunka. He did not pay a bride price, but he promised to support his widowed mother and to hand over to him the bride price of his own future daughter. And the agreement was fulfilled. Pletunka was about twenty years old when Kanka gave his own daughter in marriage, and he handed over the whole bride price to Pletunka.

583
614
[627]

As a matter of principle the bride price belongs to the clan. At a difficult moment of life, for example, if it becomes necessary to pay blood money, each clan-member takes part with his shagynd. But usually the bride price is distributed among the brothers, although not proportionately; the youngest, as heir to the house, usually receives the smallest share. Besides this, the elder brother buys a wife for the younger brother before his own marriage, so that the younger brother does not need the

000

shagynd for bride price. Along with the distribution of the bride

/376 cont./

593 inheritance. Only with relation to the daughters does the father
594 enjoy a despotic authority, regarding them as commodities to be disposed of as dearly as possible, although in practice this authority is considerably relaxed by the natural attachment of the father
593 to his children. The considerable independence of the sons is
594 determined by the forms of acquiring the means of existence.
476 For fishing with the small nets used by the Gilyak, the co-operation
[226] of only two men is required; consequently, in this respect the
[866] existence of large family households is not caused by necessity.
[224] Likewise, the hunting of the Gilyak at the present time does not
[225] require collectivism, while for the spring and fall seasons of seal hunting the Gilyak join in temporary artels, whose composition is
594 completely accidental. The practice of going to Nikolayevsk for
593 work undoubtedly has assisted in the dissolution of the large
178 family, although among the Gilyak, as among our own peasantry,
464 such employment for one of them is frequently one of the kinds of division of labor within the family. Those who go away for such work are either bachelors or members of a large family, leaving their father and brothers at home to prepare fish for the winter. In
594 any case, the separation of adult, married sons from the family
591 of the father is far from being a predominant phenomenon, espe-
178 cially in northern Sakhalin. Evidently it is of very recent origin.
[768] But at the same time the separation of the adult brothers after the death of the father is a customary phenomenon, although we should not think of this phenomenon in our sense. The brothers continue to live in one yurt, they frequently use the same equipment, but they eat apart; frequently this is the only sign of the division of the household.

593 We shall say more later concerning the economic relations of the members of a family.

It is pertinent to point out that in many respects mutual aid, as well as the feeling of kinship and attachment between members of a family in general, is more extensive and constant among these barbarians than in a civilized family.

/380 cont./

426 contract, are those sacred treasures which customarily lie untouched in the storehouse of their possessor. The creditor lays hands on these objects in those rare cases when he is compelled to recover his debt by force. The public or secret unharnessing of the dogs from the sled of the debtor is also one of the methods of collecting a debt. But what is most curious, what speaks in favor of the uprightness of the Gilyak and is most important at the trials of their lawsuits, is the fact that not a single debtor will ever repudiate his debt, no matter how ancient and unpleasant it may be to him. The Gilyak is greatly astonished when you ask him whether he has any evidence for the debt. "Ask him (the debtor)!" replies the puzzled creditor.

433 Speaking of their economic and juridical relations, one
46 cannot fail to mention the role of labor in these relations. Capital, as the basis for reward, hardly plays any role among them as yet.
[225] In their communal hunting, for example, in the hunting of seals and dolphins, when the Gilyak gather for this purpose, several men to a boat, the catch is divided equally among the participants. The master of the boat gets the same share as the youth who sits /381/ at the oars. Even the craft of the metalworker who makes the spear or the arrow does not constitute a basis for special reward. Moreover, on distant expeditions, for example, from the Amur to south Sakhalin, the one who obtains more than an equal share of the catch is not the master of the boat, but the one who performed the troublesome chores on the way, such as
226 the preparation of the food and the collection of firewood. In
465 joint fishing the master of the boat and the net obtains the same
433 share as his have-not companion ("navkh"). True, I have seen an instance where the master of the boat and net obtained 2/3 of the catch, while his have-not comrade -- only 1/3, but to my question as to the reason for this inequality I received the reply: "And why should he have more? He is a bachelor, alone;
554 he does not need any more." I encountered a status resembling
476 to any degree that of a workman only two or three times, but
466 even in these rare cases the status of the worker does not remind one of our practices. The master will help his worker purchase a wife and will make him a sharer in the inheritance after his death.

484 /473/ The northern primeval forest, inaccessible in summer on account
224 of the thick underbrush and the many fallen, half-rotted, and mossy trees, is accessible under certain conditions to foot-travelers and light sleds, thanks to the deep layer of snow leveling out all the unevenness of the ground, precisely at the time when it shelters the fur-bearing animals in their valuable winter coats. As a result,
[222] the forest, empty of human beings in the summer, or at most visited only here and there along its edges by women and children gathering berries and roots, becomes in winter a theater of action for the hunters. Through the impassable forest and mountain wilderness hunters and merchants make paths and trails which temporarily connect otherwise remote villages. Moreover, the ice of the Amur-Liman does away with the insular position of Sakhalin for months at a time, and finally and primarily the smooth ice-cover of the Amur River provides for the Gilyak a main artery of communication from the Liman up to the Sungari.

481 Let us now survey in greater detail the means which the Gilyak use for winter locomotion. With all the similarity, and, indeed, in part even identity, with those of other northern peoples, they offer enough deviations and peculiarities. The great amount of snow in the lower Amur region makes it necessary for the Gilyak to use ski at every step. Even for only a short walk from the house, indeed, for merely a few steps off the trodden or traveled path, ski are required if one does not wish to sink into the snow up to the waist and deeper. They are, of course, even more indispensable on longer trips through the forest, where the snow is especially deep and loose, or after snowstorms, when, driven by the wind, it accumulates in places, and especially along mountain slopes, in valleys and gorges, in such colossal quantities that crossing them without ski is unthinkable. For such trips as the Gilyak has to make often enough to set up or inspect his animal traps and for other hunting purposes, or on journeys when snowstorms surprise him, it is necessary, for easier and faster progress, that the ski not only prevent sinking into the snow as much as possible, but also permit gliding over it. In order to satisfy these various needs the Gilyak have two types of ski: small ones -- lakk; and large ones -- enj.

/473 cont./

481 The small ski of the Gilyak consist of two thin boards without a fur covering. They are about four and a half feet long and five to six inches wide, and are completely flat and level except for the more or less sharply tapering front end gently curving upward. Depending on the degree of this tapering at the front end, several forms of the small ski may be distinguished among the Gilyak in certain regions. Thus, the form with a gradual tapering of the tip, illustrated on Plate XXXV /see p.1015/, Figs. 1 and 2 prevails along the Amur River as far down as Wair. Below Wair, at the mouth of the Amur, along the Liman, and along the opposite coast of Sakhalin, the ski have the form shown in Fig. 3, with a more abrupt tapering, and, finally, on Sakhalin there is a third form with an even more abrupt tapering of the front end, but unfortunately, I had no opportunity to get an illustration of it. These small ski are an absolutely indispensable /47 item for the Gilyak, and in winter it is almost only inside the yurt that he is seen without them. Not only does he need them for even the shortest walk, but he also keeps them on his feet when traveling sitting astride his sled, both so that he can get off and take a few steps in the snow if necessary, say, for example, to adjust the harness of the dogs, and also in order to facilitate the movement of the sled, to which I shall come back
481 later. Once he has reached the spot where he plans to spend the
484 night in the open, the ski, with its rear and level end, serves him
412 as a shovel for readying the campsite as required (1) and for fillin
516

with snow the kettle hung over the fire, and, finally, when he sits down on the fir branches in front of the blazing fire, his legs crossed under him, a ski placed across his knees serves as a tray, taking the place of the chachtschitsch in the yurt (2), for eating

2. See pp. 647 and 683 above.

the evening meal.

G /474 cont./

481 As essential a service as the small ski performs, however, they are not very suitable for long trips over deep and loose snow on uneven forest terrain. For, because of their small size, they prevent sinking into the snow only in a very imperfect way, they are not very flexible, and, as a result of not having a fur cover, they are not very smooth; indeed, in wet weather, the clinging snow makes travel on them very difficult. For their hunting expeditions and other long trips, the Gilyak therefore do not use the small ski, but the large ones -- enj (Pl. XXXV, Figs. 4-6 /see p.1015/). Like the small ski, they are usually made of larch wood (Gilyak koi), which the Gilyak therefore designate as lakk-tschchar, i.e., ski wood (3), but are considerably longer and wider and provided

G [824]

A 481 824 113

3. The Ainu on Sakhalin prefer to make their ski out of the wood of Sorbus aucuparia (Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin /Travels in the Amur Region and on Sakhalin Island/." -- Mém. de l'Acad. des sc. de St. Pét., VIIth series, Vol. XII, No. 2, p. 99; Mitsul', Ocherk" ostr. Sakhalina /Sketch of Sakhalin Island/, p. 33), the Goldi out of ash wood (Budishchev", "Opis. lies. chasti Primorsk. obl. /Description of the Forests of Parts of the Maritime Oblast/." -- Zap. Sib. Otd. Imp. Russk. Geogr. Obshch., Books IX, X, p. 128).

G 481 [824] with a fur cover, although otherwise they have about the same shape as the former, in particular being likewise flat and level up to the front end gently curving upward. The cover is made of sealskin, which, with the hair pointing toward the rear, is pasted as smoothly as possible over the whole underside of the ski by means of isinglass and is turned up along the two edges. In addition, for fastening it, there are two long strips of whalebone or carefully polished wood running like rails along the edges of the ski and fastened by wooden pegs to the ski board. The straps for

G [237]

/474 cont./

481 the feet are like the ones on the small ski, but wider and stronger throughout. The tip of the foot, beyond the toes, is stuck under the front loop fastened to two straps running through the ski and its cover; the rear loop lies over the heel, and the two lateral straps, provided with several holes, are also fastened together there, and, to be sure, by one /475/ strap being passed through the other and wooden peg inserted to prevent slipping. In fastening the ski to the foot in this manner, the heel retains full freedom of movement up and down as well as to the right and left, and forward motion takes place merely by a forward push of the ski with the tip of the foot. The ease and speed of the motion thus depends chiefly on the ease with which the ski glides over the surface of the snow, and this is effected to a high degree for the Gilyak ski by the cover with the short-haired and smooth sealskin and the whalebone rails or the wooden ones rounded off on the outside and polished. The principal advantage of the Gilyak ski lies in this extraordinary smoothness. The rails, whether of whalebone or of wood, also serve to prevent skidding toward one side or the other. The more easily the Gilyak ski glide over the snow for the above-mentioned reason, however, the less suitable they are for mountain climbing, since only slightly cross-grained sealskin can offer only all too little resistance to sliding backward, and this resistance is paralyzed by the smooth whalebone or wooden rails projecting beyond the fur. As in the case of great unevenness of the terrain, another essential disadvantage of the Gilyak ski appears with a slight unevenness of the ground such as the northern primeval forest exhibits everywhere. This disadvantage is their lack of flexibility. The Gilyak take for their ski, perhaps for greater durability and because they count on the smoothness provided by the fur cover and the rails, not especially thin boards and, moreover, as was already mentioned, make them so flat and level that, when they are placed upon the ground without weight, they rest on it with their entire lower surface, apart from the front end curving upward. As a result of their lack of flexibility, however, they cannot accommodate themselves sufficiently to the unevenness of the ground and therefore sink in more deeply, which understandably, greatly impedes and

/365 cont./ Just as the
342 Gilyak houses are not erected by individuals, but rather are erected
161 more or less with the help and participation of all the fellow-
592 members or people belonging to a place, so also as a rule, in
[476] accordance with the communistic spirit which characterizes primitive peoples, are they not inhabited by a single family, but by several together. As may be seen from the above description, a winter yurt of the Gilyak, built following the Chinese pattern with its four long sleeping benches, provides adequate and comfortable space for four families. If one reckons the average family at four persons, husband, wife, and two children, this already gives 16 occupants for each Chinese winter-yurt. Some yurts, to be sure, are occupied by only one or two families, as I myself have repeatedly seen, and occasionally one even comes across a yurt apparently standing empty throughout the entire winter. On the other hand, over and above the family members mentioned, single persons of both sexes, be it out of considerations of kinship or in return for certain services, find fixed and permanent lodgings in the yurt. Also, the average figure of only two children per family assumed above is undoubtedly not any too large. Hence I think that it is not estimating too high if I reckon an average of 16 persons for a Chinese winter-yurt, and for an earth yurt, since it contains only three sleeping benches, and much shorter ones at that, and in general provides considerably less space, only half as many, that is, only eight persons on the average. On this basis, approximate counts of the population for the individual parts of the Gilyak area mentioned above can be ascertained without difficulty. The available data are inadequate for this for only one part, the coast of the Sea of Okhotsk, for the number of the winter dwellings of the Gilyak along this coast, with the exception of the small stretch between the Amur-Liman and the village of Kulj, is still unknown to us. Hence
161 estimates must be made here in another way. The part of this coast which is unfamiliar to us, from Kulj to Tugur Bay, is about six to seven times the size of the stretch between Kulj and the Liman, and one therefore only needs to multiply by six or seven the population figure ascertained for the latter according to the

/668 cont./

342 and thus in its utilization is to a certain extent subject to the
421 communistic principle, which is not at all the case with regard
423 to the storehouse. On account of its size and complicated con-
[476] struction, the former cannot be built by a single person, as can the latter; putting it up requires the joint labor of many persons, whom the person undertaking the enterprise, if he cannot find them among his relatives, engages from the circle of his fellow-villagers or neighbors for a small payment. Though later on
[574] it belongs to the person or persons who undertook the construction
[427] and were able to persuade the others to help, it is never forgotten that it owes its origin to joint labor and, accordingly, it is always regarded to some extent as common property: shelter and protection in it may not be denied to any villager or other fellow-tribesman, and it would be absolutely contrary to the views and the practice of a Gilyak house-owner if he tried to collect a high rent from a person permanently domiciled with him, and, to be sure, in any form other than through the obligation for assistance for the household. Hence the direct profit from a winter house, and similarly from a summer house, is very little.

343 The situation is different with regard to a storehouse, which
423 is built by the owner himself. It belongs to him exclusively, and the richer Gilyak only have an interest in one insofar as they have provisions and other things and have no shelter for them. It is
[427] arranged in practice so that only a single wall, and, if this is not enough, a second and a third can be rented for storage, until the means to construct an entire storehouse are obtained (1).

1. Cf. the arrangement of a storehouse (p. 529) with its 11 wall pieces (f-q) and two spaces (c and d) in the middle.

Since more can be asked from a well-to-do Gilyak, a section of a wall, even reckoned at only one ja, will yield about 10 ja in direct income.

Economy and Everyday Life

226 The Nivkhi's basic occupations were fishing and sea hunting. The most
[433] important fishing activities involved runs of the salmon species—Siberian salmon and humpback salmon. These were caught in "zyyezdki," nets and seines. A "zayezdok" was an L-shaped barrier of thick stakes and twigs, set at right angles to the shore with the transverse bar along the current. On this bar, the Nivkhi set up a drawnet, near which they kept watch in a boat. The fish, going in a solid mass along the shore, hit the wall of the trap and turned and swam into the net. When they saw the movement of the signal ropes, the fisherment lifted the net and emptied it into the boat. By this
[433] method, several days' fishing produced 4000-5000 fish, which quite filled the
[476] needs of the fishermen. The "zayezdok" was usually built jointly by several families.

The seines, fairly small in size, were formerly made of nettle fiber.
223 They were pulled by two or three fishermen, one of whom walked along the
282 shore, while the other two were in a boat. Later, the Nivkhi learned from
[177] the Russians to sew together large seines. Beluga and sturgeon were caught with harpoons and hook-tackle—the hooks at the end of short cords, attached to a long rope stretched in the water.

Very important to the Nivkhi was fishing for (single-net fish), carried on throughout the year. These were caught with fishing rods, fixed nets (winter and summer), floating nets (summer) and seines (during the spring and autumn seasons).

225 The Nivkhi living in Sakhalin and in the estuary did a good deal of sea hunting. They hunted sea lions and seal. The former were caught in large fixed nets. Seal were hunted in early spring, at the first sign of breaking ice. They were killed with harpoons and clubs as they climbed up to warm themselves on the ice floes. Seal-hunting continued into the summer as well. In open waters, they were hunted with a floating harpoon (lykh). This consisted

286
516

Sewing together a seine.

e boat; just as in the Siberian salmon fishing season they
nite in a collective which centers around the seine or the
ayezdka.

When the hunting season opens, the owner of such a boat
arts collecting his companions. If the owner happens to have
son-in-law (ore) in the village, he asks him to join him in
e hunt. In general, however, the owner of the boat selects
unters regardless of clan membership.

Thus, for instance, the boat owner, Gilyak Norp of the clan
f nu , was accompanied by hunters from the following clans:
tag from clan Hutevi , Potaq from clan Neo-afi , t from
an a ramla , Onkan from clan Lez ran and Tesk from
an Tfanu .

A similar situation existed in collectives of hunters who
ent hunting in 1931.

The hunter collective centering around a boat is some-
mes named after the owner of the boat. For instance,
l tun-munim ('one boat of Gylkhtyuh') Xitkun-mu-nim (one
oat of Xitkun).

The owner of the boat is the organizer and leader of the
ollective of hunters grouped around him. Those who travel
ith him are his subordinates. The leader of such a collective
f hunters is called pila ('bolshak') (2) (from pila-d--'to

2. This is the name of the oldest in the clan and generally of any foreman in industry.

e big. - suffix used in forming verbal nouns.)

The duties of pila are many. A pila is supposed:

1. To look over the boat, the rowlocks and, if need be, effect repairs.

2. To prepare and to take along a strap, harpoon tips amra), harpoons shafts (ve l), his gun and the guns of his llow-hunters, a kettle and a tea-pot (the hunters are obliged take only cups with them), a tent, a sail, a tripod for the a-pot and the kettle, and a compass. (3) Most of these items

3. Earlier they used to take to sea afu-va ("friend-stone" or "friendly stone"). See the remark in the sup-plement to "Seal Hunting."

re the property of the pilaf

3. To perform a number of religious-magical ceremonies efore setting out for the hunt as well as during the hunt. In is capacity the pila exposes the boat to smoke, performs u-zi d and t aj; ceremonies to be described in detail below.

225 During the hunt one must use the tinder box or the matches
782 of the pila to light a campfire. No hunter has the right to
372 light a camp fire using his own implements for this purpose;
476 he has to use the implements of the pila instead.

4. To tend the rudder and to observe the wind and ice-
225 floes. Young hunters with no experience in sea-faring rely
476 in this respect completely on the pila. One Gilyak told me:
502 "If the pila observes the wind and the floes, the young hunters are not worried."

5. To distribute the quarry among the hunters.

As can be seen, the pila performs the most responsible functions of a leader. I was told by the Gilyaks that if anything goes wrong during the hunt the pila is held responsible.

In the collective of hunters there must be not only organizers but also good oarsmen and a good shot.

225 [81] Everything in the boat is organized from the beginning
501 to the conclusion of the hunt. Each of the hunters occupies a
476 designated position at the oars. Each of the positions has its name.

The position at the first pair of oars, starting from the stern, is called ŋ-tivd, the second - taŋpuf, the third - alx-gid, the fourth - meyerq-pid ('sitting at the bow'), the fifth - lele m -pid ('placed at the very bow'). There are boats with six and even seven pairs of oars.

225 Starting from the stern, the first position, ŋtivd, is oc-
479 cupied by the oldest and strongest oarsman in the boat. At the
554 next pair of oars is a younger hunter. The position at the
561 oars at the bow is occupied by the youngest of the hunters in the boat.

When the ice fields are reached and the hunt begins, the position at the bow is occupied by the very best shot. Until that time he rows just like the others. As long as there are no seals in sight he rows like the others, occupying the position at the bow. Since he is the oldest of the hunters the pila often turns out to be a better shot than the young hunters. In such cases he turns the rudder over to someone in the boat and sits at the bow to fire at the seals. Thus, for instance, the Gilyak pila Norp sat during the hunt at the bow and fired at the seals. At the same time Gilak st tended the rudder which the pila had turned over to him. The Gilyak pila Tavjun was at the bow during the hunt. According to his information he had killed by himself twenty seals and missed two. We do not wish to imply that of the whole collective of hunters only one person shoots at the seals. Two, three or four hunters do the shooting

225 but the better one among them sits at the bow. The hunters
476 must often get out on the floes for it is not always conven-
554 ient to get within shooting distance of the seals in a boat.
561

If there is an extra man in the boat, if, for instance, there
225 are five oarsmen, one pila and one other man, then the pila
476 -if he is the oldest man in the boat - sits at the stern without
561 doing anything, and his junior takes over the rudder. The
883 Gilyaks illustrated this point to me by the following example:

if Xitkun and Kaun are among the hunters in the boat and if both are older than the rest of the hunters, than Xitkun, as the oldest, would sit at the stern and do nothing except for giving orders and Kaun, who is Xitkun's junior, would take over the rudder. If, on the other hand, Tujun, Xitkun, Pl skuk and Kaun and younger hunters set out in a boat then Pl skuk and Kaun, who are younger than Tujun and Xitkun, are at the oars, Xitkun takes over the rudder and Tujun, as the oldest of them all sits at the stern. It happens that the pila is younger than the extra man in the boat. In that case the pila tends the rudder and the extra man sits at the stern. I personally know of such a case. Pila Norp took along with him in the boat old man Onkan who sat at the stern and did nothing while Norp tended the rudder. When Norp was at the bow shooting at the seals and it, to whom Norp had turned over the steering oar, tended the rudder, Onkan again sat at the stern. Jesting about his work Onkan said to me: "I was simply sitting without doing a thing, but I got my share." I found out from others that during the hunt he helped build the campfire and prepare food. He also seems to have helped with some other things; which is why he was taken along. Unfortunately, I was unable to clarify this point to any great extent. I simply had no time in which to do that. It seems that Onkan performed a number of functions which did not tax his strength and, in this manner, he made the rather heavy work of the hunters easier.

Incidentally, the facts given above illustrate with a sufficient degree of clarity the role of older people among the Gilyaks.

225 [82] As mentioned above the pila performs mu-zi d
789 and t aj.
774
751 Mu-zi d is performed at the stern of the boat. Two short sticks, the thickness of a match are driven into the stern board. The distance between them is approximately two fingers. Then they tie a thin thread made of nettle fibres around the sticks. The Gilyaks usually perform zi d on hands of children. They believe that a thread made of hair of a dog and nettle fibre and tied around a child's hand protects the child from illness. The fact that the Gilyaks perform

452 and seals. They distribute the quarry. They play the leading
614 part in the economic, social and religious life of the clan
and in no one of these areas do they permit women to play
614 a part equal to their own. Women play a subordinate part in
552 the productive activity of the clan; they collect plants, roots and berries. Woman cannot play any part in the social life of the clan for they do not belong to the clan from the very time they are born, and when they grow up they are given away, in fact sold, by the hunters to some other clan. The clan that takes the woman, i.e. the clan of the son-in-law (ore) become dependent upon the clan of the father-in-law (apak). Also, women play no part in the religious life of the clan.

527 Women are not permitted to be present during more im-
562 portant moments of the "bear holiday", for the bear hunt is
784 a matter for men-hunters and not for women. Not once in their life are women permitted to eat the better cuts of bear meat. They are only allowed to eat some meat of the poorer cuts. Women must not be present at offerings to the spirits of the woods and of the sea which help the hunters, for hunting is a man's job. As mentioned above, a pregnant woman must not come to the sea shore while the men are hunting seals, otherwise the ice would disappear and the hunters would return home empty handed, etc., etc.

784 The taboos mentioned above are a religious-magical super-
412 structure on the labor distribution according to sex. One
626 should look for explanations of these taboos in the relations
183 among different groups of people in primitive society rather than in religion.

In legitimatizing this distribution of labor, the taboos turn the female part of the clan into slaves of the male part - the men-hunters.

Without further dwelling on these problems we merely indicate that there is no mystical element behind the taboos. The mystical content is often added in order to befuddle and to enslave people and to keep from them the essence of germinating exploitative relations among men. This is illustrated by the example of the t aj where the pila attempt to assert his title to a sivuch is made covertly rather than openly, under the guise of a magical-religious ceremony.

However, we now revert to our topic.

225 Having killed a sufficient number of seals, the hunters,
422 loaded with their quarry, return to the village. On arrival
479 the pila distributes the quarry. At this point it becomes apparent that the sivuch, which is the pila's legal property and whose blood he used in feeding the t aj, is included in

225 the division of the quarry. Why this ceremony should have
422 stopped at the pila appropriating the first sivuch rather
476 than asserting his full title to it on top of his share of the quarry is hard to tell. It seems to us that this can be explained by the essential preservation of the primitive Communist method of distribution of the quarry among the Gilyaks of the village Kul which do not permit a single individual to assert his title to an entire extra sivuch.

225 [89] I gave here a few examples which I have recorded
476 of the distribution of the quarry among the Gilyak hunters on their return home to the village Kul on August 2, 1931. These examples demonstrate clearly the primitive Communist character of the distribution.

The quarry of pil tun's collective consisted of 18 sivuchs 9 p i, 11 qoma and 1 a . They sold 3 sivuchs, 5 qoma and the fat of two seals on Cape Litke at the branch of the Rybaksoyuz [A, B Fisherman's Union]. They distributed the money obtained and the remainder of the quarry into equal shares. (1)

1. Unfortunately I did not write down how they distributed the money.

-1 tun.....received 2 sivuchs 2 pəyi
Jotkun.....received 2 sivuchs 1 pəyi 1 qoma 1 strap (2)

281 2. The hide of a young sivuch nav-ɔa is cut into three pieces and that of an older one - into four. Out of each piece the Gilyaks cut one thin long strap which is immediately spread out to dry.

225 Nərp (a shot)... received 1 sivuch 1 p i 1 qoma 3 straps
476 Rəntik..... " 2 " 2 " - " 1 "

13 sivuchs 9 pəyi 6 qoma 6 straps = = 2 sivuchs 1 alx

On straps	2	
Sold	5	5

Total.....18 Sivuchs 9 pəyi 11 qoma 1 alx

225 The quarry of Nitgin's collective consisted of 19 sivuchs,
476 and 8 qoma and 1 pəyi. They sold 3 sivuchs and 4 qoma on
the cape Lidtke. They distributed the money obtained and the
remainder of the quarry into equal shares.

Nitgin.....	received	2 sivuchs	--		2 straps	
Niamin.....	received	2 "			1 strap	
Kizgun.....	"	2 "	1 qoma		1 "	
Verun.....	"	2 "	1 "		1 "

		14 sivuchs	4 qoma		and 8 straps	
			1 pəyi		2 sivuchs	

On straps....2
Sold.....3 4

Total.....19 sivuchs 8 qoma 1 pəyi

The quarry of Norp's collective consisted of 26 sivuchs, 1 pəyi and 12 qoma. They sold 8 sivuchs and 4 qoma on cape Lidtke. They distributed the money obtained and the remainder of the quarry into equal parts.

Norp.....	received	2 1/2 sivuchs	2 qoma	2 straps	
Ete.....	"	2 1/2 "	2 "	2 "	
Potaq.....	"	2 1/2 "	1 "	2 "	
Otaq.....	"	2 1/2 "	1 "	2 "	
Tesq.....	"	2 1/2 "	1 "	2 "	
Onkan.....	"	2 1/2 "	1 "	2	"and 1 pəyi
		15 sivuchs	8 qoma	12 straps	
				3 sivuchs	

On straps....3
Sold.....8 4

Total.....26 Sivuchs 12 qoma 1 pəyi

[90] The fact that Norp received an extra qoma does not prove that he received more than the other hunters. The qoma is not a valuable seal and it is really of no account whether one does or does not get an extra qoma. What is important is the

225 distribution of the sivuchs. The number of sivuchs he re-
476 ceived was the same as that received by the others. If at all
it is Nitgin who received a tiny bit more than the others; he
received one extra strap but did not get a qoma and so he
225 really got no more than the others. My report of my obser-
476 vation in the year 1931 of the primitive Communist method of
481 the distribution of the quarry in the village Kul can be
appropriately concluded with the following passage from L.
IA. Shternberg's work "Sakhalinskiie Giliaki" (The Sakhaline
Gilyaks), mentioned by F. Engels and published in
"Etnograficheskoie Obozreniie" in 1893, i.e. 40 years ago.
"During the common hunt, for instance, during a seal or
dolphin hunt, when a group of Gilyaks banded together for
this purpose set out in a single boat, the quarry is shared
equally by the participants. The owner of the boat receives
a share equal to that of the young man sitting na grebkakh.
The skill of the maker of spears and arrows is not specially
rewarded. Moreover, during a long expedition, i.e. from
Amur to the South of Sakhalin, it is not the owner of the boat
who receives more than his share of the quarry, but rather
the man who, on the voyage, performs the bothersome duties
connected with the preparation of food and the collection of
firewood." Apparently, it is for this kind of work that old
man Onkan received not only a participant's share but an
extra pəyi.

476 I find it necessary to give one more example of the
225 distribution of the quarry in the collective of Xitkun, for in
it we come across an entirely new phenomenon.

The quarry of Xitkun's collective consisted of 14 sivuchs.
They cut the hides of two sivuchs on straps. They cut the
hide of the youngest sivuch nav-ŋa into three straps, and the
hide of the tje-ŋa into four straps. There were seven straps
in all. There remained 12 sivuchs. Of the remaining sivuchs
Xitkun gave one and a half sivuch to each of the seven mem-
bers of the collective. This made a total of ten and a half
sivuchs. The fat of the remaining one and a half sivuch was
divided (unfortunately, I did not find out how) and as for the
hides, the hunters decided to let them dry and then make ki
(vamps and soles for shoes) of them. Including Xitkun there
were six men in the boat and they divided the quarry into
seven parts. It turned out that the seventh share was mu-ar,
the share of the boat (or as the Gilyaks say pay), that is,
what they were supposed to pay to the Gilyak Arban from whom
they rented the boat for the hunt. Xitkun and the other hunters

476 were forced to take the boat from him for not one of them had
225 a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry
427 we saw that the share of the owner of the boat who also
476 happened to the pila- was precisely the same as that of the
225 other hunters and that he was not specially rewarded for
supplying the boat and for his work in connection with organiz-
ing and leading the collective.

The last quoted example illustrates the exploitation that
arises out of ownership of the tools of labor. The Exploitation
is effected under the guise of the particular form of leasing
tools. Here the owner of the boat does not participate in the
hunt. He rents the boat to others and still gets a share of the
quarry which he would get had he participated in the hunt.

471 Going from Kul - which is at the present time the northern-
225 most Gilyak village on the continent - in the direction of the
476 town of Nikolayevsk -na -Amur, until recently the center of
427 capitalist influence on the Gilyaks, we note an interesting
478 phenomenon. In the villages located in the proximity of the
town of Nikolayevsk-na-Amur and, consequently, exposed
most pronouncedly to its influence, the owner of the boat until
recently claimed two shares: one - as a participant in the
hunt and the other - as owner of the boat. This represents
another forward step in the development [91] of the exploitative
relations whose rise we noted in the fishing industry of the
Gilyaks of the village Kul. On top of that, the owner of the
boat claims shares for his wife and children who take no part
whatever in the hunt.

226 The tendency to claim for oneself extra shares of the quarry
439 can be explained by the fact that some time after the founding
177 of the town of Nikolayevsk-na-Amur the commercial value of
427 fish increased. The lower reaches of Amur, one of the world's
476 richest Siberian salmon areas, attracted many people from the
fishing industry as well as merchants, who brought up Siberian
salmon from the Gilyaks. The Gilyaks of the lower reaches of
the Amur, who formerly traded with the Chinese and Japanese
began selling Siberian salmon to the Russians; an item of no
importance in their trade with the Chinese and Japanese.
Owners of zayezdki and seins turned into entrepreneurs
supplying whole-sale fish-dealers, Luri, Viderman and others.
They began to increase zayezdki and to hire labor from among
Russians, Koreans and, especially, Gilyaks who come to them
from Sakhalin and from the villages located North of
Nikolayevsk-na-Amur. "With a zayezdok as a source of in-
come, the Gilyak turned into a rentier who was always idle
and drunk throughout the summer, "says the ardent colonizer

226 and proponent of a policy of oppression of "foreigners,"
439 N. V. Slyunin. (1) It is of interest to note that the new
177
427 1 N. V. Slûnin, Sovremennoîe polozheniie nashevo
476 Dal'nevo Vostoika [The present conditions in our
Far East], p. 96, 1908, SPb.

471 exploitative relations evolved among the Gilyaks on the basis
427 of ownership of the tools of labor did not produce new forms
476 of distribution. Distribution persisted, as of old, in the form
226 of the hunter's ancient way of dividing the quarry into shares.
477 It was only new claimants of shares who appeared. A new
content was given to the old form. The owner of the tools of
labor, striving to receive a greater part of the quarry, began
to claim shares for members of his family who did not
participate at all in the process of production such as wives
and children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

of the tools of labor such as the boat and the seine and even
for the use of the bench in the boat (mlət) and of the stick
over the door of the house (nəmr-tis).

We give here illustrations of the above.

225 According to the Gilyak ;argun (?) now living in the village
471 C/arva? (Charbakh), back in 1917 or 1918 he and three other
427 Gilyaks from the village Kal'ma as well as fourth one from
the village Təlmə went to the lower reaches of the Amur and
worked there during the run of Siberian salmon on the island
Langer for the Gilyak Armən who was an inhabitant of the
island. I often saw Armən in 1931. Armən's brother worked
with him. In all there were seven men working. When the
fishing season was over, Armən divided the quarry. He and
his brother got six shares, while the remaining Gilyaks re-
ceived five shares, one share per man. The six shares ob-
tained by Armən were accounted for as follows: one share for
Armən, one share for his brother, one share for the use of
the boat, one share for the use of the seine, and finally, one
share each for his wife and his old mother, neither of whom
took part in the fishing.. The Gilyak workers got no shares

225 [108] Hunting of the Beluga by the Gilyaks of the Village Puir
476
433 As L. Schrenk (1) rightly points out, hunting of the beluga

1. L. Schrenk, Ob Inorodtsakh Amurskovo Kraia, v. II, [Concerning the Natives of the Amur Region)

(white dolphin) does not play an important part in the economy of the Gilyaks which is based on fishing and, to a lesser extent, on seal hunting. Nevertheless, hunting of the beluga, which is now of an accidental rather than systematic nature, contains some features which merit description. These features are:

1) The primitive Communist character of the distribution of the catch. The hunters as well as the other village folk share the beluga. Not so in seal hunting, where the quarry is shared by the hunters only. (2)

2. E. A. Kreĭnovich, Morskoĭ Promysel Giliakov Derevni Kul', [Fishing Industry of the Gilyaks of the village Kul), Sovetskaia Etnografiia, 1934, no. 5.

2) The religious ceremony held by the Gilyaks on the occasion of a successful hunt.

124 We did our best to authenticate the facts we are about to
225 report by writing them down in the Gilyak language under the
115 dictation of the informant. Besides writing down texts, we collected maps, plans of summer and winter settlements, plans indicating the location of landed property, drawings, etc.

In the present article we publish drawings by the Gilyak Mytka which depict all the important phases of a hunt of the beluga and two accounts of the hunt; one told by the author of these drawings, the other--by the Gilyak Khor.

115 Mytka lives in the village Puir. He is about 35 years old. He is one of the most outstanding and talented Gilyaks I have met. He has a tremendous thirst for knowledge. When I went to see him for the first time, he was lying on his plank-bed and reading Goroda i Gody [Towns and Years] by K. Fedin, a book that he took out from the library at his place of work. Mytka is very much interested in problems of technology. The model of the airplane that I brought to the anthropological and ethnographical museum was made by him for his son. Mytka likes to draw, but, unfortunately

225 533 824 182 Giliakov Derevni Kul'," [Sea fishing among the Gilyaks of the Village Kul] Sovetskaia Etnografiia, 1934, no. 5.).

225 476 fed the head of the dolphin. Then we came down (to the shore) and the old men cut up the dolphin. [113] When they cut it up, we called all the people (ordered them to come), spoke to them, and made each one of them take (let them take) his share. We gave less to the "sitting" men (that is, those who did not participate in the hunt). (1) We gave more

1. The Gilyak Shurman, from the village Lyangr, told me that they divide the beluga into equal parts. Only when they kill two--three belugas do they give somewhat greater shares to the hunters.

to those who went to sea. After they had taken away their 225 782 778 shares, we cut up the head (literally, broke it up). After we cut up the head, in the evening, we sent the young men to cut some birch wood; we sent them to cut some rowan-trees. Then we got some rowan shavings and put them in the respiratory opening. We cooked some cereal and put it in the sea-dish [Russian, Morskoye blyudo] We prepared some berries and put it in the sea-dish. Then we sent the children to bury the head. When they were ready to go, an old man went with them. They put the head down on the place where offerings to the sea are made. (2) They took the eyes

2. Near each village, there is a separate place from which offerings are brought to the sea.

out of the head and, having dug a hole in the ground, they put the eyes in the center (of the hole). (3) After they buried

3. In the village Puir the eyes of the beluga are "buried" on the place where offerings to the sea are made. In other villages the eyes and the head are suspended in a birch tree.

the eyes, they scattered some rice and berries in the sea. Then they carried the head to Elzəs. (4) They hung the head

4. Elzəs--a place where the heads are "buried". Each clan has its own elzəs. When they kill a beluga, they

782 they keep for a long time. When some one is
225 drowned the Gilyaks arrange a boat race, fight, and
766 run. In this connection I wish to note that in the
415 valleys Chayvo, on the Okhotsk shore of the Sakhalin peninsula, where I studied the cult of drowned men in great detail, no felicitations are allowed when a man is drowned.

fed. (Mos for these troughs is prepared by men). Next, mos is emptied out of the tol- ir ('sea troughs') for which it is prepared, as in all other cases, by women. The offering completed, the troughs are turned around so that their "eyes" are directed to the houses instead of to the sea. (3) Next,

3. The troughs are in the form of animals. As I observed in the village of Chayvo, drops of mos meant to be "eyes" are put on one end of a tol- ir, which apparently no longer has animal form.

pebbles, picked up from the shore are put into the troughs. At home these pebbles are thrown into the fireplace.

82 The Gilyaks regale their kinsmen with whatever is left
62 over from the offering and also eat themselves. Mos from the
25 ul - ir is eaten only by old people. Women, children, and
61 young hunters must not taste this mos.

25 It is imperative that the "feeding of the sea" be completed
82 before the departure of the hunters. Once the hunters put out to sea, "feeding of the sea" is not allowed. At present this custom is not strictly observed, and if someone happens to be late, he "feeds the sea" late in the evening when it is reasonable to assume that the hunters at sea have gone ashore; although they sometimes spend the night on floes.

After the offering the Gilyaks begin preparations for putting out to sea on a hunt.

25 The essential prerequisite for seal-hunting at sea is a large
91 spacious, many-oared boat. Not every Gilyak is the owner of
76 [80] such a boat, suitable for long voyages. In the village Kul
2 there are no more than ten such boats. (1) In the seal-hunting
6

1. Unfortunately, it did not occur to me to count the number of these boats during my stay in the village Kul.

season the hunters unite in a collective which centers around

75 cont./
ows travel on such ground. All things considered, and on the basis
their construction and their entire nature, the ski of the Gilyak
e less suitable for traversing uneven mountain and forest wilder-
sses than for rapidly sweeping over broad, flat surfaces deeply
overed with snow, such as the ice-cover of the Amur River, the
mur-Liman, the many gulfs and bays, and other level stretches
fered to them by their homeland. In conclusion, mention must
made here about the stick which the Gilyak, like other northern
oples, use when traveling on ski and which serves both as rudder
skiing down mountains as a support in ordinary forward motion.
he latter is made possible by the fact that there is attached to the
ick a little above its lower end, which tapers into a straight or
rved tip, a wooden hoop which has a somewhat movable connec-
on with it by means of several straps drawn like spokes from its
riphery to the stick and through it. Thanks to it, the stick has
fficient resistance in the snow to give some support, whereas
movability facilitates pulling the stick out of the snow again
d thus avoids unnecessary effort. Finally, the upper end of the
ick, widened somewhat like a shovel, is used /476/ /illustration
ppears here/ to remove the snow that collects and packs together
nder the foot.

Both types of ski, the small and the large, are also used
hong the Tungusic peoples of the Amur region who neighbor the
lyak. The small ski, called kángulta by the Olcha and Goldi,
ve the same form and nature among them as among the Gilyak.
e large ski among them (the Olcha and Goldi ssultá, or also
ch-ssultá), however, in comparison with those of the Gilyak,
ow very considerable and characteristic differences, which I
ust discuss here in some detail. As a whole they correspond
the ski, described in detail by Middendorff, "of the nomadic
nters of Siberia," a general designation which in this case, as
hink can be definitely concluded from the pertinent description
d illustration (1) refers to the Siberian Reindeer-Tungus, in whose

1. Middendorff, Reise in den Nord. und Ost. Sibir. /Travels in Northern and Eastern Siberia/, Vol. IV, p. 1349.

492 /486 cont./
longer sufficient to make them run, he climbs down, continues on his way on ski, and pulls the dogs with the sled behind him. Incidentally, thanks to the circumstance that he is seated astride and has ski on, he can be more or less helpful during the trip: if the movement is impeded because the sled-soles /runners/ cut too deep into the snow or otherwise meet an obstacle, he gets up on the ski, and not until the dogs have got the sled, relieved of its chief burden, moving again does he let himself down on it again. If the snow is too deep and loose and the dogs sink into it, the Gilyak helps them by going ahead on ski and making a firmer path for them (2). But if in this case the sled is heavily

2. Often enough this must also be done in the case of the broad-soled Russian sleds, and on Sakhalin I myself have had to go in front of my sled on ski in order to probe the path, drifted over by snowstorms, with a long stick and make a new trail.

loaded and the route uneven and sloping first toward one side and then toward the other, he will even harness himself in front of the sled, in order, in part, to help pull it and in part to prevent it from overturning in the deep snow. This is done in the following manner: across the front end of the sled a braking stick or a similar stick is tied, and by means of it two long poles gently sloping upward are attached to the sled. The Gilyak stands on
[192] ski between these poles /Pfiémerstangen/ (Gilyak tádf), embracing the poles with his arms, and, by a timely lifting of the one or the other of them, prevents the overturn of the sled and at the same time helps to pull it, while the guide-line to which the dogs are harnessed runs between his legs or, as I have also seen, is tied
[481] to his belt. /487/ In a similar manner, incidentally, the Gilyak sometimes has himself pulled, standing on his ski without any sled, by a couple of dogs which he holds by a line in his hands and urges to run over a level surface of ice or snow, whereby he moves forward exceedingly fast, especially going homeward. Just

G.
G1
481
284

Ski: 1-3 -- Gilyak, small; 4-6 -- Gilyak, large; 7-9 -- Goldi, large.

484 sled is 70-80 rubles.
492 The chief value of the dog as a draft animal is the fact that he does not sink in so far in deep, loosely-packed snow as the horse, and in general is much more agile, so that a dog-sled finds its way without a road where horses sink in up to their chests and cannot move from the spot. Moreover, one can [118] take along food for the dogs and thus visit uninhabited regions. 13-15 dogs can draw a man and about 30 pood of baggage. However, this applies more to Russian teams, for the Russians feed their animals better (1) and their dogs pull

1. They regard the hind part of the salmon as the best dog food. In drying the salmon, they divide it into three parts: the back and two sides.

with their chests.
481 As is well known, snow shoes are used for walking on the loose snow, for one's foot does not sink in very far. The Gilyak snow shoe consists of a board of larch wood about two arshin long. On the bottom it is covered with seal-skin, the hair of which is turned in such a way as to prevent the shoes from slipping back.

VII. Trades and Occupations

226 These consist of hunting, fishing, and the indispensable
285 tasks connected with housekeeping, clothing, etc.

Fishing. Smaller fish such as carp, whiting, etc., are caught with nets. The net is made of nettle thread or hemp fiber. (2) The dried plant is exposed to the frost for a time,

2. Only wild hemp is used.

then it is unraveled and the fibers are spun. The spindle is like that used by the Russians. The long, lower end of the shaft is taken between the legs, the disk is set into motion and at the same time one end of two long strands is tossed over the head of the spinner, while the other end is pressed against the spindle shaft, turned, and wound up. The net is braided with wooden needles. Both tasks are the duties of the women, but sometimes the men also condescend to do them.
226 Carp, pike and whiting are sometimes caught with a fishing rod. Fish roe is used as bait. In places along the coast haddock is also plentiful that there is a special kind of hook used for it. The end of the line is studded with a number of hooks which face in all directions; in winter such a line

482

482 BURDEN CARRYING--methods of carrying burdens (e.g., on head, shoulders, back); gear (e.g., head pad, tumpline, carrying pole, pack basket); specialists in burden carrying (e.g., porters, coolies); uses (e.g., on safari); etc.

439 few Gilyak are familiar with it (4). On the other hand, they are
600

4. Mamia Rinsô (Siebold, Nippon, VII, p. 193) says that the Gilyak (Smerenkur) on Sakhalin found the Japanese sugar that he gave them to try very tasty, but did not ask for more of it.

123 On the other hand, they are
263 very avid for Russian sugar; at the time of my stay there, next to tobacco, it was the main object of their frequent and very importunate begging, during which, as a rule, they pushed the children forward and, to arouse sympathy, pretended that they had an eye disease, maintaining that it could be cured only with sugar.
439 Not infrequently they also bought some in Nikolayevsk in order to
252 add it to their dishes, especially to the aforementioned flour-cakes
263 and to those prepared with cranberries or bilberries and the like. They even declared that they would not hesitate to do this to the dishes prepared for the bear festival, if it were available in sufficient quantity, which shows their entirely different attitude toward sugar and salt.

128 To conclude our statements on the food of the Gilyak, there
415 follows here a brief discussion of their most important implements and utensils used for holding the foodstuffs, as well as for the preparation and consumption of the dishes. First, only the ordinary objects of this kind used in daily life will be mentioned, while the special utensils used in connection with the bear festivals will be
312 discussed later at the proper place. As was already stated above,
415 close to the entrance of the yurt there is a bucket made of birch
824 bark and filled with water, on which hangs a couple of bowls for
482 dipping and drinking. The water for this and for the other house-
482 hold needs is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke /Pl. XXXIII, Figs. 1
415 and 2/ Gilyak dshamda and kormulk, respectively). /446/ Similarly
177 consideration has been given above to the large iron kettle (Gilyak ormotsch(?)-wunj) which in the winter house is embedded in each of

221 purchase fish, while in many places (for example, on the Tym') the inhabitants set out in whole settlements to travel several hundred kilometers to the seashore for the spring seal-hunting, only to return half a year later for the fall run of fish in their native
574 places. The Gilyak likes to travel, however, even without
517 serious reasons for it. To make visits, receive guests, arrange
●[484] celebrations, and live gregariously are the greatest pleasures of
[157] the Gilyak. Gloomy and stern while alone, he is transformed in society and becomes playful, gay, and garrulous.

342 In the north, in winter, between 30 and 40 people live in
159 the big yurts of the Manchu type. It is here that sociableness, which is inherent anyway in the conditions of the social frame-
128 work of the Gilyak, is cultivated. Now, however, we must leave the external aspect of the life of the Gilyak and pass to its internal structure, with whose unique peculiarities I intend mainly to acquaint my readers.

III.

174

Kinship System. Marriage Norms and Their Influence on the Family-Clan Structure.

Of all the peculiarities of the Gilyak way of life nothing so characteristically distinguishes them from the surrounding nationalities as their classificatory system of kinship and the rules that regulate their sexual relations and marriage. In this respect the Gilyak stand equally far from their southern neighbors, the Ainu, and from the Tungus tribes that surround them. The Ainu are the only nationality of the Priamur krai who have preserved features of
[611] maternality /materniteta/. The Gilyak family and clan are purely
[614] patriarchal institutions. As for the Tungus tribes, although the
[595] classificatory system of kinship and certain characteristics of group marriage analogous to those discovered by me in 1891 among the Gilyak were discovered by me among them, a careful comparison of this institution among the Tungus tribes and among the Gilyak leads to the conclusion that they /31/ belong to quite different

/55 cont./

776
787 Other gods distant from him, the sun and the moon, for example, just like the tly-nivukh'i, interest him little, for these gods are not closely related to his life and needs. On the other hand, the Gilyak is in constant communication with such gods as the master of the taiga, the sea, and the fire, turning to them sometimes with sacrifices, sometimes with prayers. Usually both acts are joined together. For an ordinary sacrifice neither solemnity nor any special objects are necessary. The principle /56/ of sacrifice is exchange, and therefore one cannot give the god of the sea fish, nor the god of the taiga the meat of animals.

782 If the Gilyak sails on the sea and is afraid of a storm, he
●[484] respectfully lowers a leaf of tobacco or a handful of rice over the side and says: "Please make the sea calm, so that I may arrive home alive and healthy." Whenever the Gilyak sets out, he takes along in a special sack his favorite objects for sacrifice, sweet herbs, sarana, and so forth -- since the gods are not demanding.

123 Some kind of candy delivered to the deity may sometime
776 stand one in very good stead. I experienced this once myself. It was in August, 1894. With great difficulties, almost without provisions or supplies, and with one piece of brick tea and some biscuits, I reached the Head of the earth. When I unexpectedly informed my companions that I had decided to betake myself up to the top of the "Head" in order to collect plants and remove some stones, my companions were overcome with panic. They adjured me to renounce my "insane" intention, which had to lead to our common destruction, offering as proof the example of two Russian seamen who had attempted to go up to the top of the small god, Lazarev Cape, perished, and were buried there. The captain of my boat, Gibel'ka, an intelligent and loyal Gilyak from the settlement Tangi, who had become quite attached to me, was especially agitated.

/174 cont./

*835
614 In clans where a distinction is made between the wives of younger and of older "brothers," this right was formulated for me still more boldly: "among clansmen, in one and the same clan everything is permitted ('good'), the wife of an older (brother) is my wife all the same." This undoubted and primordial right of a man to the "wives" of his tuvn is invariably exercised throughout all the Gilyak territory up to the present time, with the sole limitation that we mentioned above, i.e., sexual intercourse should not take place before the eyes of the individual husband of the woman and, as far
*835 as possible, not publicly. The right of the individual spouse,
593 of course, is peremptory -- he can demand from his wife fulfillment of her marital and economic obligations and that she
[597] follow him through /175/ any change of dwelling. He has a formally exclusive right to the children that she bears, but quite often a Gilyak, if he has several children, considers it his duty to give away one of his infants to a childless tuvn of his, if the latter lives in another settlement. But also the subsidiary right of a wife and her group husbands in the person of his "brothers" to sexual intercourse is just as indisputable. It is true, the group spouses must look for a suitable opportunity in order, in the absence of the individual spouse (during his sleep or outside the home), to enjoy their rights, but there are more than enough such opportunities. A man passes the
●[484] greater part of his time away from home; either he is at the
[512] river catching fish, or he is away hunting for whole weeks at
[222] a time, or he is traveling, visiting. On the other hand, the women also absent themselves for whole days, going into the
*835 taiga for berries, roots, etc. Finally, intercourse is possible at night in the presence of the sleeping husband. In a word, the exercise of the right of group marriage does not present any particular difficulties. The bachelor tuvn most of all
[837] fully enjoy this right. Married men resort to it in their own settlement usually only in case of some sort of particular passion for this or that group ang:ei, but outside of their settlement, when they happen to be away from their individual

/247 cont./

000 weakly developed. Among the Gilyak there are very few
157 such outstanding, passionately devoted hunters as are to be
224 found among the Tungus. Nor do the Gilyak, especially
152 during the past half-century, possess the heroic emotions of
72 war. Indeed, what the Gilyak called wars in ancient times
[614] were in fact nothing more than sporadic clan skirmishes
[578] motivated by vengeance or, even more frequently, were over
[463] women. The Gilyak have never known war as a profession, as the favorite occupation of youth. It is natural that their
831 emotional energy should be principally directed toward
152 sexuality. The Gilyak begin their sexual life with the onset of puberty and devote all their leisure, all their thoughts, to women, the more so since by far not every Gilyak, as we
836 shall see, finds it possible to marry. The bachelor youth is not content with the women to whom they have rights in their own settlement; they do not stop with the circle of women to whom they have rights by law. The only category of women before which the Gilyak halts is the class of women prohibited
●484 to him. Neither length of time nor immensity of distance will
836 deter the Gilyak from his romantic adventures, if he can but find his fill of feminine society. The young man sets off most eagerly of all, of course, for the village of his "fathers-in-law" --aldmalk'i but he is not averse to undertaking a journey even to completely alien villages. During the time of my
[122] travels, young men frequently voluntarily joined me, offering me their assistance without compensation for many weeks, and this was done in the hope of finding occasion for romantic adventures, since this was not so very difficult. Owing to
836 the Gilyak's traditional hospitality and eagerness for any news,
574 the doors of every home are wide open to each new arrival. Thus, the Gilyak feels at home everywhere. A few hours
[203] after his arrival in some settlement, he has already managed to spend some time in every home, everywhere relate his news, to which the men and women listen with equal avidity, and has already managed to let his glance fall on some woman who has caught his fancy. The rest is a matter of his amatory experience and art.

/248 cont./

836 advice as to whether he should not "buy" a pretty woman who
837 had taken his fancy, although he had been married for a
159 long time and could not praise his wife enough. He did not, it is true, take part in the nightly adventures of his young companions, but only because the competition was already too great without that, since it very nearly went as far as revolvers among the young men.

839 By reason of the comparative accessibility of women, the use of force upon them is rare. I have, however, heard of instances where a group of youths, at the season when the women go for several days to places very distant from the villages after berries and sarana, made genuine raids upon the defenseless women, and, when the women have not yielded voluntarily, they have had no scruples about using force. Violence, however, principally amounts to /249/ tearing the cloth trousers which, as among the Chukchee and the Koryak, are made closed, without any openings. Such adventures, like all romantic pursuits in general outside one's own kinship circle of women, bear the characteristic designation s'ankh nan'gynd --
[196] "to hunt after women." This term, however, is also applied to searching for a bride, since it has two meanings: "to hunt" and "to seek something, somebody in general."

• 484 Special distant expeditions to alien settlements in search
83 of women, of course, are exclusively the affair of real
836 amateurs, so to speak, since in a distant village the new arrivals ordinarily encounter the fierce competition of the local youth, and the women already have their local admirers, not to speak of husbands, and special qualities are required to win an easy success on alien soil. I managed to meet such fortunate individuals: they are ordinarily good and worldly tellers of tales, jesters, and singers. There are, however, very few such outstanding lovers, even among the Gilyak, and there is a special term for them. Ordinarily the unmarried youth is either content with the women of his own village or pays visits to the settlements of his akhmalk'i, where, as we have seen, a most joyous reception always awaits him.

[The eastern Coast and the Tym' Basin]

/388 cont./

162 The ratio of the number of males to that of females (416:287) is such that there are 694 females per 1,000 males. In Russia there are 1,023 females per 1,000 males, and in Asia as a whole 960
165 females per 1,000 males. The infant mortality rate is 33.7%.
231 Every Gilyak, on the average, has two dogs and each adult Gilyak,
422 three dogs. There is very little hunting equipment, especially
411 guns, on the whole.

614 The Tymovskie and the Okhotsk Gilyak belong to 18 clans (2),
162

[126] 2. The property of each person has been registered to this or that clan, the figures on the number of clans, etc.

of which especially numerous clans are: Chuy-guy in the settlement of Chayvo (114 persons), Ady-Tymovskiy (156 persons), Mymyzi in Nyyvo (94 persons), Urlandzh in Chayvo (55 persons).
361 The most notable settlements in population are: Chayvo (151 per-
103 sons), Kekhrvo (90 persons), Nyyvo (46 persons), Tekhrvo (51
162 persons), and on the Tym' -- the trinity of settlements, Ady-Tym' and the neighboring Khomrvo and Plyuvo (106 persons), not counting the immigrant population from the western coast, Moz'bvo
20 (Rykovskoe, 56 persons), and others. Communication between the
361 first two of these settlements, Chayvo and Kekhrvo, is extremely
• [484] difficult; aside from the shallow water, the journey is difficult because in several places it is necessary to carry the boats over long stretches of dry land. As has been mentioned above, there is communication from the settlement of Kekhrvo to the village of Pomr and the western shore.

133 North of Kekhrvo the coast is uninhabited, and summer
484 travel to the north is extremely difficult and completely impossible along the shore itself for lack of any means of transportation
484 across the wide mouths of numerous bays. The only means of
492 transportation is on reindeer by way of the taiga and over the mountain ridges. If one adds to this the fact that a draft reindeer makes its way with great difficulty in the summer, it is clear how difficult and slow such a journey is.

located on the seacoast and perhaps also to a brook of the same name. Here, therefore, there is to be understood either the passage from the Amur to Lake Tschlja and from there to Kulj, or from the Kamr River, which empties into the Amur immediately above Nikolayevsk, to the Hisska Brook down this to the sea only slightly east of Kulj. Both routes are still used by the Gilyak in order to go from the lower Amur to the seacoast or vice versa. Under no circumstances, however, can the "Giljatskaja perewoloka" mentioned by Müller refer to the towpath on the Ukakyt -- from the Hemlen to the Tugur -- as Middendorff (Reise, etc., Vol IV, p. 198) has presumed, because then neither the localities nor the designation "Gilyak towpath" would fit. The towpath mentioned in Stuckenberg (Hydrogr. des Russ. Reiches, Vol. II, p. 774) is the same as the one in Müller.

175 come across Ulban Bay and Ssegneka Peninsula to the mouth
131 of the Tugur. The same route was advantageous for them for
489 another reason: they had to go across Ulban Bay to Ssegneka Peninsula and along the latter northward, if on their coastal voyages, they wanted to reach the Shantar Islands without getting too far from land.

175 There is still no mention of these islands in the reports
131 cited above, though Pojarkof and Nagiba must have sighted them on their return trip from the Amur. In the oldest reports
• [484] concerning them, which go back to 1709 and are based upon
[224] accounts by Cossacks stationed in Udskoi Ostrog and Tungus there, it is said that the Shantar Islands have no permanent inhabitants and are only visited by the Gilyak for hunting

175
131

[224]

/109 cont./ purposes (2). Müller thought that their name was of Gilyak

175
131
114
103

2. Müller, Samml. Russ. Gesch., Vol. III, p. 97.

origin, since "schantar" means "island" in Gilyak (3), which,

[113] 3. Op. cit., p. 96. Also in Büsching's Magaz. für die neue Histor. und Geogr., Part 2, second ed., p. 510.

ততু however, is certainly not the case (4). When the Russians

[192] 4. In Gilyak "island" is pólło-mif, a compound word in which mif means "earth" or "land"; thus, La-mif -- the Amur region, Laer-mif -- Sakhalin, Chagi-mif --part of the Amur-Liman, etc. I do not know the meaning of pollo. According to Middendorff (Reise, etc., Vol. IV, p. 108), the name "Schantar" first occurs on the handwritten map of the extreme eastern part of Siberia drawn up in 1720 and based on the works of the two surveyors, Jewreinof and Lushin, and, to be sure, on it the more southerly of the two easternmost islands of this group bears the name, "Schandarskij."

175 When the Russians
131 under the Cossack Semjon Anabara first came to the Shantar
648 Islands in the summer of 1713, they found them uninhabited; on only one of the three islands visited by them, on which there were ample forests and good hunting and on which they spent the winter (5), did they meet a woman, whose language

to the number of Russians originally present on the island, in which case the number of years of the stay would have been omitted, for the Russian original reads: zhit'ya ikh" bylo na tom" ostrovie liet" s" 20, kotorye khodilp v" tu zemlyu dlya rybnoi lovli..., etc. This information is also interesting because to a certain extent it is confirmation that in 1730 (not 1729 as is said in Middendorff and others), Schestakof had actually been on the Shantars, about which Middendorff, on the basis of the short and insufficient reports in Müller (op. cit., pp. 130 ff.), expresses doubt. According to him, the islands seen by Schestakof on the trips back and forth between Kamchatka and Udskoi Ostrog were not necessarily the Shantar Islands at all, since he navigated around the southern point of that peninsula and arrived at its east coast. The latter assertion, however, seems to me wholly unfounded, since Schestakof's trips, according to data from his own reports presented by Müller, took place only in the Sea of Okhotsk between the west coast of Kamchatka, Udskoi Ostrog, and Okhotsk. Müller himself never expresses doubt or uncertainty about the fact that Schestakof had visited the Shantar Islands, but only regrets being unable to give more detailed information about this trip because of the absence of the logbook.

175 It is noteworthy that all the accounts concerning the tempora
131 visits of the Gilyak to the Shantar Islands are inadequate and

10 cons.)

[1] [illegible] far as it knows, the Gilyak were never met there directly during any of the numerous visits to these islands. The pertinent accounts therefore only rest on the above-mentioned statement by the neighboring Tungus /111/ and on singular notes that the temporary stay of the Gilyak on many of these islands has left behind. According to Middendorff (Reise, Zoologisches, Theil II), the island of Chobui (i.e., bad) Shantar

1. "Ojasaisa nemli Kamchatka
/Description of the Kamchatkan Peninsula/"
(Poln. Sobr. sochin. potesh. po Kom.
Vol. I, St. Petersburg, 1818, p. 130)

said to have inscribed its name because there had no forest at it, which, however, had not always been the case: formerly had been quite densely wooded and rich in sable, but the Gilyak had to extirpate the fur bearers, the Tungus had to leave the island, and all the forest on it was burned (2). Kranchenninikow,

2. Middendorff thinks that it is probably impossible to put the island of Chobui (i.e. Schantar, "which is not marked on any map, in its proper place (Reise, etc., Vol. IV, p. 108, note 1). According to Kranchenninikow's description, which he does not seem to have noted, it can hardly be doubted but that Small Schantar Island (Maly Shantar) is meant (2), as it is also by the name "Bachui (ity) Schantar," according to Middendorff (loc. cit.). On the "Kara von der Lage von Kamchatka" (Karta po Kom. Lagu, Location of Kamchatka) in Steller's pertinent work one finds an island "Bach Schantar" west of the island of Reitinchi, just as Kranchenninikow, too, gives it, but this

2. (cont.)
does not mean much, since the Shantar Islands lie there all in a row approximately from west to east.

[2] [illegible] Middendorff thinks that information from traditions and stories, since he himself was never on the Shantar Islands, the Tungus near them. Moreover, it is very reminiscent of the above-mentioned story about the burning of the forest on Large Shantar Island, which, however, does not exactly prove its credibility. Komisa's statement in the northeastern part of Large Shantar Island nor the Tungus near Chobui Island has been dilapidated yurts in which Gilyak were said to have formerly lived (2) seems more important. But we encounter uncertainty

3. Cap. Gidrogr. Depart., Part IV, p. 89.

even with respect to this report, in that the tradition that Middendorff discovered in Udskoi Ostrog expressly attributed these yurts to Russian fur hunters, and the ruins of these few and

4. Reise, etc., Vol. IV, p. 108, note 1: Middendorff adds that this seems much more probable to him.

uncertain reports, I do not doubt that the Gilyak visited the Shantar Islands in former times. Full credence should be given to the above-mentioned report to this effect by the Tungus, which came with the Russian fur hunters concerning these islands. Whereas the Tungus along the Sea of Chibom are primarily hunters and come to the coast only temporarily in July, the Gilyak stay there continually and are therefore much better informed than the former, as Middendorff also expressly mentioned (5). Hence it seems entirely plausible that from time

Section 7

[1] Means of Moving and Going from Place to Place by Land, Water, and Ice. Sledges, Sledding, and Pack Animals — Dogs, Reindeer, Horses, Cows, Donkeys

As has already been mentioned frequently, the three principal occupations which provide the Amur peoples with clothing and food, as well as the luxuries that have become necessities, are fishing, hunting, and trade — occupations that cannot be pursued except with various and more or less considerable moving from place to place. The Amur peoples have been considering these principal occupations, I think that it is necessary to go into a special discussion of the means of locomotion and of the means which the Amur peoples and the means used for it. This will naturally fall into two parts in a little more detail than the other, namely, locomotion by land or on the ice-cover of the water and, on the other hand, on water.

A fishing people like the Gilyak, who always set up their fishing places in the vicinity of rivers, streams, lakes, and seas, they get their food almost exclusively, and, furthermore, before whom, on the Amur River as well as along the vast coast of Sakhalin, the Russian fur hunters and the Russian fur traders met with the neighboring tribes and with the closest civilized peoples, the Manchu-Chinese on the Sungari and the Japanese on southern Sakhalin, such a people must naturally spend a great part of their time in winter on the ice-cover of the water, and, in the summer, make often enough to set up or inspect his animal traps and for other hunting purposes, or on journeys when snowwater-regime is, or is unusually low, and, in the winter, however, that the ski not only prevent sinking into the snow as much as possible, but also [illegible] Gilyak, [illegible] Gilyak, [illegible] Gilyak, [illegible] Gilyak have two types of ski: small ones — [illegible] and large ones — [illegible].

[illegible] undertaken a long [illegible] Gilyak, [illegible] Gilyak, [illegible] Gilyak,

/487 cont./ Dwir

as the Gilyak on trips usually tries to lighten the work for his dogs during the traveling, so does he always seem to be in a hurry to have the necessary refreshment and rest at night. If no village can be reached and the night must be spent in the open, he prepares a resting place for his dogs similar to the one for himself. The guide-line, detached from the sled, is tied to a tree trunk, and for each of the dogs a depression is made in the snow at intervals and lined with fir branches. From these traces one can immediately see how many Gilyak sleds have stopped at a campsite and how many dogs were fastened to each of them.

Undoubtedly the present practice of keeping dogs to harness is the one, which is so deeply entrenched in the life of the Gilyak, is not a relatively new custom, borrowed from one of the other tribes or peoples, but, on the contrary, it must be considered indicative to them, in contrast to the latter, reaching back into the most distant past. The situation is similar for the other Paleo-Asiatic peoples in contrast to their neighboring tribes-all of them, since ancient times, are or were fishermen who used their only domestic animal, the dog, chiefly for locomotion, with there being no proof of the borrowing of this custom from one of the neighboring peoples not any more than there is probable.

Among the Ainu or Saxhalin the dog in general plays exactly the same role as among the Gilyak, even the construction of the sled, the harness and the manner in which they are fastened and driven are said to be the same (?). But the Ainu do not

1. N. Bunge, Ocherk Sakhalin's i Eksped. 1850 - 1854 gg. /Sakhalin Island and the Expedition of 1850 and 1854/, St. Petersburg, 1879, p. 54. As I learned from Rudanovskiy's manuscript diary, the Ainu-Sakhalin used the same of the peoples /Tlemenengan/ on especially difficult routes in also quite common among the Ainu on Sakhalin.

use the method of locomotion nearly as often and as extensively as the Gilyak do, the reason for which, as we shall see in the following, lies not only in the less favorable position of their

/501 cont./

55 of Sakhalin, in that on the former, among the Orochon and Reindeer Tungus, the reinder serves only as a riding and pack animal, but on the latter, similar to the one, also known as a Tungus animal, and in this in use joins that of the dog.

As dwellers on a great river and in tributaries of the sea and its coastal rivers, all the peoples of the Amur region are more or less oriented toward moving and travelling from place to place by water for the purposes of fishing, hunting, trade, and communication. The dwellings of the women on which they dwell, however, makes necessary a multiplicity of vessels for staying or moving on them. In comparison with the dog sled, always built after one and the same pattern, the boat used by the Amur peoples are very different in form and nature; but it must be stated at the outset that the form is adapted to the character of the waters and represents with minor variations among all these peoples and only a few of them bear a peculiar national stamp.

Since of the Amur peoples spends as much time on the water as the Gilyak, who for the most part live in fishing huts who are inclined by their gentus for trading to undertake long journeys and so on. Nevertheless, it is proof of the fact that in large part they live along the sea and obtain their food from it, they are by nature bold and skillful seamen and hunters of marine animals, who instinct, only rarely venturable small, like, say, the Aleut in their bidarka, /Kiy/ would be inclined and able to undertake the high seven seas. Chief only concentrated around the lower course of the Amur River, which offers them, in addition, a relatively favorable climate, a fertile natural and easy route of communication with their close and more distant neighbors as far as the Sakhalin-Gilyak along the Mongols, and, on the other hand, the Amur-Gilyak, a very large island stretching immediately in front of the Amur mouth, which cut them off from the open sea, and, on the other, the meridional expanse, given them a bridge, to the peak, to Japan, the Gilyak, on the contrary, in their overall parts

/501 cont./

for subsistence as well as in their nature and character, are more, in contrast, oriented toward the sea and its inlets and islands. And the single vessel serving the Amur Gilyak as well as the coastal Gilyak for fishing and for trade and communication and trading voyages matches this. It is a bateau, shallow-draft boat in no way equal to the high waves of the sea, and essentially consists of single hewn log, forming the bottom and the two side-walls, to which, for closing off the front and rear ends, a few small boards are joined. The most significant and characteristic feature of it is that the bottom board projects toward the front quite a distance beyond the prow (see Fig. XXXVIII/ZM 1/ /Fig. 1/). It is not level, but, rather, curved in such a manner that it goes deepest in the middle, but always built after one and the same pattern, the bank used by the Amur peoples are very different in form and nature; but it must be stated at the outset that the form is adapted to the character of the waters represented with minor variations among all these peoples and only a few of them bear a peculiar national stamp.

Since of the Amur peoples spends as much time on the water as the Gilyak, who for the most part live in fishing huts who are inclined by their genus for trading to undertake long journeys and so on. Nevertheless, it is proof of the fact that in large part they live along the sea and obtain their food from it, they are by nature bold and skillful seamen and hunters of marine animals, who instinct, only rarely venturable small, like, say, the Aleut in their bidarka, /Kiy/ would be inclined and able to undertake the high seven seas. Chief only concentrated around the lower course of the Amur River, which offers them, in addition, a relatively favorable climate, a fertile natural and easy route of communication with their close and more distant neighbors as far as the Sakhalin-Gilyak along the Mongols, and, on the other hand, the Amur-Gilyak, a very large island stretching immediately in front of the Amur mouth, which cut them off from the open sea, and, on the other, the meridional expanse, given them a bridge, to the peak, to Japan, the Gilyak, on the contrary, in their overall parts

and in any brisk or gusty wind using the sail is continually in danger of being capsized. Also, because of the sail and its attachments, the Gilyak, who accompanied me as guide or oarsman, could not leave the boat and swim ashore and experienced in a brisk wind, in spite of the fact that my boat had a mast (1)

1. Needless to say, after my above-mentioned experiences with the Gilyak boat, I had adequate rust bearers put on the bottom board.

and a regular sail, they usually sat there deathly pale and imploring me to pull in the sail and to go ashore as soon as possible. Their boat, which, by the way, is not at least without a keel, when it is heavily loaded, can easily draw water and be greatly capsized, and, when it is not unballast seaworthy, in order to prevent the boat from drawing water at the side, the edge is sometimes raised on either side by a board attached to the side wall. This is the case, for example, with the boat with such shapes (Gilyak /ebkch/) in particular, which they undertake sea trips, and these are generally used in the Amur region, in the bottom board (Gilyak /mach/), about 2-3 fathoms long and one to one and a half feet wide, is given the above-mentioned oscarian curvature. For the bottom board, which, as a rule, ends on two low textiles erected on level ground, each of which consist of two curved pieces of wood, joined along the grooves. The unsupported center of the board sags, but, in order to achieve the proper curve, it must be pressed down further until it touches the ground, which is done either by weighting it with stones or, more simply, by having one or two people sit on the board. When it is fixed in the proper way, it is kept and stiffened from the ground on either side and grapping the board from slipping, and, on the two side-boards (Gilyak /ebkch/), a strong rope is laid and pegs fitted with their loops fitted to correspond to the holes in the board, and, in order to be accurately, the latter at a very slight obtuse angle and temporarily held in that position.

/501 cont./

Tungus, Ainu, and other places along the west coast of Sakhalin, set out for the Tymy River on Sakhalin in order to provide themselves with the necessary fishing animals and bear skins.

Some data for the southern coast of the Sea of Okhotsk, on the western shore of the Amur-estuary, are found in Maximovich. In the list given by him for the dates of the migrations of various fish and particularly the salmon species at least at the mouths of the rivers of Siberia and northern eastern Asiatic, June 22 is given as the arrival time of /p. gorbusa/ as the month of the Gilyak, and July 9 as the arrival time of /p. keta/ among all the same coast (2).

2. Middendorff, Reise, Vol. IV, pp. 1226 and 1227. The statement contained in the same work (p. 1192, note 2), but not in the above-mentioned list and standing in contradiction to the data in it, that 1. lagocephalus arrives at the mouths of the Ale and Uda (that is, Udi) fairly regularly about June 20, and 2. ciliatus also at the mouth of the Tugur, does not seem trustworthy to me and, incidentally, it given with the Gilyak name of /ulu/ for the latter. It is regrettable, as I must note here in passing, that the original sources, which are the observations which are used for the sources

/501 cont./

of many years in summer-dwelling along the river or on the seacoast, the Amur Tungus not infrequently undertake long hunting expeditions which may last many days or, indeed, weeks. This is particularly especially particularly true of the Orochon Tungus, in contrast to the Gilyak. Although on the whole they have likewise permanent dwellings, their original inclination for bearing animals, such as sable, river otter, and the fox, comes first, simply because by trading them they obtain not only clothing materials and foodstuff, but also the universally popular luxury items, and especially tobacco, which has become indispensable to them. For a long time they used to the same way and with the same means, but over a greater area and with more intensity than the Gilyak, with more success and profit.

But whereas among the Gilyak hunting is limited almost only to the coastal and river-dwelling animals and bear wholly in the interests of trade, among the Tungusic Amur /179/ peoples it also extends to too an less an extent to the above-mentioned kinds of sable and fox, but, in a considerable degree, to bear, which are not merely skin and utilized on occasion, as happens among the Gilyak, but, rather, constitute a hunting game, because they are used directly and very essentially for their clothing and food. As I have already been pointed out above in the discussion of these two points, they are related to food, however, of the more significance must be ascribed to hunting among the Tungusic Amur peoples, for he takes pleasure in hunting more than among the Gilyak, and the farther upstream and inland, the more, and the more exclusively, it takes up the entire winter and part of the fall and spring.

Hand in hand with the longer period of hunting among the Tungusic Amur peoples also goes its extension over a far larger area. Whereas the Gilyak confines himself with a relatively small area, where he pursues his hunting and self-defense in the localities that he knows to be favorable from experience and at the most, in exceptional years, he ventures a little farther, and, if it is regretable, as I must note here in passing, that the original sources, which are the observations which are used for the sources

/501 cont./

of many years in summer-dwelling along the river or on the seacoast, the Amur Tungus not infrequently undertake long hunting expeditions which may last many days or, indeed, weeks. /605 cont./

numerated them. In the Amur region I often heard similar assertions, sometimes reinforced with very liberal swirings of the Chinese tobacco pipe, sometimes, however, with, in the Amur region, only in winter only short distance separates them from the Tungus Lamut, who have adopted the Chinese customs and, finally, close to the northern border of their habitation area, separated from the Sakhalin, the chief northern tributary of the Amur, by only a few waterways, where each year in December Yakut and Russian merchants congregate specifically in order to trade with the surrounding Tungusic tribes and, among them, with the Negda in particular (1). Under these circumstances

1. See p. 186 above. Cf. also Fr. Schmidt, "Histor. Bericht über die Sibir. Exp. der Kais. Russischen Geographischen Gesellschaft" Bericht über die Sibirische Expedition of the Russian Geographical Society, Vol. XXV, pp. 134 ff. Cf. also Dr. Radloff, Vol. XXV, pp. 134 ff.

the chances of the Gilyak middlemen for success among the Tungus are very slight, and, in comparison with the Gilyak, where the latter live in the closest proximity to the Gilyak, far from the Amur-Tungus, who, far from the Amur, find there the means for their trade with their countrymen on Sakhalin and, rather than, try to utilize the route offered them by natural evolving the profit-seeking middlemen located on Sakhalin, is needed for their own use, as well as for further trading, by the Tungusi themselves.

To be able to undertake a trading trip to the Tungusi in the Gilyak usually assists a person, "in the blanche," is the good will of the Tungusi, who, in contrast to the Gilyak, are generally, in a manner practically independent, and, in their relations with the Gilyak, in a manner practically independent, and, in their relations with the Gilyak, in a manner practically independent, and, in their relations with the Gilyak

/605 cont./

barter commodity, which is practically the only one that is considered by the Chinese on the Sungari, the long journey would not only be unrewarding and hence purposeless, but could hardly be made in view of the unavoidable payment of tribute and bribes to the Manchu officials. Since such a supply can at first only be procured with difficulty, several usually make /606/ such a journey together, under the leadership of a traveled and experienced man. Or it may be started by an experienced man who invites other and younger men to participate in it in return for an appropriate share in the profits or for a definite wage. An association of several persons is always required for its accomplishment. For a Sungari journey cannot be carried out, like the shorter trading trips, in winter on sleds drawn by dogs, with each one his own master. This is impossible for the Gilyak simply because of the length of the trip, as well as the fact that it leads through the territory, not only of their neighbors, the Olcha, but also of the more distant Goldi, among whom they cannot always count on a hospitable reception for themselves and their dogs, and, from the Ussuri to the Sungari, cuts through a sparsely populated area where they could quite easily lose their dogs altogether, and through that get into the greatest difficulty. Moreover, at best by this method such a small quantity of wares could be transported that the journey would pay only slightly, if at all. The only way to do it safely and profitably is by boat up the Amur and Sungari. For this, however, a number of men are needed to propel the boat, loaded with furs and some supplies, even though not heavily, against the occasionally very strong current, sometimes by rowing and sometimes by pulling on ropes. Hence, a small, but well-organized company, with an authoritative and commanding leader at the head, is always required for such a journey.

The goal of the Sungari journeys of the Gilyak is always the town of Ssan-ssin, or Itscha-choton, as it is called by all the Amur peoples, located at the point where the Churcha or Mutuan-ho empties into the Sungari. They are not permitted

/606 cont./ They are not permitted

439 439 484 648 823 by the Manchu-Chinese government to go farther upstream, just as they and all the other peoples of the lower Amur region are not permitted to enter the Amur above the mouth of the Sungari, the so-called Sachali River -- a prohibition whose observance the Manchu officials stationed in Dshang-dshu at the confluence of the two rivers have to watch over very strictly (1). Hence this is

1. Cf. pp. 73 and 800 above.

also the extreme western and southern boundary of that part of the *Amur and Sungari region known to the Gilyak through personal* observation. What they have to say about the towns of "Kirchk-choton" and "Nungdy-choton" (Ninguta?) located, respectively, [103] above Itscha-choton on the Sungari and on its above-mentioned tributary, which they call "Ula" (which, however, in Manchu and Tungusic, as is well known, simply means "river"), as well as about the "large" town of "Aicho" (Aigun) on the Sachali River is based only upon hearsay, on tales which they may have heard in part from the Chinese on the Sungari and Amur and in part perhaps through Daurian-Yakut traditions in Burukan. The 439 439 484 648 fact that the Manchu-Chinese government grants the Gilyak access to the Sungari, which is prohibited for all foreigners, indicates /607/ that it views them as its subjects, though it does nothing in their region to give proof of its rule over them and does not send either military or tribute-collecting officials to them, as a consequence of which the Gilyak regard themselves as independent of it. Perhaps it neglects to do this for reasons of precedence, in order not to expose itself to resistance, the removal of which would involve more cost than benefit. On the other hand, it tries to make up for it by collecting from the Gilyak coming to trade in Ssan-ssin as high a tribute as possible for permission to do so, which must be obtained from it first. The Gilyak have no choice but to submit to any demand, if they are not to lose their anticipated profits from trading and to have undertaken the whole long journey in vain. At the same

G /607 cont./

439 439 484 648 time they must submit to being treated like the Goldi and other peoples directly subject to the Manchu-Chinese. And in order to achieve their commercial ends, they behave, as they themselves told me, toward them on their part just like the latter, th is, they bend the knee before them in greeting or to make a request, which otherwise is not at all customary among them. Th Gilyak in Ssan-ssin put on an act of complete submission to the Manchu-Chinese government, and the latter is satisfied with this along with the gifts collected from them in the form of tribute a probably going into the pockets of the local officials, and otherwise leaves them in peace.

G' 439 648 The treatment of the natives of the lower Amur region appearing annually on the Sungari for trade on the part of the Manchu officials and Chinese merchants there is extremely harsh inconsiderate, and humiliating, and in particular the gentle and shy Goldi, who live closest to them and are directly subject to them, have to suffer under them. According to the description by Chilkofakij (1) and Barabasch (2), who traveled up the Sungari

G' [113]

1. Khilkovskii (Izviest. Rusck. Geogr. Obshch., Vol. II, 1866, Sec. II, p. 227. In the excerpt in Petermann's Geograph. Mittheil., 1868, p. 345).

G' [113]

to Pe-tune (Bo-dune) in 1866 and 1872, they first had to pay for a permit for travel to Ssan-ssin and for the trading itself, which was done in the village of Stussu, lying somewhat below the latter, by paying a considerable amount of sturgeon and hausen cartilage and glue to the Manchu official stationed there. Upon reaching Ssan-ssin, they first of all have to pay the tribute (alban) owed to the Chinese Crown, which consists of one sable,

/608 cont./

439 men and women, black woolens and velvet materials, silk fabrics, silk thread of all colors, sewing needles, buttons, and a quantity of Chinese ornaments, silver ear-pendants, rings and bracelets, glass beads, sheet-brass figures for decorating women's robes, and the like, as well as, finally, a number of household utensils, such as large and small kettles, etc. If the quantity of
439 goods acquired in trade in Ssan-ssin, in part heavy and bulky,
437 is too large to be transported without injury in the small boats
484 in which the Gilyak customarily make the arduous upstream
[501] voyage to and on the Sungari, a so-called Manchu boat, made by the Goldi there, is bought, in which the return voyage downstream can be made easily and quickly. And since, in order to have a stronger current, one usually stays far from the banks, he at the same time avoids the danger of being belatedly fleeced even yet by the Manchu officials and Chinese traders stationed or residing here and there temporarily or permanently. After the return trip is completed, the boat can still be used for a second type of trading voyage -- the voyages to the Ssisam (Japanese), to a consideration of which we must now turn.

439 Among the above-named commodities which the Gilyak obtain by trade in Ssin-ssan, one article plays an especially important role. It is the colorful Chinese silk fabric bearing designs of dragons and other figures and often with gold and silver interwoven in it, which is brought to market in part in whole pieces and in part worked up into long and wide-sleeved dressing gowns. /609/ Whereas the other commodities serve the Gilyak exclusively for their own use or for trade with their neighbors, these find their foremost and best purchasers outside of the Amur region, among the Japanese, and therefore give them the principal reason for direct trade with the latter. There is mention of this trade, which, however, does not take place in Japan, but in the Japanese settlements on Sakhalin, even in the oldest accounts of this island which we have from the Japanese. The Japanese interpreter Kannemon, who visited Jesso /Yesso/ before 1652, already speaks of special fabrics which the inhabitants of this island get from "Krato" or "Kraft"

/609 cont./

175 designation /610/ for the lower Amur region, there can be no
439 doubt but that the Gilyak, Olcha, and Goldi trading on Sakhalin were meant by it.

439 The principal center for the trade of the Gilyak with the
437 Japanese is Ssiranussi, the foremost settlement of the latter and
484 located close to the southwestern tip of the island (1). It is,
487

1. See pp. 146-156 above concerning the founding and the character of the Japanese settlements on Sakhalin.

therefore, also the most distant goal of the "Ssisam" voyages of the Gilyak, on which trade is conducted, not only with the Japanese, but also with the Ainu. The journeys are made in summer and in winter, by boat and on sleds. For the sea
[501] voyage the Gilyak use either the above-mentioned Manchu boats brought from the Sungari or, and for the most part, their own ordinary river boats described above, on which they only raise the sides by a board put on either side for protection against the higher waves of the sea. Making allowance for these keelless
[103] vessels of theirs, they cautiously avoid the open sea on the voyage and always stay, after they have crossed Mamia Rinsô Strait in calm weather at its narrowest point, from Cape Lasaref (Gilyak Piljan-kthy (2), that is, "Great Cape," Olcha Wasfun)

[104] 2. The th is to be pronounced as in English.

to Poghobi, where it is about four nautical miles wide and thus have reached the west coast of Sakhalin, as close to it as possible. But even the voyage along the coast, which in spots, and especially south of Duï as far as Pilja-wo, is steep and rocky, offers many a danger, which the Gilyak try to avoid by going to sea only in calm weather or light winds. Because of this, as well as because of the fact that, in order not to overload their boats,

heads. Their cover consists of skins, sometimes also of a coarse military cloth.

The houses of the Sakhalin-Gilyak are differently arranged. They have neither stoves, nor chimneys, nor windows. The floor is somewhat below the surface of the ground; in the middle of it is a box-like open hearth made of pressed clay, and above this is an opening in the roof. In windy weather the houses are usually full of smoke.

A Gilyak house is lived in only during the cold and colder parts of the year; in summer, however, those who do not go off on longer excursions move into the airy storage hut. This consists of boards, and stands on poles in order to protect it from rats. [115] On their expeditions the Gilyak often make themselves huts of birch bark, and they carry along with them wide and long pieces of bark. It is scraped, and softened in hot steam. They also make baskets, small dishes, etc. of this.

A Gilyak house seldom serves but one family; usually several of them live together, sometimes as many as eight or nine.

VII. Transportation Methods, Boats and Dog Sleds.

There are two kinds of boats. The regular one is usually made of fir or cedar wood. It is rather narrow, but very long, about six to seven meters and has no keel. The steering end is rounded, the opposite end, pointed. Lengthwise it consists of three planks, one of which is the floor, the others, the two sides. The floor board projects out at the prow, the two side boards are shorter than it and are joined by two small cross-boards; the projecting floor board softens the impact in landing and serves to tie up the vessel. The boards are joined with wooden pins, the cracks stuffed with moss which on the inside is covered with thin wooden strips and fastened down. There is no rudder; instead they use a short steering oar which is used alternately on the right and left sides. The ordinary oars are shovel-shaped; the wider end is cut in the shape of a lyre. There is a small bar fastened to the edge of the boat for each oar, against which it is braced. The rowers sit on low, narrow cross boards. Sometimes a mast is raised and a sail is set. The latter consists of fish skin or sail cloth. These boats go very rapidly but easily overturn.

The Omorchka is a small narrow canoe made of birch bark; inside, the frame is supported by a double row of lashing of the same material, which runs criss-cross. Usually only one person sits in this canoe and rows with a double oar, both right and left.

493 of long strips like the Gilyak's, but of boards and is enclosed
516 with a rail in back and on the sides, against which the rider can lean. The driver sits sideways in front and holds on to a handle with one hand and grasps his stick with the other. [117]
231 A complete pack consists of 13-15 dogs, but fewer are also
492 used. There are no driving reins, only the stick and the command guide the dogs. If they go too fast the kayur (driver) braces himself with his feet against the snow, if they are to turn right or left the point of the corresponding stick is driven into the snow. The chief command is "takh", "takh" (foreward); "kai" means "turn around", and "chy", slower.

Because of the loose harness, the number of animals and their energy, and the lightness of the sled, the driving of a dog sled is very difficult work.

484 In the back of the sled lies the baggage or the wares, or
492 sits the traveler. (1) Part of the baggage consists of dried

1. In Nikolayevsk and in Sofiyskoye there are Russian kayurs who transport goods and travelers on those winter roads where driving with horses is impossible, for instance to Sakhalin and De Kastri.

fish for the dogs, whose food on the trip consists only of fish and snow. On the run they constantly break wind which has a very obnoxious odor. Their endurance is superb, their only protection against the cold is their own pelt. If on the journey the Gilyak is overtaken by such a bad snow storm that he can go neither forward nor back, he tries to get to a sheltered place in the woods, which wind or snow do not penetrate; there the company remains, the dogs huddled against each other, until the raging storm subsides. However, at times, that is, when food runs out before a way of escape is discovered, men and dogs are sacrificed to the cold. Such cases occur most easily when channels are crossed, and on the island of Sakhalin, when the kayur must usually take along a fish supply for the entire journey.

The lead-dog is the most cautious and intelligent animal of the pack. In dangerous situations a good lead-dog can be counted on; at times he finds the way where to do this seemed utterly impossible. 80-100 rubles are paid for the best lead-dogs; but the usual price for an average pack along with the

484 sled is 70-80 rubles.
492 The chief value of the dog as a draft animal is the fact that he does not sink in so far in deep, loosely-packed snow as the horse, and in general is much more agile, so that a dog-sled finds its way without a road where horses sink in up to their chests and cannot move from the spot. Moreover, one can [118] take along food for the dogs and thus visit uninhabited regions. 13-15 dogs can draw a man and about 30 pood of baggage. However, this applies more to Russian teams, for the Russians feed their animals better (1) and their dogs pull

1. They regard the hind part of the salmon as the best dog food. In drying the salmon, they divide it into three parts: the back and two sides.

with their chests.
481 As is well known, snow shoes are used for walking on the loose snow, for one's foot does not sink in very far. The Gilyak snow shoe consists of a board of larch wood about two arshin long. On the bottom it is covered with seal-skin, the hair of which is turned in such a way as to prevent the shoes from slipping back.

226 VII. Trades and Occupations
286 These consist of hunting, fishing, and the indispensable tasks connected with housekeeping, clothing, etc.

Fishing. Smaller fish such as carp, whiting, etc., are caught with nets. The net is made of nettle thread or hemp fiber. (2) The dried plant is exposed to the frost for a time,

2. Only wild hemp is used.

then it is unraveled and the fibers are spun. The spindle is like that used by the Russians. The long, lower end of the shaft is taken between the legs, the disk is set into motion and at the same time one end of two long strands is tossed over the head of the spinner, while the other end is pressed against the spindle shaft, turned, and wound up. The net is braided with wooden needles. Both tasks are the duties of the women, but sometimes the men also condescend to do them.
226 Carp, pike and whiting are sometimes caught with a fishing rod. Fish roe is used as bait. In places along the coast haddock is also plentiful that there is a special kind of hook used for it. The end of the line is studded with a number of hooks which face in all directions; in winter such a line

words in explanation of it, as well as point out several analogous phenomena in the eastern part of Siberia.

If we now sum up the ethnographic picture of Sakhalin, there are, aside from the Japanese and Russians, three peoples of quite different tribes, Gilyak, Ainu, and Orok, who share the possession of this island in the very unequal manner described above. Certainly a rich ethnographic assemblage in view of the, to be sure, great length, but only very small breadth! Through the Gilyak the island is joined to the coasts of the Sea of Okhotsk and the mouth of the Amur River, through the Orok to the rest of the Amur region with its Tungusic population, and, finally, through the Ainu, to Jesso /Yesso/, the Kuriles, and Japan (1).

G Gi A [113]

G Gi 101 361

Let us now return again from Sakhalin to the mainland, and, if we go southward from the borders of the Gilyak area already known to us, we first strike the area of distribution of the Orochi on the seacoast. In its farther reaches this includes the entire continental coast along the northern part of the Sea of Japan, the coastal mountains (Ssichota-alin /Sikhote-Alin/), the upper course of the rivers running from these mountains to the lower Amur and to the Ussuri, and the sources of those streams. Along the seacoast, however, the Orochi territory does not directly join that of the Gilyak, but rather between the two there is a wide stretch of uninhabited country, since the last, southernmost place of the Gilyak is Tschomi on the Liman, while the first, northernmost point of the Orochi is Nangmar or de Castries /De-Kastri/ Bay. Between the two and only slightly north of the last-named bay there is the ancient trade route to the sea used

G Gi [487]

G Gi 361 101 [487]

/21 cont./

by the Olcha, Goldi, and probably now and then also the Gilyak which leads from Lake Kidsi /Kizi/ to Taba Bay and, regarded to some extent as international, perhaps has acted as a barrier to the reciprocal spread of peoples. Moreover, the Orochi population on the coast is so sparse that there probably was no reason for them to advance northward beyond de Castries Bay. The Liman-Gilyak, for their part, however, if they were to spread southward along the continental coast, would be moving farther and farther away from the island of Sakhalin, with the populatio of which they have a natural and permanent connection through a partial tribal union as well as through many trade interests. Thus, with respect to the Gilyak, there is no /22/ stepping over the mutual boundaries between the peoples (1). It is different

G [114] [113]

1. A completely erroneous and, as we shall see, frequently recurring confusion to be noted in this statement by Dm. Romanof ("Prisoedinenie Amura /Annexation of the Amur/." —Russkoe Slovo, 1859, Aug., Sec. I, pp. 131, 135), Bickmore ("The Ainos or hairy men of Jesso, Saghalien and the Kurile Isl.," Amer. Journ. of Science, May, 1868, p. 14), and others that de Castries Bay is inhabited by Gilyak -- the same people, as the latter believes, whom Rollin, too (in La Pérouse's travel account) has described from there.

Gi 101 361

It is different

with the Olcha. For them Lake Kidsi offers a natural route to t sea, on which south of Taba, de Castries Bay is the first deep a protected bay. Therefore, besides the Orochi, they, too, hav their permanent habitation sites in it.

/670 cont./

took part, and until far into the night one small pipe after another was smoked, passing from hand to hand, always in the same tranquil, deliberate manner. Hospitality also requires that the dogs be fed before they continue on their journey the following day.

The Gilyak thus travels only in short daily trips from village to village. If, with greater distance between the villages or when bad weather takes him by surprise, he is forced to spend the night out-of-doors, and he reaches the next village after the regular dog-feeding has already taken place there, the fire under the kettles is rekindled without further ado, and a special meal is prepared for the dogs of the newly arrived guest. Needless to say, he then stays there for the night and does not continue his journey until the following morning after the dogs have again been fed.

In any case, however, the weather is first carefully checked, especially in the villages located along the seacoast, where strong winds and blizzards very often occur and put the traveler in danger. During the several days of bad weather which detained me in the village of Tyk on the west coast of Sakhalin in February of 1855 and 56, I frequently witnessed the indecision which overcomes the Gilyak when the weather is still rather doubtful and the question arises as to whether going on under such conditions would be too risky. In most instances the consultations ended in another day of rest, for haste is quite foreign to the Gilyak, and an almost excessive caution always guides them on land as well as on sea journeys. On several occasions, however, I also had an opportunity to marvel at their knowledge of the climatic conditions of their country /671/ and the experiences that they had with them, for I had once made ready to continue my journey and found myself forced to return to the hated village where I had been received so inhospitably. On another occasion I reached the seacoast, which was 5-7 versts from the village, and continued my journey along it, but had to endure very bad weather and snowstorms. The Gilyak especially feared being surprised by an ady (north and northwest) or

/671 cont./

tchlangi (east and northeast) storm sweeping over the Sea of Okhotsk and almost always accompanied by snowstorms, whereas the ladwilantsch (southeast wind), the tungyrsch and ngaluws (1)

1. Soft, to be pronounced like the French z.

(west and southwest wind), and the kongrsch (south wind) cause them less concern (2). The latter are especially dangerous in

2. On the Amur the winds are, as a rule, distinguished less accurately, and simply by the four main directions: ady, tschlangi, kongrsch, and tungyrsch (north, east, south, and west).

making a trip from Duĭ to the villages to the south on the same coast, since the sea ice sometimes breaks up immediately in

Magic arrow for exorcising storms.

front of the sleds of the travelers. In the village itself several methods of appeasing the unleashed storm-spirits were used. At the tip of a long pole stuck in the snow there was fastened a square piece of sealskin, which evidently was to serve as a sacrificial offering to the storm. A second method served the same purpose, but in a much more attractive form. It was an ordinary-sized arrow made with two prongs at the tip and provided with two curls of wood shavings on the shaft. Between the two prongs, likewise bearing small wooden curls, the strong center rib of a tobacco leaf and a small piece of glowing tinder were inserted and the arrow shot off in the direction of the storm ady-wind. Finally, a third method consists of sacrificing a number of whelps to the storm. In the village of Tyk their number came to three, and, if the storm did not stop the next day three

/673 cont./

114 157 123 snowstorm had set out from Tägl merely on ski, continued on his way without considering us /674/ in the hope of reaching his nearby native village of Kullj before nightfall. Nor did he appear on the following day, and thus he gave up the fee due him. The other guide, a Tro Gilyak from Lub-wo, named Eospin, who had guided me through part of the Tymy Valley, behaved worse: he was forced to spend the night in Tafiz-wo in a small tent-yurt, where after the fire had died down the mercury froze, he crept out of it, cut the straps of one of my pack-sleds, burrowed through the contents, and made off with a few of my people's garments.

● 484 805 Only in one respect should the Gilyak never be trusted, namely, when it comes to setting the time when something is to happen, for instance, when a guide or somebody else is to arrive, etc. This is undoubtedly due to the fact that they have no proper conception of time and only a very inaccurate way of determining time and reckoning time. Apart from general designations, such as day (muw) and night (urk), morning (tyt) and evening (padf), the time of the day is determined only according to whether the sun (keng) is rising or setting (k. myrtsch or padntsch, is being born, and k. jugtsch or mutsch, is dying, respectively), whether the sun is climbing (k. tytyrach bokirtsch) or going down (k. kotretsch), and whether it has reached its approximately highest position, its height at noon (k. muwutytsch). As for the sequence of days, they have special designations for only the two days closest to today (nych), such as yesterday (nymr) and tomorrow (pyt or pat), the day before yesterday (nymrynk) and the day after tomorrow (possjch). There are, of course, no names for the days of the week, and the days of the month are not counted either. In order to designate a day back or ahead of the next two days, the Gilyak are content to give the number of night rests that there have been in the meantime or will be. On journeys, the spatial distances familiar to them from experience, come to their aid in that they know exactly what stretch they can cover in a day by boat or sled under normal conditions without tiring themselves or their dogs too much, and where they have to make their camp for the night. Such localities as a rule have special names among

484 804 805

/674 cont./

● 484 804 805 them, even without being inhabited. Their designation of spatial distances in terms of days of travel or the number of night-rests is usually, under normal weather conditions, quite accurate. The Gilyak naturally used this system of designating distance by the time required to cover the stretch during their first encounters with the Russians for information about the distances in their country. Therefore, in this case, too, even before I learned the [192] Gilyak expression for "to sleep" (k(ch)otsch or k(ch)ontsch), I came across the word borrowed from the Russian and only suitably Gilyakized, esspanytsch (from the Russian sspatj), with the derived verbal form esspara, essparor, etc. Under unfavorable conditions, however, during stormy weather, heavy snowdrifts, etc., the designation according to days of travel is very uncertain and fluctuating, for it depends merely on how much one /675/ trusts the capacity of himself or his dogs, and that is always very little, because in such cases the Gilyak generally prefer not to move from the spot.

805 821 It is most difficult among the Gilyak to set a date somewhat further in the future on which something is to happen, if they are pursuing their activities undisturbed in their own surroundings, for these usually take such a regular course that a mistake in the number of night-rests that have passed is all too easily possible and always more likely than the opposite. The Gilyak, indeed, also observe the various phases of the moon, and, to be sure, in a very careful fashion, and they have special designations for the full and new moon (long tscharntsch--is full, and l. mutsch--is dead), the waxing and waning moon (padywu-l. and muiw-l.), the half moon and the quarter moon (l. putytsch and l. per(ch)kotsch), and the waxing or waning of these phases of the moon (padywu-l. putytsch and muiw-l. putytsch, or padywu-l. per(ch)kotsch and muiw-l. per(ch)kotsch)--but for the above-mentioned purpose of predetermining a definite day, this is only an approximate method, and if the sky is overcast for any length of time, as it by no means rarely is in the Amur region, it does not work at all.

805 184 [171] The Gilyak divide the year into twelve months (1). But

sea voyage sometimes takes a longer time. Under favorable conditions, however, they are said to be able to cover the worst stretch, from Duĭ to Kussunai, often in four to five days. On winter voyages to the Ssisam, which are made in dog-drawn sleds, the above-mentioned steep, rocky coastal stretch puts great obstacles in the way. For the sea does not always freeze along it, and even if a fringe of ice has formed, with a strong wind it often, and sometimes very suddenly and unexpectedly, is broken up again and carried off by the high waves of the sea. The travelers are therefore forced to cover this stretch by land, and, on account of the mountains lying behind it, that can be done only by way of a long detour: they leave the seacoast at Arkai, shortly before Duĭ, turn inland over low passes to the Tymy sources, go from them to the Plyi or Poronai River, and follow its course up to the mouth in the Bay of Patience, on which there are settlements of all three of the peoples represented on Sakhalin, the Gilyak, Orok, and Ainu. From there they travel along the east coast of the island to Manuë and then, along a low and convenient pass located at the narrowest point of Sakhalin, /611/ cross again to the west coast, which they reach at Kussunai and which they then follow to Ssiranussi (1).

1. Fr. Schmidt, "Histor. Ber.," etc., op. cit., p. 110.

As has already been mentioned, one of the purposes of the Ssisam voyages of the Gilyak is to trade with the Ainu and to obtain furs from them in exchange for cotton cloth, tobacco, pipes, glass beads, and other Manchu-Chinese articles. This is done wherever they meet them, on the east coast of Sakhalin as

/612 cont./

prized Haliaëtos albicilla, the amount of rice desired. Furuhjel at that time head of the agency of the Russo-American Trade Company in Ajan, Nikolayevsk and the Murawjof post, estimate the total number of animal furs annually obtained in trade from the Japanese by the Ssisam voyagers in Ssiranussi at about 2,400 otter pelts, 1,300 sable pelts, and 640 fox pelts (1). This rich

1. Tikhmenev", Istor. obozr. obrazov. Rossiisko-amerik. Kompanii, Part II, p. 128.

supply of furs which the Gilyak and Olcha bring home from their Ssisam voyages is used by them in the trade with the Chinese on the Amur and especially on the Sungari in the manner described above and thus contributes greatly to the maintenance, stimulation, and augmentation of all their trade operations.

Meanwhile, the stay of the Ssisam voyagers on Sakhalin for the purpose of trade with the Ainu and Japanese often extends over a considerable length of time. In particular those arriving in the summer either wait for winter in order to return with their dogs on the above-mentioned route via Kussunai, Manuë, the Poro-nai, and the Tymy sources, or even remain through the entire winter in the southern part of the island and not until the next spring or summer set out on the return voyage by boat along the west coast of Sakhalin. On this voyage they still carry on trade with the Ainu so far as they can and, as Fr. Schmidt reports (2), are especially anxious to get bear cubs in

2. "Histor. Ber.," etc., op. cit., p. 54.

order to raise them at home.

The Japanese do not permit the Ssisam voyagers to go beyond Ssiranussi and to visit, say, the Japanese settlement of Kussun-kotan in Aniwa Bay. This, then, as in Ssan-ssin, is the southernmost boundary of the world known to the Gilyak from

/612 cont./

439 484 648 [823] their own observations, and concerning Japan, the homeland of the Ssisam, they know only that it is a land beyond Sakhalin (Lär-mif) and separated from it by a "small sea" (matsch-kerchk). /613/ In the years immediately following the occupation of the

175 648 439 Amur region by the Russians, however, the Japanese also tried to keep the traders from there away from Ssiranussi and Endungomo, their second-largest settlement on the west coast of Sakhalin and, at the same time, to extend their colonization of the island as far north as possible in order to prevent any eventual expansion of Russian power beyond it and especially any alienation of the Ainu subjugated and exploited by them (1). In 1859, for instance,

1. Concerning these events, see pp. 153-156 above.

the Gilyak coming to Sakhalin to trade were no longer admitted to Ssiranussi by the Japanese but only as far as Endungomo, and in the following year the Olcha traders were prohibited from entering even that place, so some of them remained in Kussunai and some went to Taraika on the east coast (2). Even Judin, the

[113] 2. Brylkin", "Pis'ma s" Sakhalina /Letters from Sakhalin/" (Zap. Sib. Otd. Imp. Russk. Geogr. Obshch., Book VII, pp. 22, 26). Also, Schmidt, "Hist. Ber.," etc., op. cit., pp. 107 and 108.

Gilyak from Tebach, was affected by this prohibition, though in former years he had often been in Ssiranussi and was well known there; in fact, he had frequently been used as an interpreter, thanks to his knowledge of the Ainu language, which was familiar to him from his mother, stemming from this people. But these, as well as all the later changes and upheavals in trade conditions caused by the Russian occupation of the Amur region, fall outside the scope of our considerations.

Gilyak RX3' Olcha

/613 cont./

G 439 If one surveys all of the above-described trade activities of the Gilyak, he will not hesitate to acknowledge that they are a people extremely gifted for trade by nature and completely

G [181] dedicated to it. Too indolent to obtain by hunting the means for trade with the neighboring civilized peoples on a larger scale in keeping with their inclinations, they know how to win them from the tribes neighboring them, who are more skilled at hunting, by means of trade indefatigably pursued from small be-

G [437] [484] ginnings. Thus enriched, they undertake, in spite of their primitive means of locomotion, long trade journeys to the Sungari and to southern Sakhalin, to the "Manchu" and to the "Ssisam," and since they exchange the wares and products of the one for those of the other, they serve as middlemen between the two greatest civilized peoples of East Asia, the Chinese and the

C 439 437 484 Japanese. This latter activity of the Gilyak permits comparing them with another Paleo-Asiatic people, the Chukchee, who, likewise only poor hunters, but animated by a great genius for trade, roam over the northern tundra and cross the Bering Strait in order to trade for the furs bagged by the Eskimo in the Yukon territory with the commodities of the Russo-Siberian merchants, and, conversely, along the Anjui, the latter for the former, and so in the polar north they act as trade intermediaries between Europe-Asia and America (3). None of the Siberian peoples can

C [113] 3. Concerning this trade of the Chukchee, see the detailed and exhaustive account by Matjuschkin /Matiushkin/ (in Wrangell's /Vrangel'/ travel account, Russian edition, Vol. I, pp. 331 ff.), Ditmar (Bull. de la cl. hist.-philol. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIII, 1856, pp. 129 ff.; Mél. russes, Vol. III, pp. 39 ff.), and others.

Gi 439 177 None of the Siberian Peoples Can be compared, with regard to its trade activities, /614/ to these two Paleo-Asiatic peoples, except perhaps the Olcha, whose strongly developed genius for trade, however, as we shall see in a moment, must be traced back to the influence of the Gilyak.

3 cont./

Tugur River and the Gilyak then followed (5). But even at

5. Geogr. und Verfass. von Kamtschatka /Geography and Conditions on Kamchatka/, p. 57 (appendix to Steller's Beschr. von dem Lande Kamtschatka /Description of the Kamchatka Region/, Frankfurt and Leipzig, 1774.

even at
time the Gilyak went as far as Tugur Bay, north of the
th of the Tugur River, for /109/ on an old Russian hand-
ten map, whose origin Middendorff puts in the middle of the
century for several reasons, one finds the sketch of a
yak towpath" (Gilyatskaya perevoloka), which led over the
ow, stem-shaped part of the Ssegneka Peninsula from Ulban
to Tugur Bay (1). By this route the Gilyak may also have

1. Middendorff, Reise, etc., Vol. IV, p. 116, note 2. The map is in the library of the Akademie der Wissenschaften. Müller (in Büsching's Magaz. für die neue Hist. und Geogr., Part 2, second ed., 1769, p. 508) also mentions a towpath used by the Gilyak and therefore "called Giljazkaja perewoloko in Russian since ancient times." This, however, as he says, was used in order to avoid the northern promontory at the mouth of the Amur, since it ran from one brook, which empties to the south into the bay formed by the mouth of the Amur, to another brook which flows into the sea to the north. Müller adds that the latter brook bears the name "Gole" on Chinese maps and this indicates the towpath, for "Gole" evidently refers to the Gilyak village of Kolj or Kulj

/109 cont./

175
131

1. (cont.)
located on the seacoast and perhaps also to a brook of the same name. Here, therefore, there is to be understood either the passage from the Amur to Lake Tschlja and from there to Kulj, or from the Kamr River, which empties into the Amur immediately above Nikolayevsk, to the Hisska Brook down this to the sea only slightly east of Kulj. Both routes are still used by the Gilyak in order to go from the lower Amur to the seacoast or vice versa. Under no circumstances, however, can the "Giljatskaja perewoloka" mentioned by Müller refer to the towpath on the Ukakyt -- from the Nemilen to the Tugur -- as Middendorff (Reise, etc., Vol IV, p. 198) has presumed, because then neither the localities nor the designation "Gilyak towpath" would fit. The towpath mentioned in Stuckenberg (Hydrogr. des Russ. Reiches, Vol. II, p. 774) is the same as the one in Müller.

175
131
487
come across Ulban Bay and Ssegneka Peninsula to the mouth of the Tugur. The same route was advantageous for them for another reason: they had to go across Ulban Bay to Ssegneka Peninsula and along the latter northward, if, on their coastal voyages, they wanted to reach the Shantar Islands without getting too far from land.

175
131
[484]
[224]
There is still no mention of these islands in the reports cited above, though Pojarkof and Nagiba must have sighted them on their return trip from the Amur. In the oldest reports concerning them, which go back to 1709 and are based upon accounts by Cossacks stationed in Udskoi Ostrog and Tungus there, it is said that the Shantar Islands have no permanent inhabitants and are only visited by the Gilyak for hunting

/601 cont./

439
438
184
Tungusic neighbors, who are more skillful and active in hunting, and the Amur Gilyak, who have the most dealings with the Chinese, also trade with their more distant countrymen living along the Sea of Okhotsk and on Sakhalin and buy from them the desired furs. The Amur Gilyak and in part the Tschomi Gil too, are the life and soul of this entire trade, through which Chinese wares are brought into circulation throughout the territory of the Gilyak and of the tribes immediately neighboring them, the Negda, Reindeer Tungus, Orok, and even the Ainu, and they are also the ones who draw the greatest advantage from it. There is not a single Chinese merchant in this whole area.

439
648
[487]
The northernmost and easternmost point in the lower Amur region where such a one stays temporarily is the village of Pulj, located still in Olcha territory on the Amur, near the Gilyak border, which can easily be reached in winter, even from Tschomi, via the oft-mentioned Tymi-Chaselach route from the Liman (1). It was said that sometimes a Chinese merchant

1. See pp. 144 and 909 above.

steals through from Pulj along the deserted left bank of the Amur to the Negda on the Amgunj, but carefully avoids the right bank, inhabited by the Gilyak, because they, as they themselves told me, will not permit any Chinese merchants in their territory and 25 years ago killed one who ventured it. Whether they assumed this hostile attitude toward the Chinese merchants in order to defend themselves against the domination of the Manchu-Chinese or in order to shake it off is still uncertain, but in any case it is greatly to their advantage commercially. For the role that is

439
played farther upstream by the Chinese merchants living among the Olcha, Goldi, Samagir, and other peoples of the lower Amur region or visiting them, in that they act as middlemen in the trade between them and the Manchu-Chinese wholesalers along the Sungari, falls in the Gilyak-Tungusic area, intowhich they are not allowed to come, to the Amur Gilyak themselves. And the latter perform their role of middlemen with great skill and success. The alertness, versatility, and enterprising spirit that

484
437 /601 cont./ The alertness, versatility, and enterprising spirit that
439 they lack as hunters, in comparison with the Tungusic tribes,
[157] is theirs to a high degree as traders. Not satisfied that many a Negda, Tungus, and Gilyak from the Sea of Okhotsk, from the Liman, and from Sakhalin come to them in order to get from their supplies of Chinese and, more recently, Russian commodities, tobacco, liquor, cereals, clothing materials, and the like, in exchange for furs, they themselves, provided with these foreign articles and with some of their own products, such as sturgeon or hausen /602/ meat and the like, undertake trade voyages to
[221] the places named. This is done especially in winter when there
[492] is little fishing, and for this purpose they use the numerous dogs which they are able to keep, thanks to the abundance of fish in the Amur River. With their help they are almost constantly on the move all winter in order to look after their trade interests. Although the means of locomotion mentioned permits them to take only a small quantity of commodities with them each time, the frequency and common practice of such trading trips among them on the whole brings about a considerable turnover of goods, and since the main purpose of these trips is always the same, the acquisition of the furs needed for trade with the Chinese, they offer the persons undertaking them a rewarding substitute for the time and effort spent on them instead of in hunting. Here again experience proves that the producer of a commodity always has a smaller profit than the middleman adroitly using it.

439 These trading trips of the Amur Gilyak for the purpose men-
437 tioned principally go in three directions: westward to the Negda
484 on the Amgunj /Amgun/ (Gilyak Hynk) and the Samagir on Lake
648 Udyl, northward to their own countrymen on the Sea of Okhotsk,
[487] and eastward to Sakhalin. The relations of the Gilyak with the Negda are very ancient, as may be seen merely from the fact that of all the Tungusic tribes of the Amur region the latter, aside from the Olcha, has become most assimilated with the Gilyak, or, so to speak, Gilyakized. For this reason alone, they, like the Olcha, are more interested than other Tungusic tribes in benefiting by trade, and, in view of the geographical location of their habitation sites, they do not lack the opportunity.

439 First of all, the Amgunj offers them a direct and convenient
437 route to the Chinese merchants along the Amur; secondly, in
484 winter only a short distance separates them from the Samagir on the Gorin, who are likewise visited by Chinese merchants; and, finally, close to the northern border of their habitation area, separated from the Nemilen, the chief northern tributary of the Amgunj, by only a low watershed, where each year in December Yakut and Russian merchants congregate specifically in order to trade with the surrounding Tungusic tribes and, among them, with the Negda in particular (1). Under these circumstances

1. See p. 166 above. Cf. also Fr. Schmidt, "Histor. Bericht über die Sibir. Exp. der Russ. Geogr. Gesellsch. /Historical Report on the Siberian Expedition of the Russian Geographical Society/" (Beitr. zur Kenntn. des Russ. Reiches, Vol. XXV, pp. 134 and 150).

G
439 under these circumstances
437 the chances of the Gilyak middlemen for success among the
484 Negda are not very great, except perhaps in those places where
487 the latter live in the closest proximity to the Gilyak, far from
361 those trade opportunities, namely, on Lake Orell and Lake
G Tschlja, where there is also a Gilyak village and which, more-
439 over, lie on the route from the Amur to the southern coast of the
361 Sea of Okhotsk. Like the Negda, the Samagir, too, in addition to their principal territory on the Gorin (Gilyak Kyr), have still other habitation sites remote from it and closer to the Gilyak -- these are their settlements on Lake Udyl, and, like the Negda lakes, these, too, are /603/ visited by the Amur Gilyak for trade, and, to be sure, in winter as well as in summer. Thus, on May 18 (30), 1856, I met the Gilyak Mesgun in Patt at the moment when he was about to set out in a boat laden with various Chinese commodities to travel to the "Rdhy" (Samagir) living
G on Lake Udyl. On the whole, however, the latter lies, geographi-
[197] cally as well as on the basis of the linguistic relationships of the dwellers on it, closer to the Olcha than to the Gilyak.

G /605 cont./
G mistreated them. In the Amur region I often heard similar
437 assertions, sometimes reinforced with very liberal servings of
439 liquor, made to the natives by Chinese merchants, and they
G never miss their mark, especially in the case of the Goldi who,
[186] living in the closest proximity to the Manchu and entirely dependent on them, have often personally experienced their cruelty and avarice and even give them the nickname "ssingare," rats, to indicate that they act like the latter around their supplies and possessions. On the Gilyak, however, to whom the Manchu officials do not come to collect tribute and to practice all kinds of extortion, the flattering and seductive behavior of the Chinese merchants makes little impression. On the other hand, the great profit that the latter make by selling to the Amur peoples at retail for a very high price the commodities that they purchased cheaply at wholesale on the Sungari is obvious to their commercial sense, and, little inclined to contribute to it at their own expense, they try to imitate them and keep the profits for themselves. This explains their above-mentioned opposition to granting Chinese merchants access to their territory and the
G little encouragement that the latter find among them in general.
184 The Chinese trade center on their border, in Pulj, is visited,
438 apart from the Olcha, Samagir, and Orok, almost exclusively by
439 the Tschomi Gilyak, who, far from the Amur, find there the means for their trade with their countrymen on Sakhalin and
G especially along the Tymy River. The Amur Gilyak, on the
[487] other hand, try to utilize the route offered to them by nature and, avoiding the profit-seeking middlemen located on it, fetch what is needed for their own use, as well as for further trading, from the Sungari themselves.

G To be able to undertake a trading trip to the Sungari or,
437 as the Gilyak usually express it, "to the Manchu," is the goal
439 of their most ardent desires and constant practical endeavors.
484 It is chiefly for this purpose that sables, otters, and foxes are hunted and the trips to the neighboring tribes to buy precious furs are carried out. For without a considerable supply of this

Amur region. To be sure, there are Manchu-Chinese boats there, which are used by the Manchu officials and Daur traders, and, indeed, a number of large boats of this kind constantly lies before the city of Aigun -- I myself counted 37 of them, divided into three groups -- but these old boats, painted black and red and decorated at the stern with crudely carved and likewise colorfully painted dragons, which represent the military might of China and are supposed to inbue the Amur peoples with respect for it, are of course, quite inaccessible to the latter. Moreover, these hunting nomads, depending more on the tributaries, are, as was said, completely satisfied with their primitive canoes, and, finally, also lacking there are the avaricious Chinese traders acting as intermediaries as they do along the Sungari and the lower Amur.

GGT 489 438 439 171

In looking back at all the means used by the Amur peoples to move and to get from place to place on land and on water, it seems justifiable to conclude that they show very essential and characteristic differences in the upper and in the lower Amur region, and in the latter have reached a higher development on the whole than in the former -- a fact that in itself shows that here the aims and purposes served by them must be much more far-reaching, and, in particular, that the trade maintained among the Amur peoples themselves and with the neighboring civilized peoples is far more active and extensive here than there, for which, in fact, many examples and confirmations will be given in the following, with a more detailed consideration of these conditions.

491

491 HIGHWAYS--number, location, and distribution of roads; character (e.g., straight, meandering); surfacing and drainage; adjuncts (e.g., culverts, bridges, causeways, tunnels, fords, ferries); highway maintenance (e.g., responsibility, techniques, special apparatus, personnel); etc. See also:

/384 cont./

128 realistically, we consider it appropriate to cite some of the nu-
[121] merical data obtained by us on these questions during the detailed 1891 census. In doing so, it seems more convenient to deal separately with: (a) the western coast, between the Aleksandrovsk post and cape Marii (the northernmost extremity of the western coast); and (b) the eastern coast and the basin of the Tym' River between Cape De La Kroyer and Cape Levenshtern (the northern extremity of the eastern coast).

103 (a) The western coast. There are 25 Gilyak winter settle-
361 ments between the Aleksandrovsk post and Cape Marii. They are located in the following order: Arkyyvo, Yamy, Manginay, Tangi, Khoe (Khoi), Viakhtu, Tyki, Vaaz, Nyyde (1), Noksy,

[167] 1. Formerly the area of this settlement was inhabited by the Tungus, whose grave monuments, consisting of boxes with crosses on top of them, are still preserved on the low sandy shore of the strait.

Tyrki, Tengi, Tal'votigrvo (2), Marnlvo, Nyanivo, Marvo,

[491] 2. There is a road from here to the settlement of Lyangr on the mainland.

Vaskhonkhvo, Kitnidvo, /385/ Tamlyvo, Lirkryvo, Viskvo,
[114] Pomr (1), Pil'vo, Tumi, and Nyur. The village of Koybygrvo,

[491] 1. There is a road from here to the village of Kekhrvo on the Okhotsk coast (one or two days).

which is marked on the map north of Nyur, no longer exists. In
162 the settlements enumerated there are 78 yurts in which 245 family-households live (2). The total population is 1,041, of whom

[592] [128] 2. By the word "family" is understood here first, any married couple, adult

166 /386 cont./ To make some money,
464 115 individuals, i.e., one-sixth of the adult population, make
103 the trip to Nikolayevsk. The settlements richest in seals and
433 dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is
[244] also richer in sables than the others. Potatoes are raised by the
162 Gilyak in Khoe and Tangi. In the settlement of Tyki, the
191 Gilyak have made a request concerning the settlement among
[244] them of at least one Russian with whose help they could raise
224 potatoes. The settlement of Tyki should be mentioned for sev-
433 eral other reasons. In the first place, starting from this point
178 the Gilyak are ceasing to hunt sables because of the overwhelming
648 competition from the Tungus who have killed off the sables in the vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, be-
